Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

According to a statement issued by the chief clerks of the Senate and House Committees on Appropriations, Congress at its last session appropriated for the fiscal year 1907, $879,589,185.16, or $59,404,550.20 more than the sum appropriated at the preceding session. The largest item is contained in the appropriation for the Post Office Department, the amount allotted being $191,695,908.75. The next largest, $140,245,500, was given for pensions, or nearly twice as much as was allowed for the support of the army, and over $40,000,000 more than was granted for the navy establishment. Of the net increase of $59,404,550.20 over 1906, it is stated $42,147,201.08 was for the Panama Canal, the balance being accounted for through the appropriations for the carrying out of the meat inspection law, continuance of contracts for river and harbor work, reorganization of the diplomatic and consular service, and extension of the rural free delivery service.

Specifications for bids to furnish Chinese labor for the construction of the Panama Canal were issued last week by the Isthmian Canal Commission. The basis for bidding is for twenty-five hundred coolies; but the Commission may call for additional Chinese laborers, should the experiment be successful, up to two thousand per month, after four months' previous notice to the contractor. Chinese laborers will be required to work ten hours each day. Overtime will be paid in excess of ten hours, and for all the work upon Sundays or holidays at the rate of time and a half.

It is proposed to organize, at the International Congress for the Expansion of the World's Commerce, at Brussels on Sept. 7, a permanent polar research commission and a general polar assembly, with a central committee. The congress will aim to bring about an international agreement on disputed questions in regard to polar geography; to make a general effort to reach the poles; to systematize scientific polar research, and to promote the study and publication of the results of polar expeditions.

Foreign.

The Province of Ontario, after two years of labor along the Albany River and James Bay, has secured a territory of 89,000 square miles. Rights to this by treaty had to be secured preparatory to the opening up of the country by the Grand Trunk Pacific. Nearly three thousand Indians surrendered their rights upon condition that a reserve be established for each band, one square mile for each family being the ratio. Each band is to be separated. The Government will pay four dollars per head each year to those who have lost their land.

Investigations carried on by the Egyptian Government in 1904 and in 1905 in the eastern desert between the Nile and the Red Sea, starting in near the town of Edfou, give promise as to the possibility of developing the country's resources in gold, coal, and petroleum. The Government has established a department of mines and formulated police regulations.

It is probable that before another year is over telegraphic communication for a portion of the distance to the Yukon will be made by the wireless system. Telegraphic communication was frequently interrupted last winter by storms, avalanches, and landslides, particularly in the Cariboo district.

A plan has been conceived which contemplates the use of electricity for power, lighting, heating, and cooking in London, bringing the electric energy from the coal fields of the Midlands, thus doing away with the smoke in the metropolis.

Industrial and Commercial.

A process of tempering gold, silver, and copper, says the *Scientific American*, has been discovered by Mr. Z. F. Vaughn, of Los Angeles, Cal. By his method it is claimed that the ductile metals are not only hardened, but a cutting edge is obtained keener and more durable than that of steel, because of the microscopic fineness and smoothness imparted to it. The inventor states that tempered copper is not subject to that crystallization through vibration which limits the life of steel; that springs of tempered copper have not only as great elasticity and strength as steel springs, but that owing to the extreme slowness of the process of crystallization they will retain the spring temper for a practically indefinite period. It is expected that a most extensive use of tempered copper will be made for journal bearings. Owing to the great density of the metal, it takes a perfect polish with use and makes an almost frictionless bearing, free from danger of overheating and outlasting either Babbitt metal or brass for the purpose.

The Southern Pacific Railway expects in a few weeks to begin work on a plan by which the Colorado River will be once again restored to its proper channel. This will probably cost the company $700,000. Heavy embankments will be constructed where the river water is flowing into old channels and thence into the Salton Basin, which is two hundred and sixty-two feet below the level of the sea. Engineers say that once the river is sent back into its old channel, the water in the so-called Salton Sea, notwithstanding it is thirty feet deep in many places, will, through percolation and rapid evaporation, all disappear within two or three years.

The officials of the Pennsylvania Railroad have notified the Post Office Department that they will begin to provide seventy-five steel cars at once for the mail service. The new cars will be as large and strong as Pullmans and as well fitted to withstand the shock of collisions.

The longest tunnel in the United States is soon to be bored through the Sierra Nevada Mountains by the Central Pacific Railroad, to reduce by two thousand feet the mountain climb of seven thousand feet. The tunnel will begin a short distance west of Truckee, Ariz.; it will be thirty-six thousand feet in length, or almost seven miles, and will cost $10,000,000.

Of recent years the area of land under cotton cultivation in Egypt has been steadily increasing, yet the total of the crop has remained stationary, or has even diminished. The total crop in 1904-5 was 6,352,000 kantars, a kantar being 99.05 pounds. The quality of the cotton, it is said, also tends to become less satisfactory.

An oyster grower in Connecticut and Rhode Island waters has twenty-five thousand acres of oyster grounds, an area more than twice that of any other planter in the world.

General.

In addition to the $50,000,000 now provided for new structures in Washington, D. C., improvements costing $20,000,000 more are projected. Of these the Senate and House office buildings will cost $7,000,000. They will be on the plaza east of the Capitol. The eastern front of the Capitol is to be extended at a cost of $1,330,000. The new Supreme Court building will occupy another side of the plaza, which also includes the Congressional Library. Near by is the new twelve-million-dollar railway station, now under way. A memorial bridge across the Potomac is authorized, costing $5,000,000, and across Rock Creek has been built a great cement arch bridge that is the largest cement structure in the world. Some of the other buildings under way or just completed are the new Agricultural Department building, $4,500,000; new National Museum building, $3,500,000; new filtration plant, $3,500,000; Post Office Department annex, $2,500,000; new municipal building, $2,500,000; sewage disposal pumping plant, $2,000,000; new Hall of Records, $2,400,000; Army School for engineers, $1,100,000; central power plant, $1,500,000; United States Soldiers' Home, $1,435,000; Connecticut Avenue bridge, $1,000,000; navy yard gun shop, $1,145,000. A long list of buildings below the million-dollar line total the sum of $51,245,000.

In last week's issue the *Manufacturers' Record* says: "Contributing directly and indirectly about 40 per cent of the merchandise in the country's export trade, and handling about 36 per cent of that trade through its own ports, the South made a marked advance last year in commerce. Of export merchandise produced exclusively by the South, raw cotton represented $401,005,021; cotton seed oil, $13,073,370; cotton seed meal and cake, $13,073,100; naval stores, $20,075,585; and phosphate rock, $7,910,083, a total of $455,747,059. Of export goods produced in other parts of the country as well as in the South, the latter's estimated share was: petroleum, $40,000,000; timber and lumber, $40,000,000; cotton goods, $30,000,000; tobacco, $28,000,000; provisions, $25,000,000; grain, $20,000,000; coal, $15,000,000; cattle, $13,000,000, and fruits $3,000,000, a total of $214,000,000. To these totals should be added about $25,000,000, representing the South's share in exports of manufactures of iron and steel, of manufactures of wood, of manufactures of leather and other articles originating primarily or secondarily in the South, and there is a grand total of $804,000,000 as the share of the South in the $1,743,864,500 of exports from the whole country.

The Thompson-Connellsville Coke Company is building the largest independent coke plant in the world, in the Southwest Connellsville District, Pa. It will consist of two 400-oven plants and will develop a tract of sixteen hundred acres of nine-foot coal. The company was recently formed with $3,000,000 capital and $3,000,000 bonds. The Bessemer Coke Company has also started a new 500-oven plant near Clarksville.

The world's output of gold last year was, in round figures, $425,000,000, as compared with $375,000,000 the year before.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL — WATCH" JESUS

FROM OUR CONTRIBUTORS.

CHRISTIAN SIMPLICITY.

CLARENCE W. CHADWICK.

THE mentality of one who is controlled by physical sense presents a striking contrast with that of one who has learned enough of the Science of Being to be led by spiritual sense. The one theorizes upon the subject of religion, while the other is striving to "work out" his own salvation with fear and trembling; the one judges according to outward appearances, while the other judges only righteous judgment; the one is often called a "believer," while the other is a humble follower of Christ, Truth; the one is dealing constantly with the seeming complexity of mortal existence, while the other is imbibing the simplicity of spiritual things.

Because of its purity and simplicity, Jesus chose a little child as an object-lesson for the educated beliefs of his disciples, and said unto them, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." He realized only too well the truth of the sentiment expressed by Schiller, "A childlike mind, *in its simplicity*, practises that science of good to which the wise may be blind," and he made it plain to his disciples that childlike simplicity was one of the prime essentials of Christian character. Conversion in Christian Science is something more than a theoretical exchange of one human belief for another. Rather is it the correction and elimination of all sense testimony concerning God, man, and the universe, and a consequent ability to think only from the standpoint of the reality and permanence of the unseen or spiritual. To become childlike is to escape the binding fears of false material beliefs. The little child presents a condition of thought that is not in bondage to these educated beliefs, and is consequently open to the recognition of spiritual truth. It does not boast of any material knowledge, and is therefore ready to be "taught of God." The man or woman who claims to know God, and yet is thinking in accord with sense testimony, has no demonstrable knowledge of good, and must needs be converted before he can grasp the true meaning of heaven, or harmony. After years of homage to the material senses it may at first seem difficult to question their reliability and to acknowledge the supremacy of spiritual sense; and this is because the physical senses have not taught the meaning of humility and purity, the inseparable companions of Christian simplicity. Instead they have advocated and encouraged the very opposites of those virtues which characterize the true Christian. They have made religion one of the most complicated and mysterious things in the world, so that countless thousands, who perchance have been more receptive of spirituality than others, have turned away from a material concept of God and man and have renounced all faith and confidence in the religion of their fathers.

The religion of Christ Jesus is characterized by simplicity and purity, and cannot be understood aright through the so-called physical senses. Jesus repudiated all sense control and spoke and acted only under the domination of spiritual sense. He did not look to the material senses for any reliable or accurate information concerning God, man, or the universe. He knew that these senses are not endowed with intelligence, power, or wisdom, and because he taught and acted contrary to their dictation, he was crucified. Professing Christians, those who want to be just and to do the will of the Father, ought to stop and consider this most important point,—whether they are not judging Christian Science from the standpoint of the material senses and not from that of the Christ. Spiritual things are spiritually discerned. Any material concept of them is necessarily theoretical, inaccurate, unreliable, and misleading, and yet people spend much valuable time writing pamphlets and books based wholly upon the testimony of the senses, in a vain attempt to explain away what they imagine to be fallacies in Christian Science. This is nowhere more pronounced than in the effort to explain how Christian Science heals the sick. The evidence is now so overwhelming that people no longer deny that it heals, but they persist in calling upon the physical senses, the very senses that uphold sin and disease, to explain how the healing is done.

If "no man hath seen God at any time" through the physical senses, why ask these senses to explain His healing power? If they know nothing of the Principle, how can they explain its *modus operandi?* They cannot, and those who profess to be followers of him who denied and subjugated the testimony of the material senses surely should not try to prejudice suffering humanity against that Christian teaching which is daily destroying innumerable evil habits, healing so-called incurable diseases, and instructing mankind how to "overcome evil with good" in every walk of life. All who profess to believe in the sacred Word of God should give practical proof of their faith, and not deny Christ's second coming by insisting that God promises no present salvation from disease and death. The world needs the manifestation of that childlike mind which is willing to practise the "Science of good," and thereby prove that evil has neither power, intelligence, nor reality. It is now high time to discard that traditional belief in the so-called "fall of man," and to demonstrate through healing, as did Jesus, that man is unfallen, pure, and holy, the perfect image and likeness of a perfect God. Thus may we prove that the Word is "with power" to heal, bless, and save mankind, and that it is not and cannot be understood or made manifest by the physical senses. The time has come for all professing Christians to know that "the letter killeth;" that only through the demonstration of the power of Spirit in daily living can humanity be benefited and the Word of God be explained practically instead of theoretically. They should recognize "the simplicity that is in Christ," by humbly acknowledging that all power belongs to good, so that they may understand the true meaning of omnipotence and make it manifest through "signs following." It is time to give up that most depressing and ungodly belief in the hereditary transmission of disease, which so many religionists hold to as being one of the inevitable decrees of the Almighty.

"The expression of truth is simplicity," said Seneca, and

it is this simplicity that the world is sorely in need of,—not a passive or theoretical acceptance of the dead letter, but a living, practical demonstration of the power of divine Love to destroy the discords of mind and body. This activity of the Christ-idea is operative to-day in Christian Science, and because of its simplicity the worldly-wise stumble and fall at its very threshold. When their pride of materialism wanes, and they begin to yearn for the bread of life, which the material senses know not of, they will become receptive of spiritual ideas and learn to love Christian Science and its Discoverer.

THE TRUE CHARITY.

ELOISE CAMERON MAC GREGOR.

Blessed are the poor in spirit.—MATTHEW, 5:3.
And he, casting away his garment, rose, and came to Jesus.
MARK, 10:50.

IN our zeal that relatives, friends, or patients learn of Christian Science it might be well to remember the above texts, for until mortal mind is dissatisfied with what it has and learns the inadequacy of its own false theories to save from sin, sickness, and sorrow, it is not yet "poor" in its own sight, but believes itself rich. In a state of ignorance one might believe himself prosperous while accumulating a quantity of counterfeit money; but after repeated attempts to use the money he would gradually become convinced of the fraud, and come to see that the time and effort spent in securing it was wasted.

The story of blind Bartimæus is an illustration. The defective discernment which calls evil good, or matter Spirit, is surely the worst kind of blindness, and after sufficient experience with the suffering resultant from this error we become desirous of knowing the truth. "We cannot fill vessels already full. They must first be emptied. Let us unrobe error, then when the winds of God blow, we shall not hug our tatters close about us" (Science and Health, p. 201).

The name Bartimæus points to a belief in a human origin. Having become painfully aware of the bondage entailed upon such a belief, he was looking to every passing thought, belief, or theory, along the "highway" of human reason, for help. When he heard that Jesus approached he evidenced sufficient appreciation or discernment of that high ideal of good to "cry out" for mercy. Thus, whenever mortal man discovers himself to be the offspring of sense testimony, the result of accumulated material sensations; known as an incurable invalid, a hopeless sinner, or a despairing mourner, and begins to cry out for a higher sense of good, there are usually "many" other mortals standing about, charging him to "hold his peace."

The theological belief that the age of miracles is past, or that one cannot be healed until after death; the ethical belief in resignation and endurance; the social belief in pride or a false humility; public or private opinion; *materia medica*, and the intellectual agnosticism incident to the so-called relativity of Truth,—all would discourage one from attempting to know the absolute Truth which makes free, and would try to dissuade him from coming to the Christ in his distress. When, however, the suffering becomes too great, the inborn faith that good ought to have power begins to rise, phœnix-like, out of the fire of affliction, until we refuse obedience to such restrictive laws or Pharaohs and turn more fully toward Truth, crying out "the more a great deal," in spite of them all, to a clearer sense of God's justice and mercy, made practical for mankind now and here.

We may note that Jesus did not run to meet Bartimæus—"Jesus stood still" in the knowledge of perfect Life, absolute Truth, and divine Love, "and commanded him to be called," regardless of appearing to be uncharitable or unsympathetic. It was the patient, recipient, or beneficiary who was required to make the effort to "rise" up out of his former thoughts and beliefs. The readiness to be healed was evidenced by the willingness to cast "away his garment" of creed, *materia medica*, or mortal mind's so-called intellectuality, because he had learned its inefficiency and nothingness.

Of such a garment Wordsworth says,—

> Why with such earnest pains dost thou provoke
> The years to bring the inevitable yoke,
> Thus blindly with thy blessedness at strife?
> Full soon thy soul shall have her earthly freight,
> And custom lie upon thee with a weight,
> Heavy as frost and deep almost as life!

This thought will help us to see and obey Jesus' reasonable demand that we cast off encumbering thoughts of materiality, that we may "be born again," and so begin, naked and anew, "as little children," under the teaching of Christian Science, to become clothed in our right mind.

It is interesting to observe further that Bartimæus came the entire distance to Jesus. Jesus did not meet him half way nor any part of the way. It is our task to work out the problem every step of the way, being thankful meanwhile that there is a correct solution and victory, not failure, awaiting us at the end.

And Jesus asked him, "What wilt thou that I should do unto thee?" Is this not a great example of abstinence from judging our fellow-men or their needs? How could there be more significant teaching on the denial of sense testimony? Jesus did not say, "You are blind and in need of healing, so that you may see and live on a higher plane of consciousness." If we are blind to this teaching and example of Jesus, we shall have occasion to learn from bitter experience that it is of no avail for us to dwell upon the need of our brother.

It may be well to honestly conduct a bit of self-examination, with a view to scientific discernment of that thinking which is in need of being raised from the deadness of self-righteousness, self-will, and their kin. As we overcome any ensuing sense of discouragement by remembering that the light which uncovers the error will always help us to destroy it, we shall stand more firmly on the "highway" which leads to Life.

So may we follow Jesus in refusing to accept sense testimony because of seeing and knowing the allness of God and the perfection of His creation, until that knowing calls loudly enough through our thoughts, deeds, and daily life to disclose the need of each to himself. Then will the blind thought rise to perceive its own blindness and wish to see God, since "spiritual sight is the discernment of spiritual good" (Science and Health, p. 505).

It is noteworthy that Jesus required further activity. Whereas the blind had been at first sitting, he not only "rose," but "came" up higher, and now he was commanded to go on his way. His cure was explained by Jesus as having been wrought on the basis of that wholesome faith in good which is not tolerant toward evil nor resigned to it, but resists error of every sort.

"And immediately he received his sight." Not immediately upon his appeal to Jesus, but immediately after he had fulfilled all the requirements,—shown in every respect his willingness to obey. And his sight was to see God—to see good as manifested humanly by Jesus, to acknowledge and appreciate it as such, and to exemplify it by following "Jesus in the way."

This indicates our correct relation, not only to Christ Jesus, but also to our revered Leader, whom we love to acknowledge and are striving worthily to follow by obedience, by bringing forth the fruits of the Spirit. The more we strive to emulate the beggar's responsiveness and earnest activity, the more we shall appreciate the unspeakable gift of God through our Leader's patient, unremitting toil in behalf of humanity's beggared and blinded sense of spiritual truth.

"BECAUSE I GO UNTO MY FATHER."

HAROLD BOARDMAN.

THE resurrection of Jesus, together with his subsequent victory over all the claims of the flesh, was followed by a great awakening among his followers. They were aroused to a higher sense of the Divine power, which enabled them to work many signs and wonders, and this in fulfilment of their Master's promise, "He that believeth on me, the works that I do shall he do also." He also said that his disciples were to do "greater works;" but we may ask, When and where have these greater works been done, or even works so great? It remains for Christian Science to answer this question, as well as the answer implied in the words, "Because I go unto my Father."

For three hundred years the pure gospel of Christ which healed the sick, raised the dead, and cast out demons was preached,—a gospel which recognized God, Spirit, as the universal Father and man as His eternal offspring. When the "I," through evil's deception, was to human sense buried again in materiality, and man's true relationship to God lost sight of, the unfoldment of heaven, harmony, as a result of spiritual growth, was arrested, and Christendom lapsed into the very tomb of materialism, out of which it was its Founder's mission to awaken mankind. He said, "I am come that they might have life, and that they might have it more abundantly."

Through the inspired teachings of Christian Science and the faithful labors of its Discoverer, Mrs. Eddy, "Christianity is again demonstrating the Life that is Truth, and the Truth that is Life" (Science and Health, p. 97). This priceless Gospel has gone across the ocean, and, thanks to divine Love, England has caught the Christ-spirit, so that to-day, even in its remote country districts, there are witnesses who can testify to its "Christlike benedictions" in the healing of sickness and human woe.

It will not be unprofitable for us, as individual Christian Scientists who are just beginning to understand and appreciate the mission of Christ Jesus, to take a lesson from the past experiences of humanity. Having made some progress along the line of spiritual growth, are we waking more and more to the demand of Truth,—"Be ye therefore perfect, even as your Father which is in heaven is perfect,"—or are we falling into a state of self-complacency or of satisfaction with a small measure of joy in the risen Christ? Do we retain the enthusiasm which attended our first awakening and does the pearl of great price seem to keep its lustre for us? If otherwise, then the deception which would cheat us of our rightful inheritance as sons of God needs to be uncovered, lest the "I" of man's true individuality no longer rest in the true consciousness of Life as Spirit.

In the Gospel story relating to our Master's crucifixion and resurrection, the chief priests and Pharisees speak of Jesus as "that deceiver," and implore Pilate to make the sepulchre sure, lest his disciples come by night and take him away. In the following chapter we read of these same priests, together with the elders, bribing the soldiers who watched the tomb to bear false witness against the risen Master. Here were the very men who considered themselves the guardians of the Divine law, rejecting and crucifying the most able exponent of its letter and the most faithful demonstrator of its truth.

To what extent has the deception referred to above succeeded? What success would attend any effort to resuscitate such a lie? The Christian would scorn to be duped by a deception so palpable, and yet as Christians, or Christian Scientists, it would be well to challenge our loyalty to our Master and see how much of the fuller joy in the resurrection we are allowing ourselves to be deprived of. So long as error shows itself in its false colors we recognize it as such and as a consequence keep clear of it, but when it comes to us clothed in the borrowed garments of purity, and with the universal sanction and approval of the ages as its credentials, we are not so ready to repudiate its claims. Perhaps we give it pause, and instead of banishing it from our doors at the very outset, we take it in and give it house-room.

As professed followers of the meek and lowly Nazarene let us examine ourselves in the searching rays of Truth revealed in Christian Science, that we may see how much there is in us of love and true witnessing to God's perfect Son—to the risen, living, and ever-present Saviour! By means of this light the mask of error is removed, which is then seen to be a false witness against God's allness and His perfect reflection in man. Christian Science not only reveals the glorious future in store for the one who earnestly and persistently strives to realize its present possibility, but it also enables him to unwind the grave-clothes of error, hatred, and lust which would deprive him of his spiritual birthright,—of purity and Love. In Christian Science we learn how the false claims of sin, disease, and death are to be overcome, instead of accepted as realities; then we strive to prove their unreality and thereby strip them of their boasted authority. The teaching of the Christian Science text-book pours a flood of light upon its students, unmasking all of error's deceptions. Does the reader hold to a belief of a mortal selfhood? If so, then will he see how the five senses are the false witnesses which testify to the reality of that which "deceiveth the whole world," the one lie or "devil" in whose service are these five false witnesses, testifying as they do to the reality and substantiality of matter and its beliefs; of man as deriving his selfhood therefrom, and subjected to sin, disease, and death.

The atheistic character of the five physical senses was brought home to the writer by the following question, which he was once asked by one of his pupils: "If God is everywhere, why can't we see Him?" Instead of testifying to the perfect man of Spirit's creating, these senses testify, as they are bound by their very nature to do, to the opposite of God's creation. Christian Science teaches us that when we are tempted to accept the testimony of these false witnesses regarding the reality of sin, disease, and death, we should steadfastly maintain God's allness. Where is God? Either God is true, or this sense testimony; which shall it be? "Let God be true, but every [mortal] man a liar." The knowledge of the unseen, which St. Paul speaks of as eternal, the consciousness of good, reveal man's immortal, perfect selfhood, like the risen Christ, the idea of Spirit; never buried in the beliefs of the flesh, but eternally free and testifying to the undying realities of Spirit.

Having realized in some measure the joy of the risen life,—of life in Spirit,—should we not willingly relinquish that which is seen to be only an obstruction to the fulfilment of a higher, deeper, and fuller measure of joy and happiness? Our dear Leader thus speaks of the breaking down of this obstruction: "The lust of the flesh and the pride of physical life must be quenched in the divine Essence,—that omnipotent Love which annihilates hate, that Life which knows no death" (Unity of Good, p. 49). When the Adamic "I" of personality, caste, creed, or nationality is seen to be only an obstruction, witnessing for the truth of that which we are seeking to eliminate from our consciousness, we shall understand what Jesus meant when he said, "Blessed are the meek: for they shall inherit the earth;" and again, "He that loseth his life for my sake shall find it." Then will the "I" ascend unto the Father and the individuality and brotherhood of man be forever preserved in Divine Science.

INDEX TO VOLUME VIII.

SELECTED ARTICLES.

KEEP THE IDEAL IN VIEW.

We have carefully gone over your editorial termed "Truth and Error in Christian Science," in the issue of June 23, and it seems to us that what you have named as its "errors," are not real objections, in view of the fact that the classification is based upon misapprehensions of the subject rather than upon the actual teaching of Christian Science.

For example, you assert that "the body is real," that it is not "imagination." Since you have not expressly stated it, we are left to assume that you do not understand what Christian Science gives in place of what it repudiates. This Science does not teach that man is an illusion, but that he is spiritual and not material. It teaches that everything in creation, from the least to the greatest, is real, though it differs from material-theory affirmations concerning the nature of creation. The word real, in Christian Science, applies only to that which is eternal and incapable of change and decay.

Sin, in a generic sense, includes all evil thoughts, words, and deeds, and these are prompted and perpetuated by a false sense of God and the universe, including man. The struggling mortal oftentimes feels an unnatural restraint. He seems to be conscious that he really owns a larger individuality than that which he experiences, hence we sometimes hear it said, "I am not myself to-day." One should understand that man's real self is the likeness of God, and should awaken to this true selfhood by deporting himself in accordance with this spiritual understanding; therefore he should refrain from everything that is not Godlike. Such practice will not "produce sentimentalism and effeminacy," but a "clear intelligence" and a vigorous manhood. The Christian Scientist does indeed think that God is Love, and his conduct must be in keeping with his correct thinking, in order that he may possess the spirit, or realization, as well as the letter of the Science.

We shall not attempt to estimate to what extent a given Christian Scientist may "conquer the cold in zero weather" by "a counteracting thought;" but we believe our critic will agree with us that the individual who measures up to the full stature of spiritual manhood, and who, while fulfilling his Christian duty, is able to lay hold unreservedly on that divine protection which is assured to all those who have sufficient realization of the divine presence, would be immune from any evil effects even of the most trying ordeal. Man *in the likeness of God* can no more be affected by the elements than can his Maker.

While the Christian Scientist "warms his house like the rest of us," he does not thus act contrary to the example of our Master, who, under given circumstances, said, "Suffer it to be so now." The Scientist accepts the Scriptural promises of future deliverance from all evil and discord when he shall have entered into that perfect state which is assured to all those who "overcome." To cease eating, or to be daringly indifferent to extremes of temperature, would be to precipitate the necessity of overcoming the mortal law of death a long time before he is prepared to enter upon such an undertaking, and wisdom would not counsel this course.

Christian Science appeals to us as it finds us to-day, and impels us not only to the attainment of the highest spiritual life, but also to a wise consideration of the powers that be—a wise attitude toward and control of the conditions of material belief in which it finds us. Therefore a consistent Christian Scientist will be rational and not fanatical. He understands that he must creep before he can walk. He attempts only that step which is immediately before him, realizing that the perfect state must be gained by gradual growth, not by leaps and bounds.

Christian Scientists are well aware that in their present immature state of thought they are obliged to indulge in many practices which will not be needful to the perfect man; but they are taught that they should ever keep before them the perfect ideal, and strive to reach it as rapidly as possible.

ALFRED FARLOW.
The Outlook.

As yet the Christian Scientists of Southport, England, are keeping their candle beneath a bushel. They choose to do their good deeds in the dark rather than parade them in the open street. They go about in silence, following in the footsteps of him whom they take as their pattern, but wherever they go they inspire all with faith, leave the doubting heart believing. "Heal the sick" is their golden motto. They live again in the days when Christ gave the gift of healing to his disciples—a gift which has been lost through lack of faith. They believe that the power of Christ is as strong to cure now as it was before he ascended unto his Father, and that all who come to him with the faith of the woman who touched the hem of his garment, will be made whole. According to their doctrine a painless world is then within our reach—a beautiful perfect world in which there will be no need for sympathy, for suffering will not exist.

In the treadmill of every-day life, however, far, far above the suffering of the body comes the suffering of the mind; distractions, vexations—a hundred thousand worries. Tempers of our own as well as other people's dull the bright eyes of happiness when she is closest at our side. It is then that we need Christian Science, then that we need a perfect faith in God, then that we want the patience from above, the trust, the assurance that will go with us into life and make us look straight onward through a hopeless mist, with the continued consciousness that as Christ answered the prayers of all when on earth, he is just as powerful to answer them now. The Christian Science churches always give one a sense of rest. The hymns the congregation sing are of love and joy. The prayers are full of trust, and the people one meets there have happy faces—faces like those who are the true reflectors of the sunlight of God's love.—*Ormskirk* (England) *Advertiser.*

Referring to our critics' endeavor to test the power of Christian Science healing by seeing a so-called miracle performed, we can only say that if any one desires a proof that Christian Science can heal any or all diseases of mankind, even so-called incurable diseases, the opportunity is given to all to gain the spiritual understanding of Mrs. Eddy's teachings, the application of which enables one to destroy all manner of evil and to bring to light the truth of man's being, wherein man has dominion over all the earth. But the spirit of humility, honesty, and unbiased Christian thought must accompany every effort for scientific demonstration, and with this honest purpose the student will have the witness within himself that Christian Science heals both sickness and sin. The proof of the truth of the Christian Science doctrine is available to any one who will take up the cross and through self-denial practise the rule of Christian living as demonstrated by Christ Jesus. No amount of adverse criticism or unfriendly argument can overthrow the evidence of the practicability of Christian Science as witnessed in the lives of its followers, who are daily proving its power to heal sickness, destroy sin, and overcome all discord.

AMONG THE CHURCHES.

ADVANCE IN ST. LOUIS.

[The following expression of the spirit of true Christian brotherhood was read from the platform in First Church of Christ, Scientist, St. Louis, Mo., Sunday, May 20, 1906. Since that time Third Church of Christ, Scientist, has been formed and has commenced its work under most favorable auspices.—EDITOR.]

In the course of the natural growth and extension of the Christian Science movement it becomes necessary from time to time to form new churches. In the city of Chicago, where a few years ago there was but one church of our denomination, there are now six organizations, formed one after another from the membership of First Church of Christ, Scientist, of Chicago, for the purpose of establishing Christian Science churches in various parts of the city. All of these bodies of Christian Scientists, as they have gone out into their several localities, meeting at first in halls or in rented churches, have greatly prospered, and four of them, in order to meet the needs of their growing congregations, have erected commodious and beautiful edifices, so that there are now five Christian Science church buildings in Chicago, each of them seating about fifteen hundred persons.

The room in First Church made available by these departures has soon been filled by earnest inquirers, and it is rumored that a seventh church is soon to be formed. The stately progress of the movement in our sister city furnishes a most valuable object-lesson and illustration of church extension in Christian Science, which is brought about solely by the healing of the sick and the reformation of the sinner.

In our own field we now have two church organizations, —this church in the central west-end, and Second Church, conveniently located to meet the needs of the section of which North Grand Avenue is the center, which now holds its services in the Odéon Building.

For several years it has been apparent that in the orderly expansion of our Cause a church would be established on the south-side, not only for the accommodation of our members living in the southern part of the city, but in the missionary spirit of spreading the gospel of Christian healing. Ever since the dedication of this edifice this thought has found frequent expression. While this building was being erected, and until it was fully paid for, our members from all parts of the city lovingly and loyally stood together to complete the demonstration of harmony and abundance, before taking steps to establish another church. During the past few weeks meetings have been held for the purpose of giving prayerful consideration and full discussion to this important subject, with the result that our members residing south of Chouteau Avenue have decided to form a church to be known as Third Church of Christ, Scientist, of St. Louis. They desire it to be announced that a meeting for the purpose of organization has been called for Tuesday evening, May 22, to be held in the Sunday School room of this church, and that any Christian Scientist desiring to join in the organization will be received as a charter member provided he has been a member in good standing of some other Church of Christ, Scientist, and shall bring with him a letter of dismissal from such church, issued within six months previous to its presentation.

I am informed by the clerk of this church that fifty-eight of our members have applied for letters of dismissal for the purpose of participating in the organization of Third Church, and that these letters will be issued to-morrow, so that their formal membership in this church will cease after to-day. I know that I am but faintly voicing the affectionate regard of the members of this church and congregation when I say that while we rejoice greatly with these dear friends, brethren and sisters in Christ, in the grand step they are taking for the furtherance of our God-ordained Cause in this community, we can but contemplate the severance of this formal relation with a feeling akin to sadness. Some of you whose membership in this church is about to cease were among the fifty who organized this church twelve years ago; many of you were members long before we left the dear little church on Pine Street, with whom we have walked side by side for many years in loving Christian fellowship. There will be vacancies in our Board of Trustees and in our valued corps of ushers, and twelve of our Sunday School teachers and the assistant superintendent of the Sunday School are among those who are leaving to take up their work in Third Church of Christ, Scientist, in St. Louis. We shall miss your bodily presence, but our steadfast prayer will be with you, as yours with us, knowing that "to them which are in Christ Jesus" there can be no separation.

UNION OF CHURCHES IN WATERLOO, IA.

We feel sure that the workers in Christian Science throughout the Field will rejoice with us to know that the greatest demonstration yet made in Waterloo was completed June 10, the day of the dedication of the Extension of The Mother Church, when the congregations of First and Second Churches met together in unity as one church after a separation of nearly four years.

Surely God was in our midst, and the rejoicing and tears of thanksgiving were evidence of the willingness on the part of every one to sacrifice personal belief and sentiment for the good of the Cause in Waterloo.

First Church expressed by a letter a desire on their part for a union and a willingness if necessary to disorganize their church and do all possible to bring about the harmony which is Christian Science. Second Church unanimously accepted their invitation to unite, and each church dissolved and reorganized into First Church of Christ, Scientist, of Waterloo. This meeting was very harmonious. Readers were elected; those who had recently been elected to read in Second Church being the unanimous choice as Readers for one year. Articles of incorporation and by-laws have been adopted.

At our first Wednesday evening meeting many testified to the goodness of God and their gratitude to Him, and to our dear Leader, Mrs. Eddy, for making possible this demonstration which joins us in loving union with God and each other. We know our Cause will now prosper as never before in this place.—MRS. MARY E. YOUNG, *Clerk.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A CHURCH BY-LAW.

ARTICLE XX.

TESTIMONIALS.—SECT. 12. "Glorify God in your body, and in your spirit, which are God's" (St. Paul). Testimony in regard to the healing of the sick is highly important. More than a mere rehearsal of blessings, it scales the pinnacle of praise and illustrates the demonstration of Christ, "who healeth all thy diseases" (Psalm 103 : 3). This testimony, however, shall not include a description of symptoms nor suffering, though the generic name of the disease may be indicated. This By-law applies to testimonials which appear in the periodicals and to those which are given at the Wednesday evening meeting.

APPRECIATION OF THE NEW BY-LAW.

[IMMEDIATE and hearty appreciation of the new By-law regarding testimonials is manifest on every side, and this appreciation is so well expressed in the following letter to Mrs. Eddy that we are glad to give it this prominent place. —EDITOR.]

Braintree, Mass., Aug. 22, 1906.

Beloved Leader:—The new By-law on "testimonials" has already accomplished wonders in thought, although this is the first Wednesday since its publication. Your marvelous wisdom is again seen, and the song, "What a Leader! What a Leader!" sings itself in my heart continually. We long to understand and obey you, and I believe this new command falls on listening ears and longing, loyal hearts. I thank God, and feel with others a new life and impulse for our dear Wednesday evening testimonial meetings. God bless you, dear Leader and Teacher!

With deepest love, your student,

HELEN A. NIXON.

"THE THINGS THAT BE CÆSAR'S."

IF we may judge by the numerous circulars received by them, Christian Scientists are generally regarded as more than usually well supplied with money and quite willing to part with it on slight provocation, and as these circulars frequently bear the name of some one who thinks himself entitled to write C. S. after his signature, they may receive more attention than they otherwise would. In view of this, and of the large number of comparatively new Christian Scientists who might be unduly influenced by these circulars, we have concluded to republish once more our editorial from the *Sentinel* of Feb. 12, 1903, which was as follows:—

"Some of the practitioners whose cards appear in the *Journal* complain that they frequently receive letters and circulars soliciting them to purchase merchandise, subscribe for the stock of newly organized corporations, embark in real estate speculations, and in various ways engage in business enterprises of which they have no information other than that the authors of the letters and circulars claim to be Christian Scientists.

"It is not our purpose, nor do we understand it to be within our province, to inquire into the merits of these enterprises and pass upon the status of those engaged in them, although we are sometimes solicited to do so, but we think we may be permitted to state that practitioners do not insert their cards in the *Journal* in order to receive these business propositions, and if we may judge of the feelings of all by the letters received from a number, the communications are not acceptable to them.

"If we may offer a word of advice to our friends who send out these letters and circulars, it is that every business proposition should stand upon its own merits, and that the promoters of an enterprise are liable to be honestly mistaken in supposing that it is one to be certainly successful and extremely profitable. In case of failure we feel sure that they would be considerably chagrined by the recollection that in urging others to invest their money because they are Christian Scientists, they had made use of an argument which placed the transaction upon the plane of sentiment instead of deliberate business judgment. There is a radical difference between the taking of our religion into our business and the taking of our business into our religion, and if we abstain from doing the latter we shall not be subject to the criticism that we are making merchandise of that which is most sacred.

"To our friends who are in receipt of these communications, it may seem needless for us to say anything further, but we shall hazard the advice that every business proposition should be capable of surviving thorough investigation, and that such investigation should be made before money is invested in any enterprise; also that when the surroundings of a proposed investment are such as appeal to sentiment, this should not be allowed to weigh against the facts that may be ascertained through careful inquiry.

"To those who are without business experience, and especially to those whose limited capital is necessary to their support, we suggest that the uncertain hope of large returns from untried and immature enterprises should be discarded in favor of the certainty of established conservative investments, wherein safety and permanency are the controlling factors, even if the promised return seems small."

ARCHIBALD MCLELLAN.

THE HONEY-BEE.

JOB was speaking to a self-appointed critic when he said, "Ask now the beasts and they will teach thee, and the fowls of the air and they will tell thee;" but in addition to the rebuke thus administered, his words convey a suggestion of the range and value of the wisdom which may be gained by thoughtfully interrogating the gentle creatures so often chanced upon in our daily walks.

Of these, none are more interesting than the busy little worker who flavors the summer day with a quieting hum as he hastens from one flowery threshold to another. His industry and unselfishness are proverbial, while the directness and intelligence with which he pursues his high emprise, his manifest freedom from all uncertainty as to what to do and how to do it,—these also appeal to our thought. They make us see with greater clearness what it would mean to our lives were we ever guided by that individual and immediate apprehension of truth which is made available to us in Christian Science, and the practical significance of which is so happily illustrated in the life and doings of our wise little friend. He too must sally forth into a wilderness of conflicting appeals, but he claims for his own only that which is sweet and fragrant. He is not confused or led astray by the things that yield no honey, as are we, nor wastes he one moment upon them. He troubles himself not at all with the affairs of others withal, and he appropriates his own good alone. Bravely and cheerily he passes from blossom to blossom, finding the full measure of his nature's satisfaction and laying by an abundant store of good for himself and for all.

Now it is apparent that though the bee were ever so earnest in his efforts, they would avail him nothing apart from the wondrous instinct by which he finds the scented "highways of the air" and follows them to his goal. It is

Digitized by Google

the guidance of an unerring sense which alone insures the success of his endeavor and so completes his life. And how true is this of men. How futile their aspiration and their struggles, so long as their sense of truth is uncertain and indefinite; and what of real good have they ever accomplished apart from that spiritual knowing which, as Jesus said, is to give mastery, "make free." The teaching of Christian Science rings true. Spiritual intuition must be as native to man as is instinct to the bee; as dominant in life's activities as it is essential to life's completion.

To one who had evidenced the possession of this sense, Jesus said, "On this rock will I build my church;" and he thus indicated the supreme significance he attached to that knowing of good alone which is man's high prerogative and inheritance, the basis and means of every true overcoming and attainment. Possessing it, we correctly diagnose human experience and conditions, apprehend and rightly divide the Word of Truth, steadily maintain our ascending course, and gather our abundant store of the true riches.

To "know as we are known;" to discern ever and instantly the blossomings of Truth and Love,—of the real good and beauty; to escape from the realm of mental distraction and uncertainty, and find in every hour and every experience the unerring guidance of an intuition that is divine,—this is the inspiring ideal of the Master which our Leader has again brought to men in the teaching of Christian Science; and well may they rejoice who in "the signs following" have assurance that entrance has indeed been made upon its attainment. For them

> The spiritual significance burns through
> The hieroglyphs of material shows,

and

> No lily-muffed hum of summer bee
> But finds some coupling with the spinning stars.

JOHN B. WILLIS.

AN ERROR CORRECTED.

IT has been reported that "Christian Scientists from various parts of the United States and Canada are perfecting plans for the establishment of an International Summer Residence and Assembly Park," but we can say authoritatively that there is nothing in this report. An enterprise of this kind would be entirely foreign to Christian Science methods and there is no need of an Assembly Park or parks for Christian Scientists. What we need is more spirituality, and power to resist evil. "Resist the devil and he will flee from you. Draw nigh to God, and he will draw nigh to you" (James, 4 : 7, 8).

The members of the Publication Committee are requested to send to the editor of the *Sentinel* clippings of all their letters and articles which appear in the press, also clippings of other newspaper articles and editorials which mention Christian Science in an interesting way.

LETTERS TO OUR LEADER.

Pasadena, Cal., Aug. 1, 1906.

Dear Mrs. Eddy,

Beloved Teacher:—The words written by your hand to Miss Campbell bring tears of gratitude to my eyes. How wonderful that your love thoughts not only go out helping all humanity, but that they are for your students individually. Your watchful love urges me on to better endeavors, more devout prayers, and more diligent study of your teachings, which open and pave the sure road heavenward. Deeds, not words, must prove my gratitude.

In 1901, through your kindness, I took a course in the Massachusetts Metaphysical College under Mr. Kimball's teaching. The blessings which have unfolded to me from that class instruction have been without number. They have multiplied as I have used them and given them to others.

Since last January Mr. Conger has been under Christian Science treatment and he has been making a diligent study of your writings. He often says, "I wish to be and am striving to be a good Christian Scientist." He surely is greatly in earnest. I am happily looking forward to the time when he can take class instruction. My privileges and opportunities have been many and rich with blessings. Lovingly and patiently I have waited for my dear husband to join heart and hand with me in the study of this blessed truth which you have revealed to suffering humanity. Now my grateful rejoicings are almost beyond bounds. Mr. Kimball's positive convictions impart an understanding that remains steadfast with the partaker of it.

With heart full of love I earnestly thank you, and through you I am able to know better how to give thanks to the All-good. Affectionately,

SARAH PIKE CONGER.

St. Joseph, Mo., Aug. 9, 1906.

Mrs. Mary B. G. Eddy.

Dear Leader and Teacher:—Pardon me for taking your time, but I wish to tell you that since I attended the dedication in Boston, June 10, I have had much to do and much to think of. What I then saw and heard caused this, and I have since seen, as never before, how we have failed to be grateful enough, or to appreciate what God through you, His servant, has been doing for us, and I have been praying that I might be more grateful and that this gratitude might have its manifestation. Every line of Science and Health and all that you have written is calculated to awaken mortals; first to see what they have *not*, then to see that they have all.

Your Message to the members of The Mother Church, June 10, never was more powerful and therefore effective; this, followed with your article in the *Sentinel*, "Personal Contagion," has laid error low, and yet so lovingly that the spiritually-minded have loved you all the more.

You have surely fulfilled the Scriptural command to "reprove, rebuke, exhort with all long suffering and doctrine;" "instant in season."

Truly the completion of the Extension of The Mother Church has begun a new era. Your beautiful demonstration, and the faithful work of our Board of Directors and the wise helpers at headquarters, have inspired every faithful one and given our beloved Cause a wonderful forward movement.

May God bless you and comfort you on every side is my daily prayer. Your grateful student,

CHARLES M. HOWE.

Lower Cabot, Vt., July 29, 1906.

Beloved Leader:—If in your wisdom you had deemed it wise, I could have wished you to be present on that last Communion Sunday of The Mother Church, for I know it would have cheered your heart and brightened your hope for humanity as you looked out over that sea of uplifted faces both within and without the beautiful temple, and realized that the lives of all these had been touched by the Word revealed to the world through you in "Science and Health with Key to the Scriptures." I am learning, as never before, that Christian Science demands work within one's own consciousness—that there the false and unideal must be subjugated and depravity cast out; then in realization and demonstration will our names be written in "the Lamb's book of life"—then will individual consciousness be revealed, pure, holy, incorruptible, and uncontaminated by fleshly sense. I remember so distinctly the lesson you taught me when I last visited you, and I am daily striving to put it into practice and, through Christ, to win the goal.

With loving tenderness and gratitude,

Your student,

ELLA LANCE WILLIS.

Eau Claire, Wis., July 27, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the students of Miss Laura C. Nourse, C.S.D., of the Students Christian Scientist Association of Eau Claire, Wis., in eleventh annual session, unanimously desire to send greetings to our faithful Leader and Guide. Words are inadequate to express our deep sense of gratitude and appreciation to you as the Discoverer and Founder of Christian Science, revealing to us and to the world this priceless pearl whereof Jesus said, that when a man found it "he went and sold all that he had, and bought it." In this hour of loving counsel from our teacher we consecrate ourselves anew to Truth's work; "to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure" (Science and Health, p. 497).

Lovingly and gratefully,
REV. B. E. OLIN.
MRS. ALICE G. MCRAE.
MISS CLARA NORCOTT.
For the Association.

Salamanca, N. Y., July 6, 1906.

Mrs. Mary Baker Eddy, Concord, N. H.

Beloved Leader:—For a long time the well-springs of gratitude have been flowing gently forth, and I have longed to say to you that I love you and thank you for all you have done to lift me heavenward. Science healed me of kidney trouble and the drink habit. I was made physically well and morally better, but what shall I say of the spiritual uplifting, of the peace and joy, and of the incentive to better living that has come to me through your teaching? You have awakened a desire in me to know God. My heart is ever reaching out for more and more of Love's unfolding. With the psalmist I realize "how precious also are thy thoughts unto me, O God! how great is the sum of them!"

Again let me thank you for the revelation of Truth which has come to me through your writings. My heart will ever breathe its "God bless you!"

Very lovingly yours,
ABRAM COOK.

Kansas City, Mo., Aug. 2, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Great, Gentle Leader:—The glow and reflection of your teaching about personal worship, published in our *Sentinel*, —the call, and the loving "Here, Lord, am I," has brought those who hear far heavenward. It is in the proof of our Saviour's promise, "He maketh his sun to rise on the evil and on the good." For the revelation of your God-crowned leadership, and your God-crowned following, we are truly grateful, for in the infinite mercy of our great God, Love, not one wrangling, ungrateful, disobedient thought is left to your followers in the ranks.

Faithfully your student's student,
ADELAIDE W. VEAZEY.

Winsted, Conn., July 26, 1906.

My Dear Leader:—I wish to express something of the appreciation and gratitude I feel for the article "Personal Contagion." It has uncovered to me a new series of cause and effect in the mental realm, and made plainer to me than ever before the sin of a belief of a personality. I wish to thank you, also, for the beautiful letter of Mrs. Conger's which you gave for publication some time ago.

Yours gratefully,
MRS. MARY B. WOODWORTH.

TESTIMONIES OF HEALING.

When I was a young girl a very severe nervous affection came upon me, and I was kept at home from school. Physicians were employed and their directions were faithfully followed, but the trouble grew no less during some four years and the most trusted physician gave no certain prospect of health. Then my mother took me to a Christian Science practitioner for treatment. A few months later it was decided that, as I had had no further attacks, I was able to attend school in a neighboring city. At first I went only one, sometimes two days a week. The following year I went oftener, and the next year every day. The Christian Science treatment was not of long duration. There was in two years but one more attack of the trouble, and gradually the fear of it was forgotten.

Fully five years later I needed to demonstrate the truth for myself. I was alone in my studio, writing a business letter. For two days I had felt uncertain as to which one of two things would be nearest right in a new business proposition. Suddenly my thought became confused, and I began to fear my former enemy; but quicker than thought could be put into words, this line from the Scriptures came to me: "Be not entangled again with the yoke of bondage." Instantly there was freedom! Love was then and there found to be the "master of hate" (Science and Health, p. 44). Without a moment's loss of time the business letter was completed in absolute clearness as to what was right to say and do. This incident occurred over six years ago, and there has been no trouble of that kind since then.

From early childhood I had a great fear of dogs, and often went a long way to avoid passing a house where I knew one was kept. After I had learned something of Christian Science, a good-sized dog ran out at me from a house near my home, but courage came to me in fuller measure than ever before, for there was a certainty that God is ever with His children. When I reached home I knew that a victory had been won, and a normal, happy liking for dogs has taken the place of dread of them.

A realization of the meaning of the first three lines of the Lord's Prayer, with their spiritual signification as given in Science and Health (p. 16), relieved me in a few minutes of an intense attack of the grip. A chronic affection of the throat disappeared without especial treatment. In July, 1905, during an ocean voyage lasting twelve days, seasickness, from which I had suffered on a previous voyage, was wholly overcome through absent treatment and through the help I derived from the current Christian Science Lesson-Sermon.

Great happiness has come to me from telling what I know of Christian Science to those who have asked about it in looking for something better than they have known. Science and Health opens the Bible as the right key unlocks a treasure-box. The author heard the voice of Truth, recognized it as such and followed its leading, and for this Christian Scientists love Mrs. Eddy.

FLORENCE BECKER, Hackensack, N. J.

I wish to offer my testimony with loving gratitude for what Christian Science has done and is doing for me. In the summer of 1897 I was taken with a fever, after which I suffered for six years with a nervous trouble and a complication of diseases, till mentally and physically I was wretched. Several specialists were consulted, various kinds of medicines were tried, but all to no avail. My last hope, that I might try Christian Science treatment, was shattered on being told by some one that I could not be benefited as I did not believe in God. I groped in the darkness of despair until a friend told me how she had been saved from the grave by Christian Science treatment. This gave me new hope, and *Sentinels* and *Journals* were given me to read. Finding the name and address of the

Digitized by Google

nearest practitioner, I soon went to her, and a few hours later I left her house feeling as if I had never had a sick day in my life. I soon did work I had not been able to do for years, and with no discomfort.

While staying in town I arose one winter morning with an awful sense of pain. I said nothing and went to my work, but during the day my illness increased, and in the evening the lady of the house sent for a practitioner, who was soon at my bedside. In less than a half hour I was well. The next morning I awoke refreshed from a good night's sleep.

Christian Science has brought more to me than mere physical healing. Words cannot express my gratitude for the spiritual awakening that came with the healing. Truly we owe our beloved Leader, Mrs. Eddy, a life of endless gratitude for the revelation of this saving truth.

LENA MAURER, Keighley, Kan.

I give my testimony with great pleasure and a very thankful heart, that others may know what Christian Science has done for me. I tried Christian Science treatment several years ago, but did not seem to be benefited. Four years ago, after having suddenly lost my mother and father and having met with financial troubles, I had a severe fever, and was in a hospital for weeks. I went to Gorham, N. H., with my sister and family, thinking the mountain air would benefit me, but my physician thought the altitude was too high and advised me to leave. I then went to Washington, and took treatment for three months from a prominent physician, but his treatment only relieved me temporarily.

In August, 1904, I had a slight return of fever, and took treatment from a doctor for several weeks. Later I joined my sister in Iowa, and was in miserable health all winter. I was again under medical treatment, but was not helped. In March, 1905, I expressed a desire to try Christian Science treatment. We were then almost strangers in Iowa, and I did not know where to find a practitioner, but divine Love led me to one, and through her spiritual understanding of Truth I was healed in five weeks. I had worn glasses eight years for serious eye and nerve troubles, but after the third treatment they were put aside. I feel that I can never be thankful enough to God, and to our dear Leader, Mrs. Eddy, for what Christian Science has done for me. Not only am I thankful for the physical healing, but also for the spiritual uplifting. I love to remember that God is Mind, and not limited, and that God is Love.—SALLIE STANSIFER, Cedar Rapids, Ia.

Three years ago it did not seem possible that I would ever possess two of the things which I had always desired, —health and happiness. As a child I had always been unhappy and my health had always been miserable. Aside from this, I do not think that any one has ever been troubled with a more irritable disposition than seemed to cling to me, but people had said that this was on account of my having such poor health. I first went to a practitioner upon the earnest request of a friend who had recently become interested in Christian Science and who had already received some benefit. I went merely because she assured me it would help me, and not because I had any faith in it. I knew that the doctors had not helped me permanently, and in fact I had stopped going to them. I did not want to think of Christian Science except in connection with my healing. I did not want to accept it as a religion, but I wanted to be well and have a good time like other girls.

I was completely healed of an extreme nervous condition during the first week's treatment, and it was really wonderful to realize how many other ailments which had troubled me were gradually swept away. Among other things which seemed to cause me considerable annoyance was that for several years I had suffered greatly from an eruption, and before coming into Science I had tried almost everything that people had told me would help me, but all these things had proved of no avail.

It was over a year before this trouble left me permanently, but when I was willing to give up my pride and sensitiveness and to get right down to hard study, the desire came not only for healing but for the Science itself, because I realized it as the truth which Jesus had taught and demonstrated, and I was healed. I now feel that this is one of the things for which I have most cause to be thankful. My healing was slow in this respect, but it made me stronger in the Science and more willing to study. I think I realized as never before that we must work out our own salvation, and while others are able to help us, they cannot do our work for us,—we must do it ourselves.

To say that I am grateful for the knowledge I have of Christian Science but mildly expresses the gratitude I feel. I am very thankful to Mrs. Eddy, through whom Christian Science has been given to a world hungering for the truth. I trust that I may let my light so shine that I may be able to help others to understand Christian Science, and in this way prove my gratitude.—HELEN F. MONROE, Chicago, Ill.

With a heart overflowing with gratitude to God, and to our beloved Leader, I feel I must write what Christian Science has done for me and mine. In looking back, I find that each day is indeed big with blessings for me, when I think of what was and now is. I was an invalid and under the care of physicians for many years, suffering daily, never being free from pain for a single instant. I had had this trouble as long as I could remember; then when my son was born, other conditions arose which I was told made an operation necessary, and this being my only hope of ever becoming a well woman, I consented to it.

It is now over nine years since my dear mother was healed in Christian Science. At that time I was preparing to enter the hospital for this operation, but seeing her wonderful healing, I wondered if I too could be healed, for I dreaded an operation. My joy may be imagined when I was told that Christian Science could heal me. I felt it was the truth, and although knowing nothing about it, I believed, and in three months I was healed. Words are inadequate to express what I feel, never having been able to do or enjoy anything, and then at the end of three months to find myself well, free from pain, free to do everything I had longed to do and far more; to be satisfied, contented, happy all day long; no more crying or wanting to die, but a longing to be better, to do better, to improve my time in understanding that which had made me well.

This did not come all at once, but by constant study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have thus been learning my relation to God, and my one desire is to be about my Father's business.

We have had many proofs of this blessed truth. My son suffered from a rupture, and every year he had to be fitted with a new truss, but after my healing, my husband suggested Christian Science for this trouble. Treatment was given and he was entirely healed; the truss was never used again. This was nine years ago. All I am and all I enjoy I owe to Christian Science. For all these blessings my husband and son join with me in unity of thought and purpose.

HELENA G. SEEGERT, Chicago, Ill.

Nearly seven years ago I entered the Christian Science church in Denver, Col., a broken-hearted woman, as I then thought. It was Communion day, and Mrs. Eddy's hymn, "Saw ye my Saviour?" was sung. The second verse appealed to me, especially the line, "Love wipes your tears all away." My first thought was that if I could bring

Digitized by Google

even one to this fountain, I would be satisfied. I am glad to state that through Christian Science I have been able to help the broken-hearted and heal the sick. Since coming into Christian Science, the blessings that have come to me could not be counted. I was healed of a chronic disease of the bowels, also chapped hands, by reading Science and Health. I came into Christian Science for peace of mind, but I was considered a very delicate woman, my weight being only eighty-five pounds. My health is now good, and has been ever since I commenced reading Science and Health. All that I am I owe to this blessed truth. I receive much benefit from the *Sentinel* and *Journal*.

I can express my gratitude to dear Mrs. Eddy only by living what I profess—by being a Christian Scientist.

MRS. ELIZABETH MCMANIGAL, Witchita Falls, Tex.

Christian Science has done and is doing so much for me and my family that I feel I must express my gratitude, not only to God, who has given us this wonderful gift, but also to our revered Leader, Mrs. Eddy, whose love and devotion have led us out of darkness into light, and who is constantly admonishing us to follow in the steps of the beloved Master. I have had many wonderful demonstrations. My husband came home one day, suffering intense pain in one eye. I declared the truth as we are taught in Science and Health, and within half an hour the suffering ceased, and at night he declared that the eye was well. Thirty-five years ago he had been afflicted in the same way; the same eye had caused untold suffering and much expense for months, in the Ear and Eye Hospital in Brooklyn, N. Y. Because of this experience his fear was very great when the same trouble again presented itself, but it was at once overcome by the truth.

I thank God that we are thus learning to know the power of divine Love, and my desire is ever to realize the Christ-mind for myself and others. The literature of The Christian Science Publishing Society has been such a source of help to me that I feel impelled to send this testimony.

MRS. MARGARET O'BRIAN, Independence, Ia.

I have long felt a desire to tell others how I failed to prove that Christian Science does not heal. About five years ago I was stricken with serious lung trouble, and for several weeks I was kept in a state of terrible fear by the alarming conditions. After a thorough examination my physician said that I would have to go to the plateau of Mexico and secure the best sanitary conditions and medical treatment, otherwise my time on earth would be limited to a few months. As I was unable to do this, my condition seemed hopeless indeed. At this time my young wife entreated me try Christian Science, which seemed to me to be most absurd. I at first refused to take the treatment, but at last was persuaded—"just to prove that it does not heal." I employed a practitioner, secured a copy of Science and Health, and went to work. I studied night and day, and, be it said to my credit, I was thorough so far as I knew. At the end of three months I seemed to be no better, physically; and the faithful Scientist who had worked for me, advised me to employ another practitioner, but by no means to give up Christian Science. This seemed strange to me, as I had never seen such unselfishness before. I had learned, however, that Christian Science could not be trifled with, and I had given up all thought of trying to prove that it would not heal. I was indeed positive that if I persevered I would be healed. I employed another practitioner and in about three weeks I was entirely well.

Since taking up Christian Science I have never needed medicine or medical aid. My lungs are remarkably strong and well. I am very grateful for this truth which frees us from bondage, and to all concerned with my healing.

J. MARSHALL KING, So. Frankfort, Mich.

About five years ago I suffered from a disease of the lungs and my condition was very alarming to human sense. I then called for a Christian Science practitioner and received several treatments, was told to read our text-book, Science and Health, and put into practice what I knew of this Science. I followed the instructions as best I could, and in about ten days I had regained my usual weight and strength. I now enjoy good health. As a student in the night schools I have found Christian Science particularly demonstrable in the overcoming of fatigue, after days of manual labor, also for the clear thought manifested after its study. I desire to express my gratitude to Mrs. Eddy, through whom the healing power of Truth was made known to us.

ROBERT H. SMITH, Brooklyn, N. Y.

I wish to express my gratitude for the blessings which Christian Science has brought to me. From my earliest recollection I had been afflicted with a stomach trouble, which as I grew older was pronounced very serious by the doctors. I also suffered from a train of other ills which made life a burden. In this condition I heard of Christian Science, but avoided it. After hearing of the healing of a friend, however, I decided to investigate, and procured a copy of Science and Health by Mrs. Eddy. I became so interested in the reading that the book was seldom out of my hands.

It seemed incomprehensible at first, but as I continued to read the light and the healing came. I cannot express my thanks to God for this precious gift to the world of Science and Health; also to dear Mrs. Eddy for her untiring efforts in behalf of suffering humanity. It is my earnest desire to be ever obedient to her teaching.

MRS. JOSEPHINE OBERT, Durand, Mich.

I had become throughly discouraged, and decided I would have nothing more to do with doctors or medicine, and I had adhered to this determination for two years before Christian Science was presented to our family, except when remedies were forced upon me in attacks of the throat and lung trouble of which I was a victim. My husband was opposed to Christian Science, so I gave it but little attention for four years, but after being confined to the house for a year and most of the time to the bed, I was healed in six weeks' treatment and had five years of smooth sailing. Though there were many severe battles to fight, I was helped through them all so gently and lovingly that I realized no responsibility myself. The time came, however, when I had to go on alone, and I know what it means to be a Christian Scientist and to depend on God to lead the way.

I cannot express in words the gratitude and love I bear Mrs. Eddy for her wonderful work for humanity. I have asked myself the question, If I had not been a Christian Scientist, would I have been thus delivered out of my distresses?—MRS. FLORA A. JUSTUS, Toledo, O.

Last October my attention was first called to Christian Science. A friend gave my daughter two copies of the *Sentinel* to read. She brought them to me, but I did not then think very favorably of Science, as I knew little about it. I suffered greatly at that time from stomach trouble. A Christian Science practitioner came to see me on the 9th of November. He read and explained to my daughter and me the second chapter of 1 Corinthians, and the eighth chapter of John, beginning with the twelfth verse, and showed the application of the teachings involved in these chapters to our cases. He gave no other treatment that day, but told us that the Word of God, rightly understood, would heal. From that first visit I have eaten anything I wished, and have never had one distressed spell with my

Digitized by Google

old trouble. The same day my daughter was largely relieved of a very painful attack of an old ailment, from which she had been striving to get free for a long time, having employed several doctors. I am now seventy-one years of age, and from the time I was a child until this practitioner came, I had never been free from bowel trouble. With two weeks' treatment I was also completely cured of this trouble.

Words can never express my gratitude to God, and to Mrs. Eddy for what has been done for me. I never enjoyed reading my Bible as I have since I commenced the study of Christian Science.

MRS. C. M. WHEELER, Leominster, Mass.

I can no longer delay the acknowledgment of my gratitude for Christian Science. Some months ago my baby was born without medical attendance. The nurse was a Christian Scientist and the birth was perfectly harmonious and painless. Last summer my husband and I were cycling in Germany, and one morning I awoke with a sharp attack of pain. Very shortly the pain yielded to treatment and I slept for an hour, when I felt perfectly well, without even the slightest trace or sense of anything having been wrong. We were on our cycles in another hour and had a ride of over sixty miles that day. Before I knew about Christian Science I have had similar attacks and have felt weak and ill for days afterwards.

I cannot tell how grateful I am for these and all other proofs of the power of divine Love, and the understanding that "if man is governed by the higher law of divine Mind, his body is in submission to everlasting Life and Truth and Love" (Science and Health, p. 216).

MRS. EFFIE M. NIXON, N. Cheltenham, England.

I first heard of Christian Science in 1888 through the healing of a very dear friend who had been hopelessly sick for several years. I was convinced at once that it was something good which had wrought this change in my friend, although it was several years before I made an effort to know for myself what this was that could heal without medicine. Early in 1892 I found myself suffering from an acute form of female trouble, the symptoms of which seemed quite alarming. The doctor that my husband called considered the conditions very serious. For about three weeks I took his medicine faithfully and applied the other remedies prescribed, and then, as the symptoms did not improve but rather grew worse, I decided to try Christian Science. I wrote to a practitioner for treatment, and the afternoon that she received my call for help I experienced a change; the weakness began to disappear and I decided that I was getting well. It seemed so good and so real that I finally decided to get up. My home needed attention very badly, as I was without help except what my husband could do after he came from his work. I proceeded to clean the rooms and found that it did not hurt me, but rather inspired me to do more. I made preparations for supper and had it all ready, much to the astonishment of my husband when he came home. He feared I would pay for this "foolishness," as he called it; but I experienced no bad effects at all, continued to improve, and in three days was practically free.

The treatment was continued for about a week longer, and by that time all the symptoms had disappeared. I was well, and although I had only a tract and some letters from the practitioner I began to feel that I knew something of Christian Science. I felt that only God could have done the work, and was confident that a mighty blessing had come to humanity through this new understanding of Him; nevertheless it was a year or so later before a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, was procured and the study of the *Quarterly* Lessons was begun. Since then I have become a member of The Mother Church, have nearly all of Mrs. Eddy's works, together with our other publications, and have never seen the time that I was not thankful for the many blessings which Christian Science has brought to me. The physical healing is the least of all. The spiritual enlightenment is by far the most important. One impression which I early received, and which has since grown into a grand and ever-glowing conviction, is in regard to Mrs. Eddy's spiritual leadership. It seems so clear and so reasonable that poor mortals needed a Leader to guard and guide them out of the vicissitudes of this earthly life, that it does not seem strange to me that our heavenly Father should supply that need at this hour. I gratefully testify that whenever I live in obedience to the way pointed out by our beloved Leader, Mrs. Eddy, there has come to me each time overwhelming proofs of the exalted vision and divine guidance which surely could belong to God's Messenger alone.

MRS. MINA FRY, Kirksville, Mo.

My little niece had been a cripple for three years. Her right foot was caught in a door and severely injured, and although the doctors did all they could, after several months they said that an operation would have to be performed. The child being only three years old, the parents would not consent to it; so for three years she was in this condition, sometimes able to use the foot for a while, but most of the time she had to be carried about. When the child was brought to our home she was carried into the house and the work in Christian Science was begun at once, with the result that in six months her father took her home, walking as straight as any one. The foot was in its natural position and there was only the slightest limp discernible. In a few weeks' time after treatment was commenced she could go up and down stairs, and run and play with other children. This healing took place four years ago, and since that time she has walked daily over a mile to school in all kinds of weather and in deep snow, and there has never been any complaint of the old trouble. She is an unusually bright and happy child, and loves Christian Science dearly. She has most of our dear Leader's writings.

My own gratitude to God, and to Mrs. Eddy, for this healing is unbounded.

MRS. LUCY E. WECKESSER, Newport, Ky.

NOTICE!

Those who have made application for membership in The Mother Church previous to June, 1906, and have not received notice of election, may send inquiries to the Clerk, William B. Johnson, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

WILLIAM B. JOHNSON, *Clerk.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

FROM OUR EXCHANGES.

At the Rocky Mountain Missionary Convention of the Methodist Church at Denver, Col., Bishop W. F. Oldham, a famous organizer of missions in India, said, "Just prove to me that there is a sane man who honestly believes he will be burned alive forever in a place filled with brimstone and fire. It is possible that some men believe that others will be punished in that way, but it is not human to believe it will happen to one's self. If we threaten the natives whose souls we are sent to save with the terrors of eternal torture in a pit presided over by Satan and a horde of assistant devils, we place the Christian religion on almost as low a plane as the devil-worshiping systems of the heathen. People are punished for their sins in their own souls. The beginning of punishment lies in inheriting ourselves when we die. Sins are registered in personality, and if the personality is strong enough to survive what you call the 'here,' the punishment is not entirely in this life but in the hereafter as well, but I do not believe that any man will be punished forever."

Dr. A. B. Leonard of New York said, "To be sure there is no hell. It is unconceivable that God should create human beings for the purpose of torturing them eternally."

Rev. Dr. Thompson, of Grace Church, Chicago, said: "No man I know believes in a hell of literal fire and brimstone. It is a mediæval conception of things. Man will have to be responsible for the fruit of his doing in this life or hereafter. The better hell to warn men of is the hell of their own wrong-doing—the hell that is the consequence of their own voluntary acts. Man knows the effect of violation of the laws of health. Warn him of the effect of the breach of moral laws."—*Universalist Leader.*

We look in upon our own hearts, and our own experiences tell us of the working of that Spirit in our own lives, drawing us close together in proportion as He gains control over our habits, our intellects, our hearts, our wills, and all our ways. We know here to-day that just in proportion as we submit ourselves to Him shall we be drawn away from the unholiness of our dissension, the un-Christlikeness of our separations, into the one great body which bears His name and of which Christ our Lord shall be the head. To some generation this privilege is to be given; some day the Church will come that shall realize at last in itself the blessed vision of our Lord, when all His people shall be one.

ROBERT E. SPEER.
The New York Observer.

One of the greatest sources of concern to pastors in general to-day is the common indifference and evident lack of interest in matters spiritual among the people to whom they minister. Pastors are not asleep but many of them are sorely grieved and perplexed over the situation. The general apathy respecting religious work and the disposition to be controlled by the spirit of the world on the part of so many church members, are the things which are taking the heart out of many true men in the ministry and leading them to question whether their work has been a failure.

The Baptist Standard.

In the secular press of late there has been more discussion of what are the essentials of Christianity than we recall in many years. Men are apparently trying to get "back to Christ" and to find what is the real test of Christianity. While much has been said that is unwise, and some things that are unjust and untrue, we cannot but welcome such discussion; it shows a real interest in Christianity, and while it often comes from those who are not friendly to the Christian churches, the attitude of the writers proves that they do not count themselves enemies of Christianity.

The Churchman.

For God who has made himself known in Christ, makes himself partially known in godly men. Every shining face, like that which Moses brought from long communion with God, is a true testimony to God's character and love. Every considerate word and deed bears its witness to God's loving consideration. The better hours and qualities of evil men tell us something of God's plan of what a man might be.—*The Congregationalist.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT.
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Simplified Spelling Board has announced that two distinguished British scholars have just accepted membership to testify their sympathy with the new movement to improve English orthography.—Dr. J. A. H. Murray, the senior editor of the great Oxford Dictionary of the English Language, of which the associate editor is Henry Bradley, who joined the Simplified Spelling Board some weeks ago, and Professor Joseph Wright, editor of the English Dialect Dictionary. In announcing these elections the chairman of the Board said: "Professor Skeat, the editor of the English Etymological Dictionary, became a member two months ago. The Simplified Spelling Board now has as members the editors of the three chief American dictionaries, Webster, the Century, and the Standard. The adhesion of the foremost linguist authorities of both branches of the English-speaking race ought to be reassuring to those who have dreaded that the recommendations of the Simplified Spelling Board might work harm to our noble tongue or to its etymology. It serves to show that those who know most about English spelling believe that it ought to be improved."

A despatch received at Hammerfest, Norway, from Walter Wellman, leader of the Wellman and Chicago *Record-Herald* polar expedition at Spitzbergen, says: "I have decided not to attempt a voyage northward this year on account of defects in the mechanical equipment of my airship. According to the announcement made last winter in anticipation of such possibilities, the expedition will continue next year. My party is now completing a great balloon house and other features of the plant and making experiments with a view to the campaign of 1907. This year will be one of preparation and the next will be one of action. Our confidence of success in 1907 has been increased by this summer's work and by our weather observations. The motors work well and the balloon is in good condition, but the car and mechanical equipment will be entirely rebuilt in Paris during the winter."

Automobiles may be substituted for one-horse wagons in the collection of mail from letter-boxes in large cities. Baltimore is the first city in which the experiment will be tried. The First Assistant Postmaster General has just completed arrangements by which two specially constructed automobiles will be leased to make experiments there, beginning Oct. 1. These automobiles will do away with four wagons and will compete with fifteen wagons to be retained, so that the relative advantages of the horse and motor-car in this service will be clearly shown.

Ten indictments, charging violations of the Elkins anti-rebate law, were returned last week at Chicago against the Standard Oil Company. The counts in the ten indictments are said to number 6,428.

Foreign.

An anti-opium league has been formed in the city of Honan, China, which will co-operate with the league already in existence in Canton. There was an enormous attendance at the meeting at which the league was inaugurated. The movement in China to stop the importation, cultivation, and the popular use of opium has been in progress for some time, is rapidly gaining in strength, and has earnest and influential support in Great Britain. China is likely to ask India to consent to an annual reduction in the importation of opium into China, which will have the effect of extinguishing the trade within ten years, and it is said that the Chinese will give force to this appeal by issuing an edict forbidding the use of opium by Government employes and gradually reducing the cultivation of the drug in China so as to end it entirely within ten years.

The first part of the Russian Government's agrarian programme, by which it is hoped to win the support of the peasantry at the coming elections, was put into effect last week when a ukase was published transferring 4,500,000 acres of appanage lands to the Peasants' Bank for distribution to the peasants. The lands chosen for this first distribution include: Lands under cultivation which are not contiguous to forest tracts and where leases have expired; forests adjoining or surrounded by peasants' holdings; woodlands suitable in the governments of Archangel and Vologda.

The first train over the new short route to Ireland, by way of Fishguard (a seaport of Wales) and Rosslare (near Wexford, Ireland), left Paddington station, London, on the 30th ult. The Great Western Railroad has spent nearly $15,000,000 in establishing this new service. It is claimed that the new route will save several hours in the transportation of the American mails from Queenstown to London.

The first international Esperanto (universal language) Congress opened at Geneva, Switzerland, on the 26th ult. Five hundred representatives of fifteen nations, including many Americans, were present.

The session of the Pan-American conference of 1906 was formally brought to a close on the 27th ult. Baron de Rio Branca, the Brazilian Minister of Foreign Affairs, delivered the farewell address.

Industrial and Commercial.

The proposed consolidation of three railroads in different parts of Pennsylvania at Harrisburg recently, constituted the formal announcement of a project of prominent foreign bankers associated with a former president of the Wabash Railroad, to build a low-grade double-track railroad from New York to Chicago by way of Pittsburg, which will cost about $150,000,000. It is expected that the road will require three years to construct. It is contemplated to operate it with electric locomotives from the beginning. It will be known as the New York, Pittsburg & Chicago Air Line, and will be one hundred and eight miles shorter than the shortest line between New York and Chicago. It will traverse the important bituminous coal fields of central Pennsylvania, will pierce the anthracite region throughout its length, will be the shortest line through Pennsylvania, will cross the summit of the Allegheny Mountains four hundred feet lower than the Pennsylvania, and for a mountain line will have easy curves and low grades.

The Michigan copper country possesses the world's three deepest vertical mining shafts. The deepest of these is No. 3 at the North Tamarack property, its measurements being 5,200 feet. To the south, at a distance of 4,000 feet, is the No. 5 shaft of the same company. This ranks as the second deepest vertical shaft on the globe, its measurements being 5,080 feet from the collar to the bottom level. Second only to these great openings is the Red Jacket shaft of the Calumet & Hecla Company, which is down 4,000 feet and in which the copper lode was not encountered until a depth of 3,300 feet had been obtained. The deepest incline shaft in the world is the No. 4 of the Calumet & Hecla. This shaft itself, from the collar to the lowest level, is sunk on the plane of the lode for a distance of 8,100 feet, while from a drift at the bottom a winze extends downward 100 feet to the boundary of the property, giving a measurement of 8,200 feet from the surface.

The freight bores of the Illinois Tunnel Company carried merchandise of all kinds in carload lots for the first time on Aug. 15. The construction of these tunnels was begun five years ago and has cost about $30,000,000. The company now has forty miles of tunnel, equipped with fifty powerful locomotives and several hundred cars, and has recently placed an order for five hundred additional cars and thirty-five new locomotives. The company has finished connections with thirty buildings in the down-town district, and connections have already been made between the freight departments and warehouses of nine of the principal roads.

A Baltimore firm is manufacturing and fabricating the steel for the largest gas holder in the world. It is being made for the Astoria Light, Heat, and Power Company, and will be erected at Astoria, L. I. When completed it will hold fifteen million cubic feet of gas. The largest similar tank in the world is in England, it having a holding capacity of twelve million cubic feet of gas, while the largest in this country is at Chicago, it having a capacity of five million cubic feet of gas. The amount of steel in the structure will be nine million pounds.

The New York, New Haven & Hartford Railroad has disposed of its entire group of trolley lines to a voluntary association. This means about six hundred miles of completed trolley lines in street railway lines in Connecticut, Massachusetts, Rhode Island, and New York State. The new voluntary association is to be known, according to report, as the New England Security & Investment Company.

The *Manufacturers' Record* says: "One of the most conspicuous manifestations of railroad construction in the South is the energy with which efforts are being made to further develop the coal of Virginia, West Virginia, Kentucky, Tennessee, and Alabama. Particularly great, however, are the efforts in the regions adjacent to the country where the boundaries of the first four States named come close together.

General.

Professor James H. Breasted, the Egyptologist of the University of Chicago, announces in an article in the *Biblical World*, that the oldest fixed date in history is 4241 B. C. In that year, he says, the calendar was established, the year beginning on what would now be July 19. The professor arrived at these conclusions during his long exploration trip to the Nile valley, where he compared the astronomical dates in the old and middle kingdoms of Egypt.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL — WATCH" JESUS

FROM OUR CONTRIBUTORS.

TESTIMONY OF UNITED STATES SENATOR CLAPP.

Given in First Church of Christ, Scientist, Washington, D. C.

[WE are glad to publish the following splendid tribute to woman, to her place and achievements in Christian history, and to our Leader's fitness, by virtue of being a woman, as well as by her spiritual attainments, for the great work she has been called upon to do. The value of woman's work and influence is steadily gaining recognition, and it is time that her true place in the realm of moral and spiritual thought should be clearly understood and defined. The accuracy of the Senator's statement in its historical features proves him to be a close student, and his estimate of the legitimacy of Mrs. Eddy's leadership is sustained by the facts to which he refers.—EDITOR.]

A short time ago a Christian lady wrote me a letter expressing great surprise and deep regret that I had found anything of interest in Christian Science, and especially surprise that a man could interest himself in a movement which recognized a woman as its Founder and Leader. We often encounter this criticism, and while a criticism may be absolutely false it yet serves one purpose; namely, of giving the viewpoint of the critic.

The stronger a man is in all that makes for real manhood the more ready he is to recognize and give credit to the influence of womanhood—that of mother, wife, sister, daughter—for all there is in him worth crediting to anybody, save that in him which is to be credited to Deity. We contemplate the force of man in the concrete and view with admiration its achievements which constitute human progress, but we must remember that this force, great as it is and splendid as are its achievements, only reflects the character and strength of the individual units which compose it, and recognizing the influence of womanhood upon the individual we readily recognize its relation to human progress. Not only this, but woman holds a peculiar relation to Christianity in her devotion and loyalty to Christ Jesus. In his labors and trials she was unfaltering in her faith, and was the first to know of his triumph. Not only this, but she bears a peculiar relation to the early history of the Church. Historians ascribe the difference between the sickly churches established in Asia, and especially the one at Jerusalem, and the strong churches established in Europe, to the difference between the weak and somewhat ceremonial James and the sturdy and practical Paul; but there is always a cause beneath the surface, and the comparison between James and Paul does not furnish the real reason, because Paul with all his strength and wonderful grasp of the spiritual was unable to establish churches in Asia with the strength and vigor of those he established in Greece. In Greece at that time, in strong contrast to the condition in Asia, women were not only free to yield acquiescence to the new faith, but were free to, and in many instances did, become co-laborers with Paul, becoming a potent force in the establishment and maintenance of the churches which kept Christianity alive during the first century. The Church soon became a great power, and as a factor in history, by its teachings and its opposition to monarchial power, awoke mankind from the deathlike slumber of forty-five centuries and gave men their first concept of political and civil liberties. For a thousand years it held in check the ambitions of kings and emperors to re-establish a dominion which had held the world in its thraldom, with but one notable interim, from the dawn of history to the final overthrow of the empire.

Mankind can never pay its debt of gratitude for this work of the Church, but during that time no substantial progress was made in spiritual thought and concept. Progress along this latter line began about four centuries ago, when the Church developed what is known as the Virgin cult, emphasizing the motherhood of Christ Jesus. From that period, keeping the perfect time of an ordered march, the recognition and consequent influence of womanhood grew and expanded, and the Church developed a deeper and broader concept of Christianity and a deeper recognition of the claims of humanity; until to-day the recognition of woman and woman's influence, side by side with the spiritual development of religious thought in the spirit of our institutions, has developed in our own land and time as in no other land and as at no other time in history.

In historic analysis, when a new agency is injected into the current of historic events and a changed condition then intervenes, we credit the new agency with the changed condition. Thus infidel and believer alike recognize that the influence of Christianity has changed the current of the world's history along the line of civil and political liberty, and so too, and by analogy, we must credit the development of the spiritual and the recognition of the rights of humanity in Christianity itself to the influence of womanhood, the former keeping time to the growth of the recognition and influence of womanhood in Christianity. But this is not all. Every Christian must admit that God acts from an intelligent purpose; that His acts are neither whim nor accident but the deliberate purpose of omniscience. They must also recognize that as to the power of God there is no limitation, and that the agencies employed stand for His aim; that their selection indicates not a limitation upon His power but indicates His purpose and represents a design, and that in the mystic tie which binds earth to heaven through Christ a human motherhood was no more essential to the omnipotence of God than a human fatherhood, save as it served the purpose of the divine will. When we realize, therefore, the influence of woman reflected in man, and in turn reflected in mankind as a concrete force; when we realize her relation to the birth of Christianity and her relation to the development of the last four centuries and her sole relation to the advent of Christ Jesus, and stand as we do to-day in the presence of a deeper and broader concept of the spiritual, we may not only gladly hail a woman as the author and Leader of this movement, but are irresistibly led to regard the leadership of woman in this movement, in the light of her relation to the spiritual, inevitably as a logical sequence.—MOSES E. CLAPP, Washington, D. C.

THE LESSON OF CHRISTIAN SCIENCE.

SAMUEL GREENWOOD.

THE lesson of Christian Science, illustrated throughout its practice in the healing of sin, disease, poverty, and sorrow, is that the benign power of Christianity blesses mankind only in the measure of its application; that its redemptive truth must be utilized in the destruction of evil, after our Master's example, in order to realize its efficacy. The purchasing power of money is made evident in its actual use, not in its idle accumulation in the bank. A reservoir of water, though in close proximity to a city, would not benefit the inhabitants unless its contents were applied to their need. What should we think if such people continued to suffer of thirst, seeking meanwhile in all other conceivable directions for relief, and yet made no effort to use the water right at their hand? What possible good to a thirsty man is his belief about water if he does not drink of it?

Christianity is the great reservoir of "the water of Life," established for mortals' use by Christ Jesus, given them of God for the healing of their distresses and their salvation from sin, but a false concept of the Messiah and his teachings has prevented them from using it as he intended. The popular belief that the sufferings of the flesh must be endured except for such relief as may be found elsewhere than in Christianity, is not more rational than would be the assertion that thirst must be endured except for such relief as may be procured apart from water. Water has the same beneficent properties that it had six thousand years ago; and so has the truth of God's infinite love and goodness; the requirement in both cases to realize their blessing is application, without which either is useless to him who needs it. The whole human race is groaning in unspeakable bondage to evil and suffering, while the emancipating truth waits unheeded and unused at their hand,—the truth which Jesus labored with unparalleled love to bring to them. Is it any wonder that he wept over the rejection of his message, saying, "Ye will not come to me, that ye might have life."

Christian Science teaches the imperative need of understanding the whole of Christianity,—the Christ-truth,—and of applying it to the destruction of the evil conditions of which it is the antidote and for which purpose it was brought to the attention of mankind. The application of Christian Science during the past thirty years to the alleviation and removal of human suffering and sin, has demonstrated with scientific certainty, and to the joy of its beneficiaries, that the divine remedies used by Jesus did not originate in or disappear with his personality, but are still efficacious for the cure of all human diseases, mental, moral, or physical, being the eternal truth of God's omnipotence, omnipresence, omniscience. What better medicine could he have given his patients than his knowledge of these great verities? What better could you or I take or give, provided our allegiance is not divided between good and evil?

The statement that God is good, omnipotent, and omnipresent—that is, that there actually is no power except good, and nothing anywhere existing but good and its manifestation—has been subscribed to theoretically by religionists, but little attempt has been made to apply this truth literally to the relief of men from the conditions that an opposite belief has superimposed upon them. What mankind has in effect subscribed to is the belief that there is, in addition to God, an evil power that ravages the earth. The truth that God is infinite has thus remained inoperative in human belief; not an actuality but a dead letter, an unused reservoir, a locked-up treasure. What does Christianity contain that can overthrow the rule of evil and destroy its works, besides the truth that God, or good, is All? What limit can we place upon the application of this fundamental truth of being that would not also limit our sense of its existence?

Humanity is not bettered by theories regarding the truth, but by its practical application. Asserting a belief in evil, submitting to its control, obeying its suggestions, suffering its pains,—all this is inconsistent with an affirmation of belief in the omnipotence of God. Had the Church through all these centuries persistently applied the truth of God's allness to the evils that confronted it, it would have successfully performed its mission in the redemption of mankind, instead of finding its efforts thwarted or deprived of their fruition because of the general admission of the claim of evil, the claim that there is something true and real apart from God, the infinite. This points to a need for the application of Christianity, not its neglect; not submission to the flesh, but its overcoming; not the submergence of faith in fear and unbelief.

The plea that, although true, the theory of God's all-power cannot be applied practically to our every-day existence, because the evidence of an evil power seems too real not to be believed, is not more plausible than that a lie cannot be corrected by discovered truth because the fruits of its past deception are so apparent. What did Jesus come to earth for? what did he heal and teach and suffer and triumph for, if it was not to show mortals that evil is an error that can be overcome and destroyed, no matter how materially tangible it may seem to be, and that the belief that another power exists and operates apart from the infinite God, the All-good, has no truth in it? Because of the falsity, the divine unreality of evil and of all that pertains to its belief, Christianity is effective in overcoming it, whether applied in the first century or in the twentieth. What can the Christian religion exist for if not to destroy the evil evidences of that which wrongfully appears to be? If evil did not seem to be true to mortals, what would Christians have to overcome, what to fight against? But if evil is an indestructible reality, of what avail is Jesus' exhortation to destroy it? The belief that the Christ-power is largely unavailable at the present day is to a great extent responsible for the fact that the works of the flesh and evil go grimly on.

The Scriptures imply that God's remedy for the ills of mortals is contained in the teachings of Christ Jesus; but what healing virtue can be obtained from a remedy unless it is administered? What physician prescribing a medicine does not expect it to be used according to his directions? otherwise it might as profitably be left in his dispensary. It is the impulse of human wisdom, the instinct of self-preservation, to seek and use whatever has been proved reliable and effective in the relief of suffering. If an element or compound were known of such proved virtue as to raise the dying to health and strength, would not earth's sufferers with one consent hasten for its aid in their behalf? Then what of the Christian's faith in the truths he claims to accept, if he does not apply them to his own and others' needs, when they were demonstrated by Jesus to be capable of healing all manner of disease and human woe?

May not the common attitude of Christians towards the practical application of their religion be likened to an invalid who employs an eminent physician, in whom he professes all faith, to prescribe for him; then, instead of using the prescription for its intended purpose, he devotes his attention to admiration of the doctor's personality, applauding his work for others, talking of the wonderful cases he has healed with the same medicine, praising his goodness and self-sacrifice, giving much time to minute examinations of the package containing his medicine, dwelling upon its beauty, its uniqueness, and so on. Why does he not take the medicine?

Christian Science is the orderly presentation of Christianity, "without seam or rent" (Science and Health, p. 242), as a scientific system of Christ-healing, based on and interpreting the truth taught and demonstrated by Jesus. Not since apostolic days have so many "wonderful works" been done in the healing of the sick in the name of Christ, Truth,

Digitized by Google

and in proof of its divine mission and authority, and it is questionable which will be regarded in coming centuries as the greater error,—the rejection of Jesus and his gospel by the orthodox religionists of his time, or the critical attitude of many of the present day toward the impersonal coming of the Christ in Christian Science.

THE WORD THAT HEALS.

BLISS KNAPP.

THE "Word," as used by St. John, is the Logos or divine thought conveyed to man. This meaning has been adopted by theologians to express the manner in which God may manifest himself to humanity. We find frequent reference in the Bible to "the Word," particularly in St. John's Gospel,—"In the beginning was the Word, and the Word was with God. . . . And the Word was made flesh, and dwelt among us." "The Word" as here used, is commonly understood to mean the Holy Scriptures, or some particular revelation of God to man. This phrase, "The Word was made flesh, and dwelt among us," deals especially with the expression of Mind as given in the Scripture,—"He sent his word, and healed them, and delivered them from their destructions."

The Word of God as uttered by the ancient prophets, and later by the apostles, frequently healed the sick. The power of the Word, if it be uttered with the conviction of understanding and demonstration, begets health and the "beauty of holiness." It is made practical through its manifestation in physical healing. "And they went forth, and preached every where, the Lord working with them, and confirming the word with signs following."

It was said of Jesus, "Never man spake like this man." For him to say, "Stretch forth thine hand," was to declare the Word of Truth which restored the withered member perfect as the other. Of the disciples it is said, "Then opened he their understanding, that they might understand the scriptures." Again, while two of them were reasoning together, he drew near to go with them, "and beginning at Moses and all the prophets, he expounded unto them in all the scriptures the things concerning himself." Imbued with the spirit of so marvelous an exposition, these two men exclaimed, "Did not our heart burn within us, while he talked with us by the way, and while he opened to us the scriptures?" This shows that to gain such an exalted sense of the Scripture truths, inspiration is required in order to translate them. Only through spiritual interpretation does the great factor of Christian healing become evident, for "it is the spirit that quickeneth." Indeed the spiritual meaning of the Word must be the factor most in evidence.

In all our utterances, whether spoken or written, the thought of the life-giving Spirit must be dominant, to attest their sincerity; we should always be actuated by a sense of its power, that their healing effect may not be obscured. God's Word moves in spiritual grooves to raise the human mind to the contemplation of spiritual realities. Words which do not express Love may have the letter of consistency and yet be "as sounding brass, or a tinkling cymbal." They are meaningless because they lack the true animus. Words which help and heal can only come from one who is imbued with a sense of divine Love. Without it a translator's personality only obscures the light and separates the student from the divine intent. It behooves us, therefore, to consider the source of all religious statement, that no misconceptions of an uninspired translator be permitted to cloud our sense of Truth.

This recalls the deep significance of the fact that there are a hundred pages of testimonials, comprising the chapter on "Fruitage," in "Science and Health with Key to the Scriptures" by Mrs. Eddy, which prove that the simple reading of this text-book heals the sick and sinning. Its study reveals a spiritual presence, the message of Truth which is confirmed by the signs of spiritual healing. This wonderful book has proved adequate in bringing to our expanding thought the life-giving power of spiritual understanding. "God is Spirit; therefore the language of Spirit must be, and is, spiritual" (Science and Health, p 117). This explains why Science and Health unlocks the Scriptures; its effect on the sick and sinning is to uplift and spiritualize thought in line with Paul's injunction, "Be ye transformed by the renewing of your mind."

When Jesus restored the withered hand by the power of the Word, he illustrated the scientific application of his recognition of the perfect idea, his spiritual understanding of man as he really is. Whenever the power of the Word breaks the spell of infirmity, displacing deformity with grace and beauty, it manifests the science and art of Christian healing. We are all more or less sculptors, and our ideals of God and man constitute our models. Some of these may be wholly unworthy, because the fleshly pattern is permitted to assume the place of the living ideal of Truth. It would be mere presumption for any one to set himself up as sufficient to declare a work of art perfect, either in painting or sculpture, because the artist's ideal may suggest something not yet attained. Even such an ideal must be imperfect, by reason of the imperfection of mortal thought. The pure science of mathematics, however, is not marred by such human limitations. As the application and expression of Christian healing is understood, its art becomes the handmaid of a demonstrable Science, since it has a perfect model.

The law of physics, which obtains in mortal mind as an educated belief, produces its own language. Turning to ultra-physics, or divine metaphysics, to contemplate the Word which heals,—which Jesus said "shall not pass away,"—we perceive the language of Spirit to be no longer an unknown tongue; the Word is found performing the works of primitive Christianity, the signs following. "When that which is perfect is come, then that which is in part shall be done away." As both soil and rain co-operate to nourish the plant, so the statement and demonstration of the Word portray the perfect man.

The only permanent good one can do is through unselfish love and tenderness; and pure Christianity demonstrates these divine attributes in thought and deed. Such thoughts expressed in words, however feebly uttered, are acceptable to the receptive thought,—"the poor in spirit." Then we learn the lesson that it is the spirit of the words —sincerity of purpose and tender persuasion—which converts the rude speech of the shepherd lad into a rhythmic flow that is richest melody to the sick and sorrowing. Of such it may well be said, "The words that I speak unto you, they are spirit, and they are life."

Let us strive to understand and utter the new tongue, the life-giving Word of Truth, that we may bring to others sweet surcease from the world's ills. We may have wandered into the far country of mortal belief, but however much we may become habituated to the husks of materialism with its comfortless words, we can yet catch the far-off cry, "I will not leave you comfortless." Then we come into our spiritual estate, into our true inheritance, through the guidance of Christian Science, and know what it means to be the sons and daughters of God.

CHRISTIAN SCIENTISTS IN A CROWD.

REV. JESSE L. FONDA.

IT has been remarked by those whose business it is to manage people in masses that Christian Scientists are easy to handle in a crowd. The policemen intimated this in the recent concourse in Boston, as did the railroad men in the trip to Concord in 1903. This is simply the result of scientific teaching. Christian Science teaches that we should be

Digitized by Google

governed by spiritual purpose, understanding, and judgment. Hence Christian Scientists cannot be stampeded; that is, swayed by a sudden impulse, feeling, or surprise.

When a lot of people are thrown together a mental unity is formed among them. A common purpose brought them there and a common expectation holds them. But a sudden surprise of some kind may be sprung upon them, and then the danger is that their excited feelings will carry them off their balance and they become uncontrollable for the time being. When, however, the serious purpose of Christian Science is in their thought, to maintain its natural command over the human impulses, they cannot easily become excited and bewildered; their scientific poise cannot readily be broken. The common discipline of scientific healing enables them to hold themselves always in hand and to meet seemingly startling conditions calmly.

Christian Scientists are forewarned and forearmed against fear in any form. The sense of divine protection and of the infinite kingdom is so strong within them that they never get frantic or lose control of themselves. Fright is impossible to Spirit or the spiritual. Further, Scientists have a sense of the initiative in a degree unusual to people in general; that is, they see what ought to be done and are ready at once to do it. When the Scientists went to Concord in 1903 they had a good sense of what was to be done and promptly adjusted themselves to the situation. In the assembly at the late dedication in Boston, the problems of steam-car and street-car transportation, public accommodation and private entertainment were easily solved, because each individual had the initiative and quickly perceived the plan of the arrangements and quietly followed the prescribed order.

Then, again, Scientists always have a generous thought, and that is an immense help in a time of stress. They are not suspicious that any one will take any good from them, or that they can in any wise lose the good that is for them. They expect good, joy, and abundance surely, and so are helpful, yielding to others, esteeming "others better than themselves;" and thus get the larger blessing. This puts a very pleasing tone into a crowd. All this can be summed up in the term "scientific thought." The unity that it produces and the kindness it diffuses are among the noticeable traits which must ever characterize true Christian Scientists.

I am of the opinion that the expression by which God is said to be "All in all," means that He is "All" in each individual person. Now He will be "All" in each individual in this way: when all that rational understanding, cleansed from the dregs of every sort of vice, and with every cloud of wickedness swept away, can either feel, or understand, or think, will be wholly God; and when it will no longer behold or retain anything else than God, but when God will be the measure and standard of all its movements; and thus God will be "All," for there will no longer be any distinction of good and evil, seeing evil nowhere exists; for God is all things, and to Him no evil is near: nor will there be any longer a desire to eat from the tree of knowledge of good and evil, on the part of him who is always in the possession of good, and to whom God is All. The last enemy, moreover, who is called death, is said on this account to be destroyed, that there may not be anything of a mournful kind when death does not exist, nor anything that is adverse, when there is no enemy.

ORIGEN (about A.D. 225).

ADMISSION OF MEMBERS.

The next admission of members will be Nov. 6, 1906. Applications for this admission should be in the hands of the Clerk on or before Oct. 16, 1906.

Application blanks can be obtained by applying to the Clerk, William B. Johnson, at the Church.

SELECTED ARTICLES.

If a physician is competent to judge and testify "that if proper medical aid had been called in time, the patient could have been saved"—how does he recognize the critical moment? And when is the proper time? And is not then a physician guilty of manslaughter when a patient dies who has been under his treatment from the incipiency of the case to its fatal termination? How did the proper moment escape his attention? And why did he fail to administer the proper treatment? These are questions of grave import, for if the physician's claim is based on facts, there is something to be accounted for in the seeming neglect of medical practice. If there is no foundation in fact, then such testimony should not be permitted, since it is speculative and unreliable, and would be barred as relating to any other case in a court of equity.

The purpose of this reasoning is not to traduce the medical schools but to show how unreasoning and how inexact is the conclusion that dependence upon any healing but that offered by medicine is criminal neglect. If medicine healed all the cases treated, then resort to other systems less perfect would be criminal; but such is not the case.

People are educated to believe that nothing but drugs can cure disease; that you must try drugs, and if they fail there is no hope for you. On the other hand, human life is problematical, and all the research in the biological laboratory and all the studies of the medical men have failed to reveal the nature or origin of life, or the nature and origin of disease. Physicians will admit that the primary cause of disease is absolutely unknown, and yet we are taught to believe about this very vaguely understood experience called disease that nothing but matter will heal it, and that you are a criminal if you try anything else.

Jesus' life was a complete refutation of this fatal philosophy. He taught that something besides matter could heal disease, and in proof of it he healed the very diseases abandoned by matter as incurable. He was the most successful medical practitioner the world has ever known and his medicine was not matter. He healed through Mind, or Spirit, and he never failed. He never admitted that he could heal only three out of ten of his patients. He healed everybody who came to him, and he said, "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you."

Christian Science declares that all disease is curable by spiritually mental means, the methods expounded and demonstrated by Jesus. It asserts that matter is not the final resort, that God is our deliverer from sickness as well as from sin, and it says of itself that it is a perpetuation of the healing method taught and practised by Jesus Christ. The failures to-day do not indicate a faulty system, but a lack of understanding of the system which is sufficient to bring about invariable cures. Christian Science must be judged on its record and as compared with other systems of healing. It must not be judged by a single failure, unless we are ready to condemn every other system which ever had a single failure.

ROSEMARY O. ANDERSON.
Hartford (Conn.) *Courant.*

It is well understood by Christian Scientists that what the material senses behold of the universe is simply a finite conception of that which has spiritual reality and identity.

Christian Scientists recognize the reality and permanency of all that exists as an idea of Truth, and that the universe and man are spiritual and perfect. If the limited finite sense of these things presents them as beautiful, how much more beautiful will they be when we enter into that more complete understanding of them which can come only through spiritual attainment.

AMONG THE CHURCHES.

THE DISTRIBUTION OF LITERATURE.

As many have read with interest the editorial "Our Campaign of Education," in the *Sentinel* of July 21, it may not be amiss to recount the methods of distributing literature which are followed in our national capital.

A "Joint Literature Distribution Committee," acting under the chairmanship of the State Publication Committee, has been active for several years. The contribution from the two churches is twenty dollars per month, and much more could be advantageously used. The Committee numbers six, with chairman and treasurer-clerk, and has monthly meetings. A sub-committee, called the visiting committee, is active in looking up places where our literature may be placed, and these are found to be numerous. Each department of our Federal Government has a library and reading room, and each has been furnished with a copy of "Science and Health with Key to the Scriptures," subscriptions to the *Sentinel* and *Journal*, and many with "Miscellaneous Writings." The city library (generally miscalled the Carnegie) had been given fourteen copies of Science and Health up to last month, but complaint was repeatedly made by patients and seekers that they were unable to secure a copy, as they were always loaned out. The librarian recently notified us that he would be glad to have ten copies more, which were at once given; making twenty-four in all. This makes it evident that Science and Health is one of the most widely read books there.

We have a list of several hundred names of those to whom our literature may be sent. These names are preferably within a radius of two hundred miles of Washington; but we have no limits, and frequently send literature several thousand miles. When names of people are given in a city or town which has a Christian Science church, we send them one or two packages of reading-matter, and also send their names to the Reading Room or Publication Committee of the local church. These names are furnished the Committee by the members and friends in both congregations here, and every quarter the First Reader in each church in his announcements invites all to send such names to the Committee; also, members and friends who have *Sentinels* and *Journals* on hand of which they wish to dispose are requested to send them to the Committee for distribution, which is done in large numbers. A one-cent wrapper will send two copies of the *Sentinel*. We have also lists of names of ministers, doctors, educators, etc., to whom, from time to time, literature is sent, especially Boston papers containing marked articles by our Leader, and special numbers of our dear *Sentinel*, which latter costs but one dollar and sixty-five cents per hundred, postpaid. Including these papers, and the two pamphlets, "Historical Facts" and "A Critic Answered," both by Mr. Farlow, approximating ten thousand copies have been sent out during the last two years.

The distribution is done in an intelligent manner, as we wish no fire to be wasted, and the Committee is fairly certain, before sending, that the literature will be read. When we reflect upon our dear Leader's self-sacrifice, toil, and uncomplaining love in establishing this mighty movement, our hearts go out in a strong desire to give more effectual aid, and next to living godly lives (thereby naturally and effectually healing the sick) it would seem the best thing to aid in a wise and universal dissemination of our helpful literature, thus awakening an interest in Christian Science and inducing all to obtain our wonderful text-book. We shall thus help in establishing "the entire purpose of true education," which, as stated in "Our Leader's Letter to the Teachers," "is to make one not only know the truth but live it—enjoy doing rightly—and not work in the sunshine and run away in the storm, but work midst clouds of wrong, injustice, envy, hate; and wait on God, the strong deliverer, who will reward righteousness and punish iniquity" (*Christian Science Sentinel*, Oct. 31, 1903). God bless our dear Leader!

EDWARD EVERETT NORWOOD.

MEXICO CITY.

The members of First Church of Christ, Scientist, held the inaugural service in their new temple, No. 28 Cinco de Mayo, at eleven o'clock yesterday morning [Aug. 19]. American Ambassador David E. Thompson and Mrs. Thompson were present at the services, which were attended by a congregation numbering about eighty persons. The exercises were very interesting, consisting of the customary readings from the Bible and Science and Health by Mrs. Mary Baker G. Eddy, and the recitation of the Lord's Prayer. The subject of the Lesson-Sermon was "Christ Jesus."

The opening of the church on Cinco de Mayo marks the beginning of a new era in the history of Christian Science in Mexico. The work of the Christian Scientists was started in this city during Christmas week of 1898, so that at the close of 1906 the church will be eight years old. The first meetings were held at the Jardin Hotel, in room 46, Mr. and Mrs. Adam H. Dickey being the Readers for several Sundays. The congregation soon removed to the home of Edward C. Butler, on Bucareli Street, where the meetings were held until June, 1899, when another removal was made, this time to the Hopkins, now the Lara House. The meetings were held at this place until two years ago, when the congregation again moved into the Jardin Hotel and rented the same room, No. 46, for their meetings which had witnessed the beginning of the work in this city. This room also served for their Reading Room. Mrs. W. W. Contris and Roman Erard have acted during the past summer as First and Second Readers respectively.

First Church of Christ, Scientist, began its work with a membership of seven, and during its nearly eight years of existence the membership has grown steadily. At present the congregations on Sunday morning number about fifty persons, while sometimes there are as many as eighty present.—*Mexican Herald.*

NOTICE.

Those who have made application for membership in The Mother Church previous to June, 1906, and have not received notice of election, may send inquiries to the Clerk, William B. Johnson, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

WILLIAM B. JOHNSON, *Clerk.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* Personal Contagion. Take no notice of startling reports about Mrs. Eddy. Our Publication Committee will be reliable on this subject. *Beware of counterfeit letters.*

[From the *Boston Herald*, Sept. 1, 1906.]

NEVER USED PRIZE HORSES.

THE rumor which was circulated yesterday, alleging that the Rev. Mary Baker G. Eddy, Leader of the Christian Scientists, had a thrilling experience while driving with the prize horses which had been presented to her by Mr. T. L. L. Temple of Texarkana, Ark., is declared by the Christian Science Committee on Publication to be incorrect. Mr. Fariow says:—

"Mrs. Eddy's secretary and also her driver declare (in fact, Mrs. Eddy herself has told me) that she has never ridden behind the new horses; that her driver tried them and decided that they were not adapted to her drives, and so informed Mrs. Eddy, whereupon she decided not to use them. While she appreciated Mr. Temple's kindness and accepted the beautiful horses out of courtesy to him, she had from the first been really too well satisfied with the pair which she has been driving for several years to give them up for the new ones, and she gave Tattersall and Eckersall back to Mr. Temple."

A CHRISTIAN LETTER.

[THE following letter to Mrs. Eddy expresses such loving consideration for her, and is characterized by such a profound Christian sentiment, that we take pleasure in giving it special prominence in our columns.—EDITOR.]

Chicago, Ill., Aug. 1, 1906.

Beloved Teacher:—I wrote you a letter from Ohio the other day. I do not know that you will see it, or this, but I would like very much to add a word and have you get it.

You have many times explained to me how in many ways the students have burdened your every day for years and years. Last night I shed many a tear when I thought of the unspeakable burdens that have been laid upon you by us all, and of the continuous sacrifice in which your association with us has involved you; and although it may be of no consolation to you, I want you to know that for any weight of care or sorrow that has ever been laid upon you by me, I am from the depths of my heart's affection sorry beyond description. Lovingly your student,

EDWARD A. KIMBALL.

THE CHRISTIANITY OF JESUS.

IN an article in *The North American Review* for August, Rev. Dr. Philip S. Moxom calls in question the right of our modern Christian civilization to be called Christian, and in discussing this question he says, "Conceivably, one may contend that our present social life is the result of a long evolution and is economically wise and beneficent, but one cannot truthfully call it Christian;" and after comparing present-day Christianity with Shintoism and Buddhism as exemplified in Japan, he goes on to say: "But what really suffers by the comparison is not the Christianity of Jesus, but the Christianity of the Church, the Christianity which we have made. In other words, Christianity can maintain its pre-eminence only by the vital and effective incorporation of the spirit and teaching of Jesus in individual and social life and character. Nothing can invalidate this proposition. The trial which the Christian nations are facing to-day is obvious and inescapable. Let us at least be honest with ourselves. If we will not practise what Jesus taught, let us cease to call ourselves Christians;" and from this he leads up to the question and answer, "Where is the difficulty? We have not taken Jesus frankly at his own word and on his own terms."

To the average man the conclusion arrived at by Dr. Moxom may seem extremely pessimistic, but when we recall that Jesus' ministry was so largely one of practical works, which he said should "follow them that believe," and we fail to find these works accompanying so much of the preaching of this latter day, we are forced to agree with Dr. Moxom that there is a certain "inconsistency of our life with the Christian faith and principles which we inculcate."

As Christians, it is our duty to do the works which our Master did, and the most conspicuous of these was the healing of the sick. He named this healing work as one of the signs which should identify his followers, yet this work has been neglected for centuries, and even now the possibility of its accomplishment is quite largely denied. What is needed for the establishment of the Christianity of Jesus and for the redemption of the world is a larger faith in God, a giving up of the prevalent belief that evil is as real as good and that God is its creator. So long as humanity believes that evil is real and God-created, so long will it believe that "the teachings of Jesus are not practical in business, politics, and international intercourse." Christian Science is, as its name implies, a system by which the Christianity of Jesus is demonstrably operative in human affairs, and because of the possibilities it has opened to mankind there is ground for hope that at no distant day the reproach of inconsistency—"un-Christian Christianity"—will have been removed from modern civilization. ARCHIBALD MCLELLAN.

LABOR DAY LESSONS.

WITH the swift passing of time, Labor Day has again come and gone, but not without leaving its lessons in the things it must ever suggest to the thoughtful. St. Paul's words might be paraphrased to read: As in Adam work was a curse, even so in Christ it has become a blessing. Too long have men thought of labor as something degrading, and while this may be said of work ill-done, the fault is not in the work, but in the doing of it. Our revered Leader says, "Your work, well done, would dignify angels" (Miscellaneous Writings, p. 11). Not many years ago work seemed much more irksome than at present; nevertheless, the good hoped for from improved appliances and methods has done little or nothing towards the solution of the real problems of human existence. Toil will remain as toilsome and disappointing as ever, until a measure of mental freedom is gained; until thought is liberated from the degrading service of self and materiality and lifted up to the realization of that lofty ideal which alone can give true freedom and bring blessings to all mankind.

Our first great need is to recognize the divine government in ourselves, and to obey its requirements with gladness. Thus the dignity of work is seen in its true light, for we are working out our salvation,—a process which includes all the minutiæ of human unfoldment, and which can never stop with the individual, but must make its beneficent influence felt wherever there is a wrong to right, in work or in its reward. We also need to know that our activities are divinely directed, for only thus can results be reached which are worth striving for. It used to be said that the head should direct the hands, but in Christian Science we are taught to go farther and know that the divine Mind directs and governs every faculty of man; and with such an ideal before us failure is impossible.

Those who come to understand and follow this divine

Digitized by Google

guidance in all their work may sing as did the Virgin-mother,—"He hath shewed strength with his arm. . . . He hath put down the mighty from their seats, and exalted them of low degree. He hath filled the hungry with good things." The lowliest service, no less than the loftiest, holds out to each the slate and pencil with which he may work his problem to the end and find that in so doing he is "a co-worker" with God. If faithful in that which is least, his work may be a vital part in the sublime whole of good, for Science is fast revealing the omnipotence of good in its every manifestation. If work seem arduous, we can say as did the Master, "My Father worketh hitherto, and I work." Well for each who can also say, As the Father works, so work I,—ever keeping in view the divine goal of true manhood and true work,—perfection in all we set ourselves to do ANNIE M. KNOTT.

THE KERNEL IS BENEATH THE HUSK.

HE who is awakening to a clear perception of his needs, is taking the first step towards their supply, and one of the encouraging features of the present religious outlook is found in the fact that Christian writers are continually noting and emphasizing the contrast in vital effectiveness between the faith of the early Church and that of modern believers. This contrast is abundantly illustrated and therefore quickly recognized, and thoughtful people can but draw conclusions of deepest import therefrom.

A weekly periodical before us contains a forceful article upon the subject of church federation, respecting which the writer says, that while this much-talked-of movement may in some places save a wasteful duplication of effort and expenditure, it gives no promise whatever of rehabilitating the beneficent influence of the Church, and for the reason that it "offers nothing for improving the ethical status of organized religion, or for restoring the power and spirituality of former days;" and he adds, "The great need is to make the Church mean in present conditions what primitive Christianity meant to the world ages ago."

All earnest and aspiring people can but seek to improve upon methods which have proved inadequate, but in this effort all are liable to make the mistake of centering their attention upon forms rather than upon fundamentals; upon human expression rather than upon divine Principle. Our brother is right in declaring that "the spirit of Christianity" must be regained if the Church is to mean to present-day conditions what it meant to those of the first century, and it is precisely for this that the Founder of the Christian Science movement has ever contended. She saw that in contrast with nineteenth-century conditions the "spirit of primitive Christianity" manifested itself in a faith which continually mounted up to spiritual understanding, a faith which was effective in the healing of sickness and sin, a faith which begat optimism, a "rejoicing in tribulation" which witnesses to conscious spiritual sovereignty regardless of the testimony of the human senses, and which ever leads to enthusiastic endeavor, the heroism that overcomes the world. Seeing this, she declared that "the error of the ages is preaching without practice. The substance of all devotion is the reflection and demonstration of divine Love, healing sickness and destroying sin" (Science and Health, p. 241); and in unwavering adherence to this worthier sense of Christian privilege and responsibility, she essayed to do the Master's works, and won.

Of late years many city churches have sought to re-invigorate the organization and bring it into vital touch with the needs of the times by introducing "institutional methods" of work, and in the same issue of the periodical to which we have referred, a clergyman who for years has been the leader of a well equipped and endowed institutional church, expresses his profound conviction that this form of church activity is fundamentally defective in that, whatever of incidental good it may accomplish, it fails to bring about spiritual results. It does not achieve the end whereunto the Church was instituted; namely, the salvation of mankind. The employment bureau, the medical dispensary, the benevolent relief work,—all, as he declares, "tend to pauperize the community" they would serve, and "to repel the more worthy and self-respecting."

Manifestly it is becoming clear to many others, as it has been made clear to Christian Scientists, that the only effective church is that in which the individual apprehension of spiritual truth becomes a personal channel for the divine manifestation in the healing of sickness and sin. Such was the church that our Lord "purchased" with his own supreme sacrifice, and such is the church which every true Christian Scientist is seeking to establish in his own heart.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Oakland, Cal., July 27, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Dear Leader:—A year and a half ago I was one of the most miserable of human beings. I had been ill for a number of years, and had undergone ten operations, two of which were capital. I felt so ill and depressed all the time that I had just about made up my mind to end it all. A friend of mine wished me to try Christian Science. Some ten years or more ago I had gone to a Christian Science practitioner and taken one treatment, but I did not like some of her statements, and so dropped it and never gave it any more thought. I told this to my friend, and she said, "Well, never mind, you just try it for a week to please me." I promised I would, and the next day I saw the practitioner, Mr. Davis A. Woodward, 310 Scott Street, San Francisco. I told him my numerous troubles and closed my remarks by telling him quite frankly that I came to him simply because I had promised a friend of mine to do so; that I had no faith in Christian Science, and did not believe in it, but was there for a week's treatment, and if he had any faith to go on and see what he could do. He looked at me calmly and lovingly and said, "I know your troubles seem real to you, but I also know their unreality." I took four treatments and was healed of a trouble from which the doctors had told me I never need expect to be perfectly free. I had promised I would not take any medicine while I was taking treatment, and it was the hardest promise I ever tried to keep. The night before I was healed I got up three times to take some medicine, but three times I went back to bed and said, "No, I won't yet." Finally, I felt I would certainly go crazy or die, and I said, "Well, I will die truthful and keep my promise;" and the first thing I knew it was morning. I awoke free from pain and soon realized that I was healed. I was free from the ailment for four months, but feared it would come back, and so it did. I immediately went to a practitioner and took a week's treatment, and from that time I have never had any more trouble from it and am healed.

I have read your wonderful book, "Science and Health with Key to the Scriptures," three times, and am still reading it every day. Each day I read the Lesson-Sermon and find that it is a great help. I pray constantly for more understanding. Christian Science has done much for me in every way; my health is better than it has been for years; I am a better woman than I was before I read Science and Health; and I wish to express my gratitude to God, to Christ Jesus, and to you, our beloved Leader, also to the dear ones who do so much for us through the *Sentinel* and *Journal*. CORALIN A. SIMMONS.

Philadelphia, Pa., Aug. 9, 1906.

Beloved Leader:—I thank you many times over for the word you sent me through Mr. Strang, respecting the

Digitized by Google

standing of Primary C.S.B.'s. I shall gladly await the solution of the problem. Since the earthquake in San Francisco, it has occurred many times to both Mrs. Miller and myself that sin and all its evils, among which sensualism stands out prominently, should be handled constantly. Since this awakening, we have searched your writings and found many things to support us.

Dear Leader, I hope you will not think me presumptuous if I say that ever since my visit to our new church in Boston, a week ago, I have felt that there is one thing needed to make complete the happiness we feel in our new church, and that is the joy of knowing that you have entered and tarried within its doors and prayed beneath its sheltering dome. Surely the trip could be made without publicity and your car brought almost to the door of the church in the yards of the Boston & Albany R. R. Please pardon my presumption in suggesting this. We love you so dearly and truly that our thoughts are apt to stray into unbidden places.

Obediently,

ALBERT E. MILLER.

Eureka, Cal., July 24, 1906.

Beloved Leader:—Several years ago, when a recent convert to the truth of Christian Science, I sent a letter to Pleasant View asking that I might see you. This letter met the fate it deserved, and I should not venture to write again were it not to express as best I may my gratitude for the great blessing that was mine during my recent visit to Boston, where I attended those memorable gatherings incident to our Communion season and the dedication of The Mother Church Extension. While unstinted praise is due to all in Boston who aided in that splendid work, I realize that but for your God-given courage and life of unselfed love, these blessings could not have come to me and to countless thousands of earth's weary ones.

But above all, dear Leader, I wish to show my gratitude for this last proof of Love Divine—your inspired article on "Personal Contagion" in the last *Sentinel*. I realize with sadness how half-hearted I have been in letter obedience, and I want to tell you how happy I am in knowing that henceforth I shall intelligently and gladly heed your loving admonitions in this and other lines.

Earnestly and loyally,

MRS. ELLA T. GEORGESON.

Shaitsbury House, Walmer, Kent, Eng., June 24, 1906.

Beloved Leader:—Pardon me if I encroach for a few moments on your valuable time, but such a spring of love and gratitude is welling up from my heart that I feel I must write you a few lines. Ten years ago, soon after Christian Science came to England, it found me a proud, headstrong, self-conscious boy of nineteen, rebelling against an impediment in my speech which seemed like a great blot on my life. Slowly and surely I am being healed of this trouble and am learning to lose self in love for God and man. No words can express what a help and comfort Christian Science has been to me during what has seemed to sense a very "rugged way." I am at last learning to "kiss the cross" and to be truly grateful for every pang that destroys sinful sense.

I am now enjoying the blessed privilege of being First Reader at a little service at Margate, a town about fourteen miles' distance from here. Our little band numbers eight or nine and has lately sent a love-offering of fifteen pounds to the Building Fund of The Mother Church.

From my heart of hearts I thank you for Christian Science. May God bless you more and more, and may I ever be your loyal and devoted follower.

With love and deepest gratitude,

LEONARD A. LEWIS.

TESTIMONIES OF HEALING.

I was brought up by strict parents, both of whom were members of an orthodox church, and was required to attend church and Sunday School during all my boyhood days. As I grew older I gave the subject of religion a good deal of serious thought, and held many conferences with various ministers and prominent church members; all of which only tended to estrange me from the so-called Christian religion. There were very many points, vital ones it seemed to me, that no one could explain or make plain to me. The only answer I could get was, "If God had intended us to understand this, He would have made it plain. We must leave it to God," etc. I was not satisfied with mysteries and a blind belief, consequently, soon after becoming of age I eschewed the whole subject, cast aside the Bible and discontinued attending church. I simply settled down to the "belief" that nobody knew any more about God that I did, and that I would lead a pretty fair life and leave the result to God. I lived on in that way for some twenty-five years, but was not satisfied. In 1900 I dropped into the Christian Science Reading Rooms on some secular business. I was very cordially greeted, and at once made to feel welcome. After my business was finished the subject of Christian Science was very naturally spoken of; I was curiously interested and our talk occupied an hour's time, I think. I was cordially invited to call again. I accepted the invitation, and the more I investigated the more I was impressed with Christian Science. I attended a number of services, all of which appealed to me.

About this time I located temporarily in Poughkeepsie, N. Y., where I remained about two months. During my stay there I regularly attended the Christian Science services. Soon after reaching Poughkeepsie I slipped on the ice and injured my knee very badly, and after a sleepless night I was treated in Christian Science and received immediate relief.

Since returning to Bridgeport I have given Christian Science much study and attention, and have attended the services regularly, as I enjoy them and get much good from them. At the age of seventeen I was troubled with a rectal disease, and since then, until about three years ago, had not been free from it. My father, who was considered a good doctor, attended me in the years that I was at home, and after leaving home I had treatment of another physician. From both I obtained relief, but no cure. During the summer of 1902 I went cruising on Long Island Sound, and two days before our intended return I was attacked more severely than ever before by my old trouble. On reaching home, I at once applied to a Christian Science practitioner for treatment, and obtained instant relief and a permanent cure. I have not had the slightest return of the trouble. About a year ago I was instantly cured of a very severe toothache, by an absent treatment, also of the results of a severe injury from a fall.

Not only has Christian Science helped me physically, but it has been a great help in my business, and in fact in all walks of life.—J. W. CAMP, Bridgeport, Conn.

[Translated from the German.]

Some years ago my attention was drawn to Christian Science, and since then I have attended the services. During this time I and my family have experienced many benefits, in the overcoming of varied and serious diseases, and my heart overflows with gratitude and love for our Leader, who so patiently teaches us how to overcome sin, disease, and death. My wish is that many may participate in the benefits which we enjoy through Christian Science.

E. RUOFF, Stuttgart, Germany.

Digitized by Google

I began the study of Christian Science many years ago, and to give any adequate idea of all the good it has brought into my life would be impossible. I was first attracted by its teachings about God,—a God who does not send the ills we wish to be free from, but who makes all that is perfect. This appealed to my so-called agnostic thought very forcibly, and when I learned that Christian Science taught also that it is possible to attain to this perfection here and now, I was overjoyed. That joy has remained with me, and increases as little by little I gain the understanding and strength to supplant error with the truth of man's being.

The first marked demonstration I was enabled to make after beginning the study of this blessed truth, was over a virulent eruption. Being very young in Science, I had no idea how to treat myself; but I had gleaned enough from attendance at the meetings to know that God does not send pain, so that it could not be real. This thought came to me with such force that, as it surged through my mentality, the healing was practically instantaneous. I was very much surprised; I could not understand what had brought such peace, where a moment before discord seemed so turbulent and real. Now, after many years' study of the Principle of Christian Science, I understand what wrought that change. My next experience was over the fear occasioned by a severe injury to one of our little girls. I clung steadfastly to the truth, and in a few hours the child was free even from soreness.

The next marked case that I remember was one of healing through the reading of Science and Health. A relative called at the house one morning to ask that we see the county authorities for the purpose of securing a place in the State asylum for her daughter, who had become mentally unbalanced. I told my aunt I felt certain that if she would try Christian Science treatment for my cousin she need not fall under that decree, and I asked permission to read Science and Health to her. The request was granted, with the assurance that she could not understand; but I went to her with the abiding conviction that there is but one intelligence, and that is universal and impartial. I read perhaps two hours, and before I ceased she took great interest in what I was reading and seemed much better. All the way home I worked vigorously for her, and shortly after reaching home a message came from my aunt, telling me to wait before seeing the county authorities. The sense of humility and gratitude with which I received this answer to my prayers I shall never forget. The cousin grew more rational daily, became sound in mind and body, and has remained so. This took place some six or seven years ago. I have also experienced the beneficent influence that Science imparts in the healing of a sense of deepest sorrow; and I have proved many times the power of divine Love to overcome obstacles which to human sense were insurmountable.

For the understanding which enables us to accomplish such results, I owe unending gratitude to God, and to our dear Leader, Mrs. Eddy, who has been the means of imparting this to all who are willing to accept it.

ELLA Q. VAN COTT, Salt Lake City, Utah.

Christian Science healed me almost nine years ago, after fifteen long years of suffering and almost constant expense in the way of medical treatment. Our family physician diagnosed my trouble as chronic kidney and bladder disease, with attendant ills. I felt that he could do no more for me, so began taking various remedies and also consulted two specialists. One noted specialist treated me for months, after which I was unable to get up, being much worse than when I began. I was subject to violent attacks of suffering, the cause of which the physicians seldom agreed upon. As time went on my condition became such that an operation seemed inevitable, and two were performed in my home, without any relief whatever, but with increased suffering and aggravated symptoms. It was then decided that I should be sent to a hospital, where I could have more efficient surgery, as all the relief I had was from morphine. I was, accordingly, sent to a hospital, where I remained five weeks and received some relief through an operation. Later another operation was performed, but with little benefit.

While in the hospital a Christian Science practitioner was sent to me by a friend. She remained only a few moments, but when she left a sense of encouragement was experienced. I was taken home, but continued to suffer for three months before I decided to try Christian Science, being at this time much worse. I sent for the practitioner who had called upon me, and several of my troubles were healed during the first treatment. The violent attacks never recurred, and the other troubles gradually disappeared. What *materia medica* and surgery had failed to do in fifteen years Christian Science accomplished in four months. But the physical was not all. The awakening from darkness to light by far eclipses the physical release. I was brought into such a measure of understanding of man's relation to God that it has been my desire to show others how to be healed, and how to understand that it is Christ, Truth, that does the work. I was one of the thousands who visited Mrs. Eddy's home in Concord in 1903, and heard her request that we "trust in Truth, and have no other trusts."

I thank God that it was my privilege both to see and hear His Messenger to this age; and as I stood with tears coursing down my cheeks I wondered how many others in that great throng owed both physical health and strength, as well as spiritual enlightenment and understanding, to her work and teachings.

MRS. FLORENCE MCDONOUGH, La Porte, Ind.

A little more than a year ago I was led to try Christian Science for the healing of extreme nervousness, resulting from an affliction of eighteen years' standing which three severe surgical operations and five months' hospital treatment had failed to cure. After one month's treatment by a Science practitioner I was greatly benefited but not entirely healed. Thinking that I could complete the demonstration, I discharged the practitioner, but after a few months I called for further help, and at the end of six weeks was perfectly healed.

Since learning of this religion of Love I do not know how I ever lived so many years without it. Although I was a member and an active worker in an orthodox church the religion it taught was never satisfying to me. During the last year I have had many beautiful proofs of God's power to heal and to bless His children, and I am indeed grateful to our Father, and to our dear Leader, for the complete, saving gospel originally preached by Christ Jesus.

MRS. R. ELLEN NICKERSON, Ashland, Ore.

For the encouragement of those who think it difficult to understand the teaching of Christian Science, I would say that "Science and Health with Key to the Scriptures" by Mrs. Eddy was put into my hands in an hour of sore need, when all material remedies had failed to bring healing. I had not previously heard anything of Christian Science, but after one day's reading of the book, while it seemed as Greek to me, so far as understanding it was concerned, I knew it taught the truth, and the second day I purchased a copy. Through the faithful study of this book, the Bible promises were unfolded to me as a present help. I saw that now is the day of salvation, and as I learned the full meaning of the word from our text-book (p. 593), I applied these teachings day by day, and the healing came. God alone was my help. I have had fifteen years of this blessed truth, and to-day the physical healing seems at times lost sight of in the spiritual unfolding, the rest, and peace.

My loyalty and gratitude to our dear Leader has never wavered; every command of hers has been cheerfully

Digitized by Google

obeyed, and then the wisdom of the counsel and the command has been clearly shown me. God has abundantly blessed her labors, and to-day thousands of grateful hearts rise up and call her blessed.

AMELIA NORTON, Springfield, Mass.

I was completely healed through Christian Science of a physical difficulty pronounced hereditary and incurable by physicians. With my healing came a new and more intense interest in the study of the Bible than I had ever before experienced, and by which I found the true and living God who is an ever-present help. For many months of joyous living I was upon what seemed to my newly-awakened thought the sunlit peaks of infinite Love; I had the unspeakable privilege of class instruction by our beloved Leader, Mrs. Eddy, and this was followed by some remarkable cases of healing and an unusual sense of dominion over what had previously seemed very annoying conditions. Then, through failure to listen to the Father's guiding call and to silence the subtle suggestions of the tempter, there followed years of wandering in the wilderness, asleep to the call of Truth. I was at length awakened by a sorrow, the depth of which I cannot express, to find my way back through toil and tears to more faithful work in the Master's vineyard. I am now finding my sweetest comfort in studying to show myself "approved unto God, a workman that needeth not to be ashamed."

Oft, as I toiled up the rugged steeps, these words from Isaiah came to my thought, "O that thou hadst hearkened to my commandments! then had thy peace been as a river, and thy righteousness as the waves of the sea." In "Miscellaneous Writings" by Mrs. Eddy, we find this faithful warning, "One backward step, one relinquishment of right in an evil hour, one faithless tarrying, has torn the laurel from many a brow, and repose from many a heart" (p. 339). I have learned that it is only when we forget that our helper is omnipotent and ever-present that we doubt, fear, or seem to go backward; and we need often to withdraw from the multitude, and, like the lowly Jesus, to go "up into a mountain apart to pray." Thus may we abide in the assurance that nothing can deprive us of the divine protection, and this promise from God will be ours: "I will even betroth thee unto me in faithfulness."

NANCY STILLSON, Farmington, Maine.

I was struck by an express train on a crossing, receiving many severe injuries, and was picked up for dead and carried to a house. Just as they laid me down, a young lady, a Christian Scientist, came to me, and asked if I would have help in Christian Science. I could only beckon, for I could not speak, but in ten minutes all the pain was gone. I was taken home, and the railroad company sent their doctor, who bound up the broken bones and told my wife that if he was wanted in the morning to call him. He was not needed; the young Scientist read nearly all night, and in the morning I was better. Thanks to God, and to Christian Science, in one week I was able to go out.

At the time I was hurt I had heart trouble and a bad abnormal growth, and had suffered from another serious ailment for over fifty-five years, for which I had employed many doctors and specialists, but grew worse. I have taken no medicine since my accident. When one is healed in the truth he is well, and I am rejoicing in a health, strength, and vigor that I never had since childhood, thanks be to Christ, Truth, as revealed through "Science and Health with Key to the Scriptures" by Mrs. Eddy. Science and Health did it all.—W. D. HIGDON, Jackson, Mich.

Christian Science was first presented to me nine years ago. It found me a confirmed invalid, said to be suffering from kidney disease. Two years previous to this time I was taken ill while at boarding-school, and was sent to a hospital, where I was placed under the care of a specialist. I remained in the hospital for six months, at the end of which time it was decided to remove me to my home, which was then near West Chester, Pa., as with the exception of one symptom my condition did not seem to improve.

In this state Christian Science was presented to me by a relative, who said she had been greatly helped,—in fact, raised from a death-bed. At this time I was beginning to realize that my case was hopeless. I had become so accustomed to watching my symptoms closely that I could readily see that I was gradually getting worse, and as a last resort I consented to try Christian Science, feeling that it could do me no harm at least. In September, 1896, I gave up medicine and started to take Christian Science treatment. My condition began to change immediately, and from that day I was able to eat what I pleased and take what exercise I liked, two privileges that had been particularly forbidden me under medical treatment. I felt like a free man, and was free from the terrible bondage that I had been under. My chains, as it were, fell off me and disappeared. Just one week after commencing treatment, I secured a bicycle and rode for an hour without feeling any ill effects therefrom.

I have put my strength and health to the strongest tests, doing the hardest kind of work, particularly in the first two years following my healing, and am thankful to say that in all these nine years I have never for a single day been unable to perform my daily duties. This great blessing I owe to God, to whom I feel a gratitude I cannot express in words, and to Mrs. Eddy, who has devoted her life to the re-discovery of this new-old truth, and has presented it to this age through her book, "Science and Health with Key to the Scriptures." I would earnestly advise any one who is a sufferer in either mind or body to investigate this great truth that is for all those who seek it.

THOMAS H. PIM, Philadelphia, Pa.

I deem it a privilege to express my gratitude to God for the good that has come to me since my acceptance of Christian Science, and to our beloved Leader, Mrs. Eddy, for her life of loving labor which has enabled her to perceive the truth of being and to send the message of healing into the world on the wings of her great love for God and for mankind. The knowledge of God as ever-present good has enabled me to discard glasses; to meet and master many of the earthly woes; to overcome faults of character; to learn love and gratitude, and to rejoice day by day in the spiritual power to receive and bestow help and happiness in fulfilling the command, "Take my yoke upon you, and learn of me." Each step and lesson in Christian Science teaches me to trust our beloved Leader, to love her truly, to love those who have loyally followed her, and in turn to take up the cross and follow faithfully. My heart goes out in gratitude to all who have given of their spiritual riches through the *Sentinel* and *Journal*, whose helpful, cheering messages have lightened many dark hours of trial since I was awakened to Life and Truth in Christian Science.—JESSIE MORGAN GOGORZA, New York, N. Y.

I first heard of Christian Science seven years ago. At that time I was in a miserable state of health, both mentally and physically. My ill health had commenced seven years prior to that time. I was afflicted with serious uterine and attendant maladies, besides which I had always had heart trouble and weak eyes. With all of these ailments I was most miserable. I, however, kept up until my son was seven years old, when we moved to St. Louis. I then broke down and had to call a doctor, who treated me for three months and then performed an operation. For nearly two years I was under the doctor's care, and grew worse in some respects all the time. We tried another doctor for

Digitized by Google

three months, with no better results, and then my thoughts turned to God.

I was in this frame of mind when a lady who called asked me if I had ever heard of Christian Science. I replied that I did not want anything to do with it. She then told me she had been healed through the Science after a number of years of invalidism and after twenty-two physicians had given their verdict of no hope. I was very skeptical, but later went to the lady's home, and she explained the teachings of Science to me very clearly and answered all my questions satisfactorily. She then told me to take her copy of Science and Health and read it through. I took the book home with me, and I shall never forget the peaceful, happy frame of mind I was in all the way home. I did not then know that I had touched the hem of the seamless robe. I kept the book for a year. The lady called three times and was very loving and kind, and willing to answer all my questions, but never asked me to return the book or to pay for it. One day she called again, and the first thing I did was to pay for the book. We had a long talk on Christian Science, and after she left I was awakened to the fact that I had not had any aches or pains for a long time, and that the heart trouble had also disappeared. I knew I was healed from all my complaints, and with this awakening came a humble, thankful, and uplifted feeling. I knew that I lived because God is Life, and in Him is no sickness or sorrow or pain. I thought of my eyes, and immediately took off my glasses and tried to read Science and Health, but could not see to do so. In about three weeks I again tried to leave them off to do my housework, and found I could get along very well; still I could not see to read without them. I kept on declaring the truth, and in about three months I was able to read Science and Health, and from that time I have not worn glasses. My sight has been restored gradually, and I had many a battle with error until I learned to know the truth. I have had to ask my kind friend for treatment, and each time Truth has been proved victorious.

I am a member of Second Church of Christ, Scientist, of St. Louis, also of The Mother Church of Christ, Scientist, and while listening to the testimonies one Wednesday evening, the thought came to me, Truly there is but one shepherd and one fold; for, commencing at the Atlantic, every Wednesday evening there is one glad wave of thanksgiving which reaches across the continent to the Pacific, from people who have been delivered from sin, disease, and death. Nor is this all; it reaches across the ocean and is caught up and proclaimed by nearly all nations. I have often thought I would like to see Mrs. Eddy, but I have lately asked myself, If I should look on her personally, would I see her as she is? Then I have turned to Science and Health and found my answer. We cannot separate Mrs. Eddy from the Principle she has revealed to us, and when we understand the Principle we shall see her as she is, and not her personality. I shall therefore strive to have more of that Mind that was in Christ Jesus, and in this way only can I show forth my gratitude to God, and to her, for the help that God sent me through her in my darkest hour.

MRS. MARY ROSE, St. Louis, Mo.

Christian Science came to me about five years ago, and since that time a great many ailments have been met and overcome by the power of Truth. I wish to tell of a case of healing in my family that meant a great deal to me,—a very severe case of lung trouble. My son came home from school one Friday in great distress. Next day we thought it best to call in a practitioner. On Sunday he seemed very ill, but on Monday he was better; and by Wednesday he was up and dressed. From that time on he gained in strength and in one week he was back in school. It showed us so clearly that we do not have to suffer for long, weary weeks if we but realize the ever-presence of divine Love and trust in the power of Truth. God does not withhold His blessings from those who diligently seek Him.

BYANTHA A. CHASE, Janesville, Wis.

There is an old adage which says, "Never cross a bridge until you come to it;" in other words, Don't borrow trouble. In June, 1902, I came to that bridge, and thanks to God and to His Messenger to this age, that noble woman, the Discoverer and Founder of Christian Science, I have crossed the bridge safely. I was a skeptic as to religion, —an agnostic. I had no use for a God if it was His will and pleasure to take from me my children and my devoted life-companion, a loving wife. The Bible had become to me an obsolete book, and I had not opened its lids for some years. This was my position from a religious standpoint.

Passing through great sorrow and tribulation, I became partially blind and was on the verge of nervous prostration, when the great Comforter came to me,—Christian Science. After about two weeks of Science treatment my first great relief was the almost complete healing of insomnia. My healing of a serious ailment of many years' standing, contracted during three years' military service, has been slow, but is now almost complete. My perfect cure of the appetite for intoxicants, of twenty-five years' standing, was a marvelous revelation to me, as I had tried to overcome the habit by my own human will-power many times and had failed; but with all the benefits and help, physically, mentally, and morally, the spiritual uplift far exceeds them all. For over three years I have given much time to an earnest, conscientious study of Christian Science, and I freely acknowledge that I would not part from the spiritual understanding thus attained for all the world contains.

I wish I might find language appropriate to express my gratitude to God, and to that noble woman, Mrs. Eddy, our beloved Leader, who has given us the true spiritual interpretation of the Scriptures.

OTIS E. DEWEY, Watertown, S. D.

[Written for the *Sentinel*.]

WITHOUT VARIABLENESS.

ELOISE CAMERON MAC GREGOR.

The Lord shall be unto thee an everlasting light, and thy God thy glory.
ISAIAH.

O TRUST in Spirit, when the twilight darkens,
And scenes of daytime vanish like a dream;
Love, the unchanging, to your least thought hearkens,—
Trust on, and press toward Life's ne'er shadowed stream.

O trust in Spirit, when the evenings lengthen,
When fears of darkness seem or real or true:
Mind's clear, pure light your vision still shall strengthen;
Rest, then, in peace—'tis Love encircles you!

O trust in Spirit! error ne'er can blind you,
For all your life is hid with Christ in God;
You are beyond the mists—nor fear nor doubt can find you,
The sun's brave light fares forth above the cloud!

ANOTHER NEW PAMPHLET.

"The Ministry of Truth," a new pamphlet now on sale, is made up of the following articles, reprinted from *The Christian Science Journal;* viz., "Healing as Practised by Jesus," "The True Thought Modus," "Letter from a Lawyer to a Friend," "The Word Declared," and "Here."

Price, One copy, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

FROM OUR EXCHANGES.

Almost every mention of the name of Christ in a workingmen's meeting brings forth the most hearty applause. The average workingman is naturally religious. His religion may not always be expressed in the orthodox manner, but it is there, nevertheless. Infidelity scarcely exists among workingmen. As a matter of fact, they respond most readily to the religious appeal. The social question is fundamentally a moral and a religious problem. In the end, there will be not one answer to the social question, but many. But all will agree in this—all will be religious. It will never be settled upon any other basis. History has prophesied it. The best labor leaders are coming to recognize it. Present reform measures indicate it. These things prove that the workingman, in his devotion to Christ and in his natural religious disposition, is in an attitude of mind which makes him peculiarly ready for the introduction of a great moral motive. In so far as he responds to this principle, will he receive power in the industrial world. REV. CHARLES STELZLE.

The New York Observer.

Of course no consistent Christian of to-day believes in the remission of punishment for sin; but what he does most heartily and joyfully believe, if the new spirit and interpretation of Christianity has emancipated him, is that punishment for sin must be progressively corrective and redemptive in its character. There is no such thing with God as punishment for punishment's sake; all God's punishments are punishments for redemption's sake. Logically, punishment for sin is simply the carrying out or forward of the offender's own act. Thus the wrongdoer himself cannot help seeing how sin punishes itself, how it is finally and inevitably its own retribution.

The Christian Work and Evangelist.

Ignorance, wilfulness, and sin are the fountains from which all offences to the natural and spiritual life of men perpetually flow. God is not the originator of a single deterrent or injurious influence. Every pulsation of the Divine life into the universe He has made, and into the creatures which inhabit it, in so far as the stream has not been polluted by passing through human channels in some way, has in it the promise of peace and harmonious development. God's world moves without a jar, His people suffer no want, they shed no tears. REV. H. C. SMALL.

The New Church Messenger.

The influence of the true Christian is felt everywhere. Whatever he says has a deep, or tender, or inspiring meaning for some one, each word like the drop from the pure spring. Whatever he does lends a helping hand to some one; leading one over a rugged road, or doing some errand of mercy for the unfortunate, as the continuous flow of the spring helps the soil over which it runs, and strengthens the myriad of little rootlets that spread into its waters.

The Universalist Leader.

Men pray for strength of mind and spirit, for robustness of thought and elevated sentiment; but the prayer that makes one's spirit strong, whether uttered in words or not, is a desire to do things which can be done only by one through whom the tides of the Divine Spirit are flowing. Such a one will be content with what he gets, whether his other petitions for temporal blessings and the *things* which men possess are answered or not.

The Christian Register.

To any churchman who realizes that he cannot be a Christian without acting like a Christian, the relation of the Church to labor will present no practical difficulty. It troubles only those who think they must explain and explain away the second of our Lord's commands, to love our neighbor as ourselves; and that in the face of the parable of the Samaritan.—*The Churchman.*

The Christian life is struggle. It is a purpose to live for Christ, enforced and realized by constant endeavor. The law of life is growth. When we are born of the Spirit of God we become possessed not of new faculties, new temperaments, but of a new life.—*The Standard.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

270 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

More than one thousand delegates, representing half of the States of the Union, were present when the National Irrigation Congress assembled for its fourteenth annual session in Boise, Idaho, Sept. 3. Vice President Fairbanks received a hearty welcome, the audience standing and applauding for fully a minute. The convention was roused to applause when Governor Gooding referred to President Roosevelt, saying that it was in St. Anthony, in the State of Idaho, that President Roosevelt, six years ago, made his first promise to the West to give his support to the movement for the enactment of a national reclamation law. The great irrigation works in Idaho, now nearing completion, he said, were the fruition of the promise made by President Roosevelt. Gifford H. Pinchot of Washington, chief of the forestry division of the Department of Agriculture, read a letter of greeting to the congress from President Roosevelt which ran in part as follows: "Operations under the Reclamation Act, which I signed on June 17, 1902, have been carried on energetically during the four years since that date. Construction is already well advanced on twenty-three great enterprises in the arid States and Territories. Over one million acres of land have been laid out for irrigation, and of this two hundred thousand acres are now under ditch; eight hundred miles of canals and ditches and thirty thousand feet of tunnel have been completed. Over ten thousand men and about five thousand horses are at present employed. The period of general surveys and examinations for projects is past. Effort is now concentrated in getting the water upon a sufficient area of irrigable land in each project to put it on a revenue-producing basis. To bring all the projects to this point will require upwards of $40,000,000, which amount, it is estimated, will be available from the receipts from the disposal of public lands for the years 1901–8."

Upon the anniversary of the formal signing of the Treaty of Portsmouth, which ended last year the war between Russia and Japan, the disposition of the first year's income from the funds left to charity by the Russian and Japanese peace envoys in remembrance of their stay in New Hampshire, was announced Sept. 5. Baron Rosen, the Russian envoy, and Baron Komura, the Japanese envoy, each gave to Governor John McLane a check for $10,000, to be distributed among the charities of the State. At the request of Governor McLane, Secretary of State Pearson and State Treasurer Carter invested the gifts in the securities of the two Governments, and it was decided to distribute the income to such charities as might be designated, annually on Sept. 5, the anniversary of the formal signing of the peace treaty. The total income this year amounted to $809.93 and was distributed in equal shares among the New Hampshire Centennial Home for the Aged, Concord; New Hampshire Orphans' Home, Franklin; Sacred Heart Hospital, Manchester, and Cottage Hospital, Portsmouth.

The monthly statement of the public debt issued Sept. 4, shows that at the close of business Sept. 1, 1900, the debt, less cash in the treasury, amounted to $970,360,383, which is a decrease for the month of $3,488,418. On account of the issue of Panama bonds, the interest-bearing debt was increased during the month by $26,974,290; the amount of cash on hand, however, was increased by $30,722,933. The following is the classification of the cash in the treasury: Gold reserve fund, $150,000,000; trust funds, $1,058,200,809; general fund, $100,064,238; in national bank depositories, $100,355,219; in Philippine treasury, $4,898,672; total, $1,516,178,000, against which there are demand liabilities outstanding amounting to $1,165,402,123, which leaves a cash balance on hand of $350,680,875.

On the waters of Long Island Sound within view of Sagamore Hill, the President of the United States reviewed last week the greatest fleet of American warships ever assembled. There was a ship of war for forty-five States, ranging in size from the 16,000-ton Louisiana, just completed, to the fleet of little torpedo-boats and submarines. In three columns there stretched along the Sound twelve battleships, four armored cruisers, four protected cruisers, four monitors, six destroyers, six torpedo-boats, three submarines, a troop ship, and five auxiliaries.

The Hamburg-American Steamship Company has announced a plan to issue $5,000,000 new capital, making a total of $30,000,000. The official statement given out explains that the increase is necessary to build new steamers, and says the Amerieka and the Kaiserin Auguste Victoria have hitherto been unable to take more than half the passengers asking accommodation. Hence the company intends to build others of the same type and to establish a regular weekly service to New York of that class of vessels.

The latest act of the Philippine Commission received at Washington creates the insular office in the Department of Commerce and Police of supervising railway expert at a yearly salary of $24,000 Philippine currency, or $12,000 in the money of the United States. The act gives the railway expert the right to examine the books and accounts of railway companies at any time without further authority.

Foreign.

A conference of high officers was held recently at Pekin, China, in the presence of the Emperor, to consider the reports of the Imperial Commissioners who recently visited the United States and Europe, upon the plan to give a constitution to China. Duke Tsai-Tze, head of the Chinese Political Reform Commission, which was in America in the early part of this year, denounced the officers who opposed a constitution. The conference ultimately decided in favor of a constitution, and an imperial decree was issued promising a constitution, but not fixing any date or giving any details.

Industrial and Commercial.

Eight months of the calendar year shows an increase in valuation approximating $5,000,000 in the importation of precious stones and pearls at New York in comparison with the same months of last year. Wholesale dealers say that there is much difficulty in supplying the demand for diamonds, especially in the smaller sizes. The total for the present year up to date slightly exceeds $29,000,000. The expectation is that the next four months will send the aggregate above that of 1905, which was $37,000,000. Polished diamonds, which are subject to a ten per cent ad valorem duty, have been coming in constantly increasing valuation for half a dozen years. The importation of rough diamonds, which almost tripled in valuation between 1900 and 1904, has continued since close to the level then reached. Because of the rapid growth of the American diamond cutting and polishing industry in the years immediately after 1900, many experts predicted that before long practically all of the diamonds required in the United States would soon come here in the rough state, but of the $40,000,000 in imports of the last fiscal year only one-fourth was in uncut diamonds.

The National Railroad Company of Mexico, in which the Mexican Government holds a controlling interest, is preparing to make direct connection with all the chief industrial concerns of Mexico City. In addition to the belt line which it is building around the city, the company has just obtained a concession from the Government for the construction of a large number of short branch lines, or spurs, most of which are to be located within the limits of the Federal District in which the city is situated.

The statement is made that practically all the resources of the bankers and brokers who engineered the recent attempted corner of the tomato market, had been wiped out. The total amount of goods obtained by the corner was 45,000,000 cans of tomatoes, and the amount of cash involved in getting this immense stock together was $4,500,000. According to the most authoritative estimate the loss to date is from $700,000 to $800,000.

Dealers in Mexican cocoa have bought up all the available supply of the product in that country and have advanced the price twenty-five per cent in the last few days. It is reported that these dealers are working in conjunction with a New York City commission firm, which is seeking to control the world's supply of cocoa.

The statement is denied that the Standard Oil Company has taken steps toward acquiring ownership of all the principal distilling plants in the United States. The chief reason given for such a move on the part of the Standard is the alcohol bill recently passed by Congress.

General.

Filipino students at universities in the Middle West met in convention at the University of Chicago recently to discuss the needs and problems of their country and to promote closer relations with each other. There were sixty of the islanders at the opening session of the convention, which is the first of its kind ever held. Nearly two hundred Filipinos are scattered about the country at colleges and universities. The majority of these are supported at Government expense.

William Hunter Workman, the well-known traveler and mountain climber, and his wife recently ascended a peak of the Nunkum Range, India, over 23,000 feet high, and camped for two days at an altitude of 21,000 feet. During a previous mountain climb in India he reached the record altitude of 23,394 feet, on a peak of the Chogo Lungma glacier in Northern Baltistan.

Deer are multiplying so fast in Connecticut that the game commissioners are receiving notices of claims for damages from farmers by the wholesale. In the peach belt, at the present time, peach pickers find that in the night deer invade the orchards, nibble the fruit, and pull down branches laden with ripe fruit. Market-gardens are tempting the deer as well.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

FROM OUR CONTRIBUTORS.

FROM DOUBT TO CERTITUDE.

HON. CLARENCE A. BUSKIRK.

THIS seems to be an age when "the materialistic Thomas" is yet in evidence upon every plane of life. "To this dull and doubting disciple" Jesus still remains "a fleshly reality." "Nothing but a display of matter" can "make existence real to Thomas" (Science and Health, p. 317). There are abundant proofs, however, of a vast and steadily increasing spiritual current which is accomplishing innumerable rescues on every side,—from the perilous rocks and reefs and from the slimy abysses of mortal thought many a human bark has been brought by it into a safe and serene haven. The devil-fishes of materialism seem to be lurking for their prey almost everywhere in the waters of modern life, but the Christ is walking the wave, to cheer and to save.

Mythological beliefs in the reality of matter are still surviving deities in the thoughts of men. Jupiter yet thunders, Vulcan yet stirs his fires, and Charon is yet busily steering his well-laden boat into the dreaded darkness of the Styx; but the rainbows of faith and joy with their *celestial promises* are spanning the skies, and by those who will listen the tender and loving voice of the Christ is being heard more and more distinctly above the tumult. The reign of the old materialistic gods is drawing to its close. They have lingered long, and men have suffered in despairing anguish under their cruel domination, but while these sufferings have not yet passed, and may not pass altogether for years to come, the voice of the Christ is heard in our hearts, and the dawn of a brighter day, a nobler sense, is at hand.

In this fatted land of ours, materialism seems to be in its death-throes. Mortals have been madly reveling in materialistic triumphs and excesses. The wine has mounted to their heads, and their veins are still flushed with its intoxicating madness; but the revel is ending, and reflection must follow. Indeed the debauch is already over for the more thoughtful. They have found that the search for selfish enjoyments is sure to prove an adventure into a parching desert, where only the thorny cactus grows and where the hot winds shrivel and devour. Already they have discerned that in the realms of selfishness the fancied pleasures are insidious pains and their brightest palaces too often are but hopeless prisons. They have discerned that in the seductive realms of selfish and sensual enjoyment youth speedily totters into a disgraced decay.

For too many this would seem to be the agonizing way by which "the discords of corporeal sense must yield to the harmony of spiritual sense" (Science and Health, Pref. p. viii.). Let us help, as best we can, the poor circling moths of a materialistic age to learn of the promise of Jesus, "I am the way, the truth, and the life."

The material "pomp and circumstance" of Rome long since perished, while the Athens of Pericles still lives in its perennial influences. The pride and pageantry of the accumulating material riches of to-day may become like the crumbled columns on the banks of the Nile; but Christian Science has brought anti-materialistic influences into the consciousness of mankind and its benign activities will ever increase. We who have felt, in some degree at least, the warmth and splendor of its invigorating thought, shall we not earnestly and constantly seek to manifest our love of Truth in our love of what is true, our love of God in our love of what is good? There is ample opportunity for this in helping the wandering and the wayward of our times to find "the true way."

TEMPTATION AND TRIUMPH.

CLARA E. MAC MAHON.

IN reading the story of the temptation in the wilderness, as given in Matthew's Gospel, it is apparent that there were no witnesses to the colloquy between Jesus and Satan, and for this experience to be known it must have been related by Jesus to his disciples. Moreover, as there is no personal devil, Jesus must have used this form of speech to bring vividly to their thought a mental conflict.

The dialogue between Jesus and the devil presents the two opposing points of view,—the human policy of using individual power to subserve the ends of self-aggrandizement, and the spiritual discernment of all power as belonging to God, Spirit, Love, and of man as manifesting power because he expresses the Divine nature.

Jesus was born of the royal tribe of Judah and was in the line of kingly descent, hence his recognition by the Jews as their possible king was natural. Jesus himself was the wisest man who ever lived, and the note of authority in his teachings, his absolute confidence in their truth, shows that not only was he wise, but that he was wise enough to know it. More than this, he was fully conscious of his dominion, of his ability to use his knowledge of the truth to accomplish whatever he undertook.

This, then, is the man of Nazareth who at thirty years of age, in the full glory of his manhood, comes into public life to do his part. His life must henceforth unfold, not only in its relation to God but in its relation to mankind, and it was the realization of this fact which carried him into the wilderness of doubt, perplexity, and temptation engendered by the conflict between his own inherent purity, his ineffable wisdom, and his marvelous recognition of the realities of being which his life afterward proved to be divine, and the persistent argument of materiality coming under the guise of good, but which, to his everlasting glory, Jesus recognized as the argument of evil.

His beloved nation chafed under the tyranny of Rome. He was great enough to free them. If he did so, he would be their king and could find in that exalted position opportunity to exercise his wisdom and power, and the argument undoubtedly was—for it still is—that he would use this power for the good of his people. But although Jesus' relation to the Jewish nation was that of a descendant of kings, his relation to mankind was as the offspring of the woman who had brought to the world the highest, purest expression of the God who is Spirit, infinite Love, and so Jesus' true individuality, beginning with his mother's pure apprehension of God as the Father of man, was expanding

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

into an absolute consciousness that man exercises power because he manifests the Divine nature, and that the government of man grows out of his relation to God, whose immutable law of creation sustains the fact of harmonious being. From this it necessarily follows that in our relation to each other the greatest good that we can do is to recognize, declare, and demonstrate the ever-present, unfailing truth of the Divine government.

The Gospel narrative tells us that, following this decision, Jesus went about all Galilee, preaching the good tidings and healing the sick; and later, when as a result of this healing multitudes were ready to listen to his teaching, he opened his mouth and taught them, saying, Blessed are the poor in spirit;" "Blessed are the meek;" "the merciful," "the pure in heart."

For three years Jesus followed his conviction of the true way to live, and then he was brought to judgment before the tribunal of the Roman power. A man despised, hated, betrayed by his own student, doomed to a criminal's death; his work, so far as human eye could see, a failure, he stood before the representative of the greatest power, the greatest success that human policy had achieved, and was asked, "Art thou the King of the Jews?" His answer shows his immortal greatness: "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth. Every one that is of the truth heareth my voice." At another time he said, "Heaven and earth shall pass away, but my words shall not pass away."

It is a strange commentary upon the human mind, its wilfulness, its resistance to its own deliverance, that to-day it acknowledges Jesus of Nazareth as the greatest, wisest, best man that ever lived; acknowledges his teaching as truth; acknowledges his power as the most widespread and the most beneficent the world has ever known; acknowledges the desirability of his rule in the world, and yet in large part refuses to honor his methods.

There is one individual, however, our revered Leader, Mrs. Eddy, who fully recognizes the essential truth of Jesus' teachings and who has given proof of her discernment of the spiritual reality of his work by healing the sick; whose life is the most beneficent power for good on earth to-day because she is indeed following his teaching and example in self-abnegation, meekness, and purity; who in the midst of her success in awakening the world to perceive the possibility of moral and physical freedom through knowledge of Truth, is holding out her hands to ward off all that would lead to personal domination, and who is giving to mankind an incalculable blessing by proving in her life and works the practical possibility of obeying the Sermon on the Mount. To the ever-increasing thousands who are studying "Science and Health with Key to the Scriptures," she is revealing not only how to live practical Christian lives as followers of Jesus of Nazareth, but she is giving proof to a troubled, weary world that in this right use of the Beatitudes is found the solution of the social problem, the relation of man to his fellow-man.

THE HIGHER LIFE.

ELMER GREY.

In a recent criticism of Christian Science by a well-known religious writer we were told that we are to "make disease minister to the higher life of the spirit." If that is one of the purposes of disease in the world, why try to combat it, why pray for delivery from it? Why not let God decide when sufficient ministry to the higher life has been accomplished? The human parent punishes a child when he does wrong, and in consequence the child does better another time. A parent does not punish a child when he has not done wrong, in order to minister to his higher life!

Discipline in this world is one thing, punishment is quite another. Christian Science does not tell the invalid, whose life has been one long round of misery, that his seeming punishment is being inflicted in order that he may have that which can be made to minister to his higher life. It does tell such a man that his illness can surely be cured, and it backs its assertion with the testimonies of hundreds of similar cases that have been cured. Adherence to Christian Science teaching does not exempt one, however, from the discipline of life; indeed it demands discipline of the most rigid kind, for it imposes as a standard of conduct none less exacting than that of the Master.

The Master's conduct and the Master's word, throughout all his life and teaching, were of a positive, healthful nature. He did not treat disease as though it were in any way a benefit to humanity. That is the philosophy of the Stoic, not the gospel of Christ. The Master went about healing the sick wherever he found them, and instructed his disciples to do likewise. "Ye shall know the truth, and the truth shall make you free," is an utterance of his which is characteristic of the positive, authoritative manner in which he taught. Disease does not belong to this realm. It is negative and destructive, not positive, normal, or true. Only in the realm of Truth (which makes us free) is to be found that which ministers "to the higher life of the spirit."

If our critic had gone through the experience of living in a tent as an invalid, away from home and alongside of other invalids, as the present writer has done; if he had been denied the companionship of good books, because unable either to read or to write; if he had been deprived of the companionship of good people, because most good people are busy during the day; and if he had then been restored to health by Christian Science, he would see very clearly which is the better method of ministering to the higher life; *i.e.*, the philosophy of the Stoic which says make the best of a bad thing, or the gospel of Christ which heals, —restores to strength, happiness, and usefulness.

TRUE GIVING.

H. E. HOSKINS.

After identifying ourselves with the Cause of Christian Science, one of the many things that we have to learn is the significance of the question of giving, and that it is largely a question of education. Prior to taking the larger view of giving which is gained in Christian Science, many who were working along the old lines of thought were generous in a financial way to their charities and in support of their church; still the rank and file were actuated by the idea that in the perfunctory giving of a nominal sum they were fulfilling their duty in this respect, though the amount given in the majority of cases would not be sufficient to take away the means with which to indulge in some unnecessary so-called distraction or enjoyment.

The love of money, the desire for money, and the desires that are behind the desire for money, have been largely the cause of the suffering which mankind has experienced from time immemorial. This love of money St. Paul refers to as "the root of all evil." It would, if it could, break every commandment of the Decalogue, and mesmerizes humanity into the belief that the mere acquiring and holding of it is the chief aim and object of existence. It has assumed a value that would hide from mortals the real treasure which can be found only by seeking the kingdom of God and His righteousness. To advance and to perceive the kingdom of God our eyes must be opened to the fact that money is not real treasure.

The significance of true giving is much more than the subscription of a given amount of money; it is the thought of love of which this action is merely the expression. We know that in our human relationships we are willing to make sacrifices for the loved ones, sacrifices of affection and treasure. It was the action of unselfed love that called forth the commendation of Jesus on the occasion related in Mark's Gospel; when he sat in the temple, "over against the treasury, and beheld how the people cast money

Digitized by Google

into the treasury: and many that were rich cast in much. And there came a certain poor widow, and she threw in two mites, which make a farthing." The beauty and significance of this act of love, this entire reliance upon God as her source of supply, so impressed our Master that he called his disciples and said to them, "This poor widow hath cast more in, than all they which have cast into the treasury: for all they did cast in of their abundance; but she of her want did cast in all that she had, even all her living." It would be easy to see what called forth these remarks. We can see the different people as they passed by and cast in their dorations, and discern the thought of which it was the expression. No doubt there were the ostentatious, who gave "that they may have glory of men;" the self-righteous, who felt how much more they were giving than their neighbors; the perfunctory givers, who gave a certain or uncertain amount because it was the custom to do so and something was expected of them, who complied with this custom only as regards the letter and not from a love of giving, who did not feel it necessary to give sufficient to deprive themselves of any indulgence. We find that each receives the reward in proportion to the thought that actuated the act. To quote St. Paul, "He which soweth sparingly shall reap also sparingly."

Our Master sought to impress upon his hearers that it was the thought behind the giving which was the real gift, and that in proportion to the purity and unselfed love of the thought would the reward be. He showed that in giving we should not do "as the hypocrites do in the synagogues and in the streets, that they may have glory of men," saying that they should have their reward, such as vain-glory and self-righteousness merit. In his teaching we also have the assurance that right thinking or right giving has a righteous reward. The "Father which seeth in secret himself shall reward thee openly." Nothing could more forcibly mark the unsatisfying nature of material modes than the words of Jesus on the question of giving. He showed that it was a question of the giver's mental attitude of consciousness, that if the giving were the outcome of right thinking the reward would be proportionate to it.

In Science giving involves the giving up. We must give up the thought of self, the thought that material pleasures are essential to happiness, the thought of fear that giving will impoverish, and doubts of the all-sufficiency of the divine source of our supply; and to do this we must be transformed by the renewing of our mind, that we "may prove what is that good, and acceptable, and perfect, will of God," by thinking only good thoughts, thoughts that know no selfishness; knowing that our real pleasure is in doing our Father's will; that our source of supply is spiritual and not material. We must have perfect reliance on the love of the Father who supplies all our needs, also a recognition of the fact that we are not demonstrating such reliance by withholding, while we are saying, "God is All in all." We must learn the difference between wants and needs, and a realization that God will supply all our needs proportionately as we look only to God, good, for our supply.

Christian Science does not ask one to make sacrifices in the general acceptance of the term, but through the understanding of the permanence and reality only of that which is good. We find that a labor of love ceases to be a labor; and that we are not making sacrifices by giving up trivialities and the false sense of pleasure which we once held to be essential to our happiness. Moreover, in true giving we learn to guard against untutored zeal, which is a species of self-righteousness. While we must not limit our source of supply, the privilege of giving belongs to each and every one, and it is not our province to forestall or take away from another this privilege.

We who through Christian Science have received so many blessings, who have been raised to the understanding of man's inheritance as a child of God, many of us from conditions of sin and suffering to comparative peace and harmony, surely we should feel bounteous gratitude, and as we express it we shall reap bounteously. When we contrast our present state with the former, then the inadequacy of mere material giving strikes us and we realize that true giving is the consecration to God, good, of all we possess. Why make protestations of thankfulness for the benefits God has given us and withhold the full expression of such gratitude? It was such a contradiction of words without works that called forth from Jesus the declaration, "By their fruits ye shall know them."

Organization is a necessity at the present time, and it is our happy privilege no less than our duty to support our Cause with grateful and unselfed love. If it requires our means to carry on and extend organization, it should be our loving care that there is no lack of supply. We should have such a large sense of gratitude as will prompt a keen interest in our Cause; we should be so familiar with its requirements that we need no louder call to remind us what duty and loyalty demand of us. Scientists have advanced many steps in this direction, but there are steps still to be taken. Every support should be given our periodicals, which are doing such great and necessary work. We should follow Jesus' command, "Go ye into all the world, and preach the gospel to every creature;" that is to say, we should be ready to give this truth to our fellow-men, preaching it by our words and acts in simplicity and sincerity, following his instruction to "let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

Jesus of Nazareth showed us the true way of giving,—the absolute consecration, giving up the human will and doing his Father's will; and when nearing the close of his earthly career he was able to say, "Not my will, but thine, be done." To follow in his footsteps, each must obey his command to deny himself and take up his cross and follow him. Through the constant and unselfed giving of our loved Leader, many who were groping in darkness and who could see no way out of their bondage to sickness and want are now rejoicing in the affluence of health, harmony, and prosperity.

[Written for the *Sentinel*.]

"THY LOVING-KINDNESS."

F. B. G.

Because Thy loving-kindness
Is better far than life;
Because my helper Thou hast been
In many a bitter strife;
Because Thy love restrains from paths
Where sin and fear are rife;
In Thee, O True and Tried!
"My soul is satisfied."

Because when thirsty Thou dost lead
To Truth's life-giving springs;
Because when hungry bread from heav'n
The Comforter still brings;
Because when weary I may rest
Beneath Love's sheltering wings;
In Thee, O True and Tried!
"My soul is satisfied."

Because when in Thy Presence
No mortal foes affright;
Because when error blinds me
Thou dost restore my sight;
Because my weakness is sustained
By God's own power and might;
In Thee, O True and Tried,
"My soul is satisfied."

SELECTED ARTICLES.

GIVES REASONS FOR HIS FAITH.

Some time since *The Sun* contained an anonymous communication asking me to define just what was the distinctive Principle of Christian Science. While appreciating the kindly spirit of the article, I felt that a reply might open the door for numerous anonymous letters, and precipitate a religious controversy, the fruit of which I believe would not be good. Nevertheless so many since that time have privately repeated the request, and have said that a great many of my friends desired to know what I considered that fundamental Principle which distinguishes Christian Science from other denominational beliefs, that I ask you to please insert the following statement.

I have decided to identify myself with the Christian Science movement because I believe it is destined to be a great blessing to humanity. The distinguishing doctrine of the Christian Science denomination is the Scriptural teaching that God "is All in all," and "there is none else beside him;" that there is "one God and Father of all, who is above all, and through all, and in you all." The fundamental premise underlying the great commission given by Christ is "all power is given unto me, in heaven and in earth." The Father gave to him "the fulness of him that filleth all in all." John said of the Word, "All things were made by him; and without him was not any thing made that was made." God made all and pronounced it good. Good never becomes evil, as gold is never changed into dross. Therefore evil can have no creator. It is not eternal. It is negative nothingness, as darkness when contrasted with light. In the presence of light, darkness becomes absolutely non-existent. In the presence of truth, a lie becomes non-existent. It has no foundation in fact, and so no real creator. Drunkards declare that when they see clearly the truth that God is All in all, and that man is His spiritual offspring, their appetite leaves them, never to trouble them again. It no longer has any seeming existence even.

In proportion as this truth is understood and applied, sin, disease, and death disappear before it as darkness before the rising sun. The proof that this is true is that many have tested it from all parts of the world. Their testimonies are constantly appearing in the *Christian Science Sentinel* and *Journal*, two of the periodicals of the Christian Science denomination. The name and address of the persons healed is given, and investigation is invited. A large number of similar testimonies are given at the regular Wednesday evening testimony meetings of the denomination that are being held all over the world. In almost every instance thanksgiving is rendered to God for blessed spiritual experience that has come with the healings.

This Principle works according to an unerring law, and so is scientific. The results are the same as accomplished by Jesus Christ; therefore it is Christian. That one fails to heal a patient at once does not prove the Principle untrue, any more than it proves the basic law underlying mathematics untrue because it takes a long time to solve a certain problem; or because one fails altogether in its solution. Hundreds of others are testing this law and demonstrating its truth.

In the Baptist church I learned to trust God, and believe that He is an ever-present help in time of trouble. Christian Science has shown me how and why God is an ever-present help in trouble, and has therefore increased and strengthened my faith and trust in God. In the Baptist church I learned that Jesus came to save the world. I accepted him as "the way, the truth, and the life." I accepted his good work as the proof of what may be accomplished by infinite faith in God. Christian Science has shown me how Jesus did his mighty works, and how we may follow in his footsteps and verify his promise, "He that believeth on me, the works that I do shall he do also."

(Rev.) W. L. Swan.

The Westerly (R. I.) *Sun*.

It is not unusual in these days to read in modern medical magazines discussions on such subjects as "suggestive therapeutics," "faith-healing," "mesmerism," etc. In fact hardly a month passes without an article in one or another of the medical periodicals devoted to healing by mental means. The general impression seems to prevail among these writers that the several systems of medicine must needs avail themselves of the help which the activities of the human mind seem to promise. Indeed they berate the backwardness of their fellow-practitioners in not appropriating such valuable therapeutical agents.

A singular fact in connection with the present-day discussions by medical men above referred to is that as a general rule they observe no differences whatever between the various methods of healing without drugs, usually classing them all together under the head of "mind cure" or "suggestion." This indiscriminate plan of classification works a distinct injustice, notably in the case of Christian Science. Moreover it gives sure evidence of a very superficial line of investigation, whereas there is great occasion, as there should be a demand, for the deepest and most profound study; to the end that the conscientious physician may not unconsciously adopt means which may ultimately do more harm than good both for himself and his patients. It is plain to those who have given earnest consideration to the subject of mental healing, especially to those who have carefully investigated the teachings of Christian Science, that there exists the widest possible difference between "suggestion," "hypnotism," "mental science," "faith cure," and Christian Science, and this difference is not one of name merely. The very premise on which Christian Science is founded separates it fundamentally from all other systems, and gives those who practise it the two-fold advantage of quickening the moral sensibilities of mankind, by awakening them spiritually, while healing their sickness. In Christian Science one is healed of sickness and of sin by the same means.

What I have said above is prompted by an article headed "Views on Faith Healing" in the *Democrat and Chronicle* of Aug. 19, taken from the *London Globe*, and which deals with some observations in *The Practitioner* for June. That the "mechanism" or *modus operandi* of Christian Science is not in the least like the means employed by mental systems of cure and faith cure may be proven by any honest investigator. For this reason the medical man owes it to himself, as well as to those who accept his advice, to first understand and apply Christian Science before classifying it with agencies which he regards as accounted for on a purely psychological basis.

In the article "Views on Faith Healing" it is stated, "Mrs. Eddy does not profess to mend broken bones;" and that she makes no "claim of healing power over diseases or injuries that lie within the domain of surgery." This statement evidences a misapprehension as to Christian Science, for Mrs. Eddy, as well as every other Christian Scientist, knows full well that the healing in Christian Science is not by reason of any personal power or power resident in the human mind. Christian Scientists understand what Christ Jesus meant when, after healing the impotent man, he replied to his questioners, "I can of mine own self do nothing." Yet no one on earth has ever accomplished as much for suffering humanity as he. Mrs. Eddy claims that all forms of disease, and such conditions as are even yet trusted to the surgeons by Christian Scientists, can and will be healed by God through Christian Science. Such results have already been obtained in Christian Science in numbers of well-authenticated cases. It

Digitized by Google

has also been proven, during the forty years of Christian Science practice, that "a proper selection of cases" is not "an essential condition" in the successful application of Christian Science. Growth in spiritual understanding—a true knowledge of God and His universe—is what determines the success of the Christian Scientists, and will mark the time when it shall be everywhere known that "God healeth all our diseases," even to the restoring, unaided, of such cases as the surgeons now handle.

H. CORNELL WILSON.
Democrat and Chronicle, Rochester, N. Y.

Any religious teaching which tries to bring heaven to us now; which is teaching us to be thoughtful of others; to bring happiness and to do good; to dispense in our daily lives sunshine and gladness, and to love our neighbor in the way the Master commanded us to do; and which is based absolutely upon the simple and sublime teachings of Jesus Christ, cannot be rightly termed false teaching. This is what Christian Science, which was founded by Mrs. Eddy, is doing. The thousands who have investigated her teachings, and who have accepted them, testify to having received from them a demonstrable understanding of God as divine Principle, as infinite Life, Truth, and Love, as omnipotent, omnipresent, and omniscient Spirit, "who forgiveth all thine iniquities; who healeth all thy diseases."

Christian Science is a practical religion. It enables us to understand and to apply to every condition of life, with beneficial and healing results, the wondrous truths given to man by the Master, so that by them multitudes have been healed and are being healed to-day, physically, morally, and spiritually, just as the multitudes were healed in the days of the Galilean prophet.

W. S. MORRIS, JR.
Norfolk (Va.) *Ledger-Dispatch.*

No one who has ever attended a Christian Science church, or come into contact with Christian Scientists, will deny the spiritual quickening taught by Christian Science. This is the great thing that it does teach, and not only does it teach it to the "fashionable women on Fifth Avenue and Drexel Boulevard," but to those unfashionable people as well who live on other streets, and to the great mass of business men. Every one who attends a Christian Science church in any large city will be impressed with the number of business men in the congregation. And the testimonies which are given at the Wednesday evening meetings are all along the line of work which our critic intimates is not taught at all.—*Sedalia* (Mo.) *Democrat.*

One of the preachers over in Northampton got into a newspaper discussion with the official press representative of the Christian Science denomination, and after the minister had written columns and columns defending his stand, he got mad and practically called the representative of the Scientists a liar and a fool. It was noticeable that his treatment by the Scientist was more charitable. When a man gets mad abuse takes the place of argument, but it is never as convincing, and the Scientist must have left a better feeling with the readers of the *Herald* than did his antagonist.—*Westfield* (Mass.) *Daily Times.*

ADMISSION OF MEMBERS.

The next admission of members will be Nov. 6, 1906. Applications for this admission should be in the hands of the Clerk on or before Oct. 16, 1906.

Application blanks can be obtained by applying to the Clerk, William B. Johnson, at the Church.

THE LECTURES.

CRIPPLE CREEK, COL.

Judge Septimus J. Hanna lectured on Christian Science at Cripple Creek, Col., July 22. He was introduced by Charles Walden of Victor, who said in part:—

I stand here before you as one who has tested Christian Science in his domestic life and in his business, and always found it a great benefit and never wanting. I desire to say it is my sincere conviction that Christian Science is the religion of truth, based and built upon the rock Christ. No matter what a man has been, no matter how forlorn, friendless, and hopeless he has become, he finds his true self again in Christian Science. If I had to state briefly what Christian Science is, I would say it is simply the teachings of Jesus put into practice. There is nothing new in Christian Science: it is but the discovery of the truth our Master taught. It is the light which lighteth all men. It is the religion which appeals to business men, which gives them rest, comfort, and peace and shows them that it is not only possible but profitable to apply the Golden Rule in all our affairs, under all circumstances, all conditions, at all times, and in all ways. It is the religion that gives to all mankind, health, peace, harmony, happiness, and prosperity.—*Correspondence.*

FABYAN'S, N. H.

The music room of The Mount Pleasant was filled Sunday afternoon [Aug. 19] with an appreciative audience to listen to a lecture by Mrs. Sue Harper Mims of Atlanta, Ga., on Christian Science. It was the annual lecture given under the auspices of the White Mountain Christian Science Church, worshiping in the little church near the White Mountain House. Mr. George H. Moore of Boston, Second Reader of the White Mountain Church, opened the meeting in the following words:—

The message of Christian Science, like that of every sound presentation of Christian truth, is simply the story of God's good will to man. The teachings of Mrs. Eddy, the Discoverer and Founder of this Science, have, however, this unique distinction: they insist on the fact that God's love is an available, demonstrable power in which men may find cure for every conceivable form of distress which disfigures human life; and the history of the Christian Science movement verifies this declaration. It records a constantly growing demonstration of the tremendous possibilities of this larger faith in God when directed by a scientific understanding of God's law. The promise of Christian Science is to any man who seeks its help and who brings diligence and sincerity of purpose to bear on the study and application of its teachings.

Our lecturer this afternoon is a much-honored and loved member of the official Board of Lectureship of The Mother Church of Christ, Scientist, in Boston. Her rich experience in Christian Science work and her broad understanding of its Principle enable her to speak with authority and entitle her to your most thoughtful attention.

Among the Clouds, Mt. Washington, N. H.

ANOTHER NEW PAMPHLET.

"The Ministry of Truth," a new pamphlet now on sale, is made up of the following articles, reprinted from *The Christian Science Journal;* viz., "Healing as Practised by Jesus," "The True Thought Modus," "Letter from a Lawyer to a Friend," "The Word Declared," and "Here."

Price. One copy, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* Personal Contagion. Take no notice of startling reports about Mrs. Eddy. Our Publication Committee will be reliable on this subject. *Beware of counterfeit letters.*

"THE DEEP THINGS OF GOD."

[THE following wonderfully appreciative letter is from a clergyman who a few years ago embraced Christian Science, and is now engaged in its healing ministry. The spiritual insight into "the deep things of God" disclosed by this letter is remarkable.—EDITOR.]

Eau Claire, Wis., Aug. 20, 1906.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Just now while so much is being said about seeing you, there is a desire on my part to see you *impersonally*,—that is, to see that life which was sufficiently good to perceive the healing, saving truth as given in Science and Health.

I know Christ Jesus could never have been born of Mary had she been impure in thought or deed. Lust never gave birth, and never will, to so noble a character as Jesus of Nazareth, "the best man that ever trod the globe." I clearly see in Him truth manifested to mortal eyes through that of their own conceiving,—the flesh. I can see that it required a higher sense of purity than Mary had, for the revelation of Christian Science. How sad that after the advent of Jesus it required nearly nineteen hundred years to ascend the heights to which David evidently referred in Psalm 121, "I will lift up mine eyes unto the hills [spiritual understanding], from whence cometh my help." For a small measure of this understanding I am devoutly grateful, for it means so much in every way. Thank you, dear Mrs. Eddy, for your trials, your struggles, your bleeding footsteps to the heights which I sincerely desire to attain. Thank you for showing us the way to the Wayshower. This is just a little "love letter" to you from one who was once committing "the error of the ages," "preaching without practice." Now I am striving to do both, to preach and to practice. "What God hath joined together let not man put asunder."

Faithfully and gratefully yours,

(REV.) MARTIN SINDELL.

"THE LABORER IS WORTHY OF HIS HIRE."

NOTWITHSTANDING the smallness of the charges made by Christian Science practitioners for work done by them for their patients, there has been more or less assertion and innuendo, by those who do not know the facts, that Christian Scientists are mercenary, and a letter recently published in the *New York Sun* made this misstatement. We are glad to see that *The Sun* has opened its columns to a letter from a lady who denies this charge and proves its untruth from her own case.

This lady, although not a Christian Scientist, writes from the experience of one who has been healed through Christian Science of a so-called incurable disease. The disease from which she suffered was a form of rheumatism, and as eminent doctors were consulted, including one whom she describes as "the best diagnostician of Chicago," there seems to be no question about the type of disease or its seriousness, according to medical standards. We quote from this letter as follows:—

"I have just read in *The Sun* a letter by Mr. Boulter, who questions the cures made by Christian Scientists and who intimates that he would like to hear how many hours they have spent in gratuitous healing.

"I am not a Christian Scientist, but if I possessed a fortune I should be glad to give a million or two to the Cause of Christian Science, in order to feel that I had in a measure paid for my own healing. . . .

"After my doom was pronounced I became very low-spirited, until at length some friend suggested Christian Science. Although strongly prejudiced against it, I did try it and am now almost a well woman in every respect. . . . My healers, instead of seeming to care for any extra fee because of such a wonderful cure, would accept only the usual one-dollar-a-visit fee, so that my entire treatment cost only two or three times the sum exacted by the famous diagnostician for one hour, which was twenty-five dollars. . . ."

It seems strange that the motives of a class of people whose sole aim is to do the utmost good to their fellows, should be so misconstrued as have been the motives of Christian Scientists; but we have faith that the marked change of sentiment in this regard, which has been in evidence for some time, is growing stronger and stronger, and we hope eventually to see a better observance of the Ninth Commandment.

ARCHIBALD MCLELLAN.

TRUTH ALL-SUFFICIENT.

THE blindness of mortals to their own best interests is nowhere more apparent than in the attempt to make the truth conform to their misconceptions of being and its laws. This is sometimes manifested in a demand that a Christian Science practitioner shall heal a patient who does not even desire the help of Truth and is not ready to give up material remedies, this demand being made on the ground that Jesus healed all who came to him, and that he did this on their own terms,—an assumption which is wide of the facts. From the standpoint of Christian Science the subject of Christian healing is the most sacred that can engage thought; and when we come to consider the work of the Master,—the mighty work for the doing of which he was finally brought to the cross,—we may well take off our shoes, for the place whereon we stand is holy. Mere speculation as to his motives or methods is of no value; the one all-important question is, How can we best achieve the glorious results which characterized his ministry, and thus "reinstate primitive Christianity"? to use our Leader's words. (Church Manual, p. 17.)

Of one thing we may always be sure, namely, that Jesus' constant effort was to do the Father's will, at any cost to human sense. At the outset of his public work he announced, "I seek not mine own will, but the will of the Father which hath sent me." Again, at the close of that glorious career which was ever marked by self-abnegation, when within the very shadow of the cross, he prayed, "Not my will, but thine, be done." This was the one vital consideration, before which every other paled into insignificance,—to do the Father's will himself, and to aid others to do it as did he—by the submission of the human to the Divine.

In the long centuries which have intervened since his day, mortals have been doing their own wills, and agonizing over their painful efforts to bend to God's will in some one particular, when the understanding of Truth and obedience to it leads into wisdom's ways "of pleasantness" and "paths of peace." Of what avail is it to contend for material remedies in conjunction with Christian Science treatment, when we know that all through the centuries there have been prayers and potions, but no sure and certain means of approaching the Father "in spirit and in truth" to find His ever-ready aid? If prayer without a knowledge of spiritual law had been found sufficient for the healing of sickness, even when material remedies were relied upon,

Digitized by Google

the thousands would not have turned away from time-honored material systems to find healing in Christian Science.

No one can justly claim that the effort to be healed by Christian Science is an uncertain venture, for all may acquaint themselves intelligently with its basic teaching by the study of its text-book, and by this means alone many are healed. As this book is studied, it becomes very clear to the reader that material means are not needed to assist the operation of the spiritual law which heals; that, on the contrary, a belief in them hinders the needed recognition of Truth's presence and power. Jesus once said, "The Father himself loveth you, because ye have loved me, and have believed that I came out from God." Those who are healed in Christian Science love this truth because they know that it comes from God, and thus they draw near to the life-giving touch of divine Love. They learn that the service of Truth admits of no divided allegiance, and as of old the tender, compassionate Christ answers the prayer, "Help thou mine unbelief;" then thought rises above all false evidence to say, "Thine is the kingdom, and the power, and the glory, forever;" or, in our Leader's words, "God is infinite, all-power, all Life, Truth, Love, over all, and All" (Science and Health, p. 17).

ANNIE M. KNOTT.

REGRET.

[THOSE who have received copies of the pamphlet mentioned in the following letter, no doubt have noticed that it contains profuse quotations from Science and Health, which is not only a violation of our Church By-laws, but also an infringement of the author's copyright. We gladly publish Mr. Smith's apology.—EDITOR.]

As Publication Committee for the State of Minnesota, in my pamphlet entitled "Answer to 'Decision of The Session of the Westminster Presbyterian Church of St. Paul, Refusing Letters of Dismission to Mr. and Mrs. Harry *I.* Weickert, to First Church of Christ, Scientist, of St. Paul, with the Reasons for the Decision,'" I unintentionally made larger quotations from the copyrighted writings of our beloved Leader, Mary Baker G. Eddy, than are permitted by the By-law, Article XXII., Sect. 9.

I sincerely regret this, for it is and always has been my honest purpose to the best of my ability to conform strictly to the Manual of The Mother Church, as well as to all the wishes of my revered Teacher, the Discoverer and Founder of Christian Science.

Every copy that I shall issue hereafter of my aforesaid pamphlet will have printed upon it the following: "Quotations from the copyrighted publications of Mary Baker G. Eddy are made by permission. Abbot Edes Smith, C.S.B." Having unwittingly overlooked the necessity of asking this permission beforehand, I feel most deeply grateful for this magnanimous permission of our noble Leader, so graciously granted after publication.

Sept. 5, 1906. ABBOT EDES SMITH.

NOTICE.

THE members of the Publication Committee are requested to send to the editor of the *Sentinel* clippings of all their letters and articles which appear in the press, also clippings of other newspaper articles and editorials which mention Christian Science in an interesting way.

LETTERS TO OUR LEADER.

Westerly, R. I., Aug. 26, 1906.

My Dear Mrs. Eddy:—In Mrs. Mims' helpful article, "The Lesson of the Dove," published in the *Sentinel* of June 2, she spoke of your "pioneer work, when at first there seemed no abiding-place for the heavenly message," and I was forcibly reminded of your visit to Westerly in those early days, as told in your book, "Retrospection and Introspection." This letter is just an "olive branch," telling you that there is a receptivity and appreciation here now. We hold regular Sunday services, and also keep a Reading Room open daily. Copies of Science and Health are being constantly loaned and sold, and the librarian of the public library tells us the copies there are in great demand. The sick are being healed and many people are asking, "What is Christian Science?" One of our earnest Scientists here is the daughter of a late member of the Lyceum Club which engaged you to lecture. That organization has not been in existence for many years, but a number of the members are living and hold posts of honor in this and other towns. I recently called on the Rev. A. H. Lewis, now of Plainfield, N. J., pastor of the Seventh Day Baptist church there and editor of *The Sabbath Recorder*. He has a summer home near here, and as I knew he was a member of that club when pastor here, I thought he might tell me something of interest in regard to it. He said it was organized in the early winter of 1865 and that he was its first president. They had a reading room, also debates, and a lecture course. Among the lecturers he remembers Rev. William H. Milburn, who for so many years was "the blind chaplain" of the United States Senate and House of Representatives; also J. G. Holland, the author. As Dr. Lewis left Westerly in 1867 he does not remember your visit. He said, "That was just the time when women, Susan B. Anthony and Elizabeth Cady Stanton, were fighting their way to the platform."

I venture to enclose a clipping from to-night's local paper, which may be of interest to you. It was written by my stepfather, Rev. William L. Swan, who this month resigned his pastorate in order to devote his time to practising the truth, "the best sermon ever preached." For my healing, over seven years ago, for my present faint understanding of the Science of divine Love, and for all my many blessings, I have to thank God, my Leader, and my teacher. I pray that I may ever be alert, watchful, and obedient to Principle, thus expressing my gratitude.

With love, faithfully yours,

GRACE R. KNAPP.

[The newspaper clipping referred to will be found on page 38 of this issue.—EDITOR.]

Buffalo, N. Y., Aug. 23, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

My Dear Mrs. Eddy:—The Christian Science Society of Cambridge [England] has been a source of so much good to me, that I want to tell you of one feature of its work,—that of reaching university men and women from various parts of the world. During the past three weeks the Society has been instrumental in presenting Christian Science for the first time to the careful consideration of a doctor of philosophy from Belgium, where, we believe, there is as yet no church of our denomination. The Society has also profoundly interested a doctor of philosophy from Finland, a country also without Christian Science practitioners as yet. A theological student from Germany attended a church service here, and at once began his reading of Science and Health. A woman student, also from Germany, attended a service, and, after a few minutes' conversation at its close, said that she now understood the doctrine of the trinity, a subject hitherto most perplexing to her. These four learned of Christian Science first through the church service in Cambridge.

The two practitioners here are women of fine intellectual attainment, high social standing, and entire devotion to the Cause of Christian Science. Although it is not difficult for them to cope with the problems of the scholastic and the theologian, they invariably point the seeker to Science and Health. During the few days which I have spent, as a

Digitized by Google

guest, in the home of one of the practitioners, two cases of physical healing came under my notice. The work was quick and attended by that exaltation of thought which characterizes success in metaphysics. The privilege of once acting as First Reader has been mine here in Cambridge; and the privilege of serving once in the Reading Room. These experiences have meant much to me. When I stop to think of the changes that have come into my life as a result of your having lived in truth, I am filled with thanksgiving to you. With gratitude,

LAURA DUNBAR HAGARTY.

New York, N. Y., July 1, 1906.

Dearest Leader and Friend:—I wonder if I may break into your busy life for just a few moments, to tell you of my gratitude for Christian Science? It is nearly nine years since through the sufferings attendant upon sickness, sin, and sorrow I was led to seek God through your writings, and not only was I made whole, but I found an ever-present God, who does deliver from every discord and who does answer prayer. I am grateful for the firm and enduring establishment of the Church of Christ, Scientist, that is, through your teachings, redeeming thousands from sickness, sin, and death, and my daily prayer is for a better understanding of Jesus' words, that I may be of greater service to mankind and more worthy of the name Christian Scientist.

God bless you for all you have done and are doing for the world, and may I become a more humble follower of our great Master. Lovingly,

EDGAR G. GYGER.

Alhambra, Cal., Aug. 18, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—We gratefully acknowledge the power of Truth in human consciousness, which has enabled us, a small band of Christian Scientists, to build a church that is now ready to be dedicated to the Cause of Christ, Truth, which has made us free. Our desire is to so live in this truth that its light may radiate and glow, until it reaches the hearts and homes of all the people of Alhambra. We know you are with us always in every effort to bear aloft the standard of Truth which proclaims deliverance and liberty to a stricken race. We desire to express our gratitude and love to you, our dear Leader, and may we humbly press forward in the way you have shown us by your teachings and consecrated life.

Lovingly yours in Christ,
THE BOARD OF DIRECTORS.
M. J. STONEMAN, *Clerk.*

Wilmington, Del., Aug. 21, 1906.

Beloved Leader and Teacher:—Recalling your tender appreciation of the "acceptable fruit" sent you on former occasions, Mrs. John joins me in the great privilege of again forwarding for your use some of the products of this State. We send by to-day's express, a basket each of Crawford peaches and Jenny Lind cantaloupes. But we are conscious, dear Leader, that such an offering will not meet the mighty demands of Truth which "Choose Ye" and "Personal Contagion" call for. Such demands are only met by the yielding up of the claims of the flesh and the gain of spiritual understanding, the fruitage of which is found in the speedy healing of those that are bound.

We are happy to report the continuous unity and harmony of the increasing band of loyal workers in this State, and that the dignity and influence of our noble Cause and its gentle Leader are being recognized.

Lovingly and gratefully your follower,

NORMAN E. JOHN.

TESTIMONIES OF HEALING.

During early boyhood, in the spring of 1867, I was taken suddenly with an ailment so alarming that my life was despaired of, but under the care of our family physician in a few weeks I was out and was sent West to a farm owned by an uncle, where I rapidly regained health and strength. The lesion remained, however, and continued to cause me more or less disquiet, any unusual exercise bringing a strain.

This brings us down to my healing in 1904. That year I was called suddenly to my boyhood's home. I had been suffering severely for a day or two with my old trouble. During the journey I was in great physical discomfort, and was, to say the least, in a state of exceeding mental disquiet. On arrival at Buffalo, I went immediately to a Christian Science practitioner, who worked faithfully for me, else I doubt if I should have succeeded in reaching home. The symptoms developed so alarmingly that I left uncompleted the object of my trip, returning next morning to Boston. On my arrival I telephoned to a practitioner whom I knew. I fully expected a siege, although trying to know the unreality, as understood in Science, of the whole wretched business. That night I slept comfortably for the first time in five days. The next morning I arose and dressed with greatly restricted suffering, ate my breakfast and wrote two letters. The third day I visited the office at noon, with scarcely a trace of the trouble, taking up my regular work on the day following.

Healing in Christian Science is not simply an alleviation, it is a healing from start to finish. I have ever since been able to twist my side in any way, lean forward, back, or sideways and touch the floor with my finger-tips in any direction, with no sense of obstruction,—something I could not do before. The clarified thought of the practitioners laid bare the falsity of "the lesion," and I have no fear of its re-appearance. In resultant gratitude I am studying the text-book, Bible Lessons, the *Sentinel*, *Journal*, and other authorized literature pertaining to Christian Science.

If gratitude for blessings always at hand be an attribute of Christianity, why should not a grateful recognition of Mrs. Eddy's work and its results, in perceiving and re-establishing an understanding of primitive Christian healing, be conceded by theologians and everybody else as the greatest evidence of real Christianity, in that it fulfils the divine command so often reiterated, "Preach the gospel," "heal the sick." Future generations will concede her the crowning glory of having again re-instated the Messiah, or spiritual knowing, in human consciousness. While the various creeds have argued the letter, she has perceived its life-giving spirit. While the various theological interpretations have been relatively barren of results, she has fulfilled the spiritual prophecy, "By their fruits ye shall know them."—E. F. PARMELEE, Boston, Mass.

I was in poor health for ten years and under a doctor's care constantly. My physician said I had a complication of disease,—uterine, kidney, and stomach trouble, etc. Finally I had a severe attack of fever and a doctor called every day, but I was no better. A friend then spoke to me of Christian Science. She had been healed by it, but I was not yet ready for it. I consulted another doctor and he advised me to go to a hospital and submit to an operation after he had built me up. I took the medicine for six weeks, then went to a hospital and had the operation performed. After five weeks I returned home, but was not able to do anything. The doctor told me to remain quiet for three months. I obeyed his orders, but as soon as I began to work all my ailments came back and I was soon as ill as ever. The doctor then said a slight operation would be necessary every three months. To this I would not submit and made up my mind to die.

Digitized by Google

At this time some Christian Science literature was sent to me. I read it but did not understand it. When the Scientist called upon me she reassured me, telling me that if I would get the book Science and Health and read it carefully, I would soon understand it and get well. I procured a copy, began reading, and became so interested that I could scarcely stop. I would read to my husband and say, "I know it is true," and I began to feel free and happy for the first time in years. I went to church, and read the text-book faithfully. My troubles all disappeared gradually and I have been well and happy for five years, able to do the work for a family of twenty with the assistance of one girl.

Several have been brought to Science through my healing. When my husband saw it he began to attend the services, and now we have both been members of the Christian Science church for three years. We are truly filled with gratitude to God, and to Mrs. Eddy for the teaching of Science and Health.

MRS. FRANK HARTMANN, Pittsburg, Pa.

I gladly give my testimony with the hope that it may help some suffering one to find rest and peace. I was traveling to California with a sister who was seeking health. I had given up looking for my own, as a kind and loving family had done all that was possible for me for five years, but with no success. I was without hope, and worst of all, without God, as reading my Bible and praying seemed useless, but I still clung to a little book of Scripture quotations and read a verse from it each morning. On Dec. 6, 1904, while on the train *en route* for Pasadena, I read these words from Exodus, "Fear ye not, stand still, and see the salvation of the Lord, which he will shew to you today." My first thought was a longing, that if there was a God, He would show me something of His nature, but the next thought was the wish that the train would be wrecked and I might be killed. I could see no chance of heaven, and hell could not be worse than the present.

Shortly after this it was necessary to change cars, and we were taken into a section opposite to a lady and child, who immediately won my interest. I listened to her conversation with a young lady, and when she had finished, I asked her if she would not like to come and talk to me. When I asked her the subject of her conversation, her reply was, "Christian Science." I knew nothing about it, but before we arrived in Pasadena she gave me a copy of the *Journal* and asked us to call on her if in any friendly way she could be of service to us. I then went for treatment and bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. It contained the truth I had been striving for all my life. I attended the services in the little Pasadena church every Sunday and Wednesday, and found them very satisfying.

In May, when it was time for us to return to Philadelphia, I did not wish to go, for I knew that Christian Science was the answer to my verse which I had read that dark day, but I did not think I could return home and proclaim my healing, as I knew of no one there who knew this truth and did not know how my family would feel. I again went to a practitioner, and soon realized that God was in Philadelphia, and in my own home, as much as in Pasadena. The day before I left, this verse in the Lesson-Sermon gave me much comfort, "Be strong and of a good courage; be not afraid, neither be thou dismayed: for the Lord thy God is with thee whithersoever thou goest." I was no longer afraid, and never left any place with such a sense of quiet and peace. Three days after my return home I told my father I would like to attend the Christian Science church instead of the one to which I had been accustomed to go, and this was his reply, "Daughter, I do not know anything about Christian Science, but if it is all you say it is,—and I have no reason to doubt it,—if it has done for you what I have noticed these three days, you shall follow it unmolested as long as you live with me. Thank God, you have been converted;" and so the first words I had heard of Science were proven true, "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). This has been true ever since in every sense of the word; Love has been ever-present, protecting me and giving me more happiness than I ever could have planned for myself. There are many interesting details that might be given, but God's Word has never failed.

I want to express my gratitude to God for all He has done for me through Christian Science, and I desire to so live that God may use me as a channel of love to help others, who like myself are surrounded by all good, but too much in the dark to know it.—LOU BRADLEY, Philadelphia, Pa.

I desire to testify for the help of others to what Christian Science has done for me. After about four years of miserable suffering and several extended nervous breakdowns from supposed overwork, I found myself in an alarming condition, so diagnosed by physicians, including two specialists. I was sent to a hospital, where I spent four weeks in great misery.

I had been reading Science and Health for a couple of months and really wanted to try Christian Science, but was so filled with fear that I could see no way of getting along without *materia medica*. I had, however, much help at this time from a friend who was in Science. One Sunday I went to the Christian Science church and got along better that day than before. Soon after this I went to a practitioner and told her that I had decided to drop the medicines, although with much foreboding as to the results, and that I wished treatments. I considered it quite a demonstration to have reached this beginning. From that time I improved continuously. It is impossible for me to express in words the mighty influence which worked in me to overcome my sense of no control, and which gradually brought me back to a normal condition. I was formerly filled with fear and worry and had no thought of going to God, divine Principle, for help. I had been advised not to go back to office work, and of course I had an unreasonable fear of it.

It is now just a year since I took my first treatment. My trouble has almost entirely disappeared and I have been at office work seven months. I know that several physicians believed I would not get over my sickness, and the following words of my last physician, a thoroughly experienced and competent specialist, for whom I have a high regard and an appreciation of his care and consideration, I consider a fitting expression for a testimony in Christian Science. He said, "I am much elated at your recovery; your case is one in a hundred thousand, but you had it in you to get over this." I know that these are only outward manifestations of what I have gained in spiritual growth, and others as well as myself may increase their understanding of this truth which our dear Leader, Mrs. Eddy, has shown us through her deeds, as well as in Science and Health and her numerous other writings.

Although my healing has been slow, I realize that I have gained and will continue to gain by continual study and practice of our text-book, which is indeed a "Key to the Scriptures." Most of my experience, as given above, was in and about San Francisco, but now I am located in a small town where my wife and I are, I believe, the only Christian Scientists, with the exception of one lady and her family. We read the Lesson-Sermon together every Sunday.—BERTRAM H. COFFIN, Sonora, Cal.

How thankful we should be that at last the truth which is able to set us free from the bondage of the world has been made clear to us, and that we have but to accept the teaching of Christ Jesus as interpreted in Christian Science and obey his commands in order to receive all the promises

Digitized by Google

of the Father,—health, harmony, heaven, here and now. Of this I have proof, for about one year and a half ago, after all material aid had failed and the doctors had said they could not help me, I turned to Christian Science and received help immediately. From a state of deep despondency I was raised to happiness and peace; from long-continued suffering, I was released in one treatment. I was well—happy—and have been so ever since. I was also instantly cured, by my own realization of the truth, of a pain in my hip which had troubled me for several years.

For all that Christian Science has done for me,—and there is not an hour, no, not a moment of the day that I am not benefited by it,—I am deeply grateful to God, who through our loved Leader has made these things possible.

Miss Ethel B. Prescott, Boston, Mass.

It is difficult for one who does not understand Christian Science to believe that the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, will bring that apprehension of divine Truth which heals both sin and sickness. Not only is this statement truthfully made many times in our Wednesday evening meetings, but it is often seen in the testimonies published in the *Sentinel* and *Journal*, to which I wish to add mine.

When I was a boy I had my nose broken. It was not only broken at the bridge, but the large bone or cartilage was curved in such a manner as to entirely close one of the nostrils. Later a very painful operation was attempted, but it did not bring the desired result. This was about the year 1885. Sixteen years later, in 1901, I took up the study of Christian Science, and since then I have studied it faithfully. One day within the past year I was much surprised to find that I was breathing through both nostrils, and an examination revealed the fact that while my nose was not perfectly straight, it had straightened sufficiently to give me the free use of both nostrils. This healing has been done in no other way than through Christian Science, by the almost constant declaration of the allness of God, good, and the nothingness of error, as we are taught on almost every page of Mrs. Eddy's writings. By this study I am a better man every way,—better morally, better physically, better mentally, and far better spiritually. I am glad to give Mrs. Eddy all honor, for I am very grateful to her and grateful to God for giving me this truth through her.

S. A. Blasland, St. Louis, Mo.

It would be impossible to express in words my gratitude for Christian Science, for I am glad to tell what it has done for me. Even as a child I was never quite free from some ailment, and for the last fifteen years I had been growing steadily worse, until I had become a nervous wreck, suffering at times with my stomach, and three days a week I was prostrated with severe neuralgic trouble. Five doctors had treated me, one after the other, each leaving me no better than when he found me.

One year ago I sent for a Christian Science practitioner, and in two months' time I was a different creature. I have never had my glasses on from the time of the first treatment, while before I could not use my eyes without them for more than five minutes. My friends look at me and say the change is a miracle, but I know it is the natural thing for God's children to be healthy and harmonious. He never sends sickness or sorrow, and I should like to gather all into the fold, to know the peace and joy which we can claim and so be free.

Daily I pray God to bless Mrs. Eddy for what she has done in showing us the way in Christian Science. It has done much for me physically, and what means a great deal more, it has brought me knowledge of the peace which passeth all understanding. I am indeed thankful to God, and to our Leader, who is so patiently showing us, step by step, how to claim what rightfully belongs to us all,—health and happiness.

Florence Howell Johnson, Philadelphia, Pa.

Nearly two years ago I was induced to try Christian Science treatment for a very aggravated case of asthmatic trouble. For more than sixteen years my life had been made very wretched by severe attacks of this disease, and I frequently had attacks from which my physicians feared I could not recover. During these years of suffering I went from one doctor to another, having had treatment from five of the best doctors in Wilmington. Christian Science treatment healed me, and I am grateful for it.

Mrs. Sarah J. Willson, Wilmington, N. C.

From my early childhood I had been a sufferer from stomach trouble, and as I grew older other maladies appeared, till I was miserable most of the time. I was either under a doctor's care or taking medicine recommended by well-meaning sympathizers. Some of these remedies seemed to relieve my suffering for a time, but it only returned in an aggravated form. This condition continued till I was a nervous wreck. Clouds seemed to gather thicker and thicker till October, 1904, when the doctor said I had a malignant growth in the stomach. I believed this, as my grandfather and his father had died with kindred trouble, and we therefore thought it hereditary. This was my condition when I decided to call a Christian Science practitioner, and as a result I was practically healed inside of three weeks, being able to eat or drink anything I wanted from the first. For more than a year I have been doing all the work for a family of four, besides visitors, and can do it without being tired and worn out, as I used to be all the time.

Does any one wonder that I am thankful to God for Christian Science, which brought me out of misery and darkness into the light and peace that passeth understanding? I am also grateful to our Leader for bringing us the truth that makes us free.

Mrs. Caroline R. Cochran, Watertown, S. D.

Having experienced the healing effects of Christian Science, I desire to express my deep sense of gratitude. When this Science was first brought under my notice I was suffering from sight failure. I was not able to read printed matter of any description, no matter how large the print, without experiencing the most violent pain. Many different kinds of glasses had been tried without success, and the oculist at last said I must give up all attempts to read, and live in hope that as my general health improved the sight would return; but I was then in poor health and had little hope of a speedy recovery. It was at this time a friend lent me some *Sentinels* and told me something of this, to me, new and beautiful truth. I bought a copy of Science and Health, but found that I could not read it so sought out a practitioner. At the end of one week's treatment I could read without pain. I had no more treatments, but continued reading, and at the end of the second week I put aside the glasses which the oculist had ordered and have been able to read any kind of print ever since. This seemed, and still seems, a very beautiful demonstration of the power of Truth—but the gradual transformation that results from daily study and striving to understand and live the truth; the uncovering of error where least suspected; the revealing of what it is that ails us and how it can be utterly destroyed,—the growing up into the knowledge of God's ever-presence,—is to me wonderful beyond words. Since my first healing there has been a steady growth in understanding, and, as a consequence, in health and strength.

I have had many things to be thankful for during the

Digitized by Google

short time I have been a student of Christian Science, but for nothing am I more grateful than for the new light which has been thrown on the Bible. Before it was to me an obscure, even irritating, book—now I go to it for instruction and peace. For these blessings I thank God, divine Truth, and Mrs. Eddy, Truth's Messenger.

MAY HICKMAN, Sydney, Australia.

It is now eighteen years since I came into Christian Science, when I was born anew in the truth. A dear friend, who had been sick a long time and given up by physicians, having seen the healing of a neighbor in Christian Science, accepted it and was soon better. She sent for me to come and see the Scientist. I was glad and ready, as two weeks before my last physician had said, "I must be honest and tell you that I can do no more for you." He was very kind, but told my husband I would not be here long. I had been under several different physicians for five years. It was thought that my lungs were seriously affected. I commenced to gain from the first, under Christian Science. The first trouble to leave was one from which I had suffered for years, and for which I had been taking laudanum. Another trouble I had from childhood, but one after another went and at the end of a year I felt like a new person. I have never taken any medicine since the first. I look back with pleasure to my second year in Christian Science, it was so spiritually happy, nothing to mar or ruffle the harmony; but I had to be tested and tried. Burdens seemingly too heavy to bear had to be met, but as I walked alone with God, they made me to stand firmer and stronger. I felt the all-presence about me as I clung to the Bible and Science and Health.

Early I had been taught to read the Bible, and I had united at the age of fourteen with an orthodox church. Many were the questions from childhood which had never been satisfactorily answered, but they unfolded one by one, so simply and beautifully, as I continued to read our text-book. Not half can be told, as words fail to express it. I pray that my life may so reflect the fruits of spirit as to show my gratitude to God, and to Mrs. Eddy, for the physical and spiritual blessings received and still being attained.

MRS. OLIVE CORWIN HAWKINS, Friendship, N. Y.

A feeling of deep gratitude urges me to say what Christian Science has given and taught me. Never having been strong, I underwent for nearly fourteen years a course of treatment which seemed to do me good; but when I came to know Christian Science, how clear it was to me that the material treatment is limited at best, while the power of divine Love is unlimited. During five years I suffered from severe heart trouble. I was forbidden to walk upstairs, so that at our house and my mother's a lift was made. After I had treatment in Christian Science, these were no longer required. I had no longer any palpitation or pain, and instead of lying down all day I took walks in all kinds of weather.

After thanking God for my healing, I must say a word of inexpressible gratitude to our Leader, Mrs. Eddy, to whom I owe so much. I regard existence so differently, and find it so gloriously rich in all things, that it has become a joy for me to live by having learned that God is my Life. I have become so much calmer, and go on in perfect security, with the firm conviction that God's endless love will continue to help me in all things.

MRS. VAN OVERVELDT VAN DER MEERSCH, Scheveningen, Holland.

I suffered from indigestion, stomach and rectal trouble, for nearly twenty years, and used nearly every kind of medicine for these ailments, but kept growing worse all the time. A dear friend then recommended Christian Science to me, and I went to a practitioner, had two weeks' treatment, and was entirely healed. I have had some good demonstrations of Truth's power in healing, and above all, I am grateful to God that I am privileged to live in this age when humanity is again discerning those things of which Jesus said, "Many prophets and kings have desired to see those things which ye see, and have not seen them." With the spiritual light of Christian Science I find existence to be entirely different from what it seemed a few months ago. I am more thankful than I can express, and I am striving to learn more and more of this blessed truth.

JOE ADAMS, Boston, Mass.

I look forward with joy to the weekly appearing of the *Christian Science Sentinel* and am glad that we all have the privilege of contributing to its pages. It is about four years since I found Christian Science. I was suffering from almost every ill that flesh is heir to, including heart, lung, and stomach troubles from which I had suffered for years. The healing of my physical troubles is as nothing compared with the spiritual uplifting, which is wonderful. Words cannot praise God enough. My daily prayer is "to do all for the glory of God." We are thankful for the *Quarterly* and the beautiful lessons it contains.

I am thankful that I live in this day and age with our beloved Leader, Mrs. Eddy.

MRS. MARY A. DENHAM, Minden, Neb.

I shall be very happy if the story of my healing by Christian Science serves the purpose of helping some one else out of trouble as I was helped in my hour of great need. I am a farmer, seventy years of age, and had suffered for ten years with two severe chronic diseases, until two years ago, when I was treated in Christian Science. Since then I have been healed of these troubles, also of deafness, and of the desire for liquor and tobacco, which I had used for the last fifty years. These were overcome with the help of a practitioner, together with the study of Science and Health and in trying to live its teachings. I wish to express my gratitude to God, and to our Leader, Mrs. Eddy.

WILLIAM KRAUSS, Mapleton, Minn.

I became a Christian Scientist because I was looking for the truth and I found it in Christian Science. It has helped me to overcome many habits and been a great blessing to me in many ways, for which I am sincerely grateful. I long to understand this truth more and more, so as to be able to help others. May God bless our dear Leader, through whom I have been helped in my journey from sense to Soul.—GEORGE N. HICKS, Brooklyn, N. Y.

During the past four years, by the study and application of the teachings of Christian Science, I have been healed of many physical ills and many forms of mental discord have been destroyed. I have also been greatly helped in a business way, and in matters pertaining to my business relations with other men. The truth has been my only physician, support, and guide.

WENTWORTH P. BARKER, Newtonville, Mass.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

FROM OUR EXCHANGES.

The greatest punishments incurred by sin consist in the loss of spiritual ability. God does not need to set up any external bars to prevent us from entering upon the possessions and advantages due only to the righteous. The prohibition lies in the soul of the unrighteous man himself. He cannot appropriate the things which are the rewards of virtue. He lacks the faculty for doing so. When Jesus said to Nicodemus, "Except a man be born again, he cannot see the kingdom of God," it was saying that the man who is not Spirit-born is incapable of knowing what the kingdom of God is. No gates and walls shut him out of the kingdom; it lies all about him. He simply cannot see it. Paul pointed to the same law when he said, "The natural man receiveth not the things of the Spirit of God, . . . and he cannot know them, because they are spiritually discerned." That is the dreadful retribution of unspiritual life: the whole world of spiritual things is made indiscernible. When other people talk about them to the "natural man" they seem like "foolishness," vain imaginings, and delusions. He smiles incredulously or contemptuously. Unconscious that he is blind, he denies the reality of things which other people, having spiritual sight, declare they see. And throughout the whole range of spiritual life the man of carnal nature cannot enter into the experiences of the Christian. That gracious, heavenly light that sometimes "surprises the Christian as he prays," never breaks upon him.—*Sunday School Advocate.*

The Bible puts much emphasis on internal illumination. Paul prays for the Ephesians that the eyes of their understanding may be enlightened. After the external revelation was given there was need of the opening of the understanding to its light. This was the work of the Holy Spirit, and so far as we fail to realize this at the present time, and seek only to increase religious knowledge by research and education, we are making another serious mistake. Growth in spiritual knowledge requires spiritual work within. Hence to ignore conversion, regeneration, and the transforming grace and power of the Holy Spirit, while making much of the pursuit of external knowledge, may only land us in the deepest ignorance of spiritual things. We shall boast in vain of "modern thought" if there is no revelation of God's thought in our inmost being.

The Advance.

There are two ways to root out religious error and to drive out wickedness. One is to disprove the error by argument and denounce and punish the wicked. The other method is to fill the mind with truth, to make error ridiculous, and exhibit virtues which make wrongdoing seem contemptible. The first method taken by itself is dangerous; the second method is safe. If a man is filled with new truth, imperfect creeds will fall away; but if they are merely stripped away by some process of reasoning and logic, the believer, disenchanted, may be miserable and forlorn. The barbarities of war, of cruel sport, or inhuman competitions in business may be suppressed, while men remain selfish and cruel in spirit; but men and nations filled with generous sentiments lose the impulses which once expressed themselves in cruel forms.

The Christian Register.

A thousand things in our day shut God out of providence and life. In the olden time God was in everything; now secondary causes absorb our thought. The first Great Cause is too often forgotten. We think we manage all things in this world ourselves, but we are mistaken. God reigns; an overruling Providence controls all life and is at the center of being. We need to remember that while there is darkness in the world, and sin, and cruelty, and injustice, it is as true as it ever was—and it was always true—that he who is on the side of right is on the side of the Eternal.

The Universalist Leader.

Every deliberate approach to God, in aspiration, petition, worship, study of His Word, and service to our fellow-men, helps to enlarge the powers and to clear up the ignorance of conscience. And one cherished selfishness, like the young man's love of riches which kept him from a high place in the service of Christ, may check and dwarf the whole growth of a man into the image of God.

The Congregationalist.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Navy Department is arranging to establish coastwise stations of wireless telegraphy in the Philippines, similar to the chain of stations reaching from Portland, Me., to Galveston, Tex., on the Atlantic seaboard. A naval officer has been engaged on this work for a year or more, having been sent to the Asiatic station by the Bureau of Equipment to install wireless apparatus on the ships of the Far Eastern fleet. The sites for the new stations on land have been selected, and the islands have been fully covered by the system of communication. In the arrangement of this system special pains have been taken to establish communication with ships bound for Hong Kong. The system will connect with the army stations, which are situated in the southern part of the islands. It is hoped eventually to install stations of sufficient power to send messages from the Philippines to Guam, thence to Hawaii, and so on to the Pacific coast.

The Western Union Telegraph Company has received a communication from the director of the Imperial Chinese Telegraphs, dated Shanghai, Aug. 1. It says: "The development of telegraphs and posts in the Empire of China has necessitated that a uniform system of Romanization of Chinese city names should be adopted, and for this purpose a special committee was appointed." As a result of the work of the committee, it is stated, a uniform spelling system has been adopted, and will in future be applied to all Chinese names. The Chinese Government adopted the telegraph system before it allowed the building of railroads because the officials recognized in it an important factor for the maintenance of order in the interior of the country. To-day there are about 4,000 miles of railroad and 15,000 miles of telegraphs in the 4,277,170 square miles of territory which comprises the Chinese Empire.

The Isthmian Canal Commission advertised recently for five thousand tons of steel rails for use on the Isthmus, and the United States Steel Products Export Company of New York, a subsidiary of the Steel trust, was the only bidder. The price asked for the rails was $29.45 a ton f. o. b. Baltimore, or $45.70 laid down in Colon. These prices are regarded as extortionate. When Congress passed the Aldrich resolution, providing that materials for the canal should be purchased in the United States, it expressly stipulated that this should be done unless an attempt at extortion was made by American bidders. The Commission also advertised at the same time for forty mogul locomotives, and the Baldwin Locomotive Works proved the successful bidder, its price being $458,600.

An association in Georgia, to be composed of the trade and commercial bodies, is to be formed, with the Savannah Chamber of Commerce and Board of Trade taking the initiative. An immigration agent will be appointed as the representative of the allied bodies, and prior to the formal organization the Savannah Chamber of Commerce will receive applications for immigrants and when they arrive they will be sent to such destinations as may be most desirable for them. A foreign line of steamers will be established between Savannah and European ports within the next three months.

The Department of Justice at Washington received notice of the arrest on Sept. 5 of five Japanese, members of the crew of the schooner Tokiowah, for seal poaching on St. George's Island. On a statement of the United States Attorney at Valdez, however, the Department gave authority for the release of the prisoners, on the ground that they were not guilty as charged.

About one million dollars will be spent by the United States Government in paying for the site and the erection of buildings for the new Naval Magazine on the banks of the Weymouth Back River, in Hingham and Weymouth, Mass. The plant will not be finished for several years and actual work on the site probably will not begin before next summer.

The United States Fish Commission schooner Grampus during the summer has made weekly trips between Portsmouth, N. H., and Boothbay, Me., collecting lobster spawn at all intermediate points. Over ninety-seven million lobsters have been hatched and liberated during the summer between these two ports.

Three more defendants in the land fraud cases were convicted of a conspiracy to defraud the Government in the Blue Mountain case in Oregon.

Of the $12,500 which the British committee undertook to raise for the Keats-Shelley memorial at Rome, only $3,135 has thus far been secured.

Foreign.

At the session of the Polar Congress at Brussels, Sept. 11, Dr. Jean Charcot announced that he was organizing an expedition to the South Pole, and Charles Benard, President of the Belgian Oceanographic Society, said that society was organizing an expedition to the North Pole. The two expeditions will operate simultaneously and in concert. M. Benard is a member of the permanent commission of the International Association of the Navy. The plan of Arctic exploration which he is understood to favor is one employing two ships in communication by wireless telegraphy. Reaching in the autumn the island of New Siberia, a rush would be made for a point on the 158th degree of latitude east, to drift from thence with the concrete ice. He argued that this drifting would carry the ships to the immediate neighborhood of the North Pole. The ships, he calculated, would be separated by the ice acting as a wedge until they were from sixty to eighty miles apart, each ship meanwhile tracing in the basin a line of soundings and dredging, and thus constituting two metallurgical, magnetic, and floating observatories. The term of the exploration M. Benard estimated at three years, recommending provisions for five years. The cost of such an expedition he estimated at $300,000.

The second Hague Conference will probably be held next May or June. The postponement of this gathering is now believed by the officials to have been very fortunate. Several important events have taken place in the meantime, raising issues which it will now be possible to bring before The Hague conference; and as a result of Secretary Root's South American tour, it is probable that nearly all of the governments of that continent will be represented at the second conference, which was not at all certain had the conference been held when originally proposed. The representation will thus be increased from thirty nations to about forty-five.

Porto Rico has espoused the good roads movement and its Legislature has authorized a loan of $1,000,000, the proceeds of which are to be devoted to improving the Porto Rican highways. The island now has difficulty in getting products to market, and especially to the seaports. Careful estimates have shown, however, that by the expenditure of $1,000,000, great improvements in this respect can be effected, and as soon as the bonds are disposed of the work will be undertaken.

A new banking institution entitled the Amerika Bank is about to be organized in Berlin under the auspices of the Darmstadter Bank, with a capital of $10,250,000. Besides engaging in the ordinary banking business between the United States and Germany, this bank will make a specialty of introducing American securities to the German public. The bank will also co-operate in large financial transactions in the United States, Canada, and Mexico.

There is a movement on foot in Jamaica to organize a food reform committee, in order to get the people to develop the agricultural resources of the colony and discontinue the importation of corn, peas, and other foodstuffs. It is the plan of the committee to give prizes to peasants for agricultural improvements.

Eleven railway bridges span the Thames in London. Four thousand postmen deliver ten million letters weekly, walking a distance equal to twice the circumference of the globe. There are ten thousand miles of overhead telegraph wires and the number of telegraph messages received in London in a year is six million.

The Hamburg-American Steamship Company at Hamburg has announced a plan to issue $5,000,000 new capital, making a total of $30,000,000. Travel between this country and Europe has become so great that many new steamers are needed to handle the traffic.

Industrial and Commercial.

Illinois, the great prairie State, outranks every other State in the Union in the average value of its medium farms per acre, having outstripped New Jersey, its nearest rival, since the census of 1900 was taken. Recent figures show that a tremendous growth in farm land values has taken place in this country since 1900. When the 1900 census was taken the total real estate value of farms of all classes in the United States, including improvements, was $16,614,647,101. In 1905 this value had jumped to $22,745,420,507. Illinois now has farms valued at $2,437,437,185, Iowa comes next with farming country worth $2,004,100,770. No less than five States in the Union have farm lands which have passed the billion mark in value. They are Illinois, Iowa, Indiana, Ohio, and Missouri. The average real estate value of Illinois farms has risen to $75.31 per acre.

The Baldwin Locomotive Works closed the first half of the year 1906 with an output of 1,311 engines, exceeding all previous records, and that of the last six months of 1905 by sixty-two locomotives. At the present rate of production for the balance of the year the output for twelve months will be fully 2,600 engines, or 350 more than were turned out in 1905, which was a record year. The works now have on their payrolls 21,243 names.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

STREET IMPROVEMENTS IN CONCORD, N. H.

[THE following letters are expressive of the great interest felt by Christian Scientists in the improvement of the streets of Concord, as suggested by Mrs. Eddy, and we are glad to publish them. Mr. J. Wesley Plummer of Concord has kindly consented to act as treasurer of the fund which is being contributed by Christian Scientists for these improvements. The work is now in progress.—EDITOR.]

New York, N. Y., Aug. 20, 1906.

Mr. J. Wesley Plummer, Concord, N. H.

Dear Sir:—We are informed that you have consented to receive and pay out money for work in connection with improvements to State Street in Concord, N. H.

Therefore, we hand you herewith the check of Second Church of Christ, Scientist, New York City, as a contribution toward the cost of making the street improvements mentioned in the *Christian Science Sentinel* of Aug. 11, 1906.

We are grateful for this opportunity of helping to insure certain comforts to our beloved Leader, and desire to have you know that this church will be ready and pleased to add to its contribution should there be any need for funds to complete the work outlined.

We appreciate the kind part you are taking in this good work. Faithfully yours,

M. E. WINSLOW, *Clerk.*

Rye, N. Y., Aug. 30, 1906.

Dear Mr. Tomlinson:—It gives me much pleasure to send to you the enclosed check, as my contribution to the fund for repairing the streets. Most sincerely,

CAROLINE W. FRAME.

Brookline, Mass., Aug. 30, 1906.

Mr. J. Wesley Plummer.

Dear Sir:—Please find enclosed check, to assist in carrying out the desire of our beloved Leader to have the streets of Concord properly paved. It is a great privilege to add one mite toward her comfort, when we owe all of our comfort to her. Yours most sincerely,

ANNIE LOUISE ROBERTSON.

Boston, Mass., Aug. 27, 1906.

Dear Mr. Tomlinson:—Will you kindly hand the enclosed check to Mr. Plummer (as I have not his address), to be used in improving State Street. I need not say that it gives me much pleasure to assist in anything which may please our dear Leader. Hastily, but truly,

ANNIE M. KNOTT.

Kansas City, Mo., Aug. 28, 1906.

Mr. J. Wesley Plummer, Treasurer, Concord, N. H.

Dear Sir:—Having learned that the friends of Mrs. Mary Baker G. Eddy have been extended the privilege of sharing in the expense of paving State Street in Concord, I enclose herewith check from myself and wife, to be used for this purpose.

We do this as a slight token of the love and appreciation we have for your illustrious citizen and for the city in which she resides. Respectfully yours,

ADAM H. DICKEY.

Washington, D. C., Sept. 5, 1906.

Rev. Irving C. Tomlinson, Concord, N. H.

My Dear Mr. Tomlinson:—May I be permitted to contribute the enclosed amount to the paving of State Street, Concord?

Learning through the *Sentinel* that dear Mrs. Eddy's friends will share the expense of the improvements she desires, I thought what a blessed opportunity to do something to "smooth the pathway" of one through whose unselfed love and labors for mankind, mine has been smoothed and brightened to such an extent that I seem to live in another world; and while I realize that hers is best smoothed by the obedience and loyalty of her followers, as defined in "Retrospection and Introspection," page 72, it seems a beautiful thought to have her daily drive *paved* with love and gratitude, and joy unspeakable to share ever so little in beautifying and adding to the comfort of her surroundings. Sincerely yours in truth,

ELLEN NEALE.

FROM OUR CONTRIBUTORS.

THE WRITING IN THE SAND.

SAMUEL GREENWOOD.

THERE are probably few readers of the Bible who have not paused, on reading the incident of Jesus and the sinful woman, to wonder as to what he wrote on the ground in reply to her accusers. A selected article that appeared in the *Christian Science Sentinel* of May 17, 1900, states that Professor Gregory of Leipzig has discovered in an old manuscript a different reading of this passage, in which the ninth verse is thus rendered: And they *when they read it* went out one by one, etc. As the professor interprets it, Jesus wrote on the sand the secret sins of those who would have had their fellow-sinner stoned in support of their own self-righteousness. Their assumption of innocence in bringing a less fortunate culprit to punishment could not hide from the piercing purity of Jesus' consciousness the sinfulness they had hidden from the world; and he turned upon them the sentence of their own moral distance from purity and goodness.

If this rule of our Master were generally obeyed, and those only who are "without sin" should cast the stone of condemnation at the erring, what a benediction of mercy and love would rest upon this saddened, sinful world. Too many of us are prone to find fault with all whose manner of life and conduct does not conform to our ideals, and to harshly condemn those who have yielded to temptations that may not have come our way or against which we may have been more strongly fortified. What have we to glory in with respect to our own righteousness, that we should sit in the place of judge over the brother who may have stumbled and fallen? How many of us would have done better under the same circumstances? How can any

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

one think that he would have been a better or a truer man than the one he may condemn, had he been in the other's place?

While the Christ-law condemns sin, and does not exempt the sinner from the punishment that may be necessary to bring him to repentance, it calls for compassion rather than condemnation, especially from those who are also liable to be tempted. Had Jesus spurned the woman in his natural abhorrence of her sin, instead of lovingly bidding her to "sin no more," the result would probably have been hardening instead of redemptive. He declared that his mission was to save, not to condemn. It is Love that uplifts, and heals, and regenerates, that raises the fallen and recalls the wanderer. If our exalted Master could not fulfil his Christ-work among men without the exercise of a love that is beyond human imagination to conceive, how much more should they love and be merciful who follow his example so fitfully and so feebly? What Christlikeness can there be in bringing another into condemnation for doing what we have not ourselves risen above? If Christ Jesus were likewise standing in our midst when we are accusing others, what, think you, would he write upon the sand for us to read?

St. Paul says, "Brethren, if a man be overtaken in a fault, ye which are spiritual, restore such a one in the spirit of meekness; considering thyself, lest thou also be tempted." The apostle's injunction points the safe course for us. The Christian's work is to "restore" the sinner, bring back the prodigal, unloose the prisoners of material sense, and not to bind their bonds closer about them by pharisaical denunciation or repudiation. With their Leader's example before them, Christian Scientists are without excuse in this regard. Her patience with and love for her enemies, should make our own lips mute when tempted to exploit another's errors and hide our own. Let us be thankful that we have one to guide us who thus follows Christ, and whose constant effort is to lead mankind into the same path.

In their healing work Christian Scientists meet the various conditions constituting the sinful material sense of being, and are in especial need of such humility and love as Jesus manifested, that they may bring to light the Divine likeness, the true man, which these wrong conditions have seemingly obscured. They cannot heal the sick or the sinful while mentally censuring them for past mistakes or for the errors that may be uncovered in the healing process. No matter what form of evil may have overtaken the sufferer who comes for help, or how repugnant to our sense are the errors which he may have indulged, there pertains to our own human nature the possibility of our having fallen into a like snare, if in the same mortal weakness we had passed through the same fire of temptation. This remembrance should help us restore our brother "in the spirit of meekness." Sin is not overcome by condemning the victim, but by tenderly showing him its illusive nature, and lifting his thought to perceive the allness of God; this redeems the sinner and destroys the sin.

The charity that "thinketh no evil, and is kind" must become spontaneous in Christians ere they can be wholly Christlike. To effect our complete salvation from evil we must go in demonstration over the same ground that our Master has traversed; but we must love as he loved if we would live as he lived. We also must become "the friend of sinners" if we would heal them of their delusions. The mirage of personal sense may so distort the human perception that one may often appear sinful and repellent, but this is not the sense which guided Jesus, or gave him the "correct view of man" which, as our text-book declares, "healed the sick" (Science and Health, p. 477). We must turn away from the teaching of material sense if we would learn to love and condemn not, and to forgive as we would be forgiven.

The closer we approximate the purity of the Christ-mind, the more unreal and impersonal must sin of all kinds appear to us. The tendency to dwell constantly upon others' faults or failings, even in the privacy of our own thoughts, springs from our own mental defilement, since all that we accept of sin in another comes from our own concept thereof; and to give this expression as true of him, must add to and prolong our own enslavement to it. The truth of the infinite fatherhood of God, good, makes evil impersonal and unreal in every instance, and if we would work out our salvation on this basis we must not exclude others from the possible attainment of perfect spiritual sonship.

As fellow-pilgims to a better country, striving alike for the attainment of the Christ-ideal, we cannot afford to lay the smallest weight upon each other's efforts thitherward. If we honestly believe we are doing all that we can, with what ability and understanding we have, we can at least give others credit for living quite as consistently with their light. Uncharitable judgment is a sin that can be destroyed only through love, and for its indulgence we must atone. If we are spiritually stronger than our brother we shall compassionate his weakness and help him as we have opportunity. This was Jesus' way.

Though it may take a long and direful struggle with their sense of material selfhood, and the love of sin pertaining thereto, for mankind to reach the full knowledge of man's spiritual individuality and perfection in the likeness of God, this progression and attainment is indispensable to human health and salvation. As one rises towards the realization that only what manifests God is true, he ceases to attach evil to the thought of his own or another's personality. To refrain from judging others, while yet in a state of imperfection, is a Christian demand; it means obedience to the Golden Rule. We must learn to lay down our selfishness,—self-love, self-will, self-righteousness,—even, if it need be, on the cross of humiliation; for not otherwise shall we grow to reflect that selfless, Christlike love whose work is not to accuse, but to make whole,—to heal and to save.

SIGNS FOLLOWING.

FRANK H. SPRAGUE.

CHRISTIAN Scientists are sometimes charged with inconsistency in citing cases of healing to prove the validity of their position; since, it is alleged, evidence of this description must be obtained by consulting the physical senses, whose reliability the teaching of Christian Science denies. Only, however, by a forced construction of the phraseology of certain doctrinal statements bearing on this point is it possible to reach such a conclusion.

If, as Christian Science avers, creation is wholly spiritual, and if, as Paul declared, spiritual things are spiritually discerned, it follows that every conceivable aspect of materiality is foreign to the truth of being, and must, therefore, be excluded from the category of real things. This being the case, the very belief in material functions and modes of perception—a belief which opens the door to every conceivable form and phase of erroneous thinking and the disastrous consequences resulting therefrom—must be misgrounded.

If Christian Science were merely a transcendental philosophy, dealing with the problems of being in the abstract, the case might rest here; but, on the contrary, this Science reveals a working basis, according to which everything that appears to deny the spiritual facts of existence may be eliminated, by progressive stages, from human consciousness. In the present stage of this winnowing process the wheat of spiritual perception and the chaff of material sensation appear so subtly interblended that nothing but Divine Science, the Word of God,—which, according to Paul, is "sharper than any twoedged sword, piercing even to the dividing asunder of soul and spirit,"—can distinguish and separate them, and until human consciousness advances beyond

Digitized by Google

this stage, it is necessary that the conditions demanded by the *modus operandi* of present belief be complied with.

As water in process of heating retains its liquid form until the boiling-point is reached, so the human mind, while taking the primary steps which lead in the direction of final emancipation from all the restraints of false sense, is obliged to conform, in such ways as best facilitate progress, to the structural modes of a materially conceived existence. Thus the spiritualizing process suffers no reaction, and human consciousness is allowed to "emerge gently from matter into Spirit" (Science and Health, p. 485). Meanwhile mortals must be content to abide by the admonition of the great Wayshower, "Suffer it to be so now," rejoicing in a degree of understanding which affords assurance of the complete realization, eventually, of the perfect man eternally existent in the divine Mind.

The verities of Christian Science appeal to spiritual sense, which recognizes Truth primarily and directly and neither requires nor craves evidence of a subsidiary order. Thus apprehended, perfection, wholeness, and harmony appear as the inviolable rule of being, often in direct contradiction to the testimony of the physical senses. Since these so-called faculties exist only as vehicles of the erroneous belief in a sensuous existence, they are transient and unreal, and, having no basis in Truth, they must dissolve into nothingness when the belief which sustains them is destroyed. To spiritual sense the healing work appears not as a material process of transformation, but as the operation of Truth effacing the error or false belief which says, "I am diseased, deformed, depraved," so that no groundwork shall remain to support even a physical semblance of inharmony.

The material type of consciousness, which Paul describes as the "fleshly mind," being incapable of discerning spiritual phenomena, attempts to define this operation in material terms. The spiritual fact emphasized in healing the sick and sinful is concealed from it by an artificial veil of materiality. The sensuous aspect of wholeness visibly portrayed in the patient's physical form is but the advancing shadow of this spiritual fact—a fact already patent to the healer's more spiritual vision—as it falls across the pathway of mortal sense.

Thus, while the real evidence of the healing efficacy of Christian Science is appreciable to spiritual sense alone, it must be conceded that even the mental shadow of harmony cognized by consciousness lingering in the realm of belief, points, in at least a negative way, to an ideal which, while presenting no point of contact with the spiritual fact, may nevertheless serve as a stepping-stone in the right direction. Mrs. Eddy says, "Christ changes a belief of sin or of sickness into a better belief, that melts into spiritual understanding" (Science and Health, p. 442).

If a world of distorted, untrustworthy impressions seems real and tangible to material sense, how much more real and tangible must be the genuine original when spiritual apprehension divests it of all compromising and illusory aspects.

INFINITY.

WALTER M. DIXON.

THE word infinite, in its relation to God, good, is of deep import to all Christian Scientists. From the Bible we learn that God, Spirit, created all and called His creation good—"very good." Now the only true meaning of a statement is its author's. This is not always fully conveyed by the words, and can only be perceived in the ratio that our thought is in touch with that of the author. We must therefore conclude that when the infinite pronounces His creation good, He must mean infinitely good.

All Christians admit that God is good, and that He is infinitely good, although they could not perhaps define the meaning of the word infinite; yet it certainly conveys the thought to them that God is good and nothing but good. This understanding embraces, if it does not explain, the definition of the Twentieth Century Dictionary: "Without end or limit; without bounds; that which is not only without determinate bound or limit, but which cannot possibly admit of bound or limit; the absolute or infinite being God." Let us think for a moment, "Cannot possibly admit of bound or limit." In other words, there can be no boundary that can enclose the infinite, and no boundary-line, either real or imaginary, that can shut out the infinite. Applying this meaning of infinite to creation, we have first, God's thoughts,—the elements of creation, infinitely good; next, his manifestation in the universe and man, infinitely good; every manifestation or embodiment, infinitely good; their continuous unfoldment, infinitely good. This analysis includes all knowledge and all things knowable; all science; noumena and phenomena; all cause and effect; all Life; all Truth; all Love; all action; all law, and all possibility, infinitely good. If we include every existing thing in a proposition, how and where can any other thing be added to it? If the law of infinite wisdom actually governs universal creation, from the infinitesimal to the infinite, where comes in lawlessness, or the so-called law of evil? If infinite wisdom does not govern universal creation, infinitesimally and infinitely, then the law of wisdom is not infinite. If it is not infinite, it is finite; then we have no infinity, no God.

We are profoundly grateful for Christian Science, because it has restored to us what mortal beliefs and opinions would take away,—a God of infinite goodness, wisdom, and mercy, Love, Life, and Truth,—a God who would not and could not create anything that is not according to His Mind and therefore infinitely good. God's thoughts are expressed in this wise: "Let us make man in our image, after our likeness." "He spake, and it was done; he commanded, and it stood fast." Our text-book teaches that man, as the idea of God, is the eternal expression or manifestation of infinite Mind.

DOCTORING THE SHADOW.

EUGENE FLAGG VOORHIES.

To those who have for years depended upon an appeal to material remedies for relief the thought seems reasonable that the body should be doctored if it is sick. As learners in the school of the greatest of all sciences, the "Science of Soul," we are willing to be logical and grant to the inquirer the same privilege. If indeed the body *is* sick it surely needs to be doctored, but is it?

Take for example a case which came under the writer's observation. A lady had for a number of years been active in the service of her church, fulfilling every duty as it seemed right to her. At every meal she gave fervent thanks for the food she ate and acknowledged God as the giver of it. At the same time she declared that she knew certain things on the table were detrimental to her health. She continued to thank God for all the food set before her, yet retained her belief that a part of it was not good, until she became a confirmed dyspeptic. In this state of mind she began doctoring the body, when in reality it was her thought which needed correction. Her thought began to be confused when she thanked God for her food and at the same time believed it was not good. What was the result? She lost her faith in God and began to depend upon medicine. Her concept of God was a confused mixture of good and evil, for if her heavenly Father provided all things, and yet certain foods caused her to suffer, then, according to this belief, God must have caused the suffering.

At last she became discouraged with this plan of doctoring the body and abstained more and more from the habit of eating, taking less and less of that for which she thanked God as the good giver. As a result she not only starved herself but lost faith in God, stayed away from church, and was neither a blessing to herself nor her family.

Digitized by Google

About this time Christian Science came to her notice. She began as a little child the study of this wonderful truth, learning at length that God never intended that she should suffer. Then her concept of God began to be changed. Gradually through this new understanding of the Bible and its Key, Science and Health, she comprehended the fact that she lived in divine Mind instead of a material body, and that it was her belief which needed to be corrected; her thought, and not her body, which needed doctoring.

One day it came to her that in all these weary years she had actually been thinking more about doctoring the body than she had about improving her thought, and on opening her Bible she read these words: "And be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God." Then she found this reference in Science and Health: "Science not only reveals the origin of all disease as wholly mental, but it also declares that all disease is cured by divine Mind" (p. 169). Then this picture came before her: An artist's studio stood out in all its unfolding beauty. In the center of the room was a square block of marble. The scene changed and she herself was the sculptor, with mallet and chisel in hand. All at once a great light shone in at the window and cast a shadow on the floor. The shadow was an exact counterpart of the square block of marble. The thought came quickly: If I transform this block into a beautiful statue with graceful lines the shadow will follow the substance and reveal the same outline. Her lesson was learned. She knew that thought was the substance to be corrected before the body could respond. She learned a still larger lesson; namely, that divine Mind is the perfect substance which can never be sick, and that she must reflect this Mind.

Not many days passed before she could eat a hearty meal and give hearty thanks for new-found health. She had not doctored the body but her thought had been corrected by Truth. Her body was transformed by the renewing of the human mind. She had left behind her belief in doctoring the shadow, and had found her true, eternal home in divine Mind. Her fear was replaced by confidence, her sorrow was turned into joy; best of all, she understood and loved a God whose only plan for His children is one of love, whose only purpose is divine, whose only kingdom is spiritual, eternal, and always good.

[Written for the *Sentinel*.]

"A CALL."

BEN. HAWORTH-BOOTH.

O JUDAH, scattered on the hills of scorn,
Uncared, un-shepherded, forsook, forlorn,
Dar'st thou, in this thy day, bid sorrows cease?
Canst thou behold the things that are thy peace?
With Israel and with thee thy God will make
New covenant, He said, for David's sake.
Know, then, thy brother hath the promised meed,
The mighty guerdon of a mighty need.
'Tis thine if thou wilt take it: lo, he stands
To offer thee thy birthright at his hands;
'Twas thine foretold, and now it shall be thine.
Look back beyond the days of Palestine,
Beyond the Egyptian night, the engulfing sea!
Judah, thy brother Israel calls for thee.

NOTICE.

Those who have made application for membership in The Mother Church previous to June, 1906, and have not received notice of election, may send inquiries to the Clerk, William B. Johnson, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

WILLIAM B. JOHNSON, *Clerk*.

SELECTED ARTICLES.

SCIENCE AND THE NATURE OF GOD.

Can a man by searching find out God? The founder of the Gifford Lectures believed that men may find much, of great importance; that science, indeed, is but a reading of what God has revealed of himself in His works. Therefore he established the lectureship, and four volumes have recently been published which go far to justify the undertaking.

The two volumes entitled "The Pathway to Reality" contain the lectures for 1902–03. Mr. Haldane, the author, is just now much in the public eye as the British Secretary of State for War, but he is also the leading English expounder of the idealist philosophy. He believes that "unhappy consequences have followed the neglect of faith to seek support in reason." That neglect he endeavors to remedy. There are four groups of six lectures each, on "The Meaning of Reality," "The Criticism of Categories," "Absolute Mind," and "Finite Mind." The line of reasoning is to show that the ultimate reality is mind, and that within mind the whole of experience must fall. God is the mind of which man is a manifestation in a lower form. The whole nature of reality depends upon and falls within self-consciousness. The last lectures discuss the problem of immortality. Mr. Haldane is a thorough-going Hegelian, and readers philosophically inclined will enjoy following his argument.

The Congregationalist and Christian World.

AN EXPLANATION.

To the Editor.

Sir:—An item appeared in an issue of your paper asking for a little further and fuller explanation of the Christian Scientist's attitude regarding disease, and the distinction between contagious and non-contagious diseases. Your correspondent quotes from a preceding communication this statement: "The Christian Scientist does recognize disease as he would recognize an attempt to dispossess him of his property by means of what he knew to be a fraudulent title and false evidence. He would recognize this as a false claim, and as such he would deny it and deal with it; and thus he denies and deals with disease."

Your correspondent, then, feels that there is a discrepancy between dealing with sickness as a false claim and recognizing any distinction between one kind of disease and another, or between contagious and non-contagious diseases. The Christian Scientist simply recognizes that the claim is made and the belief is held for some diseases that they are contagious and for other diseases that they are not. He denies and deals with them all as false claims, as elements and conditions that have no God-given power and are destroyed by the law of divine Life.

It is to be noted, however, that any false claim is destroyed only as it is shown to be false; and to do this man must understand what his rights are under the law. Under the Divine, spiritual law of being, man has an inherent right to health and freedom, freedom from sickness and sin. Jesus revealed and demonstrated this law of Life, and so did his disciples so far as they entered into its understanding. The whole purpose and purport of Christian Science is to reveal this "law of the Spirit of life in Christ Jesus" which Paul says has "made . . . free from the law of sin and death," to show how man can thus overcome and destroy every phase of physical or moral evil, and that "the last enemy that shall be destroyed is death." In dealing with sickness or evil in any form, the Christian Scientist is not simply denying its reality, but is availing himself of Divine resources that are open to all in just the degree that they are understood. The rational conviction of the presence and efficiency of these spiritual resources, a conviction that

Digitized by Google

can come only as they are to some degree understood, is the "faith" that Jesus emphasized and required.

I think your correspondent's greatest difficulty was, perhaps, with the statement that, "under present conditions, sanitary laws are required." By this it is not meant that the Christian Scientist requires or desires these laws for himself, but that under existing general conditions of belief as to the nature and treatment of disease, the precaution and protection of sanitary laws are required for the community. As long as the general belief remains fixed that certain diseases or conditions are contagious, they will be contagious to those who so believe; and until it is generally understood and demonstrated that this contagion is the mesmeric action of a universal belief and fear that can be destroyed by the understanding and operation of divine Mind, such sanitary regulations should continue.

The Christian Scientist proposes to obey all these laws and so "render unto Cæsar the things which are Cæsar's," while he renders "unto God the things that are God's." In noting the safety of Christian Science practice in a community, it is well to remember that there is, in all the forty years of its history, no instance of the spread of an epidemic through Christian Scientists.

ARTHUR R. VOSBURGH.

Rochester (N. Y.) Democrat and Chronicle.

In noticing the progress of creeds and parties it will be observed that some have sprung into existence "in a night," while others have taken years to obtain a foothold. It is also observable that those of a mushroom growth have rarely attained any permanency, while those of slow and laborious beginnings have become, in many instances, fixed institutions.

A notable exception to the former of these conditions is found in the existence of what is known as Christian Science, or the Church of Christ, Scientist, whose rapid growth, from small beginnings, is one of the social phenomena of the age. This church, or religion, has already passed beyond the stage of mere sectarianism, and for the future has to be treated as an important factor in the religious life of the day. Its progress has been most extraordinary. Its followers are largely of the well-to-do classes. Its influence upon them is generally beneficial. Its philosophy is not much understood by outsiders and is marked by a certain degree of conservatism that does not help to bring it in touch with the altruism of the times. Its historic significance among modern creeds rests principally upon its plea for spiritual living; as opposed to practical agnosticism, which trusts itself entirely to circumstances. It is, as such, an implacable enemy of materialism.

Because a woman, however remarkable, has been its Founder, people have been looking for some inherent weakness, which it has not so far displayed. . . . That the movement Mrs. Eddy inaugurated can continue at its present rate of growth is more or less problematical, but if its present prosperity should continue it must be counted within the progression of creeds. In the mean time it deserves fair treatment in consideration of the good it is doing for many men and women.—*Daily Press-Knickerbocker & Albany (N. Y.) Morning Express.*

Will you kindly make mention of the fact that William Jefferson, of this city, who is charged with obtaining money under false pretenses and with representing himself as a "divine healer," is in no way affiliated with Christian Science. This fact is self-evident to those who know what Christian Science stands for, and it is both unjust and unfortunate that this religion should be mistakenly mentioned in the same paragraph with charlatanry and dishonesty. This brief mention will serve to set right many who have been misinformed in the present instance.

ALBERT E. MILLER.

The North American, Philadelphia, Pa.

AMONG THE CHURCHES.

CHELSEA, MASS.

The church in this city has recently been greatly encouraged by a demonstration over seeming financial embarrassment. All the cash on hand for current expenses, one hundred and forty dollars, was on deposit in the First National Bank of Chelsea when it failed on Aug. 16. Announcement of the situation was made at the next Wednesday evening and Sabbath services, and liberal contributions were asked that our bills due Sept. 1 might be paid.

As it was the vacation season and the attendance at our meetings was scarcely more than half the usual number, few if any of us felt assured that the whole amount would be made up by the first of the month. The first joyful surprise came through the kindness of two or more visiting Scientists at the Wednesday meeting, who gave us twelve dollars. Word of what we were trying to do was sent to our people who were out of town, and Sunday morning, Aug. 26, our collection was ninety-two dollars, although there were only fifty-five present. At the meeting Wednesday evening, Aug. 29, the first testimony given was by the acting treasurer, who told the good news that he had received as much money as the church had in the suspended bank, so that all bills would be paid promptly as usual.

This achievement leads us to reiterate Paul's saying: "Now unto him that is able to do exceeding abundantly above all that we ask or think, according to the power that worketh in us, unto him be glory in the church by Christ Jesus throughout all ages, world without end. Amen."

JOHN L. WRIGHT, *First Reader.*

BILOXI, MISS.

For several years there have been Scientists here who studied the Lessons at home, but no concerted action was taken until April of this year, when—largely, as we feel, through the good work done for us by some dear visiting Scientists—we came together at the home of one of our number. This continued for several Sundays and until our gathering had outgrown our seating capacity, when we decided to organize as a Society and rent rooms. This was accordingly done and we held our first service in our new home on the day the Extension of The Mother Church was dedicated. We have a membership of eighteen, some of whom come sixteen miles to attend service.

We feel encouraged by the fact that we have never held a service at which we have not had at least one visitor, and frequently two or three. Each visitor is handed a *Quarterly* and Hymnal before the service opens.

We have quite a bit of literature in the hands of the librarian, who reports the distribution of a number of *Journals* and *Sentinels*, besides several copies of Science and Health kept in circulation.—FRANK M. SUTER, *Clerk.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From the *Concord* (N. H.) *Daily Patriot.*]

A GIFT FROM THE SOUTH.

THE following correspondence is interesting as showing the widespread notice that is being taken of the improvement of Concord's streets:—

Wilmington, N. C., Sept. 14, 1906.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of First Church of Christ, Scientist, of Wilmington, N. C., are to-day sending you a contribution in gold, with the hope that we may be counted among the friends who are to aid in the improvement of State Street in your home city.

You have made so clear to us the road to harmony, it will be a precious privilege if our love may make smooth even an inch of a road over which you pass. May the love of your students be as gold purified, of which may be built an imperishable pavement for your feet.

Work will soon begin on our church edifice, for which Love opened the way after we had given our building fund to The Mother Church of Christ, Scientist, and witnessed the completion of its beloved Extension.

Recalling the time when you sowed here in tears, we want you to know that our daily prayer is for our work to be such that you may reap in joy, verifying the Scriptural promise, "He that goeth forth and weepeth, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him."

With daily increasing love,

Faithfully yours,

MARY BRIDGERS, *Committee.*

Pleasant View, Concord, N. H., Sept. 17, 1906.

First Church of Christ, Scientist, Wilmington, N. C.

My Beloved Brethren:—Long ago you of the dear South payed the way to my forever gratitude, and now illustrate the past by your present love. God grant that such great goodness, pointing the path to heaven within you, hallow your Palmetto home with palms of victory and songs of glory.

MARY BAKER EDDY.

"APPLES OF GOLD."

Chicago, Ill., Sept. 5, 1906.

My Dear Mrs. Eddy:—I am indeed grateful for all that you have done and are still doing for mankind. I am showing this gratitude to you by devoting all my time to healing the sick (so-called), reforming the sinner (so-called), and uplifting the sorrowful (so-called); but I would be much more grateful for that quality of human consciousness which could progress through an individual understanding of what you are teaching in word and deed, instead of compelling you to make By-laws to rectify mistakes that are purely the result of a false concept of what Christian Science really is. It certainly takes time to write By-laws as well as to read telegrams. I am jealous of your time, and am praying for the day and hour when you will be permitted to spend your time and thought on Mind and its activities instead of matter and its errors.

Gratefully and lovingly yours,

MRS. FANNIE BOGARDUS HUNT.

MRS. EDDY'S REPLY.

Your perceptions are like "apples of gold in pictures of silver."

MARY BAKER EDDY.

THE BY-LAWS.

WE are frequently asked to explain through the *Sentinel* one or more of the By-laws of The Mother Church of Christ, Scientist, also to decide whether or no such and such conduct upon the part of some person is an infraction of these By-laws, and while the answering of these questions is not within our province, it may be that we can point our readers to certain things in connection with the By-laws which will be of value to us all.

1. The By-laws of The Mother Church are strictly in accord with the teachings of Science and Health, and Mrs. Eddy in formulating the Church Manual has been as wisely and divinely guided as she has been in writing our text-book. To those who desire to "progress most rapidly in the understanding of Christian Science" she says, "Study thoroughly the letter and imbibe the Spirit" (Science and Health, p. 495), and this advice may, we think, be understood to apply to the study of the Manual as well as to Science and Health and her other writings.

2. Mrs. Eddy writes of the By-laws, "They were not arbitrary opinions nor dictatorial demands, such as one person might impose on another. They were impelled by a power not one's own, were written at different dates, and as the occasion required. They sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defence of our cause" (Miscellaneous Writings, p. 148); and if we keep this well in mind in our study of these By-laws we shall be better able to understand them and apply them to our daily problems.

3. The By-laws are not intended to confuse, convict, or crush any person. They are intended to protect us and our Cause from the temptation "which doth so easily beset" mortals, and which, if yielded to, would lead them through long and devious paths, instead of the narrow way "which leadeth unto life." It is only by our understanding of these By-laws, and our application of them to our own affairs, that we can make them useful to us individually. We should be more concerned about our own obedience to these rules for the right conduct of Christian Scientists, than for that of our neighbors.

4. There are no By-laws more important to our progress than Section 1 of Article XX. and Section 1 of Article XXI. of the Church Manual, and if the Christian spirit which pervades them be brought into our lives we shall do much for ourselves and our fellows.

ARCHIBALD MCLELLAN.

"WHAT WILL THEY SAY?"

WHATEVER the kind of mental bondage, and whatever the degree of discredit attaching thereto, "Freedom through Faith" is an inspiring watchword for every Christian Scientist; and if earnest and worthy, his progress toward its all-inclusive realization will be continuous.

We are far less responsible for the sense of enslavement to heredity and to ignorance than for our devotion to those personal indulgences and self-deceptions which we have made our pets, and insisted upon feeding, grooming, and exercising every day. The fungus habits which have their unwholesome rootage in false pride or the desire for social recognition,—to consent to these is to play a part which is wholly unworthy of us. Nevertheless, how often are such

Digitized by Google

habits tolerated and condoned even after they have been recognized and condemned, and perchance after we have gotten rid of many of our more bulky weaknesses. As of old, the little foxes spoil the vines, and for the reason that they are looked upon as "little," and hence are not sufficiently guarded against.

Bondage to petty social requirements can but dwarf the nature and rob of true self-esteem, hence the saying that no serfdom is more saddening than that which results when so-called trivial concessions have woven our fetters; and the more complex and intangible the seduction, the more potent it seems. It is often said that indifference to "what they may say" simply secures one the reputation of being a crank, without bringing any compensating gain, and this plausible sophistry has no doubt led many people to trim their sails, year after year, to the dictum of foolish fashion, when their nobler selves have been in continuous protest, pleading loudly for an independent and exemplary course.

One may recognize that it is far more creditable to be known to others as a conspicuous non-conformist, than to be known to oneself as a zealous toady, but he finds that to turn his back on the conventional program is as genuine a test of character as to be brave when there's no one to see. The temptation is universal, and the lamentable outcome is this, that in many things even professed Christians are as yet too frequently dominated by the things they should have under their feet. The specific occasion is unimportant; it may be a question of social custom or caste requisition as to dress, food, furnishings, habits of living, amusements, or what not,—no matter; if the nobler impulse, the higher sense of individual freedom, of what is becoming to a child of God, of what is in keeping with our resources and with a refined taste,—if this higher sense is repressed, made to give place to the dictum of fashion, then we have denied our Lord and forged the fetters of a self-imposed degradation.

Christian Science calls to a worthier freedom. Says *our Leader*: "At present mortals progress slowly, for fear of being thought ridiculous. They are slaves to fashion, pride, and sense." "To obey the Scriptural command, 'Come out from among them, and be ye separate,' is to incur society's frown; but society's scorn, more than its flatteries, enables one to be Christian" (Science and Health, p. 68, 238). Manifestly, a Christian Scientist, one who is awakening to the Truth of being and who is endeavoring to annul the asserted laws of sin and disease, would dishonor both his ideal and his profession if, through fear of what some one may say, he hesitates to conform to any requirement of that ideal, of Christian consistency or of good common sense. Christian Science means loyalty to Truth in every least thing; not that we shall find any flavor of satisfaction in singularity, or in shocking the conventionalities of general thought, but that we shall grow more and more superior to confused and conflicting mortal opinions, more and more thoughtful of high decisions in humble things, more and more responsive to the government of divine Principle. He was a wise man who counseled long ago, "Look to it that fashion, custom, pleasure, and money are nothing to you, are not bandages over your eyes that you cannot see, but live with the privilege of the immeasurable Mind." Our storied friend, Sir Gulliver, is said to have been tied down with small threads, but there were many of them, and in his sleep they were so deftly adjusted that ropes of steel could not have added to his bondage. It is *this binding in our sleep*, the acceptance of social servitude by many apparently trivial and oftentimes unconscious concessions, which imperils Christian freedom and Christian usefulness.

To hold oneself "regally independent" of the world's opinions, in humility; to stand alone with Truth if duty calls, and to seek for divine guidance in every experience, this is to attain unto the measure of a man. This is to be free. This is to be a Christian Scientist. JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Chicago, Ill., Sept. 5, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—To you we are indeed grateful for the timely By-law, entitled "Testimonials," published in the *Sentinel* of Sept. 1, 1906. So far as the testimony meetings are concerned, your action heals the whole Field of a perturbation which claims to paralyze that spontaneous mental activity that is vital in such meetings, in order that living waters may be imparted to the thirsty and the world-weary may depart with hope, impelled to declare that the living God is with this people, and to know that in spite of gloom and despair they may yet find the living idea, before which strongholds fall and whereby man's divine rights are discovered. Controversy as to what shall constitute a testimony is removed from consciousness, and in its place is that deep-settled, abiding calm which alone is productive of living testimony. The young people who have been Christian Scientists from childhood are glad because the description of symptoms and suffering is abolished from testimonials. They have had no education in sicknesses, and such descriptions have been at variance with their freer sensibilities.

We are glad that Christian Science leads all the sheep into the fold and offers comfort for all from babe to adult, and we know that it will lead us unto more spiritual altitudes, wherein, "after those days, saith the Lord; I will put my laws into their mind, and write them in their hearts," and there can remain nothing contrary to Spirit, needing to be solaced by rules or by-laws.

With great love.

W. A. REED.

Philipsburg, Pa., Sept. 4, 1906.

Revered Mrs. Eddy.

Beloved Leader:—The opening lines of Science and Health first set the light before my eyes about seven years ago, and since then your writings have daily been my bread of Life, so to-day I join the "choir invisible," thanking you for the last line from your pen regarding our testimonials. My whole being uttered the words from Psalms, "It is a good thing to give thanks unto the Lord," and just in this way—and that it should come with the new cover to our *Sentinel*, with Longfellow's prophecy fulfilled—he who like prophets of old testified better than he knew.

Most beloved lady, I thank you that I know even "in part."

Sincerely, lovingly,

MRS. ELEANOR DE GIRANTA.

New York, N. Y., Sept. 7, 1906.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—In deepest love may I thank you for the trust imposed upon me to be a "peace maker" and not a "peace breaker" in the ranks of Christian Science workers. This has come to me upon receipt of certificate of C.S.B., signed by you and my teacher, Mr. Greene. Mr. Charters and I are daily more impressed with the necessity of being followers of Christ in deed, and thereby showing our love for God and man—not talking but proving metaphysics to our patients. The college instruction is still unfolding the importance of consecrated study of the Gospels, and every word you have written of instruction, admonition, rebuke, and boundless love. I wish I might tell you the many times your words have healed me.

Most lovingly,

LILLIAN YOUNG CHARTERS.

Boston, Mass., Aug. 19, 1906.

Beloved Leader:—I can no longer refrain from expressing my deep love for you, and my gratitude to God and to

Digitized by Google

you, His faithful Messenger, for the wonderful benefits I have received from Christian Science. I could not begin to name all of those benefits, but I wish to thank you especially for your hymns. I sing sacred solos and hymns constantly, but I have never sung any which are half as beautiful, spiritual, and helpful as are your hymns. They have comforted and healed me many times. I have had the great privilege of singing your hymns, as solos, in at least seven different Christian Science churches, and I always find that Christian Scientists love them dearly and are greatly benefited by them. I like the new settings to your words very much.

With love and gratitude,
MABELLE A. STROCK.

Oneonta, N. Y., June 20, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Revered and Beloved Leader:—The clarion call to your followers, sounded through your recent message, has stirred the human mind more, perhaps, than any message you ever gave, and the ancient cry of "away with him" is repeating itself.

To a student of Christian Science the cause for this is apparent, for it seems to me never before have you more clearly held up before us the ideal Christ. Every word is pregnant with meaning, is a call to a higher life and demonstration. A single reading of it stirred me with a great desire and resolve to show forth in my life the fruit that I know must and does follow the faithful study of your writings,—to prove the words of this message,—"God giving all and man having all that God gives."

This is essentially a message to Christian Scientists, and it is little wonder it is somewhat beyond the apprehension of those who have not grown into an understanding of Christian Science through a careful and thorough study of your works on the subject, and have demonstrated, at least in part, that understanding.

May every Christian Scientist awake to the deep spiritual import of this message. Lovingly,
FRANKLIN BLAKE.

Seattle, Wash., June 30, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Dear Leader:—We, the students of Miss Louisa C. Eaton, C.S.B., class of 1906, send to you, on this the closing day of class, our loyal love and gratitude. We stand upon the firm foundation established by your selfless love and watchful care. As we grow in grace God will guide us in the understanding of His Word, through which we shall enter the land of promise. At this time we can say with Paul, "I have learned." The cross of humility and love will lead us to the crown of rejoicing.

In sincerity and love,
SUSAN E. BARR,
GEO. M. WADE,
HARVEY C. PLUM,
Committee for the class.

Chicago, Ill., Aug. 15, 1906.

Beloved Leader:—So many times I have wanted to write and thank you for the understanding of the Bible as revealed in Science and Health, for to it I owe my health after years of suffering and sorrow; and I thank you as its author. I was healed by reading your book, and have since been enabled to demonstrate somewhat of the "Science of being," which to me is summed up on page 17, line 7, of the text-book.

Yours in truth and love,
MRS. GUSSIE HOWARD WILSON.

TESTIMONIES OF HEALING.

I desire to testify to the great benefits I have received from Christian Science, in the healing of disease and sin. I had been the victim of ill-health from my earliest recollection—the principal trouble being heart disease,—until the spring of 1884, when a condition began to develop which the physicians pronounced incurable. I had the attention of one of the best doctors in northern Alabama, where we were then living, and in the autumn of 1885 we removed to Colorado. I believed that God willed I should suffer and die; and is it any wonder that when I was told there was no further help for me that I submitted to this thought? I had tried to live a Christian life for many years, but this did not heal me. I had made all preparation for the future of my family, and I did not hope or expect to be with them until Christmas.

Soon after my coming to Colorado, Christian Science was brought to me. I must admit that I did not take to it readily, fearing that it might be something to lead me away from God, as I then thought. A Scientist was stopping in the town for three days; and to please my husband I submitted to her treatment,—without any apparent benefit,—but she told me about "Science and Health with Key to the Scriptures," and that it could be had by sending direct to Mrs. Eddy. My husband sent for it at once; I tried to read it, but the fear was very great, and I put it aside.

In about two weeks I became very much worse, and finally I consented as a last resort to place the case in the hands of a surgeon, for which purpose I was taken to Denver. When my grip was opened I found that Science and Health had come too. The doctor who examined me frankly admitted that there was no cure for me, but said if I lived through the operation it might prolong my life six months, or even a year. What I had learned from Science and Health became clear to me at this crisis, and I at once saw that the "dominion" which God gave to man, was mine if I would but claim it. Science and Health pointed the way, and I at once realized that I need not die with the dread disease unless I consented to it. Then such a sense of peace and security came to me, and hope took possession of me, so that I refused to have the operation performed, knowing who it is that "healeth all thy diseases." I was beginning to lead a new *life*,—the belief and fear of death had gone; I could read Science and Health with more understanding, and tried to put into practice all I learned from it. The Bible and Science and Health were my constant companions, and although I had never been told what a treatment consisted of, I was being led by God. I applied the truth as revealed to me in Science —and Science and Health was my healer.

All this time I was treating myself and studying the Bible and Science and Health, with the result that about the end of the third week the pain was all gone, and in two weeks more I was entirely healed. Christian Science was proven a present salvation. I began to regain my strength and took a new hold on life, and at the end of six months I was what I had never been before,—a well woman. Since that time I have been able to take my place in the world, perform my duties as they came to me, overcoming disease and error in myself and family, and have been permitted to speak the Word of Truth that has brought freedom from disease and sin to many others. After more than nineteen years have passed, I have never suffered a return, and I am sure none can doubt my healing.

Words fail to express my gratitude for Christian Science, not only for the physical healing, but for the uncovering and destroying of sin; for a freedom I never knew until the revelation of Truth was brought to me, and for the peace and joy that come with the knowledge that we can prove Christ Jesus' words, "The truth shall make you free." I can say with St. Paul, "The law of the Spirit of life in

Digitized by Google

Christ Jesus hath made me free from the law of sin and death." I am deeply grateful to my physicians, who honestly tried to help me, but I have no language to express how I feel toward the good, faithful woman through whom the gospel of salvation from disease and death, as well as from sin, has been revealed to this age.

MRS. MARY E. WEAVER, Pueblo, Col.

It is with the deepest gratitude that I add my testimony of the blessings that have come to me and to my family through Christian Science. That "man's extremity is God's opportunity" has certainly been proven in my case. For fifteen years I was a sufferer from a complication of diseases. I had treatment during that time from seven of the best physicians obtainable. Each of them made a different diagnosis and each gave me a different course of treatment. Finally I was told that an operation was my only hope, and soon after this time I agreed to have it. My suffering was intense and the physicians then claimed that my principal trouble came from the kidneys. The operation was performed but the diagnosis was found to have been wrong. A second incision was made at once and a morbid growth was found. The surgeon could not remove it, so the wound was closed up. My family were then told that I could live only a very short time. I was soon taken from the hospital to my home, and from that time until I found Christian Science, a period of one year, my suffering became even more intense. The only relief of any kind that I could get was from hypodermic injections of morphine, and on account of this fact I became a confirmed user of the drug. At this point my attention was called to Christian Science and after many doubts and misgivings I decided to try it. A practitioner was called and I received help at once. The second evening after commencing treatment I was able to leave my bed, dress myself, and go to the Wednesday evening meeting at the Christian Science *church*, a distance of about two miles, which necessitated a walk of several blocks and a change of street cars. Treatments were continued for eight days, at the end of which time all suffering was destroyed and the healing was perfect. The desire for morphine was also overcome.

It is now fifteen months since my healing and I am in better health than ever before in my life. During this time my family as well as myself have had many proofs of the ever-present power of divine Love. We have all been helped, physically, financially, and spiritually. My greatest desire is to grow in the understanding of this grand truth and to express daily my gratitude to God and to our dear Leader, Mrs. Eddy, for her loving guidance and watchful care, through which I, with hosts of others, have been led safely "through the valley of the shadow of death" and "into the glorious liberty of the children of God."

MRS. JOSIE SHIMER, Indianapolis, Ind.

About seven years ago Christian Science was brought to my attention through the healing of a very dear friend, and having enough faith in God to believe that He is no respecter of persons, that if He would heal another He would heal me of my infirmity, I was led by divine Love to call upon a practitioner, and suffice it to say, to the human sense the result obtained was a marvel. I had been a sufferer for about twelve years from what *materia medica* called a severe rectal trouble. I had tried the best medical aid, applied all kinds of patent remedies, but all to no avail.

Christian Science was recommended to me one Sunday evening. I concluded to give it a trial the next day. On Monday morning I called on a practitioner. It seemed impossible to go up the stairs to his office, and it was only by collecting together all the courage I had left that I was enabled to do so. The first treatment relieved me of all the pain and tired feeling, although the trouble did not cease entirely until seven or eight weeks afterwards, and I soon found out that I had work to do for myself, which was, I now plainly see, for my own good. Not only have I been healed physically, but morally as well, for my life previous to the acceptance of Christian Science was not to be recommended to any one; the physical blessing I have received is not to be compared with the spiritual healing.

I thank God for the saving truth given to us in Science and Health by Mrs. Eddy.

DAVID HETSCH, Guthrie, Okla.

From childhood the thought of lung trouble was held over me, it having been prevalent in my family and my earliest remembrance being of colds, coughs, etc. As I grew older, the trouble increased until the doctors decided that my condition was hopeless. The days dragged wearily away, and I often longed for death to relieve me. Instead, however, there came a new trouble to meet,—an operation was proposed. I was taken to a hospital, where I remained a month with the hope of regaining strength to go through with the operation, and during that time I was examined by four surgeons. Finally the hour came, and the result was one of the most severe operations known. In two months I was able to be moved, but two years passed before I could stand erect or do more than walk about my room.

After suffering for five years, I heard of and accepted Christian Science treatment, but did not respond readily—there seemed to be so much to meet. The time came, however, when all fear was gone, and I knew I was healed of all my diseases; that divine Love had met all my needs, and that I was "every whit whole,"—even laying off glasses I had worn for a serious trouble. With this healing I received loving encouragement and an understanding of the truth, so that I can not only help myself to keep perfectly well, but can tell others the way of the Christ-truth, which makes us reflect divine Love.

I spent a great part of my life under medical treatment, and was left in a worse condition than at the start. I was healed in 1896 by Christian Science. I will add that a relative of mine, who had made all arrangements to be operated upon for an abnormal growth, accompanied me to the practitioner's on my second interview with her, and while listening to her explanation of Christian Science, was healed instantaneously, and thus saved from the operating table.—MARY E. KING, Ithaca, N. Y.

About the year 1889 I was examined for life insurance by one of the leading physicians of San Jose, Cal., and was promptly rejected. I found out later that the doctor in his report to the company had stated that I had serious heart trouble and could not possibly live three years. From that time I grew steadily worse, and at one time did come very near passing out. I was at the time smoking a large number of cigars each day, and this habit increased the difficulty, which, added to other ailments, made life almost a burden.

I was in this condition when Christian Science found me. During the fall of 1891 my wife studied Christian Science, and received so much benefit that I took up the study and began to improve; so much so, that in about one year I was again examined for life insurance and passed for a limited amount. By this time we were greatly interested in Christian Science, the writings of Mrs. Eddy and the Bible being our daily companions.

After about ten years of continued study I was again induced to apply for insurance in the same company that at first rejected me, and passed a good examination. To-day, after nearly fourteen years have passed and not a drop of medicine has entered our home, I find myself free from the tobacco habit, the heart trouble a thing of the past, insomnia and other numerous troubles gone. I feel very

Digitized by Google

grateful for all that Science has done and is doing for myself and family.—F. C. ENSIGN, Oakland, Cal.

Christian Science has brought so many blessings to our home that I consider it my duty to tell others of some of the satisfying proofs we have had of Truth's power. We first heard of Science through the healing of a dear relative, who had been a helpless invalid for many years and whose doctor had recommended Christian Science treatment as he could give her no further help. This relative sent the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to her mother, who lived three miles from us, and who in turn loaned the book to us. Then the *Sentinel* and *Journal* were sent us, and we greatly enjoyed reading them. I accidentally got a sliver wedged under my thumb nail, which of course seemed very painful, but I declared the truth and the pain was soon relieved. Soon after this I burned my hand severely. I again declared the truth, and all the pain stopped. This was a grand proof to me of the power of Truth. I read Science and Health and was deeply interested. At that time our daughter, aged sixteen, was taken ill with a fever. I did not then know of a practitioner, but sat at my daughter's bedside and read the book. I always felt such courage as I studied it, and all fear would vanish. On what seemed the worst day she said, "Read to me out of that book, mother." I did so, and she fell asleep; a change for the better appeared, and she got well in a few days. Our youngest daughter was healed of measles in three days, through the application of this truth. My husband, through the reading of the text-book, left off the tobacco habit of forty-five years.

For eighteen years I had used spectacles, and even with glasses could not see distinctly. I had to use very strong glasses, and I went to an eye specialist for relief. The oculist examined my eyes and said that they were in a very serious condition. I felt discouraged, and it seemed as though blindness would be the end of it all. One day as I sat reading Science and Health, the daughter who had been healed of the fever said, "Mother, why don't you take off your glasses?" I did so; and by persistently declaring that in God was my sight I was enabled to realize the truth that makes free. I am grateful for this great blessing of sight that has been restored through the understanding of Truth. My husband, myself, and two of our children are members of The Mother Church. We find the study of the Lesson-Sermons, which we read night and morning, a wonderful help. They are truly our daily food. All our dear Leader's writings are studied, and they help us over all the rough places in the journey from sense to Soul. We are very grateful for all the great helps from the *Sentinel*, *Journal*, and lectures, as well as the good things given us by the Publication Committee.

MRS. NELLIE MCDOUGALL, Virden, Man.

This testimony is given in the hope that it may reach some of the many whom I know are in the same condition that I was,—a condition brought about by idleness and unconscious selfishness. I was a wreck; in constant pain, and I did not sleep except by taking opiates. My physicians, who were of the best and kindest, tried to encourage me, but I was most unhappy; a care to the family and a burden to myself. Surgeons and physicians had done all that mortal man could do. Operations were performed, and months were spent in sanitariums and hospitals, but all to no purpose. Just then Christian Science found me. In one treatment the sleeplessness was overcome completely. The other physical conditions were longer in yielding, but I was healed. Christian Science waked me up; instead of being a burden I have become a help; instead of being an expense I am now a wage-earner; misery has been turned to happiness, and hopelessness to a knowledge that God has given me dominion.

I can never be thankful enough to God, and to Mrs. Eddy, that I have been lovingly lifted out of darkness.

MRS. JANE K. THAYER, Nashville, Tenn.

In reading the many helpful testimonials in the *Sentinel*, the thought came to me that if it were not for an earnest desire to help a brother we would not have the privilege of knowing the great good which others are receiving. I have been helped in Christian Science in many instances.

One year ago last October I was attacked with a disagreeable eruption. After I had been told what the trouble was, I went to see a friend, who first told me of Science, and kindly assured me that it would be healed. At the end of ten days it was completely healed without a scar.

I am very thankful to God, to Christian Science, and to our dear Leader, Mrs. Eddy, for teaching us through that grand book, "Science and Health with Key to the Scriptures," the way to obey our Master's command, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."—ARTHUR J. BYERS, Chicago, Ill.

Gratitude impels me to write a few words in acknowledgment of the many benefits which have come to me through our beloved Science. When Christian Science first came to my notice, about fourteen years ago, it did not seem to have any message for me; but after twelve years (during which time I was a constant sufferer and a patron of the doctors and druggists, receiving no permanent relief and little temporary help) I became critically ill. A dear friend, who is a Christian Scientist, came to see me one afternoon, and before she left she reminded me how my eyesight had been restored the year before, in one treatment, when I had lost the use of one eye and could only use the other with specially ground glasses. I then sent for a practitioner and began treatment. That was Tuesday, and Thursday I was well,—healed of every ill, and they were many. Among them was heart trouble, which had been pronounced incurable and had threatened to end my life any minute. I had been operated upon with no benefit for one ailment, and for another I had undergone two severe operations, with no permanent relief. I was, however, made free by this wonderful truth. As I was afraid that these diseases might return, I remained under the practitioner's care for three weeks, but since then I can say with the psalmist, "Though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me." Even the fear of disease was utterly destroyed! That was in June, 1904, and since then I have been laboring in the Master's vineyard, humbly, meekly striving to show the love within my heart, and to keep the commandments.

For the beautiful, transparent life of our beloved Leader, my gratitude knows no bounds. I thank God for our text-book, "Science and Health with Key to the Scriptures." The *Sentinel*, *Journal*, and *Quarterly* are all dear friends, whose mission it is to help me understand the Scriptures, and the Bible is indeed "a lamp unto our feet" in the radiant light of Christian Science.

MAUDE CLARK HOUGH, Tyler, Texas.

From early childhood I was a constant sufferer from what several eminent physicians pronounced an abnormal growth, none giving any hope of a permanent cure. Thus I was looked upon as a hopeless invalid, until at last that which I most feared came upon me. I had been confined to my room from early spring until October, and death was looked for hourly. It was then that friends urged a trial of Christian Science; but I objected, as I felt I had suffered so much that even should I find relief it would only be temporary, and would at last fail me as all else had done. I was, however, finally persuaded; a practitioner came, and

Digitized by Google

after talking to me, gave me a treatment. He then expressed a wish that I rise and dress, but I felt very indignant, for I thought that he did not understand my condition. He left, and I finally did get up, and the medicine, which had been taken every thirty minutes and upon which I absolutely depended, was thrown away. My healing seemed very slow, but it was sure, and to-day I am well. Many times discouragement came, but loving counsel and patient care, strong faith and tenderness were a solace to me,—a revelation and a reflection of the Divine compassion,—until at last I became conscious of the truth of being. I read in our text-book, "Then thought gently whispers: Come hither! Arise from your false consciousness, into the true sense of Love" (Science and Health, p. 574). I seemed to catch the full meaning of these words, and saw that "in the way of righteousness is life; and in the pathway thereof there is no death."—ISABEL LAMBERT, Reed City, Mich.

Christian Science found me with many physical disorders, the most serious being nervous exhaustion. I had consulted many physicians and tried many remedies, but continued to lose ground until I was obliged to give up business. Agnostic in belief, discouraged and discordant mentally, I was, however, ready for Christian Science when it was recommended. While I could not, at first, accept all that I read in the text-book, Science and Health, I could not leave the book alone, but read it almost continuously for a number of weeks. My healing was somewhat slow, but in a few weeks I was able to attend to business, and now have better health than for many years. I was also a slave to the tobacco habit, but since I had the first treatment I have not had the slightest desire for it. I am very thankful for the healing I have received and especially grateful for the transformation that is going on in my consciousness.

I have found in Christian Science a present salvation,—a demonstrable religion. Words fail to express my gratitude to our dear Leader, who has brought to light this truth.—O. H. BRAGG, Foxcroft, Me.

For nine months I had been ill and was to undergo an operation. This was eighteen years ago. The doctor said I had three distinct diseases, but for fear of alarming me would not name them to me. The day set for the operation my doctor was prostrated, and I thought I would die if operated upon. In the mean time my husband became alarmed and wrote to my brother in Chicago of my condition. He replied at once that I should come to Chicago, even if I had to be brought on a bed, and that I could be healed by Christian Science. The doctor had told my husband that I would not be able to walk for two years or longer, but hope sprang up within me, and as soon as I could be gotten ready I started for Chicago. The next day I was told to get ready to go to a practitioner. I had worn glasses for six years, but they were laid aside after the first treatment. My truss was laid away after the third treatment, then my heart leaped for joy, and my long-unused voice burst forth in such singing as brought tears to all eyes. My healing was complete in four treatments, but I could not believe it would last, and insisted upon going longer. One day I found that I had walked over two miles. Since my healing I have been enabled to make demonstrations of the power of Truth for myself and others.

My heart goes out with gratitude and love to our dear Leader for her untiring efforts in behalf of suffering humanity. I could not live without this blessed truth. The Lesson-Sermons are strong and helpful. I pray daily to be able to reflect more love and to rise above the errors of mortal sense. May God's choicest blessings rest upon dear Mrs. Eddy.—JENNIE M. VAN DUSEN, Chattanooga, Tenn.

To recount the many blessings that have come to me through Christian Science would be like numbering the sands of the sea, and the following statement is made with a heart full of love for Christian Science, in that it has delivered me from suffering and hopelessness and from having "no God." From childhood ill health in some measure seemed to be my portion. With the passing of the years physical ills accumulated, until about ten years ago, when life seemed well-nigh unbearable. At that time I was more discouraged than ever before, having spent five months in a sanitarium, at a large expenditure of money, and being assured that my days on earth were numbered unless I submitted to an operation. This I refused to do, and left the sanitarium completely broken in spirit, helpless and hopeless. Added to the above distressful condition, was a chronic disease of the stomach (a specialist, under whose care I remained for more than a year, saying I was incurable), a severe kidney trouble, and minor ills seemingly numberless. During the greater part of fifteen years I was under medical treatment, but grew gradually worse.

At this juncture a kind friend presented to my thought Christian Science. I shall not forget the sweet sense of peace that came during that first interview, when I was assured that God could and would heal my diseases and forgive my iniquities. With hope renewed, and the joy of feeling that at last I could know God, I left my friend, happier than I had been for many years. As I learned of God's goodness, and of "his wonderful works to the children of men," I was freed from physical ills, and have remained so ever since. My gratitude is unbounded for a knowledge of this great Truth, uplifting thought to the contemplation of good as omnipotent, for the wonderful service rendered to all mankind by our loved Leader, for our text-book and all of Mrs. Eddy's writings, and for the Christian Science periodicals.

MRS. ELEANOR L. HILLIARD, Brooklyn, N. Y.

I take pleasure in telling what Christian Science has done for me, and is doing. About three years ago it was brought to my home by two dear sisters of mine, and it found me without work, my wife in bed, my children without shoes to put on, and hardly anything to eat or to keep them warm. But our need was supplied; I got work; my wife was healed; and I was healed of the drink habit to which I had been a slave, also the cigarette habit.

Christian Science has made me a better man in every way, and for this I am thankful to God, and to Mrs. Eddy. I was healed in one treatment.

AUGUST BURDIN, South Omaha, Neb.

Having received so much benefit from the testimonies in the *Sentinel*, I will tell what Christian Science has done for me. I am sixty-two years old and until four years ago I never knew what it was to be free from asthmatic trouble. Christian Science was brought to my notice through the healing of my son. I took up the study of our text-book, Science and Health, and have been healed. I now have better health than I have had for the last twenty years. My gratitude is too deep for words, so I will try to express it in my daily life.—MARY KRAUSS, Mapleton, Minn.

ADMISSION OF MEMBERS.

The next admission of members will be Nov. 6, 1906. Applications for this admission should be in the hands of the Clerk on or before Oct. 16, 1906.

Application blanks can be obtained by applying to the Clerk, William B. Johnson, at the Church.

FROM OUR EXCHANGES.

In connection with the truth committed to their custody, much has taken place in recent years to make the churches uncertain and timorous. This critical and scientific age has forced them to recast traditional systems of thought, to phrase anew their message, to shift the emphasis of appeal, and to adjust their teachings to the generally accepted conclusions of geology, psychology, and other branches of knowledge. The process of re-adjustment has made some churches doubt whether they have any special and important truth to give to the world. Another factor tending to induce nervelessness has been the upspringing of institutions designed to ameliorate the conditions under which men live and to enrich and better their lives. As the church sees social settlements, libraries, hospitals, dispensaries, and kindred philanthropic agencies ministering to the people, it rubs its eyes sometimes and asks: "Am I needed in this network of institutions? What can I give men that they cannot find elsewhere?"—*The Congregationalist.*

A Gospel for the whole man and for all men in every relation,—this alone can prevail, but prevail it will. Men are recognizing the necessity of living in the Spirit and of what such living implies. The triumph of the Spirit is coming. It is coming as truly as there is a God in nature and an eternal purpose behind the universe. Slowly but surely the mind of man is coming to see that the happiness of one is the happiness of all. Each exists for all the others. Already in this day of broad and liberal culture, and yet intensest religious devotion, humanity seems to have pitched its tents on the borders of the Promised Land. A few steps more and wearied limbs are free; a few steps more and oppression ceases; a few steps more and man extends one arm to embrace God and the other to draw the race unto his heart of love. In the heart of human kind a perennial song is sung and the long-sought-for life of perfect love begins.

REV. HORACE G. OGDEN.
Western Christian Advocate.

There are no circumstances in life when the prayerful, humble soul cannot find some honey, some comfort, some hope. The Lord even made those nomadic gipsies, the ancient Israelites, to suck honey out of the rock, and oil out of the flinty rock. Even the stony experiences of life will yield a blessing when touched with the rod of faith. The narrow-minded, self-absorbed, prayerless soul will miss the honey by the wood in Ephraim, but the man whose eyes God hath opened will not fail to mark where the comb of bursting blessing hangs within reach of his extended rod. This honey is found "by the way," just along the path of prosaic duty, close to the hungry runners.

Zion's Herald.

Each one of us ought to feel that he is of more value to himself than to any one else, that there are vast and attainable possibilities before him, that *he* can become like God! So for all the things that concern our spiritual life,—our short-comings and far-goings, our failures as well as our achievements, our slipping back to worldliness or our growing likeness to the Father,—for everything great or small through all the conscious life, every one of us "shall give account of *himself* to God." Child of eternity, boundless spiritual possibilities are thine! The attainment of them rests with thee, thyself!

REV. OLIVER ADDISON KINGSBURY.
The New York Observer.

Religion is morality into which God has breathed the breath of life. It is conduct which reveals love. It is an endeavor to live aright, not from motives of cold prudence, nor from lack of natural passion, but in the name and for the sake, and with the love of God. That the center both of Christian believing and of Christian living is Jesus Christ, in whom the love of God is manifested.

REV. DR. GEORGE HODGES.
The Churchman.

Success, real success, comes alone to him who is seeking an opportunity to make his own success, instead of watching for a chance to inherit the success of another. The call of the hour is to those who can say, "Send me an opportunity to serve."—*The Universalist Leader.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN P. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price. One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

After quietly experimenting with long range weather forecasting all summer and meeting with success, the United States Weather Bureau announces that it is ready to enter upon a new departure by predicting weather conditions in advance for periods of several days at a time, supplementing the regular twenty-four hour bulletins of the Weather Bureau. The experiments conducted this summer were forecasts for six days at a time. Professor Moore, Chief of the Department, said: "These predictions are to be made by studying the distribution of barometric areas. The Weather Bureau has been steadily enlarging its scope in that direction. As an instance, I may cite the fact that we have just made arrangements for receiving daily cable reports from the weather stations of Russia. The Russian meteorological service has agreed to furnish us with readings daily from a number of stations. Already we are getting these daily reports from the west coast of Europe, from the West Indies, from Bermuda, the Azores, the Bahamas, and Honoluiu, all by cable. In a few months we will have the daily readings from the interior of Alaska and probably within a year from Iceland. In other words we have an extensive system taking in nearly the whole of the Northern Hemisphere, and we will receive daily weather reports from a chain of stations encircling more than four-fifths of the globe. As our weather conditions are governed almost entirely by movements in the region of the equator, it can be readily seen that the more comprehensive system will enable the Weather Bureau to increase its operations."

The opening of bids for the establishment of pneumatic tube service in New York and other cities, under authorization of Congress, which appropriated $1,250,000 a year for ten years for the service, showed not only high prices and a lack of competition, but that for five cities—Baltimore, Cincinnati, Pittsburg, Kansas City, and San Francisco, where Congress authorized the establishment of the new service—no proposals were submitted at all. It is announced that the Department will not make any award until further efforts have been made to secure proposals for the cities for which none were received. The character of the bids leads to the belief that either the pneumatic tube contractors find no profit in the operation of the tubes, or else that some sort of combination exists among the companies interested which has forced competition out of the field. The Post Office Department fixes $17,000 a mile as the maximum rate that will be accepted.

Further rulings in connection with the enforcement of the meat inspection law after Oct. 1, just made public by the Secretary of Agriculture, give an idea of what consumers are to expect hereafter when purchasing meat products, particularly canned goods. Anything savoring of a false or deceptive name will not be tolerated, and no picture, design, or device which gives any false indication of origin or quality will be permitted upon any label, as, for example, the picture of a pig appearing on a label placed upon beef products, or the picture of a chicken upon the label of a veal or pork product. Geographical names are allowed to be used only with the words "cut," "type," "brand," or "style," as the case may be, except upon foods produced or manufactured in the place, State, Territory, or country named. For instance "Virginia ham" must be marked "Virginia style ham."

The corner-stone of Chicago's new County Building, which, when completed, will be the largest courthouse in the world, was laid on the 21st. The elaborate ceremonies were opened with an invocation by Rev. Frank Gunsaulus. Mayor Dunne, Governor Deneen, and Vice President Fairbanks delivered addresses. The new structure will contain twelve million cubic feet of space. Its cost will be, including furnishings, $5,000,000. There will be a floor area of fourteen acres and one mile of corridor space. The general design will be on the lines of a giant letter "E."

James F. Smith was inaugurated Governor General of the Philippines on the 28th. Governor Smith in his address announced that his policy would be the policy of President McKinley and of Secretary Taft, the education and preparation of the people for popular self-government.

The sum of $100,000 has been left as a legacy to the National Association of Audubon Societies by Mr. Albert Wilcox. They may benefit later to the extent of $500,000 more from the residuary estate. The bequest is primarily intended for the protection of wild birds and animals.

Foreign.

The largest ship in the world, the largest armored cruiser in the world, and the second largest ship in the world were all successfully launched on the 20th from British shipyards. These were the huge turbine steamer Mauritania, built for the Cunard Steamship Company, H. M. S. Shannon, and the White Star liner Adriatic, which, next to the Mauritania and her sister ship the Lusitania, surpasses anything in size afloat on the high seas. The Mauritania is 790 feet long and 88 feet in breadth. The Adriatic is 710 feet long and 75 feet 6 inches in beam, and the Shannon measures 490 feet over all. The launching weight of the Mauritania, 17,000 tons, has never before been equaled in the history of shipbuilding. She was launched in a stream only 780 feet wide by heading her down stream and checking her momentum by tons of iron cable with which she had been harnessed. A special channel will have to be dredged before the ship reaches the sea. The Mauritania will be fitted with accommodations for 2,200 passengers, 500 first-class, 500 second-class, and 1,200 third-class. In addition she will carry a crew of 800, so that with a full list of passengers and crew three thousand people will be on board.

As a result of the combined recommendations of the Chinese Commissioners who recently made a tour of the United States and Europe, of Yuan Shi-Kai, Commander-in-Chief of the forces, and of Tang-Shao-Ki, Vice President of the Board of Foreign Affairs, an edict has been issued ordering the abolition of the use of opium, both foreign and native, within a decade. The edict strongly condemns the vice and commands the Council of State to devise regulations for the enforcement of the prohibition against opium smoking and cultivation of the poppy.

Just now, says the *Shanghai Celestial Empire*, China is a land of contrasts, so wide, so sharp, and so forcible that the dullest observer can hardly fail to observe them. She is going straight from wheelbarrows and springless carts, or sedan chairs, to express trains, in place of special messengers she adopts the telegraph; from rushlights she goes to electricity, and from the extreme of anti-militarism she is developing a taste for patriotic volunteering.

A *Times* (New York) copyright cable from London says: A statistical paper on India issued shows that in 1904 there were killed in that country by snakes and wild beasts 24,034 persons—21,880 by snake bites, 796 by tigers, 309 by leopards, and the rest by other animals. The number of cattle killed was 98,582. The other side of the account shows that 65,140 snakes and 16,121 wild animals were killed, for which rewards of £7,313 were paid.

A disastrous typhoon occurred at Hong Kong Sept. 18. The entire fleet of six hundred fishing junks was lost. This increases the mortality to ten thousand persons. The money loss is placed at over twenty million dollars.

Industrial and Commercial.

The first of the five largest locomotives in the world, which the Great Northern ordered from the Baldwin Works, has been sent West, where it will be put to work on the mountains. The engine is of the Mallet compound type, with two sets of drivers and two pairs of cylinders. Each is practically two engines in one, and is capable of hauling over mountain grades twice as much as the best the Great Northern now has, or 1,100 tons on a 2.2 per cent grade. The locomotive has a weight on the drivers of 316,000 pounds, while the total weight of the engine is 355,000 pounds, and the weight of the engine and tender is 503,000 pounds.

The first official trip through the Pennsylvania Railroad's North River Tunnel, connecting New York and New Jersey, was made on the 12th. Charles M. Jacobs, chief engineer of the tunnel, and John F. O'Rourke, head of the contracting company that bored the tube under the river, led a party of forty-five men to the middle of the tube, where the working shields had met. Nobody had been allowed to pass through the shields, and on either side the workmen who had driven them were lined up ready for the cheers that were to mark the first passage through. Mr. Jacobs, as the engineer, was allowed to go through the shields first, followed by Mr. O'Rourke.

Taking effect Nov. 1, or as soon thereafter as the computation can be made and the tariffs filed, as required by law, maximum passenger rates on the Lackawanna will be on the basis of 2½ cents a mile. The Erie and the Lehigh Valley have also given notice to the same effect. At a meeting of the Trunk Line Interchangeable Bureau, Sept. 11, it was agreed unanimously to reduce the price of its mileage book on Nov. 1 from $30 to $25, the refund of $10 to be cut in half. It is believed that this will tend to increase its popularity. The action is in line with the reduction recently announced by the Pennsylvania.

The Carmania, which arrived at New York last week, brought $15,278,500 in gold. This shipment is said to be the largest ever brought to this country.

Conservative estimates of the Cape Cod cranberry crop place it at two hundred and thirty-five thousand bushels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

FROM OUR CONTRIBUTORS.

"I AND MY FATHER ARE ONE."

PROF. JOEL RUFUS MOSLEY.

Jesus saw and proved that his true selfhood, his eternal individualized spiritual being, is, was, and ever will be one with the Father. Knowing God as his Father, as his Mind, as his Life, as his All in all of being, he overcame "the world, the flesh, and the devil," and ascended above even the appearance and sense of evil. He ascended to such mental and spiritual heights, to such conscious unity with the Father, with the one Spirit, that he became invisible to the physical senses and could and can only be seen and known spiritually. As he himself declared, it was expedient for him to go away as a corporeal personality, that the Christ might come and abide forever as a purely spiritual Teacher, Healer, and Comforter. "It is expedient for you that I go away: for if I go not away, the Comforter will not come unto you; but if I depart, I will send him unto you." "When he, the Spirit of truth [the Comforter, the Holy Spirit, the Christ-mind], is come, he will guide you into all truth." "He will show you things to come." "He shall glorify me." He will "abide with you for ever."

In the light of Christian Science this going away as a corporeal Saviour and this coming as a purely spiritual presence and power, as God, Spirit, with us, was and is the perfect demonstration of the eternal and necessary union between the Father and the Son, between God and man. Jesus by his victory over all evil, by his conscious union with the Father, became the Wayshower to this union with God; and "the first-born among many brethren." And Mrs. Eddy, in the discovery, proof, and explanation that the Christianity of Christ is the Science of all real being and healing, the truth of being that reforms the sinner, heals the sick, raises up the dying, comforts the mourner, and awakens them to conscious unity with the heavenly Father, the divine Principle of life and being, is making clearer to human apprehension than ever before since the days of Jesus and his first disciples, that the Son of God, the spiritual man, is, from the divine necessity of his perfect being, forever one with God and all that God is.

Christian Science, by showing us so plainly what the Father is and what the Son is, what God is and what man is, also makes it easier for us to grasp the deeper and more vital significance of the truth that God and the real man —the spiritual man—are one. Mrs. Eddy makes clear this relationship in the words, "As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being" (Science and Health, p. 361). The Father is the divine infinite, and forever sustaining Principle, the Life, the Soul, the Spirit, the Mind, the law, the will, of man and the universe. Furthermore, this omnipotent, omnipresent, omniscient, and omni-beneficent God, Mind, Spirit, Life, is the only real and permanent Mind, Spirit, or Life there is or can be. "Call no man your father upon the earth," said Jesus; "for one is your Father, which is in heaven." In like manner Christian Science teaches us to recognize nothing apart from God as being Mind, Life, and real substance; for God, Spirit, is All in all, and matter, sin, sickness, and death are errors which will disappear with the full coming of Christ, Truth, the perfect knowledge and love of God and His creation. Man, the real man, is the image and likeness, the reflection, the manifestation, the idea, the conscious identity of all that God is. He is the Son of God; the heir of God and joint-heir with Christ. He is forever one with God and the things of God.

Man as the Son of God, while "spiritual and not material" (Science and Health, p. 468), is for this very reason not an abstract conception, but a concrete, living, conscious individuality. He is the spiritual and forever conscious manifestation of God. He is so individual, real, and permanent that when he is contrasted with the physical sense of man, the latter becomes a mere dream or a passing shadow, a false belief or a misconception of man, and not a real entity.

While Christian Science teaches that the material sense of man is not the real man, that the children of the flesh are not the sons of God, it makes clear that all men, as they are "born of the Spirit," as they forsake evil and cleave to God, good, as they awaken to the Truth of being, as they come to the true knowledge of the one Father and of man's divine sonship, are one with God. To be at-one with God is to be like Him; and to know and love Him and His creation, to know and do His will, is to be like Him. All who will to do His will shall know this will, and by doing it become like Him.

Christian Science reveals that Father and Son, God and each of His children, are one, as Mind and idea are one. "I and my Father are one," in the light of Christian Science, also means that I and my Mind are one; I and my Life are one; I and my Principle and Soul of being are one. As this dawns to human apprehension and is wrought out in life practice, we see and feel and know that we can never lose our Mind or consciousness and never be separated for an instant from our Life, nor from the sense of Life. We begin, at least, to become conscious that our "life and intelligence are purely spiritual,—neither in nor of matter" (Science and Health, p. 14), and this consciousness of God as our only Life and Mind not only sets us free from the fear of death, but also from the love of sin and from the sense of physical pain. Christian Science, as it is understood and lived, is this consciousness. It shows us plainly the Father and His perfect, sinless, spiritual creation; and by beholding these, and thereby turning away from the contemplation as well as from the love and practice of evil, we are transformed into His image and likeness, "even as by the Spirit of the Lord."

WITHOUT EXCUSE.

REUBEN POGSON.

A MAN, known amongst reformers in England for his broad ideals and earnest efforts for the sake of humanity, wrote some years ago in a reformers' paper to the effect that the story of Jesus Christ was "a beautiful myth." A few years before this I had thought so too, but the unhappy

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

experience of two or three years in the charnel-house of materialistic skepticism, together with the loving efforts of Christian relatives and friends, had lifted me to a plane which Tennyson describes in "In Memoriam,"—

> Strong Son of God, Immortal Love,
> Whom we that have not seen thy face
> By faith and faith alone embrace,
> *Believing where we cannot prove.*

In those days there was the same sad longing, matured by the pessimistic dews of many a misty autumnal morning of cheerless endeavor, that my childish heart in its better moments (which were few) had sighed for. A childish hymn expressed it, and I doubt not that many world-blunted men and women have experienced the same feeling when they have heard the familiar simple words passing over children's lips.

> I think when I read that sweet story of old,
> When Jesus was here amongst men,
> How he called little children as lambs to his fold,
> I should like to have been with him then.
>
> I wish that his hands had been placed on my head,
> That his arms had been thrown around me,
> And that I might have seen his kind look when he said,
> "Let the little ones come unto me."

If I could only prove that it was true and not "a beautiful myth"! If I had only lived in the age when God showed practically that He cared for men by healing them of all their diseases, feeding them when in the wilderness, giving water where to mortal man no water existed, then some measure of happiness would be absolutely and certainly mine. So I reasoned. Have you not reasoned so too? I did not then see that I was in the wilderness, and I little dreamed that the "water of Life" was soon to issue for me from "the rock of our salvation," the Christ-truth.

My fellow-men need no sitters in the seat of scornful judgment: Christian Scientists know what they both want and need, and that is divine Love, and this Love reflected upon their own plane of living. The love that is not sickly or sentimental will without dissimulation uncover faults to heal them, and, in the strains of the Hebrew prophets, rebuke to exhort and condemn to uplift. So now it may be said in all true charity to our brother-man, the non-believer in Christian Science, "You are without excuse for your position."

Have you had childish dreams, during the interval 'twixt prayer at a mother's knee and the final closing of youthful eyes in nightly sleep, of a good God? Of a God who could make the poor sick mother well and who would show father where work could be found? Perchance that earnest desire has not vanished in selfishness, and if so it is for you to know that your prayers are answered, that a God infinitely more loving than childhood's thought could image is here amongst men, revealing himself as He always has done and will do to those who are prepared to sacrifice man-made dogmas for the living, throbbing Truth. Proofs? No proofs! Nay, you are without excuse. The "cloud of witnesses" are now no longer visionary abstract figures in an apostle's metaphor, but here in our very midst; and from the four corners of the earth stand many mothers and fathers as honest and truthful as are you, saying, "God has healed me, and the promise, 'I will guide thee with mine eye,' is true as applied to the searching for work."

Have you in your growing youthhood, wanting to see things for yourself and dipping into scientific works bearing upon the material universe, its formation and continuance,—have you lost your faith in the religious teachings of your parents and ministers? Have you seen in the theory of material evolution a greater consistency than in the story of Adam and Eve? If you have, and in maturer years have grown farther away from the belief in the Bible as a guide to eternal Life, you are now without excuse. At your very door almost, in every large city and a vast number of villages, there are living proofs of the truth of the Holy Scriptures,—men and women who without any emotional hysteria will joyfully and calmly assure you that Christian Science has lifted them to where they see the spiritual interpretation of the Scriptures, so that they no more doubt the truth of the Bible than they doubt their own existence; and their unfolding spirituality after this uplifting experience denies the legitimacy of your excuse.

Maybe you are physically sick, and moan through the endless night and call upon God to reveal himself; to help you; to show you that He is capable of saving you bodily as well as spiritually? You want some assurance of His healing power? Perchance you long to see, talk with, or write to the Samaritan leper, or the man with the withered hand, or to Mary Magdalene, so that by the word of their verbal or written testimony you might build up a faith that would sufficiently grasp the invisible good as to experience the healing of divine Love for yourself. If this be so, then are you not hopelessly inexcusable? Every week God prepares a table for you in the wilderness of material doubts, and those who are partaking of the feast are saying through the medium of our Christian Science periodicals, "O taste and see how gracious the Lord is!" Have you such a poor opinion of your twentieth-century fellow-man's veracity, which he invites you to test, that you reject it? Are all who testify to the healing and saving power of the Christ-truth, the Christ-Science, in our churches and periodicals deceived or deceiving?

In one Christian Science church alone, where the writer was privileged to attend the testimony meetings for at least four years, he heard on the lowest computation six testimonies at each Wednesday meeting. This gives one thousand two hundred cases of healing which were witnessed to during that period. What are you going to do with them? If it is inconceivable to believe in them, is it not contrariwise inconceivable to disbelieve them? To those of you who collect your data and then deduce your conclusion, to you we say, What are you going to do with this mass of evidence? Can it all be swept aside with a skeptical gesture, does its solidity become less after a neatly phrased cynical criticism? No; it remains immovable and this banquet will continue to be prepared week by week until "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea." And you, dear doubting friend, at some time, sooner or later, will be one of those who will take hold of the skirt of him who is a child of Israel, saying, "I will go with you: for I have heard that the Lord is with you." Therefore cease your vain excuses, O brother-man, and meekly, reverently say to this spiritual Messias, "Come quickly, Lord Jesus."

THE FIRST COMMANDMENT.

LEWIS R. WORKS.

In his translation of the Bible into modern English, Ferrar Fenton, the English linguist and scholar, ascribes the authorship of the Books of Joshua, Judges, 1 Samuel, 2 Samuel, 1 Kings, and 2 Kings to Isaiah. These books the translator groups together under the title, "The History of the People of Israel," and he finds authority for placing the authorship in Isaiah, among other things, in 2 Chronicles, 32 : 32, which he renders, differently from the old translators, as follows: "But the rest of the doings of Hezekiah, and his piety, they can be seen written in the Visions of Isaiah-ben-Amoz, the Preacher, in the History of the Kings of Judah and Israel."

Mr. Fenton refers to the fact that in the old Hebrew arrangement the six books mentioned immediately preceded the book so well known under the name of the great prophet, and suggests "that Isaiah wrote this History of the Hebrews as an introduction to his warnings to his Nation, and to explain what would be the blessings he foretold, if it repented; for had he not done so by showing its former glorious condition and subsequent crimes, those warnings would have been incomprehensible to the mass of his readers in his own day, and far more so to us."

Digitized by Google

If this theory is correct, we are taught a new lesson in our understanding of the importance of the First Commandment. We have always believed, from a perusal of the facts mentioned, that the chief reason for the downfall of the Hebrew nation is found in its infraction of the Divine command, "Thou shalt have no other gods before me." Now we see that Isaiah, in his endeavor to awaken a sense of repentance among his people, and to impress the lesson attending the violation of the First Commandment, thought it expedient to take up the arduous labor of tracing the history of his people from prosperity and honor to decay and disgrace as an introduction to the grand book which bears his name. To write the voluminous history of a people, a work involving the labor which must have been bestowed upon the book of Isaiah itself, seems indeed a monumental task when it is undertaken for the purpose of showing the consequences arising from an infraction of a rule of action eight words in length. We cease to wonder, however, when we realize that the rule in question is the First Commandment, if we are mindful of its true import and full significance.

The wide scope of the initial commandment of the Decalogue is taught in another place than in the book of Isaiah —in a work written in modern times. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is a veritable commentary upon the First Commandment and teaches that it aimed at more than the mere worship of Baal or of other "gods." It teaches that men must know and be governed by nothing but God, divine Principle, "Mind, Spirit, Soul, Life, Truth, Love" (Science and Health, p. 465). It shows that we must abjure the innumerable "gods" to which erring mortals bow down—the false pleasures of the senses, the many attractions of materiality, the foibles and fancies in which they center their affections and toward which they direct their aims; in short, that we must give up all the things to which mortals mistakenly look for aid and comfort, and which they "ignorantly worship," instead of the one God, Spirit. More than this, Science and Health shows the rewards to be received by those who obey the First Commandment. It makes clear their right to the peace that "passeth all understanding" and the happiness and joy of those who possess "the knowledge of the Son of God," and teaches how we may attain "unto the measure of the stature of the fulness of Christ." Truly is it said, "Thou shalt have no other gods before me," and if we have honored this commandment, it may be said of us, Yours "is the kingdom of heaven."

WELCOMING SPIRITUAL IDEAS.

KATE D. GRANT.

PERHAPS no story in the Bible so tenderly touches the human heart as that which tells of Jesus and the little children. His love for their sweet trust and responsiveness, and his reproach to those wounding the child, is in accord with all natural feeling. To be kind to children is a lesson which the world knows by heart.

One of the helpful things that Mrs. Eddy has taught us in Christian Science is to interpret the Bible spiritually; and thus we may apply its profound lessons to the daily purifying of our thought. The story of Jesus' receiving the little ones teaches us to give a kindly welcome to every idea of Truth,—every thought which unfolds to us the things of God. This gracious, childlike reception of good on our part is our entering upon the way which leads to heaven; for Jesus said, "Except ye turn, and become as little children, ye shall in no wise enter into the kingdom of heaven" (Revised Version).

In Science and Health is given this definition of children, "Life, Truth, and Love's spiritual thoughts and representatives" (p. 582). Suppose that one of these children, a spiritual thought of Love, Truth, and Life, were to come to us, how should it be received? All know with what love and joy a little child is usually received into a home. It is gently cared for, nourished, and protected. At first only those who especially love it and are interested in it are even allowed to see it. It is guarded in the home nest until it is older and stronger. In the coming to us of a thought that strengthens or purifies, a spiritual idea, we ought to protect it with the same care that we would a newborn babe. We must love it, we must guard it against the attacks of prejudice, bigotry, indifference, jealousy; for its dear sake we must put out the evil that would injure, and must give the divine concept a sheltered home in our mentality.

As children grow into vigorous manhood and womanhood and are able to help those who nourished them, so the understanding of the Christ-idea grows until it is able to help those who have welcomed it to their consciousness. Let a man watch the development of one of these spiritual thoughts. First he is its protector, watching that nothing harmful touches it. Soon he notices that it helps him, comforts and cheers him; so he begins to depend upon it and to lean upon the strength he receives from its spiritual presence. Before long he makes what a Christian Scientist calls "a demonstration;" that is, he trusts the power of Truth to overcome some difficulty for him, instead of depending upon material means; and the Christ-idea proving equal to the need, the man has made a demonstration. He has proved the reality of Truth's idea and its ability to accomplish good for him. It must not be forgotten that even as the physical child needs food, so a spiritual idea needs the sustenance of continued good thinking.

Thus through the experience of the one who finds his perception of the Christ-idea adequate to meet his needs, others will be led to seek the same help, until by and by tired humanity will turn entirely to Spirit and things spiritual as its Saviour, and mankind will be transformed,—the clouded sense of God and man will give place to the perfect understanding of the Christ which heals the sick, casts out evils, and blesses all mankind, even as the full understanding of the Christ shone through the man Jesus.

What if spiritual thoughts come to one, and instead of receiving them he neglects them? The Master said: "Whoso shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea." Christian Science teaches that as we welcome spiritual thoughts, we perceive and receive Christ, Truth; and that those who will not receive them are cast adrift upon the sea of human speculation, which in time of storm engulfs, for human opinion is a millstone which drags many under the wave.

Thus every new thought which Truth brings to us should be received with the utmost regard, lest we "offend" one of those little ones, just born into our consciousness. As the mother prays that she may be faithful to her trust, a Christian Scientist does well to pray that he may be a faithful guardian of his spiritual thoughts, those perfect ideas of Truth, Life, and Love which are "born, not of blood, nor of the will of the flesh, nor of the will of man, but of God."

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

SELECTED ARTICLES.

Editor *Bulletin.*

Christian Science lays stress upon the omnipotence, omnipresence, and omniscience of God, in full accord with Scriptural authority; designating Him also the divine Mind, inasmuch as He was, is, and ever will be the one and only intelligence, the creative, governing, and sustaining Principle of all being. Christian Science lays stress also upon the statement in the first chapter of Genesis, that man was created in the image and likeness of this God. Paul has it, "In him we live, and move, and have our being," and urges upon mortals, as a panacea for human ills, the attainment of "that mind which was also in Christ Jesus." It will also be well to remember in this connection how Jesus declared that of himself he could do nothing, but that he thought, acted, and spoke only as he was led by the Father. Thus he established the basis for the teaching in Christian Science that there is but one Mind, and that this Mind is God. The human mind, so-called, which is identical with that which the Scriptures designate "the carnal mind" and declare to be "enmity against God" or against good,—this mind plays no part whatever in the practice of Christian Science. It is looked upon in the teaching of this Science as the mind of the "flesh" which "profiteth nothing."

It is well, we will concede, to "study health instead of disease;" in the same sense that it would be advisable to study and imbibe sweet harmonies rather than meaningless discords in one's effort to master the science of music, or to give more attention to truth than to error in the study of mathematics. But it would be impossible to establish health by declaring that there is no disease, without an absolute demonstrable understanding of the underlying truth making possible the statement. If, however, the student were fully conversant with fundamentals in either case, or if by persistent and faithful research and study he should come to understand the underlying Principle, his error would melt into its native nothingness, whether it be a mistake in figures or in notes, or a discordant physical or mental condition. In other words, he would "know the truth" and the truth would make him "free." The results of Christian Science practice have proven, beyond all hope of successful contravention, that a knowledge of man's real and indissoluble relationship to God, a conception of being as purely spiritual, never material, will heal disease and ameliorate human suffering of all kinds.

R. STANHOPE EASTERDAY.
Anderson (Ind.) *Daily Bulletin.*

The numerical growth of the Christian Science movement has taken place largely within the past ten to fifteen years. As this growth is due chiefly to the undeniable efficacy of Christian Science in healing all kinds of diseases, whether called curable or incurable by the doctors, it goes without saying that the insurance companies have profited by the application of Christian Science. It is a well-known fact that a large number of policy-holders are alive and well to-day, as the result of Christian Science, who had been given up to die by physicians. Moreover, I am acquainted with a number of men who were refused life insurance because of physical inability prior to becoming interested in Christian Science, but who now are policy-holders in good standing. Their acceptance by the companies as safe risks dated from their healing in Christian Science. The standard of health among those who follow the teachings of Christian Science is very much higher than it was before the same people accepted Christian Science. The rate of mortality among Christian Scientists is also very low.

In view of the importance attached to the non-use of tobacco and alcoholic liquors, and to good morals, by the insurance companies, it should be stated that very few men continue to use either tobacco or liquor after gaining an understanding of Christian Science. The testimony of both men and women who have accepted Christian Science is that their habits and morals have undergone a marked change for the better. Such changes must prove beneficial wherever felt.

Christian Science as presented by Mrs. Eddy is the outgrowth of her life of consecration to God and humanity. It is the result of her intimate and practical understanding of the Scriptures and her desire to understand and practise the fundamental teachings of the Galilean Wayshower, which for centuries had either been ignored or merely preached. She has founded Christian Science upon the teachings of the Bible, and it is consistent throughout with the spiritual understanding of those teachings. Paul said the Scriptures must be spiritually discerned; a requirement which Christian Science fulfils. Moreover, Christian Science is demonstrable, and enables each individual to work out his own salvation, as Jesus indicated. Salvation, according to its definition in the life of the Master, included the healing of the sick by spiritual means. The healing done by Jesus and his apostles was not confined to hypochondria and other nervous disorders, but extended to every condition of disease. Even so does the healing wrought through Christian Science apply to every physical as well as mental distress.

H. CORNELL WILSON.
The Weekly Underwriter.

That Christian Science heals all manner of disease is a generally conceded fact, and this without any alliance with material means and methods. No one knows better than a Christian Scientist that a formula recited has no healing animus, and Christian Science disallows its use. There is but one science of numbers, but one science of sound, and there can be but one science of healing, and, if it is spiritual, it cannot co-operate with material medicine.

The Christian Scientist's prayer which heals the sick is based upon "the scientific statement of being" regarding God, man, and the universe, an explanation of which the text-book of Christian Science sets forth. (Science and Health, p. 468.) This truth of being conversely denies the counterfeit—the false sense of things. This process of transformation has no tendency toward annihilation. All educational advancement involves a continual denial. The human mind is not a blank, even in an untutored state, but is filled with an erroneous sense of things which scientific progression removes; as, for instance, the false sense of music is denied by the science of music, and is dispelled through the cultivation of thought that development brings.

H. M. MASON.
Nashville (Tenn.) *Banner.*

Christian Scientists are endeavoring to attain to that spiritual-mindedness in which they find the only guarantee of safety from the perplexities of the human or mortal sense of things. This spiritual-mindedness includes happiness, joy, freedom, and the "peace of God, which passeth all understanding." It also includes freedom from physical, mental, and moral diseases, and inculcates ideal Christianity. In proportion as the broadening influence of Christian Science becomes recognized, will it be appreciated for its true value to humanity, for its reformative and regenerative effects, and it will then be seen that its title Christian Science is not a "misnomer," in that it teaches the exact Science of Christianity.

THE LECTURES.

FLORENCE, COL.

An interesting lecture on Christian Science was given by Judge Septimus J. Hanna, Sept. 2, at the Houston Opera House. He was introduced by Judge Charles D. Bradley, who said in part:—

I am not a member of the Christian Science church, but like a world of others, I take great interest in the Christian Science movement. It is worthy of a most respectful hearing, and the people of Florence are under a debt of gratitude to First Church of Christ, Scientist, of this city for the public lecture on this subject to be delivered here to-day. We have reached the beginning of a new epoch. The world is athirst for a message that will satisfy its spiritual wants. This is not, as some assert, an irreligious age. I would rather call it an age of great religious awakening. The nineteenth century was a period of great mental activity—the whole realm of science in that time was most carefully traversed. The human mind had reached that stage when it would not be satisfied with anything because it was old, or because it rested on supposed authority. Never before had there been profounder religious investigation or acuter religious criticism. Never before had the researches of the savants been carried so widely to the doors of the multitude—the teeming press scattered broadcast among the people every discovery and every thought of the learned. No wonder, then, that the world had advanced upon all lines, and that now the science of religion—the science that reveals the true relations of man with the supreme power of the universe—should so deeply engross the attention of the human race. In the grand drama of present human events Christian Science plays no inconsiderable part. Its growth and progress is a wonder of the times—discovered only forty years ago by its now venerable expounder, Mrs. Mary Baker G. Eddy, it is already a visible and potent factor in our civilization. Perhaps the message from this great woman is the message to lift mankind to a higher and truer spiritual living.

The Tribune.

DOVER AND FOXCROFT, ME.

A large audience gave the closest attention to an able and interesting lecture on Christian Science by Mrs. Sue Harper Mims of Atlanta, Ga., in Central Hall, Sunday afternoon, Sept. 2. The speaker's exegesis of Christian metaphysics was concise, comprehensive, and most helpful to her auditors. Mrs. Mims dwelt at some length on the practicability of Christian Science in the every-day affairs of life and of its regenerative influence upon mankind physically and morally. She also paid a beautiful and glowing tribute to Mrs. Eddy, the Discoverer and Founder of Christian Science. The lecturer was introduced by William R. Knox of Roxbury, Mass., who said in part:—

The object of this lecture is not to proselyte. As Christian Scientists we fully appreciate the fact that one is not made a Christian Scientist by merely listening to a lecture, but by the understanding and daily living of its teachings. Christian Science is to-day engaging the attention of thinking men and women, and why? Because of the marvelous works it is doing in healing all manner of disease and in regenerating and uplifting the lives of its adherents; because a perusal of its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is awakening an interest in the Bible and revealing its practical import in the affairs of this present existence; because a study of these two books is unfolding to human apprehension the Science of God and man, and is supplying the spiritual understanding of divine Principle that is applicable to every human need, as it enables the student to know for himself that God is a very present help in every time of need.—*The Piscataquis Observer.*

FOND DU LAC, WIS.

An audience that comfortably filled the first floor of the Henry Boyle Theatre listened to a lecture on Christian Science Sunday afternoon [Sept. 9] by Judge William G. Ewing of Chicago. He was introduced by Attorney R. L. Morse, who said in part:—

There are some facts that appeal even to those of us who are skeptical, persuading us to give to Christian Science a hearing as impartial as the fetters of the philosophy of our early training will permit.

The followers of Christian Science are sincere and earnest. They live their religion every day. Their happy, smiling faces evidence one of the tenets of their belief—that the great universe of love and peace and harmony is their heritage. Those who live Christian Science not only find peace and harmony of mind, but seem to find bodily health as well. From their religion they get results, and unless a religion brings results there is something wrong with it.

The fairness of Christian Scientists in advocating their Cause, the high degree of intelligence of their followers, and the rapid, widespread growth of their philosophy, entitle them to respectful consideration.—*The Commonwealth.*

LIVERMORE FALLS, ME.

A very attentive audience gathered at the Universalist church Friday evening, Sept. 7, to listen to a lecture on Christian Science [under the auspices of First Church of Christ, Scientist] by Mrs. Sue Harper Mims of Atlanta, Ga. Mrs. Mims was introduced by Rev. J. M. Paige, pastor of the church, who said in part:—

We are glad to welcome Mrs. Mims from the South, because our sectional prejudice is passing away and we need the help of one another in order to gain the best possible conception of the best possible life. Our minds are becoming more open to that which is good everywhere. The Universalist church has taught the conception of man as a brotherhood for more than a century. We have also tried to recognize the good in all religions. Many of the so-called refutations of Christian Science are only cheap harangues. As a matter of fact Christian Science is a help to many lives. We must examine the problems and possibilities of life scientifically. Although not a Christian Scientist myself, I gladly welcome you to this pulpit in behalf of this faith, and also in behalf of the community.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

LECTURE IN THE MOTHER CHURCH OF CHRIST, SCIENTIST.

A LECTURE on Christian Science will be delivered by Prof. Hermann S. Hering, C.S.B., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in the Extension of The Mother Church, Falmouth, St. Paul, and Norway Streets, Boston, Tuesday evening, Oct. 16, 1906, at eight o'clock. The lecture is free and the public will be cordially welcomed.

"BY THEIR FRUITS."

BECAUSE of the emphasis which its teachings give to the healing of the sick, Christian Science has been regarded by some of its critics as merely a means of curing bodily ills, and to such its true spiritual animus is unknown. On the other hand there is a class which assumes to see in it nothing but another denomination or sect, preaching the same gospel of a future-world salvation which has been preached for ages. Both of these concepts of Christian Science are wrong, for it should be understood that faith and works are united in this religion as they were in the time of Jesus and his immediate followers.

The healing of the sick is the necessary and logical outgrowth of the teachings of the Master when scientifically applied to the affairs of men, and this healing cannot be separated from the spiritual development of the individual. The two are so interwoven as to constitute the practical demonstration of Immanuel—God with us—in human experience. Mrs. Eddy has well said of the necessity for a unified Christianity, "Anciently the followers of Christ, or Truth, measured Christianity by its power over sickness, sin, and death; but modern religions generally omit all but one of these powers,—the power over sin. We must seek the undivided garment, the whole Christ, as our first proof of Christianity, for Christ, Truth, alone can furnish us with absolute evidence" (Science and Health, p. 142).

Those who are seriously considering the possibility of Christian Science being of benefit to them in their ills and sorrows, are calling upon its followers for proof of their faith by their works, and it is incumbent upon them to be actively engaged, as was their Master, upon their Father's business. The demand of the hour is for the healing of the sick and the regeneration of the sinful, and as this work is done by Christian Scientists they will hasten the day when the miseries and pains of mortal existence shall be no more. The grateful expressions which are made public through our periodicals and at our Wednesday evening meetings give evidence of this healing work and the great benefit it is conferring upon humanity, but there should be still greater progress. What is needed is a more careful and prayerful study of the Scriptures and of our text-book, and a more exact and painstaking application of their teachings to our daily affairs. Thus will we be ready to prove the truth of Christian Science and to fulfil our Master's command to "preach the kingdom of God, and to heal the sick."

ARCHIBALD MCLELLAN.

"FISHERS OF MEN."

THE story of the call of the Galilean fishermen to the Christian ministry, as told in the fourth chapter of Matthew, is characterized by great simplicity and suggestiveness. "Follow me, and I will make you fishers of men." This single sentence sufficed for their summons and their authorization, and yet in its very brevity it gives increased emphasis to the essentials of their new life-work; namely, conformity to the Christ-ideal, and utilization of that practical wisdom which has so largely to do with the success of Christian as well as commercial enterprises.

The life aims, the motives, the activities of these humble fishermen were all to be changed, exalted, and yet they were to remain fishermen, bring into everyday use for Christ all the alertness, the courage, the patience, the endurance, and the skill in adjusting means to ends which they had acquired in their many years of seafaring experience.

The ministry of love must be effected through the hand-grasp of brotherhood. It can be fulfilled by the Christ-like man alone. It is much easier to join a well-named and noble-intentioned society, and make a generous subscription to the furtherance of its ends, than it is to manifest the Christ-ideal in all our relations to others, and the unideal state of mankind at the opening of this twentieth century is explained in large part by the fact that the great body of Christian believers have thus sought to delegate their ministry to others. Christian Science denies the legitimacy—yes, the possibility—of this transfer of Christian responsibility, and the emphasis it lays upon the call for every believer not only to "know the truth" which makes free, but to bring it into demonstration before men in the personal overcoming of sin, disease, and death,—this gives Christian Science both its present-day uniqueness as a religious teaching and its supreme advantage in winning men.

When awakened to a right sense of what it means to "follow" Christ Jesus, he who is sincere and aspiring is moved by a high and holy impulse. He sees how splendidly eventful his individual work is designed to be. He sees that he must be scientific. His faith must be not only simple but philosophical; he must so apprehend the nature of God, of man, of the universe, and of evil, as to achieve for himself and for others the Christ life thereby. He sees that through ignorance, narrowness, or the blunderings of immaturity, Truth's statement may be marred; that it is thus rendered correspondingly ineffective, and that a knowledge of all that is wholesome in nature, in literature, in art, and in life, may become practically serviceable in adding to the wisdom and winsomeness of his address.

The study of the method of the great Wayshower will now have a new interest. Jesus appealed to varied conditions of life, and his words everywhere evidence great thoughtfulness and discretion in adjusting himself thereto. His constant use of the parable in speaking to a story-loving people, his care not to frighten or offend unnecessarily those whom he would rebuke, and especially his choice of pertinent and telling illustrations,—all reveal the practical wisdom of an expert in method.

If we would "follow" the Master, we must seek to do his work, his way. The fine blend of truth, tact, and tender love which marked his every statement, and the need of which is so emphatically commended by our Leader, especially in the introductory pages of "Christian Science Practice" (Science and Health, pp. 362–377),—to this we must attain; and we may, for Jesus said, "I will make you." The Christ-idea still guides "into all truth," and "his reward is with him." The achievements of patient and humble endeavor to "follow," even as he commanded, are being sung in every land and language to-day, and this is the harbinger of that glad time when the shame and sorrow which attend our stupid and therefore needless fumbling and defeat shall have passed away.

JOHN B. WILLIS.

THE QUEST FOR TRUTH.

"If God were to offer me truth in the one hand and search for truth in the other hand, I would choose the search for truth." This frequently-quoted saying contains the inference that the truth has not been found by the one who continues to search for it. Even the search for Truth has a wonderful influence for good. Our revered Leader says, concerning her efforts in this direction, "The search was sweet, calm, and buoyant with hope, not selfish nor depressing" (Science and Health, p. 109). What its results were in this instance, students of her writings the world over are telling gratefully to-day. Hers was not the quest for material knowledge, of which Lowell says,—

> Many loved Truth, and lavished life's best oil,
> Amid the dust of books to find her,
> Content at last for guerdon of their toil,
> With the cast mantle she hath left behind her.

Because of the utter impossibility of finding Truth by material means, many have come to the shortsighted conclusion that ultimate truth is not to be found or that it is only a vague abstraction, forever eluding the seeker's grasp; but this belief is wholly at variance with the Master's unequivocal teaching, "Ye shall know the truth, and the truth shall make you free;" and "he that seeketh findeth." It is well to remember how continuously Jesus proved the power of Truth in healing the sick, giving sight to the blind, stilling the tempest, and raising the dead. He had much to say concerning Truth throughout his ministry, and near its close he uttered those wondrous words, "When he, the Spirit of truth, is come, he will guide you into all truth." Later, John, the beloved disciple, showed how we may distinguish between truth and error. He said that worldlings would speak of the world, and that the world would hear them; and he added, "He that knoweth God heareth us; he that is not of God heareth not us. Hereby know we the spirit of truth, and the spirit of error."

It seems difficult for mortals to turn away from materiality in order to "know the truth," but many are impelled by suffering to do this, and as they do they are made free from sin and suffering. Then it is no longer an uncertain quest for Truth with them, but a continual application of its power to all the conditions of human existence. Mrs. Eddy says, "A grain of Christian Science does wonders for mortals, so omnipotent is Truth" (Science and Health, p. 449), and the correctness of this statement is being proved by thousands, who are sometimes startled at the wonderful results which follow the application of even a slight understanding of divine Truth, as made known in Christian Science.

Some one has said that "intensity and endurance cannot co-exist in the human economy," but we are bidden to be "not weary in well-doing." Our realization of Truth's power should deepen daily; and it must be intensified as we apply it with more and more understanding. Most eloquently does Paul tell us how our victories over error are to be gained, as he links together "the word of truth" and "the power of God." Those who have scientifically sought and found Truth can say with the psalmist, "Because thou hast been my help, therefore in the shadow of thy wings will I rejoice."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Concord, N. H., Sept. 18, 1906.

Dearly Beloved Leader:—The Directors have notified me that I have been selected to deliver the lecture for The Mother Church on Oct. 16, and that you had approved the selection. I thank you deeply for the honor thus conferred and pray that I may be a channel for Truth and Love on that occasion. It will be the first lecture delivered in The Mother Church Extension. If you have any suggestions to make, I will be most happy to receive and adopt them.

I enclose a verse that accompanied a contribution sent to me for the street-paving fund. It expresses so sweet a thought I believed you would be pleased to see it. Could the students everywhere know of this fund, and that they are privileged to contribute to this new highway, I am sure many would gladly make use of the opportunity to be of some real practical help to you and to your beloved home city.

I will take this opportunity of telling you that we have been having some very beautiful services and meetings lately. There is a more spiritual atmosphere, a more receptive thought, and an increased attendance,—the most gratifying feature of which is the fact that so many more Concord residents are coming to the church. In this regard there seems to be somewhat of an awakening, as the demand for healing has increased also, and we have had some good cases of healing lately among these people. The speaking at the Wednesday evening meetings is interesting and helpful, and I am grateful for the good testimonies. These have been in line with the new By-law.

With deepest love and gratitude, in which Mrs. Hering joins me, your devoted student,

HERMANN S. HERING.

[The following is the verse mentioned in Professor Hering's letter.—EDITOR.]

FOR THE STREET FUND.

SOLOMON said of Wisdom
That she giveth true increase;
"Her ways are ways of pleasantness,
And all her paths are peace."
So to the Leader's wisdom,
Which imparteth truth to-day,
I send a tiny tribute
To make pleasanter the way.

GERTRUDE RING.

Roxbury, Mass., Sept. 3, 1906.

Mrs. Mary Baker Eddy.

Beloved Leader:—While on a visit this summer to my childhood home in Tilton, N. H., I drove to the Park cemetery and, as has been my custom for some years, stopped to ponder the epitaph on the monument erected to the memory of Dr. Asa Eddy. It always has been an inspiration to me, but fresh from the dedication of The Mother Church Extension, I could but feel how much we owe this man for the crowning success of our church. My teacher, who was one of your early students, told us how he was raised up at a crucial hour to help you; how faithfully he stood by the "young child" while the healing truth was being established. I was truly glad on this day to pay homage to his memory. More understanding of this truth has brought greater gratitude for this faithful pioneer's work in Christian Science. I am most glad that my early days were spent here in the neighborhood with your dear people. Many incidents spoken of in your writings are familiar to me, and the past eighteen years have given me opportunity to correct many errors relating to the work in Christian Science. I have found people glad and satisfied to know the facts. The Christian Science service is held each Sunday at the home of a dear one just across the street from the Congregational church which you used to attend.

With love and gratitude,

MRS. ADDIE TOWNE ARNOLD.

Boston, Mass., Sept. 2, 1906.

Mrs. Mary Baker G. Eddy.

My Beloved Leader and Teacher:—I want to tell you what a joy I had in visiting First Church of Christ, Scientist, in Concord, N. H., Aug. 30, 1906, of the great pleasure I had in attending the Wednesday evening meeting there, of the delight in seeing the lovely gifts in your

Digitized by Google

room at the church, and hearing the fine organ and the chimes, all of which tell us the story of your faithful love-service to God and man. My heart goes out in boundless gratitude to you for so many blessings. I find no words to number or express them. I know, dear Mrs. Eddy, you will appreciate my fulness of joy and love.

Yours most sincerely,

CLARA E. CHOATE.

Chicago, Ill., Sept. 3, 1906.

Beloved Leader:—I am grateful for your compassionate treatment of my last letter, published in the *Sentinel* of Aug. 25. It brings a sweet sense of forgiveness, for which the heart had yearned, and the example is priceless. The line expunged referred to an incident which seemed to be the occasion of painful regret and sorrow. The mistaken human impulse was rightfully defeated at Concord and the necessary lesson on "Personal Contagion" is partially learned. My eyes have thereby been opened to see that a glorious Communion season is just the time when erring impulse would erect the wrong tabernacle on the mountain and prevent the adoption of the true pattern there shown. Your timely article surely directs us to "the true tabernacle which the Lord pitched, and not man."

May all who really love you grow in wisdom to better understand this grand statement of rightful devotion to Principle, and thus help you and your Cause in the right way.

Lovingly,

ERNEST C. MOSES.

Los Angeles, Cal., Aug. 27, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—Ever since reading your article in the *Sentinel*, "Personal Contagion," I have wished to thank you for it. While in Boston, July 1, 1905, whither business had taken me, I visited the magnificent foundation of the Extension of The Mother Church, and I was moved to tears as I viewed the work of one woman who was loyal to one God. I came home filled with a desire to do better than before, and also impressed not to infringe upon your time by seeing you—as I felt I must when I left here to cross the continent—but to work up to where I could be a help to you. I consider it a great privilege which you gave us, to assist with this Extension. I had always been sorry that I had never contributed to The Mother Church, and you opened the way. Every dollar has returned fourfold; it was gladly given, without ever a sense of having given anything. I am so thankful for your article and the awakening it brings. I shall strive not to be lax and allow "injustice and personal contagion" to rob me of "grace and growth spiritual." My husband and four children, who are all devoted Christian Scientists, would send love to you, if they knew I was writing. We have studied sixteen years.

Lovingly yours,

(MRS.) IDA M. HAWES.

Leeds, England, Aug. 25, 1906.

Mrs. M. B. G. Eddy.

Beloved Leader:—We, the Board of Directors of First Church of Christ, Scientist, Leeds, at our first meeting after organization, wish, with hearts full of joy and gratitude, to tell you that we have formed this church with a membership of twenty-six. Lady Victoria Murray has lovingly helped us, and explained to us the duty that we owe to God, to you, and to mankind. We know that the only foundation of a Church of Christ, Scientist, is healing the sick and casting out error, and we shall strive more earnestly in the future than in the past to demonstrate the healing power of the Christ, and thus prove our love to God and loyalty to you, our Leader.

WM. S. NORTH, *Clerk.*

TESTIMONIES OF HEALING.

Two years ago I borrowed the Christian Science text-book out of curiosity. At that time one of my three children was very ill with an extreme case of ivy poisoning, another had bowel trouble in such a severe form that the usual remedies could not be relied upon to relieve him, and I had had severe nervous trouble by which I was incapacitated for five days every two or three weeks. In addition I had stomach and bowel trouble, weak heart, and extreme irritability. After my first talk with the Scientist from whom I borrowed a copy of Science and Health, I found the boy's bowel trouble entirely relieved. We were perfectly astonished at this, and decided to give the case of the second boy, who was sick in bed, to a practitioner. In forty-eight hours he was free from bandages, eating at the table with us, and with the exception of the emaciation —the result of weeks of limited diet, etc.—he was well. This was another surprise to us, and by this time we stood in awe of the power of divine Love.

We bought a copy of the text-book and "Miscellaneous Writings" by Mrs. Eddy and began to work on the fundamental truth which is the keynote of all that is done in Christian Science; namely, "God is Love" and "God is All in all." Though there were many questions to be answered, I was told by the practitioner, "It is not what you do not understand but what you do understand that counts." This turned me to a persistent study of these books for myself, in which all my questions have been answered. By the way, we could not find our Bible, it being a book which neither my husband nor I had read since our childhood. I said at first that I could not give more than one half hour a day to this new subject, but I soon learned that "the desire which goes forth hungering after righteousness is blessed of our Father, and it does not return unto us void" (Science and Health, p. 2). Thus I was enabled to devote an average of five hours a day to the reading of the Bible and Science and Health, for the time I had been giving to sickness in the family and myself, or when well to social duties, was now given entirely to study. Meanwhile I was not conscious how strong and well I was growing, until people began to remark upon my changed appearance. Now I have not one of the ailments which made me wretched two years ago.

My husband forgot to wear his glasses in less than a month after coming into Science, and the physical healings were crowding themselves upon us. Many ailments were overcome by this truth, and our boys are now healthy, fearless lads, standing at the head of their classes. Before we came into Science the doctor's carriage was oft-expected and trained nurses were in frequent attendance. The troubles from which we suffered were not things of the imagination but to us were actual facts. The health and happiness we are now enjoying is the great fact that God governs all, and this truth Christian Science has taught us is ours by right. I deem it a privilege to speak of the physical help we have had from Christian Science, though it is the least of our blessings. From being where we had no God, we now have a Father and Mother in the understanding of the ever-presence of divine Love. Whereas our home was unhappy and quarrelsome, it is now happy and peaceful. My gratitude to the Founder of Christian Science can only be expressed by my fidelity to the truth.

LUCILE G. TILDEN, Brooklyn, N. Y.

The first of June, 1905, an eruption of some kind broke out on my body, and then there was a severe bladder trouble. At that time my husband, although not antagonistic to Christian Science, had not studied it. I had a copy of the text-book, and felt that it contained the truth, as we had all been helped many times, but this was the

Digitized by Google

first time that anything of a serious nature had presented itself; and in our fear we resorted to material means, but with no result. The nearest Christian Science practitioner was six miles away, and as I grew worse rapidly, it seemed best, on account of relatives who were opposed to Christian Science, to call in a physician. When he came he remarked upon the conditions, called my sister-in-law out, and told her I was a very sick woman. He also said that he had two other cases similar to mine in the hospital, and that he had little or no hope for their recovery. We followed his instructions until the next evening, by which time I was in a most serious condition.

That night my husband and sister-in-law told the doctor that unless he could give them some hope, they wanted to have Christian Science treatment, as that was my last conscious request. He said that I ought to have it, and added, "I don't think it will do her any good, but it can't hurt her." This was on Monday night. On Tuesday afternoon the practitioner came out, and in twenty-three hours from the time all material remedies were given up and all reliance placed upon God, relief came. For ten days I seemed to hover between life and death. The practitioner stayed with us for two weeks, and for a few days, when things seemed darkest, another practitioner came out and aided her. All this has since been told me by my husband and sister-in-law, who were with me every moment, as I knew nothing that was going on at the time.

The improvement seemed very slow at first, but one thing after another was overcome by the power of Truth and through the patient, loving work of the practitioner, until at the end of two weeks she went home and continued the treatment absently. From the time Christian Science treatment began, I could retain food. When I began to sit up I was as one in a dream,—could not hear, see, think, or remember clearly. We went to town and I remained some time. In a week after going, I walked seven blocks. My improvement from this time was gradual, but sure. I continued to improve until my healing was complete.

My heart is filled with gratitude to God for this wonderful proof of His protecting and healing power, and to Mrs. Eddy, the one who was found ready to bring us the message contained in that wonderful book,—"Science and Health with Key to the Scriptures."

MABEL VAN HORN, Marietta, Wash.

After being treated for several years by a number of doctors and not receiving any help, I was finally obliged to leave my work and remain idle nearly three months. At this time I was persuaded to try Christian Science, which healed me of a chronic bowel trouble that a doctor had diagnosed as very serious. I was also healed of insomnia, extreme nervousness, etc. Besides the healing of these physical ailments I have received much help morally and spiritually. Christian Science has helped me in my work and in my home life. My wife was healed of a very severe attack of illness in a short time. My son was healed in two treatments of a severe fever.

For all this help we are truly grateful to God, and to Mrs. Eddy for the knowledge of this wonderful truth.

W. B. MOULTON, Evanston, Ill.

I wish to acknowledge what God has done for me through Christian Science. About two years ago two ladies came to live with us, and gave me some Christian Science literature with an earnest request for me to read it. I looked over the *Sentinels*, but being a confirmed skeptic I did not take any interest in them at the time. There was, however, something that I could not get away from, and I was led to read them again. It was then that the light came, and I wish I could express in words even a small part of my gratitude and love to God, and to Mrs. Eddy for Christian Science, as it has healed me of a number of very serious ailments. I had been operated on for hernia and other troubles, being in a hospital several times, and spending a large amount of money to little or no avail. I was also healed, in the truth, of the tobacco habit of forty-five years' standing, also of profanity. My eyesight is wonderfully improved. I had been almost tempted to leave this world, but I found that God would change my thoughts if I wanted them changed. Everything moves in harmony now; I love to work, and I love everybody. I cannot fully express my thankfulness for the many blessings which this truth has brought me, besides restoration to health. I find that Christian Science helps me in all my daily affairs, and that it is a duty I owe to God and my neighbor to make this acknowledgment of what it has done for me.—E. E. ROUNDY, Everett, Mass.

I feel so grateful for what Christian Science has done for me that I cannot be silent any longer. When a loving aunt first brought the light to me, I was in great darkness, the medical verdict being that I should die or go insane. But thanks be to God, and to our Leader, the light of Truth has cleared away the darkness. After we came into Christian Science my husband came down with a contagious disease. Not being a Scientist, he sent for a physician, who pronounced his case malarial fever, so that at first we were not prepared to meet it. When the symptoms appeared on myself, I overcame them in one night by realizing that God is ever-present, and that where He is disease cannot come. My mother and our youngest child, a half year old, were the next ones to be attacked. The demonstration was made for the baby by my mother's realization of the power of Truth as illustrated in the raising of Jairus' daughter, and mother was able to care for her own room the fourth day. Our youngest child was born in Christian Science and without any painful experience. An attack of throat trouble was overcome for our little girl, so that within a week she was back to school. It seems that all the ills of the flesh have come up to be destroyed, but by holding to the thought of God's perfect creation, and that man has dominion, we are more and more competent to meet them.

MRS. O. E. REAVES, Jackson, Mich.

A little over five years ago I read part of a *Christian Science Journal*. It seemed good to me, and I bought a copy of Science and Health and began its study. At that time I had given up any belief in God or a future life; but when I learned in Science and Health that God is Love, and Love only, and that evil does not exist except to mortal sense, then my heart went out to Christian Science. Through the study of the text-book, and the declaration of the truth as I learned it there, tobacco was discarded. The desire for an occasional drink went next, also profanity, and in their stead came a sense of the presence of Love, Life, and Truth. I am still trying to overcome whatever stands in the way of my inheritance. My wife, son, and daughter followed me into Christian Science, and all the happiness that we have in our home life we owe to it.

Before I became interested in Christian Science I had frequent headaches, and other ills, but after I began the study of Science and Health these conditions left me, and now the truth is my medicine. Twice I have had an attack of a severe eruption overcome for me through the understanding of a dear practitioner. I am healthier and happier than I ever have been before. Existence once seemed to be a burden, but now I know that God is Life, unchangeable and eternal, and that man reflects God.

I am thankful to Mrs. Eddy for showing us the way. Sometimes, when thinking of our dear Leader, I say, "God bless her," and almost immediately the thought comes,—

Digitized by Google

God is blessing her constantly, in that the truth taught in her book, Science and Health, is becoming the cloud by day and the pillar of fire by night to many weary hearts, leading them into health and peace.

HENRY W. SCOTT Denver, Col.

After suffering "many things of many physicians," for seven years, I was given up to die. My illness was called a complication of diseases by some of the doctors, but all agreed that should I live I could never be strong again. In 1891 Christian Science was brought to my notice by the healing of an aunt. I did not think then that it could help me, for I thought God had forsaken me. In the month of July I was in a very weak condition, having one sinking spell after another. After regaining consciousness one day, I saw a Christian Science tract lying on the pillow. I read a few lines, quoting the Scripture, "All things, whatsoever ye shall ask in prayer, believing, ye shall receive." I closed my eyes and asked God to heal me in Christ's name, and I was made whole in that moment, so that I arose and said to my husband, "I am well—God has healed me." I was so happy in going about and looking after my house and children,—something I had not done for seven years. I am indeed grateful to God, and to our dear Leader, for the many blessings which I and my family have received through Christian Science.

MRS. CARRIE M. F. WEEKS, Loon Lake, Wash.

I rejoice to testify to my healing in Christian Science. I am glad to be a living witness for the truth that has made me free. In the summer of 1900 I was taken seriously ill, and after much advice of family and friends, I consented to see our family doctor. After hearing all about my case, he shook his head and said he would have to make an examination. This took place, and to my surprise and sorrow he informed me I had an abnormal growth, and that, as this was entirely out of his line, I would have to go to a hospital and be operated on. He also said it must not be delayed. This I refused to do, having an antipathy to hospitals and the taking of ether, as I felt I would not come out of the effects. It was therefore a very serious time. I knew, however, that nothing is impossible to God, and it was in a moment of great distress that I turned to God in prayer, believing that He would lead me; and my prayer was answered. Perfect peace came, and I turned to Christian Science. The next morning I sent for a practitioner, and although I went through deep waters, I was healed in eleven months. I have tested the efficacy of divine Truth, and the promise was made good to me, "Ye shall know the truth, and the truth shall make you free."

How my love and gratitude go out to our beloved Leader, who pressed on through thorny paths to give to the world the best news that has ever come to light. Words cannot express my gratitude for all this truth has done for me.

MRS. ELIZABETH P. MCNAB, Brooklyn, N. Y.

I have ere this told how I was healed by Christian Science of a throat trouble of years' standing, after receiving no particular benefit from medical treatment and after having been to various places in search of health. I have lately had recalled to me the fact that I was at the same time (about six years ago) healed of an ailment from which I had suffered for over twenty-five years. When I was about sixteen years old I was thrown from a horse, and from that time on I was a sufferer from the injury then received. I was on crutches quite a while and never considered my knee perfectly well. Frequent consultations were held with prominent physicians, each of whom suggested and tried different methods to relieve the pain and restore the knee action. Their opinions as to the injury differed. Finally, about eighteen years ago, an operation was performed, and I had to use crutches for about four months, after which I had to wear a tight elastic bandage to keep the parts in place.

The following winter the trouble increased and I was again confined to the house. We then consulted with another prominent physician, who tried another line of treatment, so that I could not go out at all excepting on crutches. Finally I became better, but with each change of weather the trouble returned. This occurred up to the time of my being healed in Christian Science of the throat trouble, since which time I have forgotten all about the years of pain and treatment for my knee. I can now walk miles without feeling any ill effects.

I know that Christian Science alone relieved me from this ailment of years, and I am therefore grateful to it for this and other benefits received, and when I say that I am grateful to Christian Science it includes Mrs. Eddy, who has made it possible for the civilized world to benefit by this truth which makes men free.

ISIDOR JACOBS, San Francisco, Cal.

Christian Science was first presented to me in June, 1897, at which time I was suffering intensely from headaches and serious trouble with my eyes. From my youth up I had been thus afflicted, and had consulted several doctors, but could not get relief. I went to the best oculist here and he gave me treatment for months. I had finally to resort to morphine, and had to increase the dose until it took three grains to subdue the pain. All this time I was under treatment with the oculist and he said the only thing left was an operation on my eyes. I asked him what would be the result if I did not have it, and he replied, blindness. I could not make up my mind to have an operation performed, and turned from him thoroughly discouraged and disheartened.

It was at this time, when I was almost a mental and physical wreck, that I turned to Christian Science for help, was healed in the first treatment, and have never had a return of the trouble. The following winter I broke my glasses, which I had worn constantly for twelve years. It is now seven years since I gave up their use and my eyesight is perfect.

Words fail to express the freedom that I feel through this wonderful healing which has been wrought through the power of Truth, and my heart goes out to God for His great love in revealing to our beloved Leader, Mrs. Eddy, this blessed truth as taught in Christian Science.

JOHN CHESTER MILLER, Poughkeepsie, N. Y.

From a small child I had ill-health, and grew into a delicate woman with very weak lungs and heart. After my marriage my husband spent thousands of dollars for me, in traveling and for treatment from different physicians, but all to no purpose and I grew steadily worse.

When I had given up all hope of ever being cured, a friend recommended Christian Science, and though I knew nothing of it but false opinions, I was willing to try anything that held out any hope, as medicine no longer did. I went to a practitioner and was healed in three treatments. Through the understanding of Truth I am now enjoying perfect health.

MRS. L. F. LEDBETTER, Birmingham, Ala.

In love and gratitude to God, and to Mrs. Eddy, the interpreter of Jesus' wondrous teachings, I wish to tell of some of the benefits which I have received from Christian Science. It is over a year since it found me in a deplorable condition of many years' standing. I had stomach trouble, with other troubles too numerous to mention, which

Digitized by Google

have all been overcome through Science. I shall never forget the sublime moment when I perceived that an all-loving Father is always with us. All sorrow was forgotten, and to-day I am a strong and healthy woman. All this has come to pass in less than one short year, and my earnest desire is that I may be more and more worthy to be called a child of God. This is in loving gratitude for an understanding of this glorious truth.

MRS. L. CLARK, Vernal, Utah.

It is over four years since Christian Science came into my life, bringing health, peace, and a growing sense of God's love for man. I came to Science for physical healing, and have been richly repaid for every hour of study, every wrong thought overcome. Through this awakening many chronic and serious troubles have been overcome. I left off glasses with the first treatment, though I had worn them for five years; and my sight has steadily improved until it is normal.

I am very grateful for this healing, but my deepest gratitude is for the change it has made in my disposition and for the love for the Bible which it has brought. My heart goes out in love to Mrs. Eddy, whose teachings have helped me in this journey "from sense to Soul."

MRS. ELLEN O. EDMANSON, Chicago, Ill.

[Translated from the German.]

From childhood I had been weak and ill. As I grew older the weakness increased, and the professor whom we at that time consulted, recommended a long rest. His advice did me little good, however, for at the age of nineteen I had to give up my chosen profession of teaching. Last December I was again taken so ill that I had to suspend work, and I was sent to a hospital. There the physicians stated that I had heart and lung trouble. My condition soon grew worse instead of better, and I left the hospital after two weeks. I did not know where to turn for healing, and grew very unhappy. In this despairing condition Christian Science was recommended to me by friends, several copies of *Der Herold der Christian Science* were given me, and although I had until then not been able to read for any length of time, I was able to read a whole article in *Der Herold* the following day. I studied more each day, and decided to go to a practitioner for help. After a few treatments I noticed a marked improvement. After two weeks I felt a desire to work, but feared that I might not find a position so out of season. The practitioner *told* me to banish all such doubt, for God would lead me in the way to find a suitable position. "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," were her admonishing words, and I *soon* heard of a position where I was accepted, and where I am still happy and well.

Through Christian Science I have not only been freed from physical ailments, but happiness, contentment, and joy have found entrance to my thought. I thank God, and our dear Leader, Mrs. Eddy, who through her true teaching always points out the right way to Life.

PAUL STRUBE, Berlin, Germany.

About five years ago I began attending the Christian Science meetings in our city. I had previously been healed by Christian Science, and through this treatment I had found the truth. I had no idea but what I could take it into the church of which I was a member, but to my great disappointment I found I was growing dissatisfied with my church, which I had always loved. I had felt that it came nearer the truth than any other, but now all was changed, and I must set myself about finding, if possible, the cause of my restlessness.

I studied the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, and found that while I had a theoretical knowledge of God and of the brotherhood of man, I lacked the understanding of God as good and of man as an idea of God. So, after receiving satisfactory proof of the truth of Christian Science, I united with First Church of Christ, Scientist, in this town. My healing was accomplished through absent treatment. It was not a quick healing, but it was effectual, being achieved in about three months. Besides the ailment for which I was chiefly treated, I had other serious maladies, including eye trouble, having worn glasses for three years. All of these ailments have one by one disappeared, and besides the physical help, the spiritual uplifting has been beyond expression. I have found God ever ready to answer my prayer, when I have been willing to bring myself into harmony with Him. I find that only by constant demonstration of the saving truths of Christian Science, do we rise in consciousness to their full meaning and helpfulness. What blessed assurance lies in the thought that man is God's child; that He loves us and cares for us. It is the understanding of this which has aroused in me a desire for something more tangible and practical than the material and temporal in which I believed in the past.

Thus each step in Christian Science becomes like a stitch set in a beautiful garment, that each one of us is preparing for himself; and at last the old mantle of materiality will gradually be loosed from our shoulders, and we shall find ourselves "clothed upon" with the spiritual. Thus, by keeping our thoughts constantly upon Truth and Love, we shall attain, here and now, that which in the past seemed unattainable.

For all this and more am I grateful—grateful to God, and to our Leader, the one whom God has ordained to be the prophet of the present day and through whom the unfolding of this truth has been made possible to thousands of weary and discouraged people.

LIZZIE G. PREMO, Rutland, Vt.

[Written for the *Sentinel*.]

ONE LIFE, ONE LOVE.

ELIZABETH EARL JONES.

GREAT vault of heaven, how blue and vast you are!
And hoary mountains—steadfast stand ye yet!
The trees, the flowers, the distant watchful star—
On you I gaze enraptured and forget
The sordid sense of separation.
Whence comes this sweet companionship with thee,
And with my God—the God of all creation?
Some mystic bond there seems 'twixt thee and me—
Such love I feel for every little flower!
Then softly on my sense a voice did fall:
There's but one Life, that shines through thee and all;
One Love, including all in God's rich dower.

ADMISSION OF MEMBERS.

The next admission of members will be Nov. 6, 1906. Applications for this admission should be in the hands of the Clerk on or before Oct. 16, 1906.

Application blanks can be obtained by applying to the Clerk, William B. Johnson, at the Church.

NOTICE.

Those who have made application for membership in The Mother Church previous to June, 1906, and have not received notice of election, may send inquiries to the Clerk, William B. Johnson, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

WILLIAM B. JOHNSON, *Clerk*.

FROM OUR EXCHANGES.

This is the truth that we must seize—that we are answerable for the judgments which our conscience gives. We cannot indeed help what it pronounces; for its pronouncements are the inevitable outcome of our moral and spiritual conditions at the moment; but we are judged by that which we so pronounce, just because we are responsible for being in that particular moral and spiritual condition. If we are blind, we cannot help giving wrong judgments and heading for the ditch. But why are we blind? That is what we have to answer for. Do we ask ourselves this question with real quivering anxiety? Do we go back upon our sturdy Anglo-Saxon assurance in our own honesty of purpose, and tremblingly search into that purpose itself to see whether it is adequate and enlightened and true to the Divine reality? A purpose may be so honest and yet be so fatuous, so stupid, so blinded, so obstinate, so selfish, so cruel, so fatal, so false. And so it comes about that we walk on blindly into the ditch, perfectly satisfied with the absolute sincerity with which we go wrong.

REV. H. SCOTT HOLLAND, D.D.
The (London) *Church Times.*

Jesus knew that the only way in which the good tidings of the kingdom could be spread abroad was through personal witness-bearing on the part of those acknowledging its sovereignty; therefore he commanded his disciples throughout all time to display both their doctrines and their deeds so clearly that men might see in this human exhibition the realization upon earth of his kingdom and love. The moment, however, that the individual follower of the Master begins an attempt to realize this command to let the light shine, he is brought face to face with the difficulties and the dignity of his effort; and he learns that the work to which he has set himself is so difficult that he can only hope to do it through the gift of grace and strength from God himself. Then he becomes humble. He realizes the feebleness of his own power and the insignificance of his own personality. The contradiction which seems to inhere in self-assertion and self-forgetfulness has disappeared in the practical effort to realize the commandment to let the light shine.—*Zion's Herald.*

Not to intellectual acumen, not to great scholarship, but to purity of intention and purity of imagination, to singleness of purpose, cleanness of thought, and tenderness of feeling, is God revealed. We come to the vision of Him as we grow into oneness with Him, and we grow into oneness with Him by purposing what He purposes. If it is true that we shall be like Him when we see Him as He is, it is also true that we see Him as He is only as we are like Him. "Ye are," says Paul, "the temple of God, and the Spirit of God dwelleth in you. If any one shall corrupt the temple of God, him shall God bring to corruption." Whatever drives God out of His temple destroys the temple and makes it a common edifice. It is God's temple only when God dwells in it, and God dwells in it only when, in aspiration if not in actual realization, in strong desire if not always in successful accomplishment, the temple is pure.

LYMAN ABBOTT.
The Outlook.

Jesus' supreme gift to the world was a moral ideal. He had a vision of man at his best, man doing the perfect will of God; and the unique thing with him was that he realized his ideal. And so he becomes the way for all others. He is our ideal man. In him men see humanity without the taint of sin. As Emerson inspiringly puts it, "One man was true to what is in you and me." Thus Jesus opens the door of a great hope to all the children of men. What he is, we may strive toward. REV. FANNIE E. AUSTIN.
The Universalist Leader.

To get one's piece of work done in this world, to find the truth and say it, though the utterance lead to Gethsemane and the cross—this is the concern of the world's great souls. And when they have passed, and men catch at last the actual meaning of their life, they bow themselves over the print of what they now discern to be Divine footsteps. They know that once more "God hath visited his people."
The (London) *Christian World.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly **Magazine is the official organ** of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science **movement.**
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes **always a number** of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: **Payable in advance,** postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty **Cents**; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German *only*. 31 pages.

Price. One copy, six cents; twelve copies to one address, sixty cents, *twenty-five* copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

One of the important questions which will be taken up for consideration by the State Department relates to the pending negotiations for the stopping absolutely of pelagic sealing. For the first time since the negotiations to that end were instituted, several years ago, there is now a prospect of an end being put to the unreasonable destruction of seal life. The seal herd, it is now known, numbers about two hundred and twenty thousand, having been reduced to that number from four million only a comparatively few years ago. The North American Commercial Company is permitted by the United States to take fifteen thousand seals each year on the Pribiloff Islands under restrictions which have rendered it impossible for the company to take the maximum quota of the seals for several years. Canada has hesitated to enter into an agreement because Canadians were the owners of a large fleet of pelagic sealing vessels, but the State Department officials believe now that an agreement will shortly be reached. If such an agreement should be effected, Japan also will probably agree to cease pelagic sealing.

Owing to the failure of the Cuban Government to reach an agreement with the insurgent representatives through the kindly offices of the United States Government, an American provisional government assumed possession of Cuba on the 25th ult., when Secretary Taft's proclamation, declaring himself provisional governor of the island, was formally published in the *Official Gazette*. The terms of the proclamation caused general satisfaction. The Cuban flag was not lowered. This establishes a precedent on provisional governments and protectorates.

On the 25th ult., in the presence of a distinguished gathering, the new buildings in Boston of the Harvard Medical School were dedicated with special ceremonies. The new school comprises five buildings, all of Vermont marble, and built in the classic Roman style around a quadrangle. The buildings were erected at a cost of $5,000,000 and have been three years in process of construction.

During the year ending June 30, 1905, according to a statement issued by the Interstate Commerce Commission, an average of twenty-six persons a day were killed, and two hundred and thirty-eight a day injured on railroads in the United States. The total number killed during the year was 9,703, while the injured numbered 86,008.

Judge Charles E. Magoon, ex-Governor of Panama, who will become Vice Governor General of the Philippines, has left the Isthmus for New York, en route to his new position.

Foreign.

Junction of the two ends of the Weissenstein tunnel, near Interlaken, Switzerland, has just been effected. The construction of this tunnel has been proceeding for two years under difficulties, owing to the hot springs and phenomena of high pressure similar to those experienced during the construction of the Simplon tunnel. Water is now running off rapidly and there are prospects favorable to opening the tunnel for traffic in about twelve months. The new tunnel will eliminate the present long detour and loss of running time via Soncebos and Bienne for trains from Paris and Calais.

The Sinai boundary dispute between Great Britain and Turkey has finally been settled. The maps prepared in accordance with the agreement reached at Constantinople have been signed, and the Turkish troops stationed at Kusemeh, which Turkey considered to be the most important strategic point, have been withdrawn.

Canadian Pacific Railway steamer Empress of China arrived at Hong Kong on the 23d ult., delivering the mails from Great Britain in 20 days, 7 hours and 35 minutes, or four hours and twenty-five minutes within the time allowed by the post office.

German athletes won very few honors in the recent Olympian games, compared with Americans. German writers are unanimous in placing the blame for this on the beer-drinking habits of the Germans and the abstinence of the Americans.

The announcement comes from Berlin that the Government has decided to hold a great International Exposition in that city in 1912. The fair, it is announced, will be planned on an imperial scale that will surpass all previous expositions.

A despatch from Tokio says that in connection with the war honors Marquis Ito and Field Marshals Yamagata and Oyama have been created princes, and Vice Admiral Togo has been made a marquis.

Industrial and Commercial.

With the blowing of whistles, the clanging of bells, and the cheering of thousands of persons who had gathered at the river shore, the renewal of steamboat traffic on the Missouri River, after the lapse of more than a decade, was celebrated on the 24th ult. when the steamer Lora, laden with freight from St. Louis, docked at the wharf at Kansas City. The movement to establish a boat line on the Missouri River grew out of the fight of Kansas City merchants for reduced freight rates.

According to official reports of the traffic through the Portage Lake Ship Canals for the month of August there were shipped from the mines of the copper company during the month a total of 10,087 tons of copper, the bulk of which went east. Figured on a basis of 2,000 pounds to the ton, there were 22,174,000 pounds. The prevailing quotation for spot copper is 18⅞ cents a pound, hence the shipments had a value of $4,147,040.

Lighting the street lamps by clockwork is the latest English notion. The thing is done in Bath, and Birmingham is becoming interested. A patented automatic gas-controller switches the lights on and off. The mechanism consists of a clock which can be so set as to light the gas each night and extinguish it each morning, so as to make an automatic variation of the time of lighting and extinguishing each day throughout the year, according to the season.

According to figures furnished by the Union Pacific Railroad Company the corn crop of Nebraska this year will be the largest in its history. Reports from six hundred correspondents in various parts of the State estimate a yield that will reach 275,000,000 bushels, against a little over 200,000,000 bushels last year. The increase in acreage of wheat, corn, and oats is 500,792 acres, of which 368,419 acres are in corn.

The *Revue Scientifique*, which recently discussed the consumption of paper by the principal nations of the world as reflecting modern progress of civilization because of its extensive use for printing purposes, places the United States in the front rank with an annual output of 630,734 tons. Germany follows with an annual production of 393,683 tons; England, 240,051; France, 106,942; Austria, 147,700, and Italy, 123,026.

An investigation is now under way to determine the extent of the horizontal displacement of the earth's crust along a geological fault, four hundred miles in length, caused by the San Francisco earthquake. The shift will be determined by remeasuring and triangulation across the fault of land and out to the Farallones Islands. This work is being done at the request of the California Earthquake Commission.

A new vein of coal extending a mile in length and an eighth of a mile in width, with an average thickness of twelve feet, has been discovered by the Philadelphia and Reading Coal and Iron Company in the Mahanoy Valley. Experts say it contains millions of tons, valued at from $50,000,000 to $75,00,000, and that it will require over fifty years to exhaust it.

Beet sugar manufacturers of Michigan are confidently expecting to break the State's record in sugar production. It is expected that the production this year will exceed the 200,000,000-pound mark, against 143,100,000 last year. There are under contract this year between 85,000 and 90,000 acres, as against 78,000 last year.

An extraordinary general meeting of the stockholders of the Hamburg-American Steamship Company at Hamburg approved the increase of $5,000,000 in the company's capital, decided upon early last month.

The announcement is made of a big steamship company on the Great Lakes that will build at once eight ships, each six hundred feet long and each costing about $475,000. The ships are to come out in 1908.

In the twelve months ended with August the imports of the United States were $1,254,300,735 and the exports $1,750,417,898, a total for the twelve months of $3,013,817,633.

Aroostook County's potato crop, now being harvested, is estimated at 13,000,000 bushels, an increase of 2,000,000 over that of 1905.

General.

Some time ago there was announced the departure of skilled divers from Leghorn for Greece, with the double object of getting at the Turkish vessels that were sunk by Admiral Codrington in 1827 in the Bay of Navarino and of recovering more of the bronzes from the sea near Anticythera, where the statue of the beautiful "Youth of Anticythera," now in the National Museum at Athens, was found a few years ago. The chief of the divers reports that sixteen out of the seventy-two sunken Turkish ships are visible at a depth of one hundred and twenty-five feet, but as there is thirteen feet of sand in them special machinery will be required. In the Channel of Anticythera the divers found at a depth of one hundred and sixty-four feet the ruins of an ancient galley which was conveying bronzes. The galley is one hundred and sixty feet long and thirty-three feet wide.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SOME INTERESTING TRANSLATIONS.

Brookline, Mass., Sept. 20, 1906.

Dearly Beloved Leader:—Ever since my arrival in this country for the memorable and never-to-be-forgotten Communion and the dedication of the beautiful temple,—the Extension of The Mother Church in Boston,—I have felt a very strong desire to write to you, and to tell you of the song of praise and gladness that is in my heart and mind.

First of all I must say to you that my heart is full to overflowing with love and gratitude for all that has come to me through the study and understanding of Christian Science, and that every heartbeat is a thanksgiving to God and a blessing to you, His chosen one! Christian Science has not only healed me from many bodily ills, but—what means much more to me—it has thrown the light of understanding upon my path; it has brought to the world at large the means to have the highest ideals realized among men, and it shows them the way to work out their salvation from all evil; and that means infinitely more! Many wonderful proofs have been given to me, in evidence that your book, "Science and Health with Key to the Scriptures," contains the truth,—a correct explanation and spiritual interpretation of the Bible.

It is becoming apparent now more than ever, that you, dear Leader, are the God-chosen instrument to bring to *this* age the spiritual understanding of God and His spiritual universe, and to re-establish primitive Christianity —to prove to humanity that the works of Jesus and his disciples can be wrought among us to-day through the same spirit that was in Christ Jesus. And here I must tell you of a book that I have been reading this summer, while enjoying the quietude of country life and surrounded by the most primitive and pastoral scenery.

This book, issued in German, is a compilation of works by the most famous academic professors and Bible scholars of Germany, fifteen or sixteen in number,—translations from the original manuscripts in Latin, Greek, Syrian, Ethiopian, and Coptic. It is the "Apocryphal New Testament," published by Pastor Lic. Dr. Edgar Hennecke of Betheln, Germany, and in its present form first appeared in 1904.

I thought you would be interested to know of some statements I have found in the "Acts of the Apostles" and other chapters which are contained in this book. In the "Acts of John" we find a "Song of Praise" to God the Father, chanted by Jesus and repeated by the apostles, in which he addresses God as "Father, All, Mercy, Light, the only Creator." Jesus calls himself the "Way, the Door, the Word" (Logos), and he gives to God in the most exalted language all honor and glory. He explains to his disciples his dual nature—shows them how his earthly and human appearing in the flesh was only an assumption. This was before he went into the mount to pray alone, and when his disciples were scattered. During the hours of the crucifixion John fled to the mount of Olives, where he gave way to his grief. There the Lord appears to him, filling the cave with a glorious light. He explains to John the "hidden secret of the cross" and the "Logos." He also tells him how, in understanding the unreality of suffering, there is no suffering.

This was all very interesting to me, and I was wondering whether you have read W. Wright's "Apocryphal Acts of the Apostles," which first appeared in London in the year 1871. The teachings of John before his death and the manner of his death is also interesting. These teachings are all identical with your teachings in our text-book, which you have given to the world.

Besides the "Visions of Hermas," which give us the building of the Church and explain the symbolism thereof as given in the English Apocryphals, this German book contains the "Christian Sibyllines," a chapter by Dr. Johannes Geffken, Hamburg. No. 3 : 63–92, is a prophecy which speaks of "The Last Things. Beliar. The Rule of a Woman. The End of the World and the Second Coming of Christ." "Then the world, ruled by the hands of a woman entirely—shall rest in obedience." "Then, when the royal widow shall thus rule over the whole world—all gold and silver, iron and brass she shall cast into the salt-flood, into the sea,—all the elements of the world shall be forsaken—when God, dwelling in the ether, unfolds the heavens like a scroll of a book. And the whole firmament shall fall upon the earth and into the sea." Then it gives a description of the changes of the seasons similar to what Science and Health says in regard to them: "O ye rushing waves—and the entire foundation of the earth. Now the sun rises which never is to set—and all shall be in obedience again to Him who returns once more into this world." Dear Mrs. Eddy, this was the most interesting part of the prophecy. The "royal widow" ruling the world in loving obedience to Christ, bringing also, through Christian Science, his children into loving obedience to him who, as the prophecy continues, is coming again. "A whirlpool of fire shall flow untiringly, burning up the earth and the sea; and the days and creation itself will he fuse into one and separate the dross. And no more splendid balls of heavenly light shall be there, no light, no morning glow. Thou shalt no more, during many days, trouble about spring time, nor summer, winter, nor harvest. Then shall come, after all this has come to pass, the judgment of the great God in the great Aeon."

The whole book is highly instructive and full of meaning, as interpreted through the understanding which Christian Science has given me, and there is a great deal that I should take pleasure in translating to you; but I must not take too much of your precious time. I shall soon leave these shores to go back to my country, and there endeavor to heal the sick and lead to the truth those who are seeking the Lord with all their hearts. They all love you, are grateful to you, and are waiting patiently the day when your great wisdom will see fit to give them your books in their own tongue. The German nation is ready for the truth as you have given it to the world.

I have seen, heard, and learned much during this summer that will help me in my work over there. One more treat is awaiting me,—to go to Concord. It will be a great joy to me to worship in the dear church which is a loving gift from you, and which expresses the fulness and riches of your love for the dear Christian Scientists in Concord. It will forever be in my heart to bring out love and purity,

Copyright, 1906, by Mary Baker G. Eddy.

—to have my window-pane polished so brightly that God's power and love may shine through it every moment of my life; to follow your glorious example—to be a faithful and true Christian Scientist, not only in word but in deed.

With a heart full of love and gratitude to you, dear Mrs. Eddy, I am ever

In obedience yours,
BERTHA S. REINKE.

MRS. EDDY'S COMMENT.

The above letter from Miss Bertha S. Reinke is deeply interesting, but I will say that the important matter of publishing in the German language my works on Christian Science is not within my jurisdiction, except as I voluntarily assume it.

I have put aside the matter of translating my writings into German since receiving the courteous approval of my thoughts upon this subject from the Countess von Moltke. The Trustees of The Christian Science Publishing Society are the proper *authorities* to settle this question.

MARY BAKER G. EDDY.

FROM OUR CONTRIBUTORS.

THE PERMANENCE OF UNSEEN THINGS.

M. G. KAINS.

We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal.—PAUL.

THE professing Christian is frequently perturbed by the seeming victories in arguments of atheists and agnostics. When the line of reasoning is particularly astute and its fallacies not apparent, he may be tempted to abandon his own ground and sally forth—only to meet discomfiture. Usually these discomfitures are due to the unfamiliar weapons with which the believer tries to fight. Instead of iterating David's declaration to Goliath, "I come to thee in the name of the Lord of hosts . . . whom thou hast defied," he cumbers himself—as David refused to be cumbered—with material armor. Unwittingly he casts aside his all-adequate spiritual mail, forsakes his spiritual stronghold, and tries to vanquish the foe on, to him, an uncharted battlefield and with pointless weapons,—those furnished by sense testimony. By taking such a course he forgets that "the weapons of our warfare are not carnal, but mighty through God to the pulling down of strong holds."

Atheism bases its arguments on the evidence of the physical senses, the carnal mind which testifies oppositely to God. It ignores the fact that these senses do not and cannot declare truth, and accepts only such sense dicta as may tend to confuse the Christian opponent. On its own basis, sense testimony leads to annihilation, for not one sense can testify of any but "temporal things." Is it smell? Odors are the most evanescent of all physical compounds. Is it taste? Flavors are nearly as volatile as odors, with which they are closely associated. Hearing, sight, touch—what do these record but fleeting experiences? Every item of sense testimony is thus proved transient; and since the sum of like things is of the same denomination as the units, the aggregate of sense items is transient. So is everything connected with them. Even the body in which they seem to be resident fails at length to experience any of those vaunted sensations which were expressed as pleasure or the reverse. Nay, further, the material body itself vanishes in dissolution, leaving only a memory of the so-called sentient being. But this memory is not dependent upon sense testimony; it is purely mental, whatever its quality may be. The only permanent thing about an individual, then, paradoxical as this may seem, is that which exists in spite of the body, which exists after the body is destroyed; in other words, that which never had anything to do with a material body.

But atheism does not pursue its quest thus far; it dare not, for it would thus reveal its own fallacy. It stops at dissolution, and declares: "That ends it." The professed Christian, therefore, who accepts atheism's premises and consents to look only "at the things which are seen," is forced in spite of his declared faith in spiritual things to admit that he cannot confute any argument so based, even though he feels positive that the conclusion is not true. As long, however, as he accepts testimony of the physical senses he must be prepared to admit this conclusion.

The orthodox believer will not improve his case by asserting that the "unseen things" lack visible manifestations, for even on the physical plane—much more on the mental or spiritual—this statement is readily proved false; for if he will consider gravitation, the expansion of both steam and freezing water, the vibration of air in organ pipes, and a hundred other instances, he must admit that none of the causes are seen, and were it not that their effects prove their existence, at least in the so-called physical universe, their actuality might be reasonably doubted, as in fact many of them were until overwhelming proof forced their acceptance. In these instances, however, sense testimony is again erroneous. Thus on both scores its evidence is untrustworthy, for its "seen things" lead to nothingness and its "unseen things" are permanent. What folly, then, for the believer to descend from the spiritual plane with any hope of victory in this realm of paradox and contradiction.

Nothing is "seen" which is not the effect of thought; indeed, force is mental, the initial cause always being invisible to physical sense. Few people will admit that thought can be seen, either in its potential or its active forms. Still, all have probably observed such effects of thought as a face pallid with fear, red or white with anger, drawn by sorrow, smiling with joy or humor. The causes—unseen thoughts—are revealed in these effects. So of all thoughts. The body, and especially the face, is a screen upon which thoughts of various kinds are so clearly depicted that every one can see them. Nay, further, frequent or continuous thinking in any definite direction leaves its impress in such a striking manner that the body portrays the thought more or less permanently. Many formerly dominant thoughts may become temporarily inundated by later ones, nevertheless they leave their record for good or ill and all help to make the composite picture known as the person. It is at this juncture that he who looks at the things which are not seen; *i.e.*, a scientific Christian or a Christian Scientist, can discern dominant and dormant qualities, cast out the false, emphasize the true, and thus bring to light the spiritual attribute of man which was seemingly submerged by material ways of thinking. It is those who recognize the transient nature of seen things and the eternal qualities of the unseen things who can prove the truth of the text quoted above by the healing of sickness and its causes—fear, ignorance, or sin. They pierce through the disguises of materialism and its agents, the physical senses; they strip off the mask and see God's man perfect, as the "Father which is in heaven is perfect."

This recognition of the perfect man may be illustrated by an instance of an actor dressed for a part in a play. His make-up may be such that even his intimate friends in the audience do not recognize him, but every one who glances at the program knows who he is. No disguise can make them think he is actually what is indicated by the part he plays. In the same way the Christian Scientist recognizes, by means of the scientific interpretation of the Bible, the real man, in spite of the habiliments of the physical senses and all their manifestations. The Christian Science practitioner's work is to pierce through and strip off the disguise, for as in the case of the actor who becomes for the time being a prince or a pauper, even to the extent of believing that he enjoys or suffers as the part may indi-

Digitized by Google

cate, so the patient may have believed the testimony of the senses to such an extent that he not only suffers or enjoys in accordance with their evidence, but may have thrown himself so completely into the role of a sufferer that others believe similarly, diagnose his case sympathetically, and thus encourage him in his delusion. As has already been pointed out, the testimony of the physical senses is not merely questionable but absolutely false,—a fact proved by the healing, in Christian Science, of every kind of disease in the calendar of human pathology.

Thus "the things which are seen," the diseases, are seen through by the Christian Scientist; their mental causes, being false, are destroyed and their ephemeral nature proved. At the same time health, unseen to or by the physical senses, is recognized, first by the practitioner, who has learned to distinguish facts amid appearances, then by the patient, and lastly by relatives and friends, who had believed as the patient did. And as the patient wakes up to the fact that health and disease are each dependent upon the character of the thought he entertains,—the unseen causes,—he begins to experience normal health as the result of normal thinking. Whereas formerly he was sick, perhaps much of the time, he ceases to be so because he learns to banish from his mind as ungodlike the unhealthful thoughts which bound him to the seen effects.

Nothing could be more satisfactory in proving the permanence of unseen things than the fact that each and every one may do the work himself without aid from any one else. There are countless instances of healing where careful, earnest, unbiased reading of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has so altered the thoughts of the reader that the seen things of physical sense have vanished and the unseen truths have been grasped mentally and then been manifested by the replacement of disease with perfect health. It is because of this fact that Christian Scientists prescribe this one thing which is so frequently derided by the ignorant; namely, the reading of the Christian Science text-book. The professing Christian often asks why he cannot get the healing from the Bible, without the aid of another book. The reason is that the Bible, at least so far as healing is concerned, has so long been misinterpreted that the reader is often unable to strip himself of this wrong teaching and reap the benefit of the correct interpretation. Science and Health gives this correct interpretation, and the fact that it is correct is manifest in the healing which the honest perusal and study thereof is daily bringing to the world.

The far-reaching nature of true thinking, however, is not bounded by the mere acquisition and maintenance of health. All thought will bear fruit according to its kind, therefore the more one thinks in channels of Godlike thought the greater will be his spiritual harvest of love, joy, peace,—every good and perfect gift that cometh down from the Father of lights, who sees only eternal things.

LOVE'S OMNIPRESENCE.

MARIA LOUISE BAUM.

SEVERAL years before I became a member of The Mother Church of Christ, Scientist, I had an experience which I have often wished to record, yet I have hesitated because human language seems so feeble an expression of those things which we have seen and handled of the Word of Life. The help lately found in hearing a similar testimony from a friend has, however, prompted this present attempt.

It was at a crucial period of my life when, after a severe struggle, I had deliberately turned away from a temptation to wrong-doing, in spite of material and seemingly needed advantages to be gained thereby. Doubtless it was this definite victory of dimly-seen spiritual good over the "good-in-evil" of material sense that prepared me for what followed. The circumstances were such that it seemed the greatest battle I had ever won, but the immediate reward appeared to be nothing better than anxiety for my future and threatened nervous prostration. I had heard and thought a good deal about Christian Science, but had not persisted in my interest, and now turned to a doctor for advice. The doctor prescribed merely rest and the endeavor to be free from troublesome or exciting thoughts. In following these directions, I turned away from my worldly affairs, thought much of God, strove to be occupied with such peaceful things as the beauties of nature, hymns, and quiet books. One day there suddenly swept over me a tempest of grief for the sufferings of mortals,—the blind maze in which we seem to wander, the eager desires thwarted, our loveless lives, longing for happiness and righteousness, desiring to fulfil our true destiny, yet ignorant how. I "wrestled in prayer" for the first time in my life. It was as if I clasped the feet of Truth and would not loosen my hold till my questions were answered. The Lord was not in that whirlwind of importunity, yet I went to sleep that night, peaceful and happy. Then I seemed to dream that the pain in my head grew intense, and a terrible fear of death possessed me. I thought, in the dream, that my head would burst. Then I seemed to say, "Well, if it does burst that can't hurt me; nothing can harm me." It was as if I defied the physical condition to do its worst, reasoning that it could not hurt my real life. When I awoke a voice was echoing clearly in my thought, "Can't you trust Me?" It was the answer to my prayer for light. The pain was all gone, I was unutterably at peace, and words cannot tell what I knew in that hour of the present actuality of God's love.

I had doubtless heard the statement of Christian Science that all suffering is a dream of material sense; and now I could look down the vista of years and see that every suffering, sinning sense that had ever darkened thought had been a dream, an illusion,—nothingness. I realized the presence of God a thousand times more clearly than I had ever felt a human presence. This consciousness was with me for several days. I felt that I knew what Jesus meant when he said, "I knew that thou hearest me always." I devoured the Bible with breathless delight, saying, "This is what these men were trying to tell us." I said, "I know the truth of the truth; it is not a far-off vision of poets and seers; it is real and it is here." The joy of the experience was natural and serene. I was sure that it was man's normal consciousness, and concluded that many people, perhaps all Christians, knew this present Love which had but just been revealed to me; but my friends looked at me with wonder, and had no experience to corroborate mine. Gradually I came back to the consciousness which mortal mind claims to be normal, wherein matter is more substantial than God. I concluded that there was no definite way to get back again into that light, that such a consciousness of God could come only at a period of great moral conflict and victory, together with a cessation of any concern over material affairs. I did not then realize that the way to the "secret place of the most High" had been made plain in Christian Science, that we could find and follow it through Science instead of suffering. When we know material sense and all evil to be illusion, we may by daily, definite work "annihilate hallucination," as our Leader bids us (Miscellaneous Writings, p. 3), and at last reach the pure consciousness of God's ever-presence. This is the true aim of the Christian Scientist. The evidences of physical healing that come to us are but signs to show that we are coming to abide in Him. The evil dreams of materiality are one by one destroyed by this blessed Christian Science, whereby we know how.

Our gratitude is great to her who has shown us the way of Jesus. It would fairly make our hearts ache with the longing to repay her, did we not know that she is reaping the harvest she has sown—the harvest ever ripe—and needs no human recompense. May the light of Love shine upon her unto the perfect day!

SELECTED ARTICLES.

Jesus was a practical idealist in a spiritual sense; he opposed matter at every step, and laid stress on the spiritual rather than the physical. He said among other things, "The flesh [matter] profiteth nothing," and Christian Science follows his leading in inculcating the allness of Mind or Spirit and the unprofitableness of the flesh. Christian Scientists believe that you can only judge a system by its fruits, and upon that exacting basis they are willing to rest their claims that their religion is both Christian and Scientific.

What is it to be a Christian? It is not enough that a man shall say, "I am a Christian because I believe in Jesus Christ." Jesus himself said, "If ye love me, keep my commandments." So, then, a modern Christian is under fully as great an obligation to practise Jesus' teachings as were the Christians of the first century or two after the crucifixion. The early Christians had imbibed Jesus' notions about Spirit and matter. They had heard Paul's preaching, that "the flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." As a result of Jesus' teaching, the early Christians, according to Gibbon, healed the sick and raised the dead, without resort to material remedies, just as Jesus did and exactly as he had taught them to do. If the healing of the sick by prayer, by spiritual means only, was one of the characteristics of a Christian in the time of Paul, what has happened that it should not be a requisite of Christianity to-day? Christian Science heals the sick and reforms the sinful by a transformation of the mind, after the manner Jesus taught, and, inasmuch as it obeys his injunctions, keeps the commandments, has one God, and inculcates the Golden Rule, it is Christian.

What is Science? The word itself is derived from the Latin, meaning "to know." Then Science is knowing. It is positive knowledge; not conjecture, not speculation, but definite, provable knowledge, arranged and classified in an orderly manner.

Do we know anything about God? Did Jesus know anything about God and His infinite laws? If Jesus knew something about God which was precise and definite, was it not Science, and was it not Christian? It certainly was not pagan science, nor material science. If it was entitled to a name, we are obliged to call it Christian knowing, or Christian Science. "And this is life eternal, that they might know thee the only true God, and Jesus Christ whom thou hast sent." Here Jesus says that eternal life is the outcome of knowing God aright, and his Science, or what he knew about God, enabled him to heal the sick and triumph over all material conditions. So his Science, which is Christian Science, will do a similar service for all who understand it as he did, and even for those who are struggling with its fundamentals, as modern Christian Scientists are doing, it has wonderful power.

Our critic thinks that because Christian Scientists do not erect free hospitals and other charitable institutions they are neither benevolent nor humane. Let us see about that. What is the object in building hospitals and homes for invalids? Is it not to relieve suffering, to ameliorate agony and sin? Yes; but must all efforts to improve the condition of stricken humanity operate through certain organized channels in order to be humane or charitable? We do not think so. Jesus was infinitely compassionate and tender, but he erected no hospitals. There were physicians in his day, and accommodations for the sick, although it is true they were not developed as at the present time, but there was ample precedent, if he had deemed such organized activities to be the best way to relieve the world's distress. He had wealthy followers who, no doubt, at a word from him, would have endowed institutions. But that was not his method. He healed disease and sin by his word, instantaneously. He was both humane and charitable, but if our critic's standard of humanity and charity is correct then Jesus was neither the one nor the other.

Jesus recognized sin, suffering, and sorrow, but he did not admit that they were beyond God's power to destroy, or that they were anything to be feared. He healed them, thus proving effectually that they were not eternal entities.

Which is the greater charity, to express one's belief in the reality and perpetuity of disease by erecting hospitals, or to express one's belief in God's power over all evil conditions by putting an end to those conditions and thus put an end to the need of hospitals? Which was the divine method of Jesus, the Exemplar?

Christian Scientists, as a Church, do not build and support hospitals, but it should be remembered that they are constantly engaged in healing and reforming work, which makes better citizens and thus accomplishes the real ends of charity and benevolence. WILLARD S. MATTOX.

News and Observer, Raleigh, N. C.

Under the heading "Sermons in City Pulpits," in your issue of the 10th, you report briefly a sermon delivered by Rabbi Schanfarber, in which reference is made to Christian Science by using the threadbare accusation that Christian Science ignores the mortal belief in the existence of evil. This mistaken sense of what Christian Science teaches, places it in a false light; therefore the rabbi's erroneous statement should be corrected.

No class of people know better than the Christian Scientists that sin abounds among mortals. They also know the hideousness of sin and the result of indulgence in sin. Christian Scientists also know, through the teachings of Christian Science, that sin is not the offspring of Deity, and inasmuch as God did not create sin it has no real entity or permanence and therefore has but a fabulous existence—the result of a false concept. Sin, however, must be grappled with and overcome before mortals are freed from its bondage.

It must be admitted that such reasoning on the subject of sin is very different from the unqualified statement, "There is no sin," as used and interpreted by our critics. If Christian Scientists really regarded sin as the rabbi avers they do, they could rightly be likened to the proverbial ostrich, but fortunately such is not the case. A. V. STEWART.

Chicago (Ill.) *Chronicle.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

NOTICE.

Those who have made application for membership in The Mother Church previous to June, 1906, and have not received notice of election, may send inquiries to the Clerk, William B. Johnson, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

WILLIAM B. JOHNSON, *Clerk.*

AMONG THE CHURCHES.

WAUSAU, WIS.

The last of the improvements for the present on the new home of the members of First Church of Christ, Scientist, are now being completed, and when they are, the church will be one of the best in the city of Wausau.

Some time ago the members of the church negotiated for the purchase of the old Presbyterian church on McClellan Street. With the improvements that have been made, about six thousand dollars has been expended on the new home.

The Wausau (Wis.) *Daily Record.*

OPENING A NEW FIELD IN MEXICO.

We are in receipt of correspondence respecting the inauguration of Christian Science services in Guanajuato, an important mining town north of Mexico City. The first Christian Science service was held Aug. 26, in the parlors of the beautiful home of a Christian Scientist. The attendance is between twenty and thirty and the outlook is most encouraging.

One year ago Christian Science services were held only in Mexico City and in San Luis Potosi. Soon after they were started in Oaxaca, then at Torreon and Chihuahua, and now at Guanajuato. One year ago there were Christian Scientists in only four or five places in the Republic; they are now to be found in twenty-two cities and towns.

FROM THE FAR NORTH.

[We are permitted to publish the following interesting excerpts from a letter written by a Christian Scientist who has been spending some time in Sweden, Norway, and Denmark, as it gives some idea of the keen interest in Christian Science manifested in these countries.—EDITOR.]

When I was in Copenhagen I came in contact with several earnest workers in the Field. The Danes are grasping *Science* beautifully; they have Sunday and Wednesday services, and about fifty regular members. There have been many fine cases of healing in Copenhagen, and there seems to be little or no opposition from either Church or medical faculty. In June I went to Christiana, Norway. While there, I hunted up the Reading Room and attended a Wednesday evening meeting. The service was in Norwegian, and much love was expressed by this little band of thirty men and women.

Here in Stockholm there is as yet no society, but there are half a dozen who are working faithfully by themselves and meeting their own problems. The first Sunday service was held in Stockholm to-day,—in my room. There were four Swedes present and two Danes. A Danish lady acted as First Reader, while I read the Scripture texts. We sang "What is thy birthright, man?" and "Shepherd." The Lesson subject was "Man." Those who attended were much impressed, for they were hungry for this word of Truth. It had been my intention to hold services all along, but as all the Stockholm people go away during summer months, there were no interested persons to attend. Now they are coming back, and since services have been inaugurated, they will continue; and I am sure that little by little the movement will grow.

LECTURE IN THE MOTHER CHURCH OF CHRIST, SCIENTIST.

A LECTURE on Christian Science will be delivered by Prof. Hermann S. Hering, C.S.B., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in the Extension of The Mother Church, Falmouth, St. Paul, and Norway Streets, Boston, Tuesday evening, Oct. 16, 1906, at eight o'clock. The lecture is free and the public will be cordially welcomed.

THE LECTURES.

SIOUX CITY, IA.

Mayor W. G. Sears at the New Grand Theatre Sunday afternoon [Aug. 26] introduced Bicknell Young, who lectured on Christian Science. The mayor said in part:—

We have with us this afternoon a duly and regularly qualified representative of the Christian Science religion, who will explain to us and discuss its doctrines. Now, the last fifty years has been an era of development. Probably in no period has there been so much individual thought as during this time. Some say that it has been an inventive age, and others a commercial age, where people have gone wild over the dollar; but I say that during this period there has been more thought over religious doctrines and teachings than ever before. During this period we have probably had the theory of eternal punishment shattered. During this time we have had the well-known Robert G. Ingersoll, a student of such men as Voltaire and Tom Paine. The secular papers of the country took delight in publishing his addresses. His lectures were put into book form, and these books were read and commented upon far and wide. These lectures threw the sectarian press on a strong defence. But Robert G. Ingersoll has passed away and we could probably count on the fingers of one hand the number of places where his teachings are advocated, while his books, if you could find them at all, would be on the shelves of second-hand bookstores.

But during all that time he had a contemporary, and that contemporary was Mrs. Eddy. She did not receive the same notices in the secular press; she probably did not receive the same notices in the religious papers; but to-day her book is read more than it was one year ago, more than it was two years ago, and it will go on and on, doing good, because its teachings are right, and fifty years from now it will be read more than it is now. It goes hand in hand with the Bible, but with the Bible always in the lead. The teachings of this contemporary of Ingersoll have increased in power, and to-day we have magnificent churches in which to promulgate the doctrines of Christian Science. We have built up a religious society upon her teachings, composed of some of the best and most intelligent people of the country. It recognizes the good only in man, and unlike some other sectarian churches, is not preaching that the world is growing worse, but that it is growing better. This church has not had the assistance, you might say, of evangelists like Moody and Sankey, or of such orators as Henry Ward Beecher, or of logicians like Talmage and Swing; but nevertheless it has quietly grown. Christian Scientists believe not only in the theory of their religion, but in its practice every day in the week and every hour in the day. On this record it would not seem well for me to stand here to-day and say that Christian Scientists are faddists or cranks. Now, to me,—not a member of any church, and—to use a commercial term—whose faith is so short that I have been unable to unite with the Unitarian church, although I have attended that church for years and given it my support,—there is something in this religion and its workings, its growth and its results, that is grand and wonderful.—*The Journal.*

FORT COLLINS, COL.

Rev. George P. Avery introduced Judge Septimus J. Hanna, who lectured on Christian Science at the Opera House last evening [Sept. 7]. This divine, who is a broad-minded Methodist, said he would put away any prejudice he might have against Christian Science and he respectfully urged his hearers to do the same. The speaker could not have been given a more hearty or kindly introduction than the Rev. Mr. Avery gave.

WHAT OUR LEADER SAYS.

Beloved Christian Scientists:—Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full. There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness. Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort. And not only yourself are safe, but all whom your thoughts rest upon are thereby benefited.

It is the evil thinker who injures himself with what he would have harm others. Goodness involuntarily resists evil. The evil thinker is the evil talker and doer. The right thinker abides under the shadow of the Almighty. His thoughts can only reflect peace, good will towards men, health, and holiness. MARY BAKER EDDY.

Pleasant View, Concord, N. H.

The Christian Science Journal, March, 1899, Vol. XVI., No. 12.

THE SIGNIFICANCE OF BELIEF.

CHRISTIAN people are much given to the free expression of their religious beliefs, and so far as these statements are demonstrated to be true, or so far as they express the logical sequence of an unquestioned truth, even if not thus demonstrated, they have an ethical and educational value.

There is no danger of the too frequent declaration of important truths, or of our knowing them too well, but there is danger of our falling into the habit of making absolute statements of religious belief when in fact the "interiors" of our human sense have not as yet been brought into subjection to the spiritual truth embodied in such statements,—a habit which is the result of self-deception and which is one of the most ill-begetting outgrowths of unthinking dishonesty.

Christian Science is contributing spiritual stimulus to all the world to-day in its emphasis of the unworthiness of human content with those expressions of belief which are mere verbal endorsements of asserted Christian truth, and in its insistence upon the possibility and need of so actualizing faith in consciousness that it shall become dynamic, be manifest in the demonstration of the Spirit and of power.

A declaration of belief may signify simply the acceptance of a statement of religious truth because of our faith in a given authority, or it may express an honest conviction of the truth of a given teaching because it seems likely, it appeals to our reason, our sentiment, or our imagination; but when Jesus said, "He that believeth on me the works that I do shall he do also," he gave a profounder meaning to this word. To believe in him, so that his works shall be done by us, is manifestly to believe as he believed. True faith *in* Christ is the faith *of* Christ. This is the teaching of Christian Science, and when it is clearly apprehended, we are impelled to cry out, as did another long ago, "Lord, I believe; help thou mine unbelief." We begin to understand the Master's meaning when he said, "He that believeth on me hath everlasting life." Manifestly the belief demanded by Christ Jesus is not to be expressed in words, but rather in a loving and loyal life.

Christian Science is impelling human sense to flee its whilom satisfaction with thought about Truth, and to seek for the realization and demonstration of Truth. Some one has well said that no mere belief respecting God, however idealistic, is "strong enough to cope with the passionate experience of human life." The embrace of the divine idea is our only refuge. "This is the victory that overcometh the world, even our faith."

The frank statement of conviction is often called for, but it is never impressive unless it is backed by consistent conduct. Dogmatism may be vociferous in its assertions of a traditional faith, but unaccompanied by the works which Jesus demanded it is as the sounding brass and the tinkling cymbal. Among the thoughtful it succeeds only in the disclosure of its spiritual uncertainty and unrest.

It is not only the right but the duty of all who are sincere in their spiritual aspiration and faithful in their spiritual endeavor, to declare the truth of being, the nothingness of error,—to stand for an ideal which is far in advance of this attainment; but he who unadvisedly asserts that he no longer believes in matter or its reputed laws, is likely to be painfully awakened to the truth of our Leader's words when she says, "Until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine" (Science and Health, p. 207). Far more reliable than all our statements of belief is the testimony of our daily living and overcoming, respecting what we really know of Truth, and what we simply accept as true.

JOHN B. WILLIS.

A GREAT NEED MET.

THE question is sometimes asked by those who are looking into Christian Science, If this truth is contained in the Bible, why is Science and Health needed? To this it may be answered that Christ Jesus never claimed that he had given to the world the complete teaching needed for its deliverance from sin, disease, and death. On the contrary he declared, "I have yet many things to say unto you, but ye cannot bear them now," and he taught that the "Spirit of truth," the Comforter, must come and lead his followers "into all truth." In the Gospels and Epistles we have a partial statement only of the Master's teachings, for John says, at the close of his Gospel, that there were "many other things" concerning the Master's work which were not written at that time. More than this, Jesus himself said that "the Comforter" would bring to remembrance the things which he had spoken; "he shall take of mine, and shall show it unto you." This points unmistakably to a further revelation of the "deep things of God," and it also implies a statement of that revelation.

There is not only abundant Scriptural authority for expecting a fuller revelation of God and His law than is given in the Bible, but a great need of it. If mankind had been in possession of the rules by which to work out the varied problems of existence, and above all to overcome sin, disease, and death in the Christ way, then the question might be raised, Why is the teaching of Science and Health necessary? The fact that so many sincerely religious people have been driven almost to despair by the world's sin and suffering, their own and that of others, and that they have felt the demand for the overcoming of all evil, but knew not how to meet it,—this surely answers the question, at least in part. The further fact that thousands of these people are finding in Christian Science the way to overcome, point by point, all that is unlike God, that they now not only see clearly *how* Jesus and his disciples healed the sick, but are themselves healed, and are conscious of the presence and power of "the Spirit of truth" as a mighty agency in the world,—this adds to the reasons already given for the indispensability of Science and Health to all.

It should not be forgotten that Christian Science came at a time when physical science, so-called, was demolishing all the previously-accepted theories of creation and leaving

Digitized by Google

God out of His own universe, as some one has said; indeed Huxley was right in contending that God could never be proved by a material universe. At this juncture, when the faith of many had suffered shipwreck, "Science and Health with Key to the Scriptures" came to announce that Science must be spiritual since God and all that He creates is spiritual, and this great truth was supported by demonstration,—the "signs" promised by Christ Jesus.

The thousands who testify to the great benefits received through Christian Science, all tell of the wonderful illumination of the Scriptures which accompanies their study of our text-book, and even erstwhile agnostics tell of their love for the Bible and their daily study of it, since coming into Christian Science. To Science and Health we are indebted for our awakening to the vital fact that all truth is demonstrable and that the understanding and demonstration of truth inevitably results in harmony and freedom—mental, moral, and spiritual. The Master must have foreseen the coming of this revelation of Truth when he said of the Comforter, "He shall glorify me." Through Mrs. Eddy's discovery, Jesus' work is both glorified and perpetuated; the sick are healed, sinners reformed, God is known, and the silence of long centuries breaks into songs of the morning. Does not Science and Health meet the world's need, and has it not the seal of a Divine commission?

ANNIE M. KNOTT.

WILL our readers kindly bear in mind that the work at headquarters is necessarily divided into departments, also that by referring to the advertising pages of the *Journal* and *Sentinel* they will be able to ascertain the person or persons to whom their correspondence should be addressed in order to avoid delay.

Mr. Joseph Armstrong, 250 Huntington Avenue, Boston, Mass., publishes and sells Science and Health and Mrs. Eddy's other writings, and all orders for these books, including the Manual, should be sent to him, and all checks, drafts, and money orders for these works should be made payable to *his* order.

The Christian Science Publishing Society publishes and sells *The Christian Science Journal*, the *Christian Science Sentinel*, *The Christian Science Quarterly*, *Der Herold der Christian Science*, besides Bibles, pamphlets, reprints, also other miscellaneous publications fully listed in our advertising pages. All correspondence in regard to these, except that relating to articles and testimonies for publication, should be addressed to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass. All remittances should be similarly addressed, and checks, drafts, etc., should be made payable to the Society. The editorial department has nothing to do with the business affairs of the Society, nor with practitioners' cards and church notices in the *Journal*, and no remittances should be made to the Editor. Testimonies and articles for publication should be addressed to the Editor, as should all correspondence relating to them.

Mr. William B. Johnson is the Clerk of The Mother Church of Christ, Scientist, and all correspondence regarding church matters, except such as pertain to the Treasurer's office, should be addressed to him at the church, Falmouth, Norway, and St. Paul Sts., Boston, Mass. Applications for membership in The Mother Church and all correspondence relating thereto should also be addressed to Mr. Johnson.

Mr. Stephen A. Chase, whose address is P. O. Box 56, Fall River, Mass., is Treasurer of The Mother Church, and all remittances for the church—per capita tax, contributions, etc.—should be sent to him. Remit to him by check, post-office order, or express money order. Do not send currency.

Correspondence regarding instruction in the Massachusetts Metaphysical College should be addressed to The Board of Education, 250 Huntington Avenue, Boston, Mass.

LETTERS TO OUR LEADER.

Northampton, Mass., Sept. 14, 1906.

Dear Leader:—May I share with you one of the first-fruits from your article "Personal Contagion"? Two months ago a patient at the Institution for Consumptives in Rutland, who had been there a year and a half after other resources had failed, was declining so rapidly that the physicians advised her to leave the place for a while and have a change of climate. She came home and was reminded of her promise to try Christian Science if other things failed. When she asked me to take her case my first thought was one of discouragement, then the divine voice whispered your question, "'What went ye out for to see?' A person or a Principle?"—a patient in a serious condition needing help, or divine Principle manifested in harmony? The latter was clearly seen and the light of God manifested itself beautifully. The true healing was the awakening of thought to Truth. The first three days she gained three pounds in weight, was able to do things about the house, and to eat anything set before her. She has accepted a position since then, is working every day, and walking to her work. It would have gladdened your heart Wednesday evening to hear her expression of gratitude for the unfoldment of Truth.

This is only one of many thousands who have been blessed as the result of your labors. I have often regretted that I did not join the Busy Bees in providing a room for you in The Mother Church, and my prayer is that I may even now become a Busy Bee through obedience.

Lovingly yours,
MIRIAM B. CLARK.

Toledo, O., Sept. 18, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

We, the members of the Toledo Students Christian Science Association (No. 34), Sarah J. Clark, teacher, in our seventeenth annual meeting assembled, wish to express to you our love and gratitude. More grateful are we to-day than ever before for the great truth, Christian Science, which you have discovered and given to the world, and which you have maintained and protected in all its purity; for your loving guidance and patient watchfulness; for your recent articles so full of wisdom and so helpful in this hour of need; and we now demand of ourselves, in the words of your recent Message and that of the renowned Hebrew leader, "Choose ye" whom ye will serve. To-day we renew our pledge of love and loyalty to you and our Cause.

Lovingly yours,
CLARENCE B. HADDEN,
MARY STEVENS COMPTON,
SUSAN W. SCOTT,
For the Association.

Boston, Mass., Sept. 11, 1906.

Beloved Leader and Teacher:—Please accept my most heartfelt thanks for the degree of C.S.B. which came yesterday. I could not express to you in words my appreciation for all your love and all you have done for me. When expressing gratitude as a child, it was always said to me: "Improve yourself and all the opportunities which are given you, and I shall be repaid." So now, dear Leader, I am striving to live close to your teaching, praying for meekness, love, and purity, that I may heal the sick, bind up the broken-hearted, and give a correct sense of God's chosen one. Carol's little book came to me yesterday from the publisher, and I am sending you one by mail.

Thanking you again for the degree and all the opportunities which you have given me for progress, I am ever and always

Your loving and grateful student,
ELIZABETH NORTON.

Digitized by Google

Baltimore, Md., Aug. 28, 1906.

My Dear Mrs. Eddy:—Whilst I am only new in Science, each day in going over our Lessons I long to express to you the absolute joy I derive through reading our little *Quarterly*, and never before in the history of my womanhood have I known such pure, beautiful thoughts as those that come to me from the selections. I was brought up in the Episcopal church, and heard the Bible read all my life, but never before have I been able to comprehend my true relationship to God—that I am His spiritual child—and never a day has passed since my knowledge of this beautiful truth that I have not turned to God for spiritual help, and always found it. It will be my constant thought and prayer that we shall all be able to live in unity of love, unity of belief, unity of purpose, and unity of action. I trust I have not burdened you with a very long letter, but you will appreciate that it is only to express my deep gratitude to you and the recognition that this is a part of your great work. I could not therefore refrain from acknowledging the joy and comfort it has been to me and mine, spiritually, these past few months.

With love and gratitude I am most sincerely yours,

ELLEN BUJAC DIFFENDORFFER.

Atlanta, Ga., Sept. 13, 1906.

Mrs. Mary B. Eddy, Concord, N. H.

Revered Leader:—A deep sense of my obligation to you and reverence for you comes over me when I realize what you are to the world, and this sense is accentuated because of what you are and have been to me through my healing and reformation, as heretofore acknowledged and published in Science and Health. To-day I am brought to a deeper sense of this obligation, since receiving my certificate from the Board of Education, as it bears your dear signature. I am praying our Father-Mother God for guidance and strength that I may more earnestly watch, work, and pray that the Cause of Christian Science be better understood, as this is the only way that I can prove my sincerity and assist in that for which you have so lovingly and unselfishly labored,—the establishment of the kingdom of heaven on earth. Most gratefully and lovingly,

EDWARD H. CARMAN.

New York, N. Y., Sept. 11, 1906.

Mrs. Mary B. G. Eddy, Concord, N. H.

Dear, Dear Leader:—My thought reaches out to you as never before with a desire to tell you how much I love you for what you have done and are doing for all mankind. Your grand and noble life has been to me a living example of perfected womanhood. These words of the Master come to me: "If a man love me, he will keep my words: . . . and the word which ye hear is not mine, but the Father's which sent me." This "word" you have brought to me; from my heart of hearts I thank you, and will lovingly strive to follow. Affectionately,

EMMA BICKNELL SMITH.

Ottawa, Ont., Sept. 7, 1906.

Beloved Leader:—The students of Mrs. Elizabeth W. Higman's Association, in annual meeting assembled, desire to renew their love and loyalty to the Discoverer and Founder of Christian Science, and through God's help to pledge themselves to greater consecration and holier living.

Yours sincerely,

E. Y. STEELE, *Secretary.*

ADMISSION OF MEMBERS.

The next admission of members will be Nov. 6, 1906. Applications for this admission should be in the hands of the Clerk on or before Oct. 16, 1906.

Application blanks can be obtained by applying to the Clerk, William B. Johnson, at the Church.

TESTIMONIES OF HEALING.

As it is a little over a year since my attention was directed to Christian Science, and having received so much help from articles and testimonies in our periodicals, I send this in the hope of aiding some one who is looking for better things. That Christian Science will cure, when both medicine and surgery have failed, I know to be true. After having tried medicine for a number of years, as a last resort I submitted, with the assurances of a radical cure, to an operation, only to find on returning to work that I was no better than before. I became very much discouraged, as I imagined I had exhausted all means of help.

About this time I received a visit from an uncle who had been healed through Christian Science some time before. He asked me if I would object to trying it. I said no, but that I did not have much faith, as what he told me it would do seemed too good to be true. In about a month after he left, I received a copy of Science and Health and a Bible. I had never expected to own a Bible, as I had been unable to understand it or become interested in it.

The night I received the books, feeling unusually sorrowful and despondent, I opened Science and Health from curiosity, and read. Something seemed to comfort me, and I can truly say that never since has its reading failed to help. I went to bed and slept better than I had for a long time. I read the book regularly and soon was sleeping soundly every night. In about one month, after two days of unusual pain, which did not discourage me, my trouble disappeared, and I have been free from it ever since, and have been able to work harder and with less fatigue than ever before seemed possible to me. While I am indeed thankful for the physical benefits, they seem very slight compared to the joy, hope, and peace which become ours as we learn to apply the rules of our text-book in our daily lives; and how beautifully they illumine the Scriptures! Born in a religion which held before me the fear of eternal punishment, I early began to doubt and despair of finding any satisfaction in religion. It was indeed a cup of water in Christ's name, when our wonderful text-book was placed in my hands, for it has brought me a peace and happiness which I had not thought possible in this life.

Words are inadequate to express my thankfulness for our Leader's work. I feel that I can best express it by striving to follow in the way she has pointed out, and in trying to realize the privilege we have of adding to the great wave of gratitude which is expressed by those who have found that of which Jesus spoke, when he said, "My peace I give unto you."—JOSEPH W. FITCH, Cranmoor, Wis.

As I never seemed to be strong from childhood, I was reared very tenderly. In 1879 my husband, myself, and our little boy went north to locate on a homestead, and in 1881, after a little daughter was born, I did not regain my health and strength as before. We had two physicians, the best the new country afforded, but at one time a despatch was sent to my parents that I might pass on at any time. Praying parents were soon by my bedside, and I finally recovered sufficiently to return to their home. We consulted a doctor, who said I never would be any better until an operation was performed. I submitted, and was under treatment for some weeks, then went back to my own home. The doctor continued to send medicine, but failed to help me; I could not lift my children at all, and it seemed a burden to live any longer, yet I felt I had much to live for.

In 1883 another physician was called, who said he would do what he could for me if I would give him a thorough trial. He treated me for nine months, but I had to encourage *him*. I was making God's Word my study, for it seemed to be all that gave me any hope. I believed in the healing works of Jesus and his followers. Soon after, I

Digitized by Google

picked up a torn newspaper, and saw the words "Christian Science." I had never heard the name before, but I kept it for years, and was searching for something that would tell me about it. I loved the name; I was sick of medicine, and homesick. My loving parents had done everything they could, even to getting up at midnight to intercede for me to a merciful heavenly Father, who through Jesus had healed Jairus' daughter; and yet they had not learned that we must rely on God only, and thought it not safe for me to be without medicine. The doctor wanted to hear from me every week, but I wrote him that he need not send me any more medicine for I would trust the Physician who could always be present. I kept on searching for Christian Science, but not until 1895 did we learn of it as Science and Health gives it. Two years later a dear Christian Scientist sent us a copy of the text-book, as she was treating my husband. We have since bought two copies, and we study it with the Bible every day.

When I heard of the dear, God-inspired woman, Mrs. Eddy, who had proved that Truth still heals in Jesus' own way, I did so long to see her or write to her. My dear mother, who suffered so much, was soon treated by a Scientist and wonderfully helped, and she and my father study Science and Health. I am in better health since I gave up the medicine than I ever was before. My husband was attacked with severe illness over a year ago. We had to call for help and I feel that Christian Science was all that saved him. We are clinging to the truth, feeling that God is able to deliver us, and we are very grateful that He has given our dear Leader wisdom and understanding to lead us out of darkness into the infinite light of Love and Truth.

MRS. O. R. VAN TINE, Holly, Mich.

It does not seem possible to tell of all the benefits I have derived from Christian Science and the rest and peace it has given me. I wish to express my deep gratitude to Mrs. Eddy for our text-book, Science and Health. It is *now* over two years since my little boy, then two years old, *and myself* were healed through the knowledge of Truth as *taught* in Science and Health. I was completely healed from an ailment of several years' standing. My child was *suffering* from what the doctors supposed to be spinal and kidney trouble and he had become so weak that he could *not* walk at all. I was then asked why I did not try Christian Science, but I only sneered at the remark. Finally I became so desperate, seeing no improvement from *materia medica*, that I came to the conclusion I would give Christian Science a trial and I took the child to a practitioner. The first week we all noticed a vast improvement, and the following week the trouble was all gone. He was also healed of a very stubborn case of bowel trouble, and another ailment which seemed the most stubborn of all. One day I remembered the text, "Work out your own salvation," and I saw that I had my own work to do, as I had been holding a sense of doubt, fear, and impatience; and as I met the foe right there, the trouble was overcome. I cannot express enough gratitude for all the blessings I have received.—MRS. PHILIP KELLER, Chicago, Ill.

It is over five years since I heard of Christian Science. I have been healed of a stomach trouble of nine years, for which I had tried everything that I thought would help me. I also had heart trouble. I could find no relief until Christian Science came to me, and now I know that ever-present Love is guiding me. I was a physical wreck; now I am strong and rugged, thank God! The physical healing is not all we get in Christian Science; the spiritual uplifting is much more to me. I was a great smoker and also drank beer, but I am no more a slave to those things. They all left me; I did not leave them. I have been made a new man; life is worth living now; everything is joy and peace and harmony. The *Sentinel* and *Journal* are a great help to me. This truth has lifted the gloom from my sense. I cannot find words to express my gratitude and love for what Christian Science has done for me. I never used to think of going to church before I was healed, but now I love to go. Truth is such a revelation, and I thank God that the Bible is no longer a sealed book. "Science and Health with Key to the Scriptures" has unlocked it for me. I am thankful that I have found the pearl of great price, and I am grateful that God has given to the world our beloved Leader, Mrs. Eddy.

PATRICK BURNS, Westbrook, Me.

Christian Science was brought to my attention some years ago, and although I read "Science and Health with Key to the Scriptures," I then failed to receive a right understanding of the truth revealed in that grand exposition of Christ's teaching. I knew of many who had been healed, but I was only an indifferent student of the text-book, yet I felt that it contained the truth that healed and that I needed. I was an inveterate user of tobacco for more than thirty-five years; it seemed that I could not work or enjoy life without a cigar or pipe. Last October I again began the reading of Science and Health, and from the start I had a clearer understanding of it than before. What had once seemed obscure to me, was now clear. One evening the pipe seemed distasteful to me; I could not enjoy it as I once did. That night I threw away pipes, tobacco, etc., and have not smoked since. The odor of tobacco is now exceedingly disagreeable to me. I had a severe attack of illness afterward, but was healed in a couple of days by reading the text-book.

I am thankful that God has raised up Mrs. Eddy to bring to mankind the knowledge of this great truth, so helpful and so full of hope to all.

N. C. A. RAYHOUSER, Marion, O.

About four years ago I felt that I was a most miserable woman, physically and mentally. I was suffering from what was called chronic liver trouble, heart trouble, etc. These conditions brought about a mental state which was indescribable,—indeed, many times I felt that death would be a relief; still the fact that I had two children who needed care, caused me to desire to remain here. I prayed as earnestly and sincerely as I could, but after being treated for a long time by the best of physicians, I felt absolutely no relief. I then turned as a last resort to a tried and trusted friend who had been for some years a Christian Scientist. I remember telling her that I believed it was then too late for Science or any other method to cure me. She answered that it was never too late for God to help. Having had a treatment, I went home and felt like working. This was a marked contrast to my previous state.

Just one week later I felt absolutely well in mind and body, and remained so about three months. Then came the test, as I was unwilling to give up the work which I had been doing for several years, when able, in my former church. I also wished to wait until the members of my family were ready to go with me to Science. My efforts to work on old lines, and at the same time be a Christian Scientist, brought again mental and physical confusion. The "baggage," to which our Leader refers in "Miscellaneous Writings" (p. 327), had to be laid aside. The old work was given up and the decision to be none other than a Christian Scientist was made. I then learned that there are no incurable diseases. With the help of a faithful practitioner, and the earnest, faithful study of Science and Health, came the healing, which has been permanent. Now I can truly say that I am thankful even for the hard experience which caused me to turn to Science. All is so different now.

Only a life of service can express the gratitude which I

Digitized by Google

feel to God, and to our Leader, for the truth which led me along when all seemed so dark. I have learned that there is no darkness in Truth.

OLIVIA BURGESS, Bridgeport, Conn.

Some time ago I awoke feeling very ill,—my throat seemed to be in a very bad condition, and as time passed on it appeared to be gradually growing worse. I tried to work for myself, but several days passed and I then realized that I must have help. I immediately sent word to a dear Christian Science friend, and was instantly healed. I cannot express my gratitude for this help, and for this blessed truth that has come to us through our dear Leader. Christian Science is a daily help to me in taking up the problems of my household, and my desire is to gain more of this light that leads on to the perfect day.

MRS. MARY WATSON, Moorestown, N. J.

I desire to express in some small measure my ever-increasing sense of gratitude for the blessings which Christian Science has shed upon my earthly path, in bringing me out of darkness into Truth's eternal day, enabling me to understand the Bible and how to divide the words of Truth aright. When I realize for a moment what Christian Science really is, what it has done, and will yet accomplish, my sense of gratitude is unspeakable. "Science and Health with Key to the Scriptures" by Mrs. Eddy so illumines the Scripture, and so reveals the ever-present Christ, the Comforter, that the journey seems less toilsome. Divine Love lightens our burdens. For even the small degree of understanding that I have gained of God and Christ, of heaven, harmony, and immortality, through Christian Science, I am profoundly grateful both to God and to our beloved Leader, who has, through the heroism of moral courage divinely bestowed and divinely directed, again given to the world-weary, sin-sick sense the blessed Gospel of peace. As the science of numbers proves the rule in primary arithmetic as certainly as in algebra or a problem in Euclid, even so small demonstrations prove the rule of Scientific healing through Mind to be the rule given by Christ Jesus.

In the summer of 1905 I met with a very severe sprain. From my medical experience I felt that the tendons were ruptured, but I instantly declared the truth, and soon gained possession of myself, though I had to hold to the railing for support. A sense of faintness was soon overcome, and as it was necessary for me to be in the city at a certain time, I let go the support, realizing that I could walk in the power of Spirit. I walked two blocks to the elevated station; climbed the long stairs, made my appointment on time, and went home, no one knowing of the accident. I refused to examine the foot for several days. The pain was all destroyed in the first twelve hours and the swelling soon disappeared. I never limped, or favored the foot, but walked with a strong, firm step, making my visits each day. With my knowledge of *materia medica* and so-called physical law, I knew how different would have been my experience in the old thought.

For this speedy and almost painless deliverance from the asserted laws of materiality, and this peaceful and harmonious realization of the spiritual, I am most profoundly thankful.

MRS. CORDELIA LONA MARSTERS, M.D., Chicago, Ill.

One evening my boy complained of feeling very badly; I suggested that he lie down and let me read to him. I got my book, Science and Health, and tried to read, but a sense of fear seemed to overpower me. I tried to repeat the 91st Psalm, but his cries of distress confused me, until I closed my eyes and earnestly declared the truth. Immediately there came to me Mrs. Eddy's beautiful hymn, "Shepherd, show me how to go" (Miscellaneous Writings, p. 397), and I sang it as I never had before,—for with each word came a glorious "Peace, be still," and before I had finished the last verse my boy had ceased tossing and moaning and went to sleep. He slept well all night, and next morning he got up bright and happy. It seemed then that this shadow had been merely a nightmare. Tears of joy came to my eyes as I realized what a wealth of love our dear Leader has made known to us.

ROSE B. REHLANDER, Chattanooga, Tenn.

Every Scientist is glad to express gratitude for the understanding of divine Love received through Christian Science. I wish to tell of the great joy that has come to me in the past year and a half through this knowledge of God. From childhood I was in bondage to disease. At sixteen I was a frail girl under the care of physicians who said that I had organic heart trouble, also weak lungs and poor blood. I was sorely afflicted, and although my health improved during four years at college, another disease slowly crept upon me. When I returned home one leg wasted away until it was much smaller than the other, and I limped badly. I went to specialists, who said the leg would always be withered and weak. All of the old symptoms were aggravated and worse than ever before.

Two years more passed, in which my misery seemed to increase, and then I was led to go to a Christian Science practitioner. I took one treatment and bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and returned home lighthearted. My troubles left me one after the other. I can scarcely tell which went first. I only know that I felt free for the first time in my life, and I was happy because I did not limp and because my limb was strong and perfect. Ever since then I have sought to gain a better understanding of this truth, but never had the opportunity to attend regular Science services until I came here. When I first came I suffered from an attack which was attended with all the symptoms that once made me so miserable, and caused my people days of anxious watching and nights of broken rest. I sent for a practitioner and was soon able to be out again. I have been perfectly well ever since and know this last victory has meant much to me.

I am grateful to our loving Leader and desire to express my gratitude in right thinking and right living; in following the Master faithfully and in reflecting Truth and Love.

ELIZABETH FRANK PARKER, Watertown, Wis.

Some years ago I had a growth which necessitated a very critical operation, and it was considered marvelous that I had no return of the trouble. In September, 1904, I became conscious of a constant pain at the place where the growth had been. I had been studying Christian Science for nearly four years and I tried to overcome this trouble. I worked on for about three weeks without any perceptible change. I was getting rather discouraged, when one day, while asking myself what I intended to do, a picture of the hospital, the doctors, and the operation came up, and I realized that it was not necessary to repeat this experience. I then thought of going to a Scientist, but remembered that it is the truth which heals, that I knew the truth and I could declare it. I began at once to repeat the scientific statement of being, from our text-book (Science and Health, p. 468), and as I continued to declare the spirituality of man and the universe, I forgot about the pain till I reached home, some hours later. It had gone and has never returned. Then I knew that I had proved the truth of our Leader's words, beginning on line 12, page 14 of Science and Health. I would like to give one more experience. In going from a light room into a dark passage, I fell and injured my hand. The pain was intense, but I mentally declared the truth and in a few moments I was free from it. I managed to do some things from the first and in a week did my work with-

Digitized by Google

out help. In a fortnight my hand was almost as strong as before. I am very grateful for these and other demonstrations, but they are nothing in comparison to the spiritual understanding of God and man and the Bible which I have gained from the study of Mrs. Eddy's works.

MINNIE A. STILL, Southall, Middlesex, England.

In April, 1905, I injured my knee very severely. A relative and physician, who happened to visit me at this time, examined the knee, and said I must keep perfectly quiet, that it would be months before I would have the full use of the knee, if ever. Upon receiving help in Christian Science, however, I was enabled in ten days' time to be about my work as usual, and it keeps me on my feet nearly all day long. This is only one of the many demonstrations we have had in our family since coming into Christian Science nearly four years ago. The spiritual benefit far exceeds any physical help we have had, and by the aid of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the Bible has become to us an inexhaustible treasure. By obedience to God and to His Messenger I hope to prove my sincere gratitude for all these blessings.

MRS. GRACE BENNETT, San Jose, Cal.

Having read the *Sentinel* and *Journal* for the past four years, and having received so much help from the encouraging testimonies that come from nearly all parts of the world, we wish to add ours. Christian Science has given us strength and help in ways that are too numerous to mention, but we wish to speak of the wonderful healing of our little boy after all hope had vanished, as doctors had pronounced him incurable. From his birth the child was said to have a trouble of the brain, and he remained in this condition until he was about five years of age. What we suffered no one knows, but at last Christian Science came to our notice, we asked for treatment, and through the truth, as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy, he was completely healed *and is to-day* a sound, healthy boy. All hope of his healing had vanished when the beautiful promises of Christian Science came to us. Our extremity was indeed God's opportunity, and no wonder our hearts are filled with gratitude that we have been lifted out of darkness. We are grateful to Mrs. Eddy, who has shown us that God is an ever-present help in all ways to those who seek Him.

After all has been said, spiritual awakening is the greatest and this truth is the grandest help in our daily lives, showing us the way to find heaven while yet on earth.

MR. and MRS. C. E. BROWN, Caldwell, Idaho.

In January, 1898, I fell on an icy pavement in Omaha, Neb., severely injuring my right ankle. I was assisted home by two passers-by. My friends were much alarmed. I thought they were needlessly troubled, but at the end of thirty-six hours, after consulting with a Christian Science practitioner, we thought best to accede to their wishes and call a surgeon who was considered the best in the city. He examined my foot and stated that the injuries were severe. It was thought that the bandaging would prove a terrible ordeal, but I received Christian Science treatment and can say that I did not experience any pain. The doctor gave me no medicine of any kind and seemed much surprised at what he thought my "grit." He said it would be a long time before I could use my foot, and that it would never be as strong as before, but Christian Science treatment proved him to be mistaken. I returned to my home two weeks later, walking with crutches. These were soon discarded and in a short time my ankle became perfectly well and strong. I have had no difficulty in using it in walking or any other way. During the healing I had only two attacks of pain, and these were quickly overcome through Christian Science.

MRS. VILLA MILLS GRANT, Charleston, S. C.

With Paul I can say, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." It has been proven to me in Christian Science that there are no incurable or hereditary diseases. Two members of my family had passed on with lung trouble under *materia medica*, and about three years ago this form of disease came into my experience; but I turned to Christian Science for help, and although for a time the road seemed long and dark, the light was made manifest and the trouble suddenly vanished into its native nothingness. I was brought to see that as long as we hold to thoughts which are unlike God, good, do we manifest correspondingly erroneous physical conditions. Mrs. Eddy tells us, "The true consciousness is the true health" (Miscellaneous Writings, p. 298). For the help which I have received in Christian Science and for the many blessings which this understanding brings, I can only pay my debt of gratitude to God and to Mrs. Eddy by living the life of a true Christian Scientist.—MAY C. GROFFMAN, Chicago, Ill.

From early childhood I was considered very delicate, and was held in bondage by that belief until my freedom came through Christian Science, many years later. During this time my case was diagnosed by eight of the leading physicians as an abnormal growth. After making every effort possible to obtain relief, and at great expense, it was decided that an operation was necessary, although they could give but little hope. In the operation a growth was removed, but they found another which they said could not be removed, and four weeks later I was sent home to die; the doctors saying they could do no more for me, that I might live three days at the longest. Prior to this time I had become interested in Christian Science, but I had not yet gained sufficient understanding to have faith that it could help me in so serious a case. Now, however, I turned to the truth as my only hope. I began at once to gain in strength, and was able to be about my household duties. Later I had a struggle for a time, but the Christian Science treatment was continued, and in about a year I was perfectly well. I have been a well woman for fourteen years.—MRS. L. J. ROBERTS, Rochester, N. Y.

[Written for the *Sentinel*.]

ASLEEP, AND AWAKE.

HAROLD SUSMAN.

ALL the world was dark and drear,
Doubt and discord, fright and fear;
What to do but weep?
Wherefore should we drag along?
Everything was wicked, wrong!
When we were asleep!

All the world is bright and fair,
Harmony is everywhere;
Joyful noises make!
All we see is, we confess,
Health and holy happiness,—
When we are awake!

A PAMPHLET IN GERMAN.

The pamphlet, "Prayer and Confidence," which has had a wide circulation in English, is now published in German. It contains four articles originally published in *The Christian Science Journal*, viz., "Individuality and Simplicity of Prayer," "Confidence," "Victory over Fear," and "In God we trust." Price, 6 cents each; 60 cents per dozen; $1.15 for twenty-five copies; $2.25 for fifty. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

FROM OUR EXCHANGES.

Is it not true, and do you not know it to be true, that the best things of your life have come not from without but from within—the loyal friend, the reciprocated love, the conscience at peace with God and man, the clear view upward, the large view outward. These things are like letting in the tide that comes bearing its rich argosies of joy from the far-off shores of the eternal day. The big house does not necessarily mean a happy home, a full pocket is not always the same thing as a light heart, and great affluence does not mean great influence. To walk down Regent Street on the sunny side of the way, the object of the people's desire, is a very different thing from having an angel in the heart to talk to and to listen to. Happiness grows, it is not made. Is not that so? Is it not character rather than circumstance that makes happiness, after all?

REV. A. J. VINER.
The British Congregationalist.

In all his claims and invitations Christ is calling men to an experiment and venturing his own authority upon its results if fairly tried and faithfully carried out. But as it is an experiment in the sphere of personal relations it can be so carried out nowhere but in the experience of the individual. "Come unto me, trust in me, walk with me, undertake and persevere in my work," he says, and the result will be the discovery of God. "If ye had known me, ye should have known my Father also: and from henceforth ye know him, and have seen him." And again, in answer to the sincere inquiry of a listener in the crowd, "He that willeth to do shall know." To-day, as always, the way of knowing God is the way of this experiment with Christ on the conditions which he himself has appointed.

The Congregationalist.

Those who have fallen most completely under the spell of fortune-hunting, and have been consumed by the fever of a pursuit which dries up the very sources of spiritual life, can no longer be blind to the fact that when great wealth ceases to be associated with character, honor, genius, or public respect, it is a very shabby substitute for the thing men once held it to be. . . . Young men especially begin to see clearly that the wealth which cannot buy honor, confidence, influence, and respect is only another form of poverty. No fortune is worth possessing for which a man is compelled to pay in integrity, fineness of soul, free development of his nature, or that spiritual happiness which comes not from what we get, but from what we give.—*The Outlook.*

After any quickening religious experience, rightly taken and rightly used, the thought of the Divine Immanence does not remain cold and lifeless, but becomes a quickening power. When one knows that the infinite energy of the Holy Spirit is expressing itself in terms of his consciousness, and revealing itself in all the nobler elements of his life, the thinker and philosopher becomes a devout worshiper; and he who began with cold abstractions about the nature of things, with awe and wonder begins to say, "Lo, God was in this place, and I knew it not." Thenceforth the idea of the immanent God becomes the most thrilling fact within his knowledge and the most inspiring influence in his life.

GEORGE BATCHELOR.
The Christian Register.

We are learning, slowly but certainly, that religion must get a grip on all of life; that it is not worth having unless it is making us better men and women in every-day affairs, more honest and upright in business, more honorable in our social relations, more fair to others if we are employers, more faithful if we are of the employed. "The religion which does this six days in the week," says Dean Hodges, "is just six times as valuable as the religion which does what we will those days and then tries to serve God on Sunday."

The Churchman.

The blessedness of seeing God is the inevitable consequence of being pure in heart. The pure in heart do see God in this sense, not that they will see Him in some other world. God dwells in the pure heart and is seen and known and fully recognized in that heart. The reward in this state is in the possession of it as a formal possession of the pure soul.—*The Universalist Leader.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines, 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

By presidential proclamation the Kootenai Forest Reserve has been created in the extreme northwestern corner of Montana. The reserve, which contains about 887,300 acres, is a natural forest region. Ninety-nine and one-half per cent of the area is either covered with forest, or, having been denuded, is capable of reforestation. The region is in every way more suited to forestry than to any other purpose. It is an important factor in maintaining the flow of streams draining through this region directly into the Kootenai, one of the most important tributaries of the Columbia River. The protection of the forest growth over this drainage area is, therefore, a matter of importance to a wide stretch of country.

The Goose Lake Forest Reserve has also been created in Oregon recently by presidential proclamation. This reserve is situated near Goose Lake, which extends into Oregon from the northern border of California. The country which it embraces is very rough, except along the water-courses, being mainly of volcanic character with a surface of broken lava rocks or solid basaltic escarpments or "rim rock." Climate, physical structure, and soil conditions effectually preclude development as an agricultural area. The principal industry of the region is cattle and sheep grazing.

To solve New York's rapid transit problems, which include the traffic into and out of the city, the municipality and certain public corporations are spending or planning to spend $650,000,000. This enormous sum is about $250,000,000 more than the present funded debt of the city. It represents about three times the cost of the Spanish-American war. It exceeds the $555,000,000 expended on the present subway and its equipment and the $23,000,000 for the two big suspension bridges over the East River. Nineteen proposed routes for subways in Manhattan and Brooklyn will cost $220,000,000 and the necessary equipment will foot up $100,000,000 more. In addition, four rapid transit tunnels will be built under the East River, to cost $20,000,000. Eight new giant bridge structures to span the East River and weld Brooklyn to Manhattan, will consume $85,000,000 of the city's money. The Pennsylvania Railroad tunnel, now nearing completion, will cost $50,000,000, and other tunnels and bridges will make up the total. These plans indicate that New York is entering upon a period of constructive engineering work such as the world has hitherto never seen or dreamed of.

On the fifth, after several postponements, the Sultan officially received Ambassador Leishman, who presented his credentials as first Ambassador of the United States to Turkey. This audience ends a long series of attempts on Turkey's part to evade a settlement of many pressing issues urged by the United States. Ambassadors at Constantinople deal directly with the Sultan, while Ministers have to deal with the Porte, or government officials. The elevation of the Constantinople legation to the rank of embassy was ordered by Congress at its last session, so that the envoy might take his mission to the Sultan and avoid the obstruction with which he met from the Porte. It is expected that the settlement of the pending issues can now be secured.

At least seventy-five meat dealers and packers throughout the United States were outside the pale of the new meat inspection law when it became effective Oct. 1. Government inspectors on the first inst. barred a large amount of meat and meat products from shipment and the railroads were alert in doing their part towards enforcing the law. As far as reported, not a single railroad accepted meat for inter-state shipment that had not been inspected. The sudden demand for inspection convinces the Secretary of Agriculture that the annual appropriation of $3,000,000 will not be sufficient to meet the cost of inspection next year. He says that he will have two thousand persons on the inspection service payroll before the end of the year.

Pennsylvania's new and beautiful capitol is 525 feet in length and 254 feet in width. The height from the ground floor to the top of the allegorical figure surmounting the dome is 272 feet. The area of the building is 80,275 square feet, or 2,000 square feet larger than St. Paul's Cathedral in London. In its construction 40,000 separate pieces of granite were used, weighing from one ton to thirty-five tons each. There are thirty-two monoliths in the structure, weighing thirty-five tons each. A total of more than 400,000 cubic feet of granite was used on the exterior of the building alone. The building covers a trifle more than two acres of ground. The entire cost of the structure and its furniture is over $12,000,000.

Discussing conditions on the Isthmus, Ex-Governor Magoon of the Panama Zone said: "The main difficulty there is the labor question. Our labor is drawn from Jamaica and Barbados. These people are intelligent and with some education, but the trouble is that the West Indian is a bird of passage. You get him to understand what you want and fairly educated to his work, when he suddenly drops everything and goes away. What is needed on the Isthmus is organization of the laborers. They should be divided into gangs with a skilled man at the head to instruct them in the work, and to advance those who become proficient in any line. Organization along this line is under way at the present time."

The monthly statement of the Government receipts and expenditures shows that for the month of September, 1900, the total receipts amounted to $51,497,190, and the expenditures $40,270,154, leaving a surplus for the month of $11,227,036. The public debt at the close of business Sept. 29, 1900, less cash in the treasury, amounted to $954,240,103, which is a decrease for the month of $16,122,109.

It has finally been settled that Judge Magoon, ex-Governor of the Canal Zone, will succeed Secretary Taft as Provisional Governor of Cuba. When order is restored there he will proceed to his appointment as Vice Governor General of the Philippines.

Foreign.

Sixteen balloons, averaging over two thousand cubic metres capacity each and representing seven countries, sailed away from the Tuileries Gardens, in the heart of Paris, on the afternoon of Oct. 1, in the first competition for the Gordon Bennett cup. It is calculated that over a million people witnessed the test. Massed military bands enlivened the crowds with music. Each balloon carried a sealed recording barometer and a number of envelopes to be thrown out every two hours in order to mark the individual trail. Food for three days was also on board each car. Major Hersey, the companion of Walter Wellman in the Wellman and Chicago *Record-Herald* North Pole expedition, acted as assistant to Frank P. Lahm, lieutenant in the Sixth United States Cavalry, one of the American competitors. He was winner of the contest and sailed his balloon 415 miles in twenty-three hours, landing at Eylmgdale, near Whitby, England. Much of his success is attributed to his knowledge of meteorological conditions, obtained as the result of long service in the Weather Bureau at Washington. Before the departure of the United States, the winning balloon, Major Hersey closely examined the latest weather reports and knew that the heavier and faster outer currents would be at the surface. Consequently, while the others were vainly testing the upper strata the latter remained close to the earth, their guide rope touching much of the time. Their judgment was vindicated by the fact that although the United States was the twelfth balloon to start it was the first to reach the English coast.

The famous "Drago Doctrine" issue, the collection of debt from debtor nations by force, to which the nations of Latin America are strongly committed, was disposed of on Aug. 22 by the adoption of a resolution leaving to the separate governments the matter of raising the question in The Hague Conference. Mr. Buchanan, chairman of the American delegation and also chairman of the committee, did not believe that the defining of the question of collection of debts by force, involving many delicate points and principles of international law, came within the scope of the Pan-American Conference, composed to a great extent of debtor nations. The Washington point of view was that it would be unseemly and uncalled for if this conference of debt-owing nations should attempt to lay down a policy concerning the collection of debts for adoption by The Hague, the preponderating power of which is that of European creditor nations.

Minister of Public Instruction Gimeno has announced a project for a loan of $10,000,000 for the construction of five thousand primary schools in Spain during the next five years.

The cost of the recent war to the Japanese in money was, according to official statistics issued at Tokio, £126,116,266.

A contract for five hundred London motor-buses, involving £325,000, has gone to Berlin.

Industrial and Commercial.

Heavy rolling-stock and high speeds, says *The Railway Age*, are having a destructive effect on the rails of American railroads. As a result the cost of maintenance on some of the four-track Eastern lines is greater to the mile than the gross earnings of many smaller roads in the West. Ties cannot be placed closer, as spaces are now about as small as will allow of proper tamping of the ballast, which is necessary to hold the track in line and surface. When wheel loads of 15,000 pounds were reached many engineers regarded this as the limit of weight on drivers. It was thought rails would be crushed under any heavier load. Weights on drivers have increased so that the maximum at present is 30,000 pounds, or double what it was in 1893. The rails have increased in section and in hardness and they are capable of carrying a load of 60,000 pounds an axle.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

FROM OUR CONTRIBUTORS.

"THE PRIESTHOOD OF MEDICINE."

EFFIE ANDREWS.

THE British *Medical Journal* publishes the following letter, which was written by Thomas Carlyle to an Edinburgh firm of publishers in acknowledgment of a book entitled "The Healing Art the Right Hand of the Church":—

Chelsea, 25th February, 1859.

Dear Sir:—I have received your book which you were kind enough to send me, and I beg to return you thanks for the same. It is a book (unlike many that come to me here) of a serious nature, the fruit of long study, meditation, inquiry, and evidently of perfect conviction on your part.

I believe, and have long believed, the essential idea it sets forth to be not only true, but of the very highest importance to mankind—namely, that the physician must, first of all, be a priest (that is to say, a man of pious nobleness, devoted to the service of the highest, and prepared to endure and endeavor for that same, taking no counsel of flesh and blood, as the theory of priests is)—first of all, a real priest, and then that the whole world should take supreme counsel of him as it does of its real or imaginary priests or pontiffs *this long* while back, and follow said counsel as the actual will of God, which it would be were the physician what I say.

It is curious to remark that "heilig" in our old Teutonic speech is both holy and also healthy—that the words holy and healthy, as our antique fathers understood them, are one and the same. A thousand times has that etymology risen sorrowfully upon me in looking at the present distracted position of affairs, which is horrible to think of if we look earnestly into it, and which cannot well be spoken of at all. We, sure enough, have completely contrived to divorce holiness (as we call it) from health, and have been reaping the fruits very plentifully during these fifteen hundred years.

The notion of bringing our present distracted anomaly of a physician into union with our ditto ditto of a priest, and making them identical, is of course extremely chimerical: nor can one easily say what ought to be the first step towards bringing each of them back from his anomalous, imaginary condition, and nearer to veracity and the possibility of coalescing. But I am very glad to see the idea started in any form under any vesture, and heartily wish you success in bringing it home to men's minds.

I remain yours truly,

T. CARLYLE.

When I received the above clipping from Scotland I was struck with its significance, and could but think that at the very time Thomas Carlyle was writing this letter one was being prepared who a few years later stood before the world and proclaimed the healing power of Truth. What Carlyle sorrowfully longed for and the lack of which may account for the severity and bitterness of his thought, what he deemed "chimerical," has been revealed to the world through Christian Science. Thousands of the sick and sorrowing, the weary and heavy-laden, have rejoiced with joy unspeakable that to them the "Comforter is come," according to the promise of our blessed Master, Christ Jesus.

In our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we are given positive statements respecting health and holiness, as we are pointed to the light of Divine Science, and in its irradiance we see clearer and clearer "the Spirit of truth" that leads "into all truth." Our hearts turn with love and gratitude to her who for Truth's sake suffered misjudgment and persecution. We see in our Leader one of "pious nobleness," one who has endured all with willing sacrifice and self-consecration to prove through her life the truth of her God-given mission, her message of health and holiness to this age. When Mrs. Eddy first declared to the world that "All is Mind, there is no matter," scorn and ridicule were heaped upon the message. To-day physical science would claim the statement as its own, and its advocates say they had "always believed it" (Science and Health, p. 104). Once it required courage to say "I am a Christian Scientist!" To-day it is a crown of rejoicing to be among those who follow our dear Leader, who has given us this Science, and has shown us the way to demonstrate the truth our Master taught and proved in his life among men. This truth has come with "health and holiness" in its outstretched wings of love. It is surely the Gospel of "on earth peace, good will toward men."

THE ONE MIND.

BLANCHE H. HOGUE.

THE basic teaching of Christian Science, that there exists but one Mind, that this one Mind is God, and that the knowledge of this counteracts the unhappy results of believing there are minds many, operates to bring a salvation to mankind which will eventually triumph over every phase of evil. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, affirms that there is but one Mind because there is but one God. This may seem difficult to grasp, on account of the complexities of human education, but it is in reality the simplest statement of Christianity which the world has heard since Jesus of Nazareth declared that Christ, Truth, alone can give rest to all who are weary and heavy-laden. Christianity, fully and scientifically stated in Christian Science, lifts thought to comprehend the great truth that there is one Mind, that this Mind is infinite good, God, and that, therefore, there is no other Mind. This revelation, unfolded in Science and Health by means of intelligent reasoning and explanation, so refutes the arguments of material thought-processes, so called, that the reader is able spiritually to discern the divine logic of scientific Christianity, and to accept, in its simplicity and purity, the statement of the existence of but one Mind.

So soon as this inspired setting forth of the truth is discerned, the individual thus convinced is confronted by the claim that he still continues to exist in an environment

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

of minds many, and that he must work his way to the realization of the ideal condition through whatever human footsteps may be necessary. From the human side the question may be approached somewhat in this fashion: That there can be only one truth about everything which exists; that innumerable falsehoods may claim to prevail about anything, but that the thing really can exist only in one true way; therefore there is but one truth about it, and all men who unite in knowing this truth are "of one mind" upon the subject. To illustrate: Suppose it were possible for a person to be so ignorant or so abnormal that there was but one thing in the world about which he knew the truth. Let it be, for example, the truth that two added to two make four. Suppose a second person, also wandering in a maze of ignorance or hallucination, differing in phenomena but similar in kind, should awake to the truth about two and two. These two people, so diverse in their ignorance, would find themselves absolutely in accord in their enlightenment. For the first time they would be "one" in their apprehension of this truth. Let these two individuals who have united in a common understanding of this one question, continue to add more and more to their store of enlightenment and to dispel proportionately the illusions of ignorance, and they will grow to be "of one mind" upon all matters about which they know the truth. If this can be pictured as applied to all mankind, and as continuing until that which is true about everything is rightly understood by everybody, it implies a millennial condition in which there can remain no erroneous way of thinking about anything. The whole realm of diverse and mistaken opinion, judgment, and conclusion would have melted away, and all men would unite in their thinking, their knowing, and their enjoyment of what they know. Individuality would not be lost, but each in his individual way would know rightly, not wrongly, whatever there is to be known. No confusion, misunderstanding, or wrong point of view could prevail, for all would rejoice in the light of understanding which reveals all things as they are.

Mrs. Eddy has discovered, in this age, the way of salvation from all erroneous belief and its results. She has set before humanity the way to the attainment of the Christ-ideal, as wrought out by the Master in his daily demonstration of the truth, and has made clear to the one who would walk in this way the footsteps to be taken. Much of that which the so-called human mind has called truth, and in which the "minds many" have tried unsuccessfully to unite, is found to be a counterfeit invention, a false sense of truth. Governed by passing standards affected by the blindness of personal motive and subject to caprice and change, it must crumble before the advancing revelation of that truth which is one with God, one with the Principle which contains and maintains all that is real. In the passing of the fables of mythology, the theories of ancient astronomy, the century-old methods of *materia medica*, and the severity and gloom of the old-time theology, one may read the fate of the mortal sense of things, however closely it may have been cherished in the hour of its supremacy. In like manner the network of sin and suffering now enmeshing humanity will be recognized as fable, not fact; as false reasoning, false pleasure, false testimony, and it will cease to have a place in human experience as the reality of being becomes apparent.

Christian Science has no apology to offer for bringing to the world the radical and sweeping declaration of the unreality of all evil, all matter, all sickness, and all death. Did its teaching not get at the root of the entire question by refuting the asserted existence of all that is not in and of the divine Mind, it would bring no further remedy to the sore ills of humankind than has already been offered by every humanly devised system of philosophy. The Old and New Testament writings, and the sublime life and work of Christ Jesus, always enthrone the omnipotence and omnipresence of God. The teaching of Christian Science enables its learner to apply his increasing understanding of this omnipotence and omnipresence to every detail of daily living. That which has no place in the divine Mind is erroneous and passing, and it drops into oblivion proportionately to one's expanding knowledge of the truth. The daily study of Science and Health instructs the student concerning that which is real and that which is unreal, and encourages him to reject, in each day's experience, all that which he perceives to be unlike God. The degree of his fidelity to this work determines the speediness of his deliverance from discord.

When Christian Science touches the thought of any one, it finds him in the waste places of human belief, and he may not at once be wholly transformed. The statement of Truth is first discerned to be logically correct; its promise of salvation inspires thought to relinquish "the old man" and to strive to put on "the new." Each individual must watch his own thinking untiringly, that the falsity may disappear and that right discernment and right practice may appear. Though this is called spiritual growth, it is not in reality a mortal growing better, an Adam being saved; it is an Adam being cast out, the Christ-ideal accepted, cherished, and taking the place of the disappearing mentality of sin, sickness, and death. No sin is so deadly, no sickness so hopeless, no grief so overwhelming, that it cannot disappear if the understanding of the one divine Mind be desired above all else, for these phenomena belong to the realm of mistaken thinking, and have nothing upon which to stand when Truth takes possession of thought.

To the heavenward-journeying individual, the mist of temptation arising from the tangled supposition of many minds often presents itself in the guise of truth, to delay if possible the escape from evil; but that heart which really desires only good, and which adds to this desire an intelligent watchfulness, leads past the danger-point, like the little compass which never swerves from the right direction, and ensures a continued and ever-brightening ascension. Through the scientific recognition of the one Mind the beliefs and practices of ignorance will one by one yield to enlightenment, until the one Truth, God, will be known, enfolding all human experience in righteousness and peace.

AN OBJECT-LESSON.

MYRA KING.

A SHORT time ago I had an experience which greatly helped me to realize the falsity of material sense. In a large public building, at one of our seaside towns, is a room of the size, proportions, and appointments of a passenger car. On this occasion a man in uniform stood on a platform outside and announced that the car would now take a trip through Italy.

When the passengers were all aboard the conductor came in, the door was closed, and the journey began. The whistle blew, the car seemed to move, and in a moment, looking forward, we saw the bay of Genoa, Italy. Then we passed on through ancient cities and other historical places, went under bridges where people were hurrying to and fro, crossed rivers and saw the ships being loaded, climbed steep mountains, etc. Then the conductor announced that our trip was concluded, and so we stepped outside and found ourselves at our starting-point.

The illusion had been very perfect. Three of the five material senses, sight, hearing, and feeling, had been entirely deceived; nevertheless, I realized all the time that the thinking, knowing part of me had never for a moment believed it to be other than an illusion. This little incident enabled me to see more clearly than ever before that material existence is but a passing panorama of human sense, a series of moving pictures which do not in any way shape or modify the facts of existence,—the eternal, unalterable truth. It helped me to know that reality is right here and now, though physical sense is taking no cognizance of it

Digitized by Google

and that it is possible for us to realize this truth in the very presence of the most assertive sense testimony.

BEARING WITNESS UNTO THE TRUTH.

HOWARD C. VAN METER.

I HAD been reading the Christian Science text-book several years without seriously apprehending its meaning, when one day the question as to the "why" and "wherefore" of things brought up the remarkable answer of Jesus to the inquiry of Pilate, recorded in the eighteenth chapter of St. John's Gospel, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." Recognizing the significance of the Saviour's mission to point the way for mortals, and that in his answer there is embodied the scientific explanation of the true relationship between God and man, there came into my consciousness at that time a clearer insight into the depth of daily living than I had previously known, and this gave me great cause for gratitude. Instead of living from day to day with no particular thought other than to meet the various conditions of a business life, the whole question of existence took on a deeper significance. I saw the necessity of understanding the truth, in order that I might be fulfilling my part in the true business of creation; viz., to bear witness unto the truth, and thus "glorify God."

My study of Mrs. Eddy's book, Science and Health, now took on greater earnestness. I had been healed of what might be termed a state of unrighteous satisfaction, for I had believed myself satisfied without knowing God or understanding my duty to Him. Prior to this time I was very little acquainted with the Bible; now I began reading it with enjoyment, because our text-book was unlocking the spiritual meaning thereof, revealing the spiritual facts of existence that form the basis of daily living. Thus Christian Science taught me to give earnest heed to each day's work, to remember that whatever the day's experience comprehended, man's business is to serve God, and the way to do this became constantly brighter.

In these years I have many times uttered a prayer of gratitude to God for the great joy of deliverance from a purposeless existence, and it is wholly due to the unselfish work of our beloved Leader, who saw humanity's need and had the love and courage to meet it. I am trying in my work as a student of Christian Science to impress others with the necessity of making each day and hour fruitful in good, that every detail of our experience may give some evidence of "God with us," rather than awaken a belief in a power apart from Him.

[Written for the *Sentinel*.]

AT EPHESUS.

AMY RUTH WENZEL.

AGAIN the faces of the careless throng
At Ephesus I see:
Again I feel the clutching sense of wrong.
Again Love comforts me.

The wild beasts rush upon me through the door.
A moment stand at bay,
I hear the crashing thunders of their roar—
O Love, be now my stay!

But what avails that I with beasts have fought,
That they, not I, were slain,
If at the journey's end we come to naught,
Nor rise to life again?

Beloved, endeavor is not futile, though
We pass from earth uncrowned;
Against the impulse of Life's onward flow
Death sets in vain its bound.

SELECTED ARTICLES.

In your issue of Aug. 23, "W. B." tells us that "all that is valuable in Christian Science is the cultivation of a tranquil mind, and that we can have without following Mrs. Eddy." We are glad to notice, however, the admission that "Christian Science is a fact, and it has come to stay until the churches awake to the needs that Christian Science seems to supply."

Even if a "calm mind" were all that Christian Science had to show for the results of its teaching, it would certainly have a long mark to its credit. It was Mark Twain who, in quoting a Baptist minister's honest convictions as to Christian Science, said, "He [the Christian Scientist] has put all anxiety and fretting under his feet. What proportion of your earnings or income would you be willing to pay for that frame of mind, year in, year out? It really outvalues any price that can be put upon it. Where can you purchase it, at any outlay of any sort, in any church or out of it, except among Christian Scientists?"

Mrs. Eddy teaches that the only way to avoid the results of sin is to cease sinning, not only in word and deed, but primarily in thought. She tells us that to obtain a peaceful mind we must become obedient to the teachings of the Sermon on the Mount, and have that Mind which was in Christ Jesus. Is there a better way?

Our critic tells us that Christian Science denies that sin and disease are facts, and says that this is our weak point. If by this is meant that "sin and sickness" are creations of God, we do deny them as facts, for to be God's work they must accord with the Scripture,—"God saw every thing that he had made, and, behold, it was very good." On the contrary, if they are not God's work and are still real, there must be another creator, another power; and here we run against the First Commandment. Christian Science takes the position that sin and sickness seem real only to material sense, and they must be overcome by the power of God in the same manner that Jesus overcame them,—by knowing their falsity. The fear of a child over an imaginary ghost is not cured by making it a reality, but by showing its nothingness. To the fauity sense of the child the illusion is terribly real, but to the parent it is unreal. So are sin and sickness real to those accepting the testimony of material senses, but to those looking beyond and seeing only God's true man who was given "dominion," everything not belonging to His creation is unreal and false. It is by understanding this that Christian Scientists heal the sick, and the way is open to all who will learn. CHARLES H. SKINNER.

The Michigan Presbyterian.

Christian Scientists have great respect for the noble army that is seeking to relieve the distressed through the use of material remedies. They would give due respect to every therapeutical and ethical institution which honestly seeks to benefit mankind, but they must insist that what Jesus taught and practised was and is the perfect way. While one medical student is choosing the homœopathic system and another the allopathic system, it seems a little strange that so few are choosing the system which Jesus practised, for if we may be permitted to judge the merits of a system by its results, we must concede that Jesus' method was the best, for he was the only one who always succeeded. There is neither authority nor reason for the substitution of material remedies for the power of God in treating the sick.

Christian Scientists make no boasts regarding their immunity from sickness, being well aware that many generations must pass before there is a sufficient degree of spirituality in the world to accomplish all that this Science promises. I am personally acquainted with many Christian Scientists whose lives have been prolonged far beyond the period allotted them by medical practitioners, and this

Digitized by Google

is at least a step in the right direction. We expect that finally the fulness of Truth will be demonstrated in the lives of mankind.

ALFRED FARLOW.
Boston Times.

Failure to secure peace, happiness, and contentment through what the world has to offer, has doubtless turned many a weary earthbound traveler to seek them from higher and spiritual sources, and for this reason thousands have found in Christian Science that which satisfies the longings of humanity, in the spiritual understanding of the Scriptures as taught in the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. There is naught that is mystical or obscure in the teachings of Christian Science, as the honest and earnest student thereof has no difficulty in obtaining a clear and satisfying explanation of God's Word, which enables him not only to become a better citizen and friend, but to heal sickness and sin in accordance with the Master's command.

CALEB H. CUSHING.
The Lewiston (Me.) *Journal.*

Christian Science does not deny that pain and suffering exist in the human consciousness. Their seeming reality can be destroyed, however, by the understanding of the supremacy of Spirit,—that in God's kingdom sin, sickness, and death do not exist. Christian Science endorses the Bible teaching, "Whatsoever a man soweth that shall he also reap;" and "if we say that we have no sin, we deceive ourselves, and the truth is not in us." Christian Science opens the sinner's eyes to the enormity of his sin, and shows him how to free himself from the bondage of an unreal master. Mrs. Eddy declares that the sinner must forsake his sin in order to comply with the demands of this Science.

ALBERT COPE STONE.
Melbourne (Australia) *Herald.*

A MISTAKEN OFFICIAL.

Dr. Gray, coroner of Peterboro, more than exceeded his duty when he went out of his way to give the Christian Scientists a tongue-thrashing. The coroner's duty was to ascertain the cause of Randlett's death—that was the beginning and the end of it. When the coroner undertook to make such references as "nefarious process," "public robbery," "imbeciles," "in it for nothing else than the money," etc., he was utilizing an official position to insult a class of his fellow-citizens, and it would be well if the Ontario Government were to retire him into private life.

Editorial in *The Ottawa* (Ont.) *Journal.*

CORRECTION.

A clipping from the *Troy Times* recently published in the *Sentinel* stated that First Church of Christ, Scientist, Troy, N. Y., had sent ten thousand dollars to The Mother Church Building Fund. As a matter of fact it was a little under eight thousand dollars, and our friends in Troy ask us to make this correction.—EDITOR.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

AMONG THE CHURCHES.

WINCHESTER, KY.

As we review the past six months we have cause for much gratitude for the growth made in our church. Much local interest has been shown in our Cause. The *Sun-Sentinel* printed a synopsis of Judge Hanna's lecture last April; thus affording many people an opportunity to read a fair and correct presentation of Christian Science.

The Literature Committee reports that the racks placed in the depot and hotels are quickly emptied. After the burning of the Kentucky Wesleyan College, the librarian kindly consented to have another copy of "Science and Health with Key to the Scriptures" placed in the library, in lieu of the one burnt. When the call came through the *Sentinel* for funds to complete the Extension of The Mother Church, our building, library, and Sunday School funds were gladly sent.

We send our heartfelt thanks to our Leader and loving greetings to all loyal Christian Scientists.

First Church of Christ, Scientist,
J. W. POYNTER, *Clerk.*

SAN FRANCISCO, CAL.

The new building being erected by First Church of Christ, Scientist, in this city, at the southwest corner of Sacramento and Scott Streets, is nearing completion. The regular services of the church have been held continuously in the building while construction was going on, and its completion will be much appreciated by the congregation which worships there. The main auditorium will be known as Christian Science Hall, and will seat comfortably twelve hundred and seventy-five people. A smaller hall in the same building, which will be used for the Sunday School, will have seats for over five hundred.

In response to the appeal for help in behalf of the people of Chile, a collection was taken at the church services last Sunday for the Chilean relief fund, amounting to two hundred and ninety-five dollars.

Announcement is made that the free Reading Rooms maintained by the church are now ready to receive visitors and will be open to the public daily except Sundays and holidays from 10 A.M. to 5 P.M. The rooms are located in the south end of the building and the entrance is 2035 Scott Street.—*San Francisco* (Cal.) *Call.*

CHURCH OPENING IN JOLIET, ILL.

The Christian Scientists of Joliet opened their new church, corner of Sherman Street and Second Avenue, Sunday, Sept. 2, under favorable circumstances. During the fall of 1891 four ladies met at a private residence in Joliet for the purpose of studying Christian Science. In March, 1892, a few others were ready to join, having become interested through witnessing what was perhaps the first case of Christian Science healing in Joliet, and the society was ultimately incorporated as First Church of Christ, Scientist, with nine charter members. The growth of the church was steady and in December, 1900, a move was made to the Marshall building, and there for nearly seven years the members have labored and learned that the Christ is the same yesterday, to-day, and forever.

One year and a half ago the question of a church home was presented at the annual business meeting of the church. Last December a committee was appointed to investigate various proposed sites. The present location at the corner of Sherman Street and Second Avenue, known as the Henry C. Cullom home, was purchased last April. The Christian Scientists have endeavored to trust in the promises of Christ, and thus has their every need been met.

LECTURE IN THE MOTHER CHURCH OF CHRIST, SCIENTIST.

A LECTURE on "Christian Science: Humanity's Helper" will be delivered by Prof. Hermann S. Hering, C.S.B., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in the Extension of The Mother Church, Falmouth, St. Paul, and Norway Streets, Boston, Tuesday evening, Oct. 16, 1906, at eight o'clock. The lecture is free and the public will be cordially welcomed.

THE LECTURES.

BEATRICE, NEB.

Hon. Clarence A. Buskirk lectured on Christian Science Sept. 16. He was introduced by H. W. Ahlquist, who spoke in part as follows:—

That Christian Science is creating considerable comment and interest throughout the land is not to be denied. While I am not a member of the organization represented here, and do not claim to know much about their teachings, yet I do know that they believe in the same God, in the same Christ, and in the same Bible as do the orthodox churches, and that their aim is for the uplifting of mankind. I have the greatest respect for Christian Science, for its worthy purposes, its lofty ideals, and the splendid work it is doing for humanity.

Christian Science is no longer a doctrine which is or need be scorned or ridiculed; it has been tested, has passed through and beyond the experimental stage, and has become a great religious movement. Any religion which contributes to the happiness, the joy and gladness of human lives, which ameliorates and relieves suffering, sorrow, grief, and distress in this world of ours, is surely worthy of being given fair and generous hearing. The steady, constant growth of Christian Science, and the fact of the acceptance of its teachings by men and women of the highest, keenest, and best intellects to be found throughout the country, place it beyond that point where people gather to criticise or wonder what a strange thing it is; on the contrary, they now gather for the same purpose that impels them when they attend the services of other Christian denominations,—they are seekers after the truth.—*Correspondence.*

PIPESTONE, MINN.

Mr. Edward A. Kimball, who lectured at the Ferris Grand Opera House, Pipestone, on Tuesday evening, Sept. 4, was introduced by R. W. Ashton, who said in part,—

Let me say to you that the speaker represents a line of thought that is attracting some of the brightest and most intelligent people of the world to-day, people who are unwilling to accept a doctrine that they have inherited but who are disposed to do their own thinking and choose for themselves. What the doctrines of Christian Science are, I confess I am unable to say. I do not know that it matters much to you or to me, for we do know that its ideal is a noble and lofty one. Its beliefs and hopes are for better things. Its ambition is to raise mankind to a higher, purer, and nobler life.

If the practice of Christian Science can make the world brighter and better, and bring sunshine and gladness to the hearts in gloom, if it will bring a ray of hope to the poor, the downcast, and oppressed of the earth, if it is the balm of Gilead for every conceivable form of disease, if it will bind up the broken-hearted and border the pathway of life with the flowers of love, and draw all mankind nearer to God, then—whether we understand it or not, whether we believe in it or not—we should temper our criticism and condemnation with charity and bid the society Godspeed in its mission for good.—*The Star.*

GRAND RAPIDS, MICH.

Rev. Irving C. Tomlinson of Concord, N. H., delivered an address yesterday afternoon [Sept. 23] in the Majestic Theatre upon the subject of Christian Science. The lecturer was introduced by Circuit Judge Alfred Wolcott, of this city, who spoke in part as follows:—

Not many years ago a lecture on this subject would have received but scant attention in any community, except, perhaps, in the way of criticism, but that time is passed. This large audience to-day is evidence, I believe, of a changed attitude in the public mind towards Christian Science, an attitude which is at least no longer one of hostility. I believe—and not being a member of that church myself, I can speak of this without embarrassment—that it is, in part at least, due to the fact that it was soon learned that this denomination, which has had and is now having such a phenomenal growth, was not made up of fanatics or dreamers, but of sane, intelligent, reverent men and women, earnest in their convictions, having a keen sense of all the obligations of home, social, business, and civic life, content to have their faith judged by its works, and quietly and without ostentation offering a ministry of hope and healing to the sick and the hopeless.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

AN "EXPRESSION OF LOVE AND GRATITUDE."

Minneapolis, Minn., Oct. 3, 1906.

Beloved Leader:—The enclosed check for five hundred dollars from Second Church of Christ, Scientist, Minneapolis, Minn., is a small expression of love and gratitude to you for having shown to all mankind the road to health, holiness, and heaven. May it serve to make smooth a little of the way over which you pass on your daily drives through the stately street of dear old Concord, with its sheltering elms and Christlike, ministering church.

Throughout the years may an ever-increasing fruitage whisper to you the tender love and immeasurable gratitude of this church of your planting in the "Flour City" of the West. Lovingly your student,

EMMA A. THOMPSON.

MRS. EDDY'S REPLY.

Beloved Brethren:—In the words of the Scripture, "Well done, thou good and faithful servant: thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord."

Lovingly, gratefully yours,

MARY BAKER EDDY.

"HAVE FAITH IN GOD."

CHRISTIAN SCIENTISTS have often declared that the leaven of Mrs. Eddy's discovery is working in the older religious organizations, but the truth of this declaration has been disputed. It would seem, however, from the following item, which we copy from *The Congregationalist*, that at least one church is placing itself in a position which admits its debt to Christian Science. *The Congregationalist* says:—

"DR. DENISON TO THE BOSTON MINISTERS.

"Unusually large attendance testified to their appreciation of the privilege of hearing this 'son of the prophets,' who almost without observation has brought about a peaceful revolution in the worship and activities of Central Church. Referring to the tendencies drawing our people toward Christian Science, Episcopalianism, and Unitarianism, he analyzed the attractive elements in these bodies and showed how Central Church, without departing from Congregationalism, is endeavoring to meet the needs which these satisfy.

"Corresponding to the system of mental and moral culture secured in Christian Science by close Bible study and meditation, Central Church offers certain 'courses of thought.' Last year the object was to impress 'The reality of God as a personal friend.' This year the subject will be 'The transformation of character produced by faith in God.' To supply the element of devotional expression found in the Episcopal ritual, a responsive service has been arranged which expresses penitence, gratitude, aspiration, trust, one which can be sincerely uttered by the modern business man. To provide some altruistic outlet for religious feeling, committees have been appointed to identify the church with various lines of civic and philanthropic work in our own city and with home and foreign missions.

"So simply and modestly did the speaker set forth the result of his thorough study of these problems that the youngest listener might have said to himself: 'Surely this is but reasonable. It ought to be done and I believe I can do it.' Thus did he make himself an apostle of hope to his brethren."

The subjects selected for the "courses of thought" for both years are worthy of careful consideration and practically limitless in their scope. Any one who has given a year's faithful study to "The reality of God as a personal friend" should have acquired a good working basis for Christian living, and be ready to sing with David, "Bless the Lord, . . . who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies." God is indeed a friend, but to avail ourselves of His friendship we must understand Him and fully trust Him. We must trust Him to heal all our diseases as certainly as we trust Him to redeem us from all our iniquities. Knowledge of God, and faith in Him, produce not only a "transformation of character," but also a healthy body; and it is because of their dependence upon the promises of their Master along this line that Christian Scientists are able to show forth the signs which he said should "follow them that believe." ARCHIBALD MCLELLAN.

AN ASTOUNDING CONCLUSION.

ADDED interest attaches to the religious situation to-day, in view of the fact that those who hold tenaciously to the reality of evil are being impelled by the logic of their position to either abandon their premises or else accept the inevitable conclusions they involve. Very many Christian believers pursue the even but unprogressive tenor of their way, by simply standing for their creed, without troubling themselves to think seriously or deeply about what it means; but as the assault of free inquiry continues upon the fortress of undemonstrated theories and opinions, the real issues are brought out into the open, and either the bondage of conformity to tradition is broken, and men are free, or they are driven to the necessity of endorsing the full content of their creed, be it ever so startling.

In the past the supporters of the belief in the reality of evil have tried to dodge the question of God's responsibility therefor, and evil's consequent legitimacy as an essential part of the divine order, by declaring that man was created free, and that evil is so related to the exercise of this freedom that its reality can be maintained without compromising the divine nature. This refuge has not been consented to, however, by logical inquiry, and it is coming to be seen that men must either look upon evil as unreal or else accept it as essential to divine providence and plan.

An eminent Christian writer has recently said that "a world without sin and evil would be a very unsatisfactory place. . . . If there is evolution, growth, development, we must be on the way toward perfection; we cannot have attained to it, hence some imperfection there must be, and imperfection is only a milder name for evil. . . . You cannot have heat and degrees of heat without having degrees of cold; one implies the other." ("The problem of evil," *The London Clarion.*) Yet another writer has said that the bad cannot be extirpated, since it is necessary there should always be something opposed to the good. "In order to know more perfectly what is right and just, and what is to be discarded, we require a course of training,—which it is the office of evil to afford,—and an agency which is necessary for this result cannot belong outside the pale of Divine Goodness"!

That those who assert their loyalty to Christ Jesus can thus speak of evil as indispensable,—can affirm that that which Jesus unqualifiedly condemned as an abomination in its every degree and aspect, is essential to good,—this is indeed astounding, but if this conclusion is the outcome of

Digitized by Google

their religious belief, it is important that the world should know it. "There is nothing covered that shall not be revealed," and the fact is being discerned that consent to evil's reality does commit us to utterly impossible conclusions when it is logically developed.

The assertion that "evil is good in the making" has been the most plausible and taking explanation of things that the materialist could make, and it has always been very comforting to those who do not feel inclined to resist evil strenuously, as Jesus commanded. If the statement were true, however, we should have to concede that the end justifies the means and accept the outcome; namely, the elimination of all moral distinctions, together with our concept of the ideality of the divine nature. It would seem that when thoughtful people apprehend the extent and nature of the sacrifice this view of evil involves, they must speedily conclude that their hard and fast hold on the reality of that which the Master said we should deny, is not a paying investment.

In its vigorous and unqualified assertion that God, good, does not create, sustain, authorize, or consent to evil, and that it is therefore without substance, place, or utility, Christian Science is begetting a wholesome stir among the dry bones of unthinking creedal contentment, and the day is at hand when all who believe in the source of being as infinite good will be compelled to choose between the recognition of the unreality of all save God and his manifestation, and the helpless and unsatisfying acceptance of a bald agnosticism. There is no other alternative.

JOHN B. WILLIS.

GRATITUDE FOR HEALING.

As we study the Bible in the light of Christian Science, we are impressed with the fact that the healing of the sick by spiritual means has always accompanied the higher understanding of God, and that while the old prophets may not have understood the law by which this work was done, they yet reflected sufficient light to dispel the darkness of sin and suffering to some extent. When we come to the New Testament we find that the healing of the sick and the sinful was the distinguishing characteristic of Jesus' ministry and also that of his immediate followers. Although Paul was not a student of the great Teacher, in the sense in which the twelve and the seventy were, we read that he came into the truth through healing and soon began to heal others as the Master had done.

The fourteenth chapter of Acts contains a most interesting account of the healing of one who had been a helpless cripple from his birth; and it is noteworthy that even the pagans who saw this wonderful demonstration attributed it to divine power, while the whole city was ready to sacrifice oxen and to crown Paul and his fellow-apostle with garlands. This expression of gratitude recalls the oft-quoted case of Naaman. We are told that when he left his home in Syria to seek the cure of his leprosy from Elisha, "the man of God," he took with him as an offering "ten talents of silver, and six thousand pieces of gold, and ten changes of raiment." While it is true that none of these were accepted by the prophet, who demanded instead the surrender of pride and personal opinion, the high estimate which Naaman placed upon the healing he hoped to receive is disclosed, and we can readily determine the value he would have placed upon such an understanding of God and His law as would enable him to overcome disease and discord for himself and others, in an ever-increasing degree. Would he not have agreed with the wise man who said that "the price of wisdom is above rubies"?

No one will question the statement of our revered Leader, that "Christian Science is dawning upon a material age" (Science and Health, p. 546). In earlier times material belief was less dense, and a simple faith in divine goodness offered a ready channel for the healing of the sick. But the increased tendency of mankind to disease shows plainly that more than blind faith is needed for the emancipation of the race from the bondage of sin and suffering, and Christian Science has come to supply this need by revealing anew the divine Principle of health and holiness—"the God and Father of our Lord Jesus Christ," of whom Paul speaks as "the Father of mercies, and the God of all comfort."

The materialistic tendencies of mankind have so obscured the teachings and demonstrations of the Master that hitherto sufferers have looked for aid in every direction rather than to divine power, but now through Christian Science thousands are not only seeking but finding the truth which heals to-day as surely as in Jesus' time. For this healing much thankfulness is felt, but the deeper, truer gratitude comes when God is better understood and man's possibilities as the child of God begin to unfold. Then it is ours to tell by word and deed of what has been received, and in so doing we cannot forget the one through whom this understanding has come. Those who have been healed know that God "has dealt bountifully" with them, and they realize that "it is a good thing to give thanks" for the great blessings which have come to them in Christian Science.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

South Kensington, London, England,
Sept. 22, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader and Teacher:—Just the other day there was brought to light what I know must prove of great interest to you. It is a letter of Thomas Carlyle, dated as far back as Feb. 25, 1859, in which he strongly upholds the necessity for uniting in the same individual the offices of priest and physician. He wrote this letter to a firm of publishers in Edinburgh, acknowledging the receipt of a book entitled "The Healing Art the Right Hand of the Church." What Carlyle longed for but thought almost impossible, you have accomplished. His desire was prophecy, yours is fulfilment. Through you Principle is unveiled. "Its only priest is the spiritualized man" (Science and Health, p. 141), and that man the only physician. A multitude of grateful hearts joyfully acknowledge this unity, and bless and praise God for her through whom it has been comprehended.

Very lovingly your student,
W. N. MILLER.

[The letter referred to by Mr. Miller will be found on page 99 of this issue.—EDITOR.]

Utica, N. Y., Sept. 19, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—A growing recognition of your love for us makes me desire to express in words my love for you. I can see that it is because you love your neighbor as yourself that you so persistently turn our thought from personality to Principle. You desire to have us recognize in goodness a reflection of the one universal good, so that we may love the Father better through learning to love His child, and may realize that all His gifts to you are ours if we will manifest the same spirit of meekness and obedience. Thank you for teaching us the way to be with divine Love. The seventeenth chapter of John is illumined since I have had a glimpse of your heart's prayer for us.

Lovingly your student's student,
ROSEMARY BAUM.

Gates Mills, O., Sept. 14, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Teacher:—I write to acknowledge the innumerable blessings which have come to me through Christian Science. Every day I have reason to thank God for the light you have brought into my life, or rather for your

Digitized by Google

revealing of God, Life, to me. I am proving Christian Science an ever-present help. You may be glad to know of my gratitude, progress, and deep desire to be true to the truth for which you are giving all.

Lovingly your student,
RALPH MOODY.

Fowthorpe, Hunmanby, England, Sept. 10, 1906.
Mrs. Mary Baker Eddy.

Beloved Leader:—Even though in your busy life these lines should never meet your eye, I nevertheless feel constrained to give outward expression to my grateful appreciation of what you have done for the world and for me. Time does not lessen but enhances my sense of wonderment at a salvation so complete, so Christlike in its effects, blessing alike him who gives and him who receives. To look into the near future of the fruits of this your teaching fills me with a reverent awe. The following lines but feebly express the spiritual import of what your name conveys to me.

"HIDDEKEL."

Mother in Israel, gentle and meek,
Leaven the lump with the spiritual Word.
Clothed is all power in infinite Love,
Backward now flow the pure currents of Truth.

May Hiddekel on its bosom immeasurable bear my bark in the wake where yours has gone, with Watchfulness in the prow, Truth at the helm, and all under Love's control. Patiently, meekly may I strive to keep my gaze fixed on the goal, till sense gives place to Soul, hope is absorbed in fruition, and "the divine understanding reigns, is *all*, and there is no other consciousness" (Science and Health, p. 536).

Most respectfully and gratefully your pupil's pupil,
N. E. FELL (*Lieutenant-Colonel*).

Durham, N. C., Sept. 24, 1906.
Mrs. Mary Baker G. Eddy.

Beloved Leader:—The Christian Science Society of Durham, N. C., in second annual meeting assembled, send greetings to you, and wish to express their love and appreciation by thanking you for leading them out of material sense into spiritual understanding. Your letter and the By-law in reference to Christmas was most heartily approved and accepted by every member of the society. The building of the beautiful Extension of our dear Mother Church seems to have brought much happiness and prosperity to us, and we love you for your brave Message. We are indeed grateful for your article on "Personal Contagion," and also for the new By-laws. Every word which comes from your pen inspires us with new courage and endeavor. The understanding of Truth in our midst, which your books have given us, has healed diphtheria in one absent treatment, healed typhoid fever in one visit, a case of intemperance was healed simply by attending the services, and a case of cancer of the stomach destroyed and the patient healed in six weeks' treatment.

May we glorify God in our healing works, and ever prove a joy to our dear Leader.

With tender love,
ANNIE C. BRIDGERS, *First Reader*.

A PAMPHLET IN GERMAN.

The pamphlet, "Prayer and Confidence," which has had a wide circulation in English, is now published in German. It contains four articles originally published in *The Christian Science Journal*, viz., "Individuality and Simplicity of Prayer," "Confidence," "Victory over Fear," and "In God we trust." Price, 6 cents each; 60 cents per dozen; $1.15 for twenty-five copies; $2.25 for fifty. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

TESTIMONIES OF HEALING.

It is with love and the deepest gratitude that these words are written in testimony of the blessing Christian Science is to me. One year ago a friend told me of this Science, and of her healing. It seemed that this saving truth was just what was needed by me and in our home. The condition of my mother, who lives with us, could scarcely have been worse, both mentally and physically, and my own condition, supposedly from overwork, was serious. Having confidence in the promise of relief, and realizing the seriousness of my mother's case, I was led to go to a practitioner. Mother at once began to read Science and Health; in three weeks my own ailments were met, and mother's troubles began to disappear. She read daily, and surely and gradually improvement was apparent,—the mental faculties were restored and the kidney trouble entirely healed. Each day brought to her the sweet assurance of the Father's love in the beautiful words of Science and Health and the Science literature, making true to her the promises in the Bible.

One Sunday morning she manifested signs of an attack which had come about every six months. We applied for help to a practitioner, and this thought was uppermost, "Lo, I am with you alway." Knowing that God is the only power, the seeming power of the error was denied, till the struggle ceased in about ten minutes and a restful sleep followed. When mother sat up she asked for Science and Health, ate her dinner as usual, and was able to go upstairs at night unaided; the attack leaving no bad result as formerly. Under *materia medica* she had been helpless for a period of six weeks.

This was a wonderful demonstration to us, and proved without question in our home the allness of God. There are six members of our family, and from that time the Science healing has been received by all, and many beautiful demonstrations have been made, especially with the little ones. During a case of illness, when the older child seemed to have it especially severe, we turned in perfect confidence to Truth, knowing that "there is no power apart from God" (Science and Health, p. 228), and thus the disease was met and mastered. Not long ago a little one of three and a half years caught her finger in the wringer, crushing it very badly. Realizing at once the unreality of pain and the allness of God, a practitioner was telephoned, and in fifteen minutes the child was quiet. A prayer went to the Father, knowing that perfect healing would be realized; and it was, the scar fast disappearing and the nail being perfectly replaced.

Words cannot express our gratitude to the Father, as we have proved that He does care for His children at all times and in all ways; that we can use this wonderful truth, revealed and made practical by Mrs. Eddy, as Jesus taught it; that through her loyal devotion and unswerving purpose the way is made plain. These words are much with me: "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." We saw this light reflected, and thus there was awakened a desire to go and do likewise, that we, too, may some time enter into the joy of our Lord.

There is come a spiritual understanding and new love for the Bible; its meaning once hidden is now being revealed. The daily study of the Lesson-Sermon, and the endeavor to put it in practice, result in a better daily life, more love to all humanity, a fuller realization that God is divine Mind, Life, Truth, and Love. As the possibilities of this truth open, it is the greatest privilege to serve our Master, to study and know more of this Science, to tell the children these truths, and to know that the life which God gives He taketh not away. I praise and thank Him for this light which has come in Christian Science.

MRS. BERTHA GARLING, Auburn, N. Y.

Digitized by Google

It is about three years and a half since I began to investigate Christian Science. I was under the doctor's care for a number of years, until Science was brought to me, and it was a blessing that it came as soon as it did, as I was in a very serious condition. I was sick nearly all the time, and could not work. I took much medicine, but it left me worse than ever. I had lung trouble and other ailments, which have all disappeared. Before coming into Science I was a burden to myself and all around me. The doctor came every day, but I seemed to grow worse instead of better, so that at times I wished to die. Now I can say that God is my strength; He alone is my healer; His medicine is all that I take. I am enjoying perfect health, and Truth has done away with all fear. I was healed by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. My family have all been healed in Christian Science, and I thank God for the truth He has sent to us by our dear Leader. I hope this will help some other who is afflicted as I was.

MRS. HANNAH E. KINNEY, Paterson, N. J.

Nothing real has ever been accomplished except when based upon Truth, and the real work of the world to-day, as in the past, is accomplished by men and women whose work witnesses to Truth. Because Abraham and Moses were faithful witnesses for Truth we have the Old Testament. Because Jesus was a faithful witness for Truth we have the gospel of the New Testament. Because our Leader was and is a faithful witness for Truth we have "Science and Health with Key to the Scriptures," and thousands healed in demonstration that the truth embodied in this book is of God.

The declarations of the truth which are given almost all over the world every Wednesday evening by Christian Scientists, are witnessing to the coming of the kingdom of heaven upon earth. Perhaps never before has error—evil—been uncovered and destroyed as is now being done in individual, civic, and national life. The ceaseless, silent affirmations of the truth and the denials of error, by the spiritually-minded as they daily go about their Father's business, are bringing about this amazing revolution in the individual and public life. If the faithful effort of our Leader can accomplish what it already has, what may not the thousands of her students and followers accomplish, as the result of her example and teaching and by the use of the same spiritual weapons?

I personally know that Christian Science is of God, for the declaration of the truth for me healed me instantaneously of a malady which no human skill ever had healed, and at a time when I believed that God had wilfully afflicted me; when I was tempted to curse Him and die. But a silent call for the healing and compassionate Christ was made and found response; early next morning a Christian Scientist was at my door, uninvited and but half welcome. A previous case of Christian Science healing in my family I had attributed to hypnotic suggestion,—and herein is added proof of the truth of our Leader's words when she says, "Divine Love cannot be deprived of its manifestation, or object" (Science and Health, p. 304). I was also healed at this time of a painful hernia and of tobacco and liquor habits, the latter the outgrowth of my malady, liquor being the only remedy advised. My ailment had been declared to be a serious stomach trouble, and incurable, by a skilled medical practitioner. I may say that for the greater part of my business life I have been a pharmacist and chemist, had taken medicine for many years, and had a fair knowledge of the so-called science and practice of medicine.

In Christian Science I soon learned that what I had called God and believed to be personified vengeance was a purely suppositious concept, existing only to mortal mind, but what a glorious concept of God, the Father, was now revealed. I am glad and thankful for the physical healing, but not all the gold in the world could purchase from me the peace and spiritual understanding that have come to me in Christian Science. May our Leader's light shine as a star forever in the firmament of Truth, for she has indeed turned a multitude unto righteousness,—rightness,—has demonstrated to the consciousness of men that God is not the relentless scourge of mankind but the divine and loving Father; that "man is His image and likeness; hence, man is spiritual and not material" (Science and Health, p. 468).

W. C. KENYON, Chicago, Ill.

[Translated from the German.]

Last year, through the healing of an eruptive disease, I experienced the power of divine Love. The illness had developed to its utmost, but after ten days' treatment in Christian Science every symptom of it had disappeared. During last March I had to remain at home on account of illness,—lung trouble and other diseases. A practitioner was called and help given. For a few nights I had quite a struggle and feared that the end had come, but the sixth night I slept, the cough decreased, and other troubles disappeared. After two weeks the last trace of the disease had vanished. This healing was a revelation to our whole family of the all-power of God,—divine Love,—and it is impossible for us to express enough gratitude. We consider it a great privilege to be adherents of Christian Science and we cannot think what would become of us without it.—WALTER KELLER, Zurich, Switzerland.

[Translated from the German.]

Since January, 1903, I have attended the Christian Science services and meetings, and I am grateful that I have found the truth, for through it I have received great benefits. Last month I was taken very ill, supposedly from over-exertion in my profession and some hardship during an excursion. I suffered greatly, but continued working until the fourth day, when I took treatment and at once felt an improvement. After the fifth treatment I was entirely free from the trouble. Three years ago I had suffered from the same disease, and had to go to a hospital, where I was treated for sixteen weeks, and when I returned home I was very weak.

Through Christian Science I feel entirely well, and I thank God for this revelation of Truth.

FRL. EMMA MICHEL, Zurich, Switzerland.

On last Christmas day I had such a wonderful proof of God's great power, of His ever-present help to those who understand the truth, that since then I have desired that understanding and have prayed constantly that I might be guided into what was right for me to do. Prior to this time I had received many blessings from Christian Science through my mother's understanding, but I myself was not a Scientist and could not see why one should have to leave her own church in order to receive the benefits of the truth as taught by Christ Jesus. My mother has been a Scientist for several years, and each day we could see the good results of this religion, and at last I was awakened to the fact that it is not the form of religion which brings God's help to us, but that it is the casting aside of all materiality and seeking "first" of all "the kingdom of God, and his righteousness."

Our family had all looked forward to Christmas, for we expected our brothers and sister, who had been away all the year, to be at home again. On that morning we were a happy household and were anticipating a delightful day. My youngest brother had received a little steam-engine, and about noon, when he was trying to run it, there seemed to be something the matter. Two of my older brothers began to examine it, when suddenly one of them, who was leaning over it, was thrown backward on the floor. I heard a noise like an explosion, and hurried to my brother, who had risen from the floor. He had been severely scalded,

Digitized by Google

and when I first looked at him a terrible fear came over me, but I did not think of getting material remedies,—my first thought was to get our mother. She had been sitting in the next room, had seen all, and while we were trying to aid our brother, she was seeking the spiritual help. We left him to her care, and then for the first time noticed that our other brother's face had also been burned, but in a very short time the truth had conquered and his face was all right.

It seemed now as if our plans for the day must be entirely changed, not only that our pleasures were to be spoiled, but it was hard to think of the suffering which must be endured from such severe scalding. In one half hour, however, our brother was entirely free from pain, and in less than an hour was getting ready to go with all of us to a family reunion. When ready to start we tied a handkerchief around his forehead, feeling that it would cause too much comment should his whole face be exposed. When we reached our aunt's house, after a twenty-minutes walk, his face was so improved that it was not necessary to cover it any longer. Different ones noticed that something had happened to his face, but did not think of it as anything serious. I, however, knew from former experiences how much we had suffered from scalds and how long it had taken for the injured places to heal. Since that first half hour my brother suffered no pain in his face and had no scars.

This one demonstration, above all others, has made me feel the great need of that higher spiritual understanding which Christian Science came to give us,—which had been lost to the world for so many centuries, until at last Mrs. Eddy has shown us how to prove the value of the Christ-teaching.—ABBIE ATWOOD, Janesville, Wis.

I have had such remarkable help in Christian Science, that I desire to tell of my healing, hoping that it may help others. For twenty-five years I was a great sufferer from distress in my head. I had twenty-seven different doctors, some of whom were noted specialists in Boston, Philadelphia, New York, Chicago, Denver, and San Francisco. I underwent five different operations, one being very serious. The most severe suffering had occurred about every two weeks for twenty-five years; and the only relief for ten years came from injections of morphine, of which I was finally obliged to take very large quantities. A Christian Scientist who knew me and had heard of my sufferings, begged me to try Christian Science; but I had then lost hope of ever being helped, and was so discouraged that I did not want to try anything.

I moved to Salt Lake City in 1903, where this same friend resides. She again advised my trying Christian Science, and I then went for the first time to see a practitioner. At first I received but little benefit, and I now think it was because I opposed the teaching. I could not believe it was for me. I attended the Science services, but was much discouraged when I heard of cases of quick healing. I so opposed the Science that I would not purchase any of the literature, but read borrowed books. After a time I was convinced I must do more for myself; that I should read and study more earnestly. On doing this, I began to see that the truth was for me as much as for any one; and I began to improve gradually. This was about seven months after I had started in Science, and within two months more the severe headaches lessened. Within four or five months more, or a little over a year after I became interested in Christian Science, I was entirely healed.

During the time I was being treated in Science, I was healed of rheumatic trouble in two treatments. Since then I have been through many kinds of exposure, have never had any return of the trouble, and am now in better health than in twenty-five years.

I know that a beautiful light has entered my life through Christian Science, which has given me my health. I am indeed grateful to that noble woman, Mrs. Eddy, who has done so much for mankind in giving to the world "Science and Health with Key to the Scriptures."

MRS. A. WILSON KING, Salt Lake City, Utah.

I wish to express my gratitude for what the understanding of Christian Science is doing for me and mine. Seven years ago a friend left me a copy of the *Sentinel*. I investigated Christian Science by attending Wednesday evening meetings, and one particular demonstration given by a young woman convinced me that God would heal me if I would do my part. I had been a complete nervous wreck for many years. *Materia medica* and surgical remedies had failed to help me. After thirteen months at the woman's hospital, I was discharged as incurable unless I would submit to a dangerous operation, which I refused to do. Three weeks' treatment in Christian Science made me a new creature. I was then anxious to gain the understanding of the truth that heals,—to know what God is. This cost me many a hard struggle, but I kept on with the good fight, a faithful practitioner helping me for several months at a time, because I had much to let go; but I now rejoice to say that the sense of error has lost its power to my consciousness. I am thankful to God, and grateful to our beloved Leader, Mrs. Eddy, who brought to the world this wonderful idea of God which heals the sick.—MRS. ANNA J. DREW, New York, N. Y.

When this blessed truth came to me three years ago I saw something in it which I did not possess, although an active church worker. I lacked understanding, and I immediately investigated Christian Science for myself. Through the kindness of a lady visiting in our town, "Science and Health with Key to the Scriptures" was loaned me, and I soon purchased a copy for myself. After a severe attack of illness, the doctors being able to do nothing for me, I felt that I must take a stand for the truth. I rejoice to say that I have gained much from the *Sentinel* and *Journal*, together with an occasional talk with Scientists. I would like to say that I have been supported during a severe trial with circumstances that would have seemed unbearable in the old thought. There are five children in our home and the three youngest ones are now able to help me as well as themselves. I have within the last six months (since I have studied in earnest) had many beautiful demonstrations. After using glasses constantly for six years, I laid them off and never have been tempted to put them on.

I thank God hourly that this wonderful truth has dawned in my consciousness, and with love and gratitude to dear Mrs. Eddy I hope to follow humbly on in the way she has pointed out to us.

MRS. MARY A. HOWELL, Southampton, L. I., N. Y.

For several years past I have been afflicted with an ailment which increased in its intensity each year. I tried several doctors, and early in the summer of 1905 I went to a specialist, who told me that there was positively no cure for me. Discouraged and disheartened, I sought help in Christian Science, for I had a friend who had recently been healed of a long-standing illness, and I felt if there was help for her there must be for me. I did not delay, or wait for the usual attack, but went at once to a practitioner, and for the first time in ten years I was free from the disease. It was so good to go wherever I wished, even into a barn filled with new-mown hay,—a place which before I had always had to shun.

I am a teacher in a commercial school in Boston, and Science has been such a help to me the past year, for I have

Digitized by Google

worked and taught, knowing that God is the one intelligence and source of strength, and thus my work has been and is one of pleasure in every way. God is indeed very good to me, and I am trying to thank Him, not only in words but in deeds, for the many blessings with which He is constantly surrounding me; and to Mrs. Eddy, who has given to the world that dear, comforting book, Science and Health, I give my heartfelt gratitude.

GRACE E. NICKERSON, Cambridge, Mass.

Over eleven years ago my health failed, and the best medical talent in Chicago was employed but failed to restore me. I was then asked by a friend to try Christian Science, and in one treatment I was instantaneously healed. Nearly all my life I had been a sufferer, and as I grew older the disease continued to get worse. I was treated by a number of physicians with but little benefit, and I also tried medicines, until my system was saturated with poisonous drugs. This was followed by stomach trouble, which seemed to distress me more than the disease had done, and the doctors claimed that it was the effect of the medicines I had taken.

In the spring of 1893 I went to Chicago and secured a position as manager of a World's Fair hotel, and in a few days I was attacked with a fever which my physician pronounced very serious. The doctor did not succeed in breaking it up, and in a few months the other ailments began to grow worse. I changed my doctor, but a nervous breakdown added to my other troubles, and kept me confined to my rooms and bed a part of the time,—almost a total physical wreck.

It was now near Christmas, 1894; my physician had planned a holiday visit, and I was left in charge of a lady doctor not in active practice, who lived in our hotel. This lady had sprained her ankle and was unable to walk, so I went to her rooms for advice and treatment, which I was scarcely able to do. On my way to the doctor's rooms I met a friend who had been treated in Christian Science for a serious trouble and had been relieved of intense suffering, and who insisted that I should go to see a Christian Scientist, but I replied that I did not have faith in that kind of healing. When I reached the apartment of the doctor, much to my surprise the Scientist was there.

I then told the doctor that I had almost made up my mind to try Christian Science. The doctor replied at once, "Don't hesitate a moment on my account; this lady has been giving me Christian Science treatments for my injured ankle and has relieved me of intense pain." These words from the doctor settled all doubts for me, and I went at once to the Scientist's suite of rooms, where, as stated above, in one treatment I was healed of all the troubles mentioned. For over eleven years I have not been sick enough to be confined to my bed or room, nor have I lost a day from business on account of sickness in that time. I do not claim that in all these years I have always been perfectly well, but I have relied strictly on Christian Science healing, which has never failed to bring quick relief.

Christian Science is not a new system of healing the sick, but is the same grand truth which was practised by Jesus when he healed all manner of disease. This blessed truth and Christ-healing was re-discovered and demonstrated by Mrs. Eddy, a grand, pure, and noble Christian character. She has made it clear to us that nothing is impossible with God; and there is no disease that Christian Science cannot heal, if it be properly applied. The only motive which has prompted me to write this testimony of my healing is that it may be the means of showing a way of relief to suffering humanity.

I may add that, with other Christian Scientists, I have the most kindly feeling of respect for the medical profession; several of my personal friends are physicians, and before I was healed by Christian Science they were very kind and did all they could for me.

WESLEY H. ROWE, Brooklyn, N. Y.

It is two years since I heard about Christian Science; a friend telling me of a wonderful case of healing of spinal complaint. I had been considered very delicate from my birth, and was now suffering from spinal and stomach trouble. The physicians told me that I could never be cured, and only by lying on my back half the day could I find relief. We tried all kinds of medical treatment, which did me no good but only made me weaker. When I was sixteen my parents took me to another physician, who advised a course of massage, which I had for two years. During that time I got very disheartened and depressed, as nothing seemed to do me any good and all my time was taken up going to doctors and doing exercises.

It was just at this time that we heard about Christian Science, and my mother decided at once to try what it would do for me. The nearest practitioner lived in Manchester, and after many difficulties we found her at home. I then had my first treatment and she loaned me a copy of Science and Health. My mother and I returned home that night and the next morning I got up free from pain, the first time for two years! This was indeed wonderful to me, for I had suffered intensely, in fact I did not know what it was to be without pain. I continued treatment for about a month and was completely healed. In our home life we have passed through deep trouble in connection with financial matters, but we have found daily comfort in Christian Science. It has never failed us, and all we have we owe entirely to the new understanding it has brought us. I am very grateful to God, and also to Mrs. Eddy for her beautiful life. My great desire is to show my gratitude by helping others and gaining a fuller understanding of this glorious truth.

MURIEL E. KERSHAW, Rochdale, Lancashire, England.

Some years ago I had a very serious attack of illness, which kept me indoors for many months, spending most of the time in bed. I never really recovered from that illness. The trouble still lingered with me, and I could never go out in damp weather without bad results. This was a great trial to me, as I naturally wanted to be strong like other people. A little more than two years ago I went from home on a visit, and when I returned I found two of my sisters, who had been delicate, wonderfully improved. I was very much surprised at the change in them, and was eager to know what had brought it about. They then told me they had been studying Christian Science, and explained what it is. I had never heard of it before, and wanted to read about it at once, because I had seen the good fruits. One of my sisters gave me a copy of *The Christian Science Journal* to read. While I read the articles a sweet peace came to me, and my fear of the disease left me. That same night I was healed, my sister helping me to realize the truth, and every day after that I gained in strength. The more I studied Christian Science the stronger I became. I did not use any other remedy than the truth revealed in Christian Science, and indeed I found that it was and is the only true and lasting one. Soon after that I was healed of a skin disease, also of biliousness. These were overcome simply by studying Science and Health. Another time I was able to overcome, through Christian Science, a bad condition of my throat. I now enjoy very good health, which I owe wholly to Christian Science. I am very grateful for the beautiful way in which I was guided into the truth, and for the practical help it is to me every day. I am glad I have also been able to help others to overcome, and am proving that "the great Physician now is here."

JANE ANN THOMSON, Edinburgh, Scotland.

FROM OUR EXCHANGES.

Those who are reckoning the growth or decay of their sects should consider whether the vital question is not which of them is getting most of the church-attending population, but whether the best part of the modern world is coming to church at all. Those who see the situation most clearly are troubled not so much about their denomination, as about the hold that the churches in general are keeping upon the thoughtful and responsible part of Christendom. "I am disposed to think," said the late Prof. A. B. Bruce of Glasgow, "that a great and steadily increasing portion of the moral worth of society lies outside the organized churches, not by godlessness, but rather by exceptional moral earnestness." Dr. Anderson, another Congregationalist, echoes: "It cannot be doubted that the churches have lost their hold upon two classes of every community, the cultured and the industrial. . . . This state of things is due simply to the fact that the theology of the churches has passed out of the living mind of to-day. The modern man is not living in the world in which that theology had its being. He is not opposed to it. He has no live interest in it." How like the day when the Master found the Church of his day dry and dead, and took his stand outside of it, appealing to the souls of men!

The Christian Register.

If Christ had known only what is in the heart of man, he would have been the greatest of spiritual physicians but without the power to heal. But he knew the heart of God also. If there had been no unique revelation to him, he would still have been, by reason of his purity, his holiness, his union with and likeness to God, the most authoritative of all the interpreters of the spirit of the Father, with a gift of divination, a clearness of vision, born of his spiritual nearness to the Infinite. But he was more than a diviner of what is in the heart of man; he was so full of life himself that it flowed from him in a healing stream, and the touch of it was health, peace, content. Long after he had vanished from the earth men and women in the last agonies of martyrdom looked up at the unseen Christ and died with smiles on their faces.—*The Outlook.*

If we had a truer, a Biblical and Christian conception of the divine love, we would be more loving, more tolerant, more long-suffering towards one another. The object of the divine revelation is not only to make us feel how much God loves us, and how great is that love, but to make us nobler in nature and purer in life, and unless it does this we miserably fail to realize the full grandeur and significance of our essential self. It is not enough for us to believe what the Scriptures say about the love of God; that belief must take shape in our lives, and prove its virtue by effecting such a transformation of character that it shall be a witness to the personal indwelling of the Love in which we believe.

REV. H. T. POTTEN.

The British Congregationalist.

Therefore, beloved, ask yourselves: "Is there any spot in my life where I cross a line and pass over into a region where I live by another moral code than that which God accepts? Where I take the world standard; a region in which Christ's own conscience is not allowed to act and where God is of no account? Is there any place in my life where I make reserves and concessions, and accept another service and wear another livery?"

Ah! if there is, then we may know why we are so weak and sickly in our walk with God. For we are at variance with ourselves; and a soul divided against itself is on the way to ruin.

REV. H. SCOTT HOLLAND, D.D.

The (London) *Church Times.*

God can speak freely to men only through man, and we shall find him best, outside our own experience, in the religious strivings and the faith of our fellow-men. For we can always say of the inward experiences of others, if not of their outward circumstances or their special call, "I, too, am a man, no other than they and of like value in God's sight. God has made me the same offers and promises and is calling me to the same sonship and communion." We are encouraged to seek God in our own experience even by the sins and follies of other men.

The Congregationalist.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price. One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

THE REAL AND THE UNREAL.
THERE IS REST AND PEACE ON EARTH.
CHRISTIAN SCIENCE AND THE BUSINESS LIFE.
A PROTECTING RELIGION.

REPRINTS IN GERMAN

CONCERNING THE TEXT-BOOK.
THE REAL AND THE UNREAL.
SERVICE AND STIPEND.
THE LESSON SERMONS.

Price. Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

SUPPLEMENTS IN GERMAN

CHRISTIAN SCIENCE: ITS PROMISES AND THEIR FULFILMENT. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE: THE CHRISTIANITY OF CHRIST. By Rev. IRVING C. TOMLINSON.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, $3.25; one thousand copies, $6.00.

MISCELLANEOUS PUBLICATIONS

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. By CAROL NORTON. Single copy, 20 cents; twelve copies to one address, $1.75.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

COMMUNION HYMN. "Saw ye my Saviour?" The poem by MARY BAKER G. EDDY, the music by WILLIAM LYMAN JOHNSON. Published in two keys, G and E, for high and low voice. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy; $9.00 per dozen.

CHRIST MY REFUGE. A hymn for voice and piano, with suggestions for organ registration. The poem by MARY BAKER G. EDDY, the music by WILLIAM LYMAN JOHNSON. Arrangement for high and low voice in same copy. Price, 75 cents; $7.00 per dozen.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all orders for above literature to

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00

Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00

Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00

Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid 2.25

Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.00; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 50 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Isthmian Canal Commission's recently evolved scheme of having the actual work of Panama Canal construction done by contract with a private concern has been made public. Chairman Shonts and those who are associated with him, as well as President Roosevelt, are very much in favor of it, and are certain that it will not only materially lessen the total cost of the canal, but will hasten the completion of the great waterway. The great reason for the change is found in the labor problem. Labor for the lower forms of work has been difficult to procure. In the case of a private contractor the matter of labor will be taken off the hands of the Government, for the contractor will already have at his command a working force of thousands of men skilled in the very class of work which must be accomplished in Panama. The Commission will make the contract with one contracting company, composed of several reputable concerns. The companies presenting bids must have a capitalization, over all debts and incumbrances, of $5,000,000, and will be obliged to present a certified check of $200,000 with each bid. The successful bidder must furnish a bond of $3,000,000. The compensation of the contractor will be on the percentage plan, each bidder setting forth for how small a percentage of the total cost of the work he will assume the task. The total cost, upon which the compensation of the contractor will be based, will be estimated by a board of engineers, two of whom will be appointed by the successful bidder and three by the Government.

Within five years, by international agreement and wireless telegraphy, weather forecasts will be made by the Weather Bureau at Washington covering the entire Atlantic Ocean. This is the prediction of Prof. Willis Moore, chief of the department. The establishment of this "world-wide" weather service has already been partially secured. Half a dozen transatlantic liners equipped with wireless, a number of vessels in the coastwise trade similarly equipped, and Government vessels, are already sending reports while at sea to the Weather Bureau. In addition Washington headquarters also receive every day weather reports from wireless stations in the Azores, Bermudas, and Bahamas, the west coast of Africa, and twenty stations in the West Indies. An international wireless congress is now in session at Berlin, and the American representatives present have been instructed to urge the passage of an international law compelling all vessels equipped with wireless, picking up weather reports at sea, to transmit them to the nearest coast, whence they may be flashed by cable to Washington. Within two hours after such reports are received, Professor Moore says, they can be flashed back to sea, to be picked up by vessels, which can thus secure warnings of storms and unusual disturbances. The vessels receiving such a warning on location of a storm could evade it. With such information much of the damage to shipping caused by the Galveston storm, which was only two hundred miles in area, could have been avoided.

Who is responsible for the creation of the Salton Sea in southern California, which already covers an area of four hundred square miles and threatens to spread over two thousand square miles if some means of diverting the Colorado River cannot be devised, is a question perplexing Mexican and American diplomatists. Meanwhile both the United States and Mexico are bending every effort to check the river which has been accidentally turned from its course through the efforts of the California Development Company to irrigate lands in northern Mexico and southern California. Again and again the Southern Pacific Railroad has been compelled to move its tracks which ran through the Salton sink, and have been forced on to the foothills surrounding the great basin. Several small towns are now beneath the waters, and in many places only the tops of the railway telegraph poles indicate where the roadbed formerly was. In the lowest part of the sink the water is now seventy feet deep. For a time the water from the Colorado raised the sea at the rate of six inches a day. The failure to control the river would give this country and Mexico a lake comparable to the Great Lakes separating the United States and Canada. At present the lake is greater than any body of water wholly within the United States except Salt Lake and Lake Michigan.

There are in the United States over sixty million acres of swamp land. Now that the Government has shown what it can do to water the barren deserts of the West, it is suggested that the Government might be equally successful with the swamp lands, which by drainage can be rendered habitable and productive. Opportunity for this would be afforded in the vast swamps of the lower Mississippi Valley and Florida, of the Sacramento Valley of California, of northern Minnesota, and the southeastern coastal plain. The efforts to drain swamp lands began, like the movement to irrigate the deserts, with individuals, was taken up by the corporation or colony, and is now fast becoming the concern of the State. In northern New York, Ohio, and Wisconsin, corporations as well as individuals have drained some of the larger swamps and now raise in them the finest quality of celery, onions, and asparagus. The same has been done also to some extent in the lower Sacramento Valley. In Florida a Governor has recently won an election on the drainage issue, and the people of that State are hoping to drain not only their more accessible swamps, but possibly even the great Everglades. In Minnesota and North Dakota a State drainage commission has been organized and vast areas are being drained and settled under State auspices.

Proceedings will be started without delay to invalidate the patents to millions of acres of coal land obtained from the public domain in the West by methods believed to be fraudulent. This policy is in connection with the President's plan of preventing entry of coal lands on the public domain. The Geological Survey has parties mapping and minutely examining the coal lands on the public lands in Washington, Montana, Wyoming, Colorado, Utah, and New Mexico. There are about one hundred thousand square miles of coal lands in these States and New Mexico, about two-thirds of which has been patented to private parties, the other third belongs to the Government; but of the two-thirds conveyed away by the Government it is thought a vast amount can be recovered through the legal steps the Department of the Interior contemplates.

The south tube of the Pennsylvania tunnel under the North River was officially opened on the 10th inst. Some days before the two shields were brought together final measurements were taken, as in the case of the north tube, opened about four weeks earlier, to ascertain that the alignment was correct. The result was a triumph for the builders of the tunnel that surpassed the one achieved in the north tube, which was the subject of comment the world over. The deviation in the north tube was found to be one-sixteenth of an inch, but in the south tube event this slight deviation had been eliminated and when the two shields met it was found that the two steel tubes fitted as exactly as if they had been made in one piece.

For the first time since the city of New Orleans was founded, 188 years ago, a modern sanitary and underground sewage system was put into operation on the 11th inst. The pipes connected are part of a $24,000,000 sewage, drainage, and water system, building of which began eight years ago.

Foreign.

The Shah of Persia has greatly surprised his subjects by granting them a legislative assembly and a constitution. This step is taken, it is expressly said, "in view of the desire of the Shah for the extension of national tranquility, for the welfare of Persia and all its inhabitants, and to fortify the Government." The new national assembly will be immediately organized in Teheran. It will be composed of equal parties, namely, princes of the blood, clergy, chief of the reigning dynasty, Cadjar, high dignitaries and personages, merchants, and representatives of corporations. It is provided that all civil and constitutional laws shall originate in the assembly, and become effective after signature by the Shah. The flag of the Persian Legation in Washington was flown to the breeze on Aug. 10 in celebration of this important political event.

The resources of Cuba are derived mainly from the tariff on imports. During the first period of American intervention, 1899 to 1902, the value of the merchandise imported was about $66,000,000 a year. This supplied the major part of a total revenue of approximately $17,000,000 a year. Improved industrial conditions resulted in greater exports, larger purchasing power, more imports, increased revenues for the Government. The net result was the creation of a large surplus, which induced extravagance and excited individual and party cupidity. Next in importance to the passage of organic laws, which will correct abuses in her elections and her judiciary system, Cuba's great need is a readjustment of her fiscal system.

About a year ago there was much excitement in Great Britain over German attempts to buy coal fields in South Wales, regarding which Mr. Balfour said in the House of Commons that the Government could not view with indifference the acquisition by foreign syndicates of areas of steam coal on which the British fleets depended. It is reported, however, that such acquisition has been accomplished. The shares of the original company owning the Whitworth collieries in South Wales have been gradually bought by a group of German capitalists, who now control three-fourths of them and request the English directors to resign to make way for a complete German board.

The amnesty proclamation of Provisional Governor Taft of Cuba is of the most sweeping character possible, pardoning every serious crime which has been an outgrowth of the revolution and its cause.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

LECTURE IN THE MOTHER CHURCH OF CHRIST, SCIENTIST.

AN appreciative audience which not only filled the five thousand seats of the new auditorium of The First Church of Christ, Scientist, in Boston, but likewise all the available standing-room, listened with close attention to the lecture delivered Tuesday evening, Oct. 16, by Prof. Hermann S. Hering, C.S.B. The seats on the main floor were filled before quarter past seven, and quarter of an hour later every seat in the galleries had been taken. Many persons who could not obtain even standing-room went away. The lecturer was introduced by William D. McCrackan, M.A., C.S.B., First Reader of The Mother Church of Christ, Scientist, who spoke as follows:—

Ladies and Gentlemen, Friends:—I suppose it is fair to assume that most of us would like to be better, healthier, and happier,—in a word, more harmonious than we now find ourselves to be. Among the five thousand and more persons present here to-night it is likely that the majority at least feel that there is room for improvement in themselves or in their surrounding conditions of life. Some of us, I have no doubt, feel the need of a change for the better to be urgent, if not desperate.

It is a significant fact that whatever may be the differences *among* men as to ancestry, race, temperament, or education, all are, nevertheless, in search of the same greatly desired *goal*. While this person or that may believe the goal to be wealth, or fame, or power, or praise, or personal adulation, or any one of the great number of forms assumed by human ambition, yet everybody when closely questioned will gladly acknowledge that the real goal is what we call happiness, —a condition of thought, a mental attitude.

Christianity teaches that happiness is to be found only in the consciousness of our unity with God, and Christian Science proves that this happiness depends upon no illusive, visionary expectation to be realized after death, but is attainable and available here and now, in the measure of our understanding of the only true God and of His Son, Christ Jesus.

There is nothing sensational about Christian Science, unless one chooses to call the fruits of the Spirit and the works of faith sensational. Christian Science is at work in this work-a-day world of ours, making better men and women out of the ordinary material which is to be found here. Christian Science is no strange or supposedly incomprehensible process by which mortals are suddenly translated into the realm of pure Spirit, having no trials nor tribulations to test their faith and charity, their mercy and long-suffering. The effects of Christian Science are made manifest in improved mental, moral, and physical conditions. It is making better Christians, better Bible students, better fathers and mothers, husbands, wives, and children, better friends and citizens, better employers and employees. God's guidance and God's blessing mark this growing body of Christian people as they march along the road from "sense to Soul," trusting in the omnipotence of God to save from every ill, woe, and sorrow.

For one reason or another Christian Science seems to have been quite frequently misunderstood and thus misrepresented. Christian Scientists do not complain particularly of this, because they know that every great truth has received treatment of this kind since history began, but it is obviously unfair to the millions of unprejudiced persons who are in need of the ministrations of Christian Science to permit such misconceptions to go uncorrected. Much has been corrected in the public prints, and the lectures of the Christian Science Board of Lectureship are doing much to meet the popular demand for correct information about Christian Science and its revered Discoverer and Founder, Mrs. Eddy, the author of its text-book, "Science and Health with Key to the Scriptures," and Pastor Emeritus of this Church.

It is now my sincere pleasure to introduce to you the lecturer of the evening, known to many in this audience as a former First Reader of this Church, Prof. Hermann S. Hering, C.S.B., a member of the Christian Science Board of Lectureship.

Professor Hering's subject was "Christian Science: Humanity's Helper," and the full text of his lecture will be published in the November issue of *The Christian Science Journal*.

FROM OUR CONTRIBUTORS.

THE WORLDLY-WISE STEWARD.

REV. WILLIAM P. MC KENZIE.

THE story of the unjust steward, as it is called, might well be named the story of the dishonest steward: but since the peculiar form of dishonesty described involved such scheming as drew forth a compliment from the defrauded employer, as if he thought it an evidence of cleverness, the above title may not be inapt. At any rate the inference from the story teaches that we should not adopt the really short-sighted methods of worldly wisdom in order to make present gain, but rather should so plan our lives as to secure enduring riches. In discussing the translation the endeavor will be to throw a ray of light on the meaning of the passage, such as we may sometimes gain from a consideration of the original text. Our suggestions are, however, put forth for consideration, not as a final or authoritative interpretation of the text.

This story recorded in the sixteenth chapter of Luke's Gospel is not called a parable in the text. It does not have the sign of the parable, as when Jesus said, "Whereunto shall we liken the kingdom of God? . . . It is like a grain of mustard seed;" or "like unto leaven." So we may expect that in it we are not going to find a parallelism in human affairs with spiritual processes. Indeed the teaching from this story is drawn by direct contrast rather than likeness, as we shall see.

Let us first relate the story. There was a man of wealth who had an overseer, and this overseer was accused to him of squandering his property. So, having summoned him, he asked, "What is this thing I hear concerning you? Make out an accounting of your management, for you can no longer be overseer."

"What am I to do," said the overseer to himself, "since

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

my master is going to take away my office from me? I haven't the strength to dig, and to beg I would feel ashamed. I know what I will do, so that when I am dismissed from office some may welcome me into their houses." So, inviting to him separately each one of his master's debt-owers, he said to the first, "How much do you owe my master?" And he replied, "An hundred measures of oil." Then he said to him, "Take your account, sit down quickly, and write fifty." Again, to another one he said, "And you, how much do you owe?" He replied, "An hundred measures of wheat." To him he said, "Take your account and write eighty." And, on discovering it, his master complimented the guile of the overseer, because he had acted thinkingly; for the sons of this world are for their own generation more alert in thinking than the sons of light.

The story gives us an early example of the rebate system, and although the rich man had suffered by the embezzlements of his financial agent, he rather admired the far-sighted method he employed for making friends by a final piece of rascality. If these bills were for a year's rent of farm and olive yard, then the man who should have paid his rent in oil had a rebate of one gallon for each day in the year, and the farmer who owed in rent twelve hundred bushels of wheat had a rebate of two hundred and forty. Even though they recognized that they were to have no more favors of this kind, yet by what is spoken of as "honor among thieves" they would feel bound to do something for the overseer, who could claim to have been discharged because he had favored them. This is the wisdom of the world, to enchain others by making them participants in wrong-doing, and then to make use of them. The clever overseer knew his men when he offered the rebate, and their eager acceptance of the dishonest advantage made them his servants; so he had neither to dig nor to beg, and even the defrauded master said, "Well, he was a clever rascal."

The ninth verse of the chapter has given rise to much discussion. Evidently the authorized version is not a correct rendering of the original: "And I say unto you, Make to yourselves friends of the mammon of unrighteousness; that, when ye fail, they may receive you into everlasting habitations." The revisers of the Bible made some attempt to clarify the translation, and rendered the verse "Make to yourselves friends by means of the mammon of unrighteousness; that, when it shall fail, they may receive you into the eternal tabernacles." But would this be in line with the Christly teaching? Could one honestly exhort a man to use his unrighteously gathered riches to win the friendship of good people, with the promise that when his material world collapsed, they could in some way receive him into heavenly places? That would be a plea for "tainted money" such as this age has outgrown. Is the lesson which Jesus drew from the story intended to indicate that we shall follow the example of this rascal steward, this rebating agent, this embezzling overseer? or is it that we shall do the exact opposite? The four verses which follow the one in question make very clear what the teaching really is.

The confusion comes from the translation of the Greek preposition *ek*, which, when used in respect of *place*, is rendered "out of," and when used in respect of *origin* or *source* its usual meaning is "by means of." In Matthew, 7 : 5 this preposition appears twice—being translated "out" and "out of" in the admonition, "Cast out first the beam out of thine own eye." The word translated "cast out" means exactly to throw away; and the idea of separation is strongly suggested, as if it were said, "Throw away the beam away from your eye." In composition with other words this preposition *ek* implies, among other meanings, removal away from, out of, or one might say "away out." In its simple use this idea of separation is primitive, because when translated "out of" in regard to objects, it is used of an object once *in* another but now separated from it in respect of place, time, source, or origin—so at least it is affirmed in Robinson's Lexicon of the New Testament.

What, then, was Jesus' teaching from the story? He acknowledged that the worldly-wise master admired the rascality of the worldly-wise steward; then, turning the conversation, he began: But I for my part say unto you, make you for yourselves friends away from (or separate from) the riches coming from fraud and injustice, so that when you fail, they may receive you into the eternal dwellings. He that is faithful in a very little, in much will also be faithful, and he who in a very little is dishonest, in much will also be dishonest. If then you should prove unfaithful in regard to the wealth connected with dishonesty, who will entrust with you that which is genuine? And if in regard to what belongs to some one else you are not trustworthy, who will give you what is your own—that is, who will be trustworthy for you?

The final summing up of the instruction is in the words, "Ye cannot serve God and mammon." We can remember when the glory of material success was a pulpit theme, but we are grateful that the whole trend of thought has already changed. Men have seen the dishonest suffer under the scourge of universal disapprobation, and have seen that material possessions bring no balm. They have seen that certain qualities of thought bring abiding happiness and eventually win the good will and confidence of all right-thinking men.

It is not enough, however, that the dishonest be ostracised from fellowship with worthy men; the good men who thus express their disapprobation must also learn from Christian Science about the genuine and real riches, the qualities of mind which enrich character, which reveal the wealth of affection, and build up enduring substance. They may thus establish relationships with those who live apart from dishonesty, cruelty, coercion, and fraud; and in such friendships there is a foretaste of heaven, and indeed preparation for that state which is the kingdom of heaven, or the reign of divine Love.

There are many who recognize the manifest change in public thought whereby materialistic ideals are being superseded, who perhaps have not yet recognized the service of Christian Science therein. Like the imperceptible advance of light at dawn which finally fills the world with its illumination, so has the light of truth become pervasive, until the whole world sees more clearly the beauty of spiritual being and the attractiveness of holy living, because they have seen this harmony and beauty illustrated in characters refined and cultured by Christian Science teaching.

STUDY THAT SATISFIES

MARY LLOYD MC CONNEL.

SCATTERED over the world to-day are men and women more or less isolated from society. It may be they dwell in western mining camps, on Canadian ranches, on sheep-farms in the Australian bush, or even in secluded hamlets of rural England. They have once lived in cities with large possibilities of education and of culture, and now, side-tracked from the world, they feel stirring within them the fear of stagnation and mental deterioration. There are no picture-galleries to visit, no lectures to attend, perhaps not even congenial society to frequent. Under such circumstances they imperceptibly fall into slipshod mental habits. The daily routine of work is performed mechanically. "The daily round, the common task" seem to furnish the sole outlet for energy. For them life loses its zest. There is no guerdon for ambition. Too often a dull discontent with a monotonous existence takes the place of hope, vitality, and strenuous endeavor. The body responds to the depressed mentality; physical ills follow; relief is sought in *materia medica* or alcoholic stimulant, until "the last state of that man is worse than the first." Now for this false condition of things a sure and simple remedy is at hand,—within the reach of every man's time and means.

Digitized by Google

God never intended a daily round of monotonous work to satisfy man's immortal cravings for something beyond the material; but society functions, visits to art-galleries, or attendance at learned lectures are not necessary to keep us mentally awake, improve diction, feed imagination, cultivate the intellectual faculties—in short, to educate us in the truest sense and give supremest culture. The systematic study of the Lessons given in the *Christian Science Quarterly* proves of untold benefit, enabling us not only to overcome illness should it present itself, dispel fatigue, and guard against contagion, but the concentration of thought necessary to find the consecutive "steps" which build up each Lesson proves also of incalculable educational worth.

No magazines that come into a home can uplift, calm, and strengthen as do *The Christian Science Journal* and the *Sentinel*, bringing periodically their messages of earnest personal endeavor, intimate correspondence, and helpful editorials. The reading of one of the Christian Science pamphlets in our isolation will bring a sense of satisfaction and of peace not to be obtained from merely personal preaching, and lastly, the daily reading in the Bible and in "Science and Health with Key to the Scriptures," and "Miscellaneous Writings" by Mrs. Eddy, opens vistas of mental growth undreamed of before. Our lives cannot become narrow, routine will not degenerate into a rut, nor our vocabulary grow circumscribed, where these marvelous books are studied. Besides bringing us physical healing and spiritual regeneration, they prove supremely interesting as educational factors. Thought grows more harmonious and less chained by outward circumstances. Language becomes gentler and more refined. We no longer sigh over neglected opportunities of the past, or over present limited environment. Religion takes on a new meaning and becomes for us not a matter of creeds or sects, but universal and soul-satisfying.

As we go about our daily avocations, after the study of the morning's lesson, we remember that to partake of the true Sacrament the first step necessary is the purification of sense and self, to attain which humility and repentance are needful. These lead to confession of sin, reformation and amendment of life, watchfulness and prayer, culminating in regeneration and a rising into newness of life. As we ponder over the synonyms for God which illumine the pages of Science and Health, we thereby realize how much our mental horizon has widened since we commenced the study of Christian Science. God is no longer the Deity of Milton or of Dante. We have learned that God is Life, that Life is Truth, separating the false from the true; that an understanding of divine Principle even in part heals the sick and casts out sin; that Truth must be demonstrated and not merely believed.

It takes seeking and striving to gain an understanding of Truth that will overcome sickness and cast out sin, but we learn that Truth "endureth for ever" and must ultimately triumph over all error, and as we realize that God is Love, Love leads us out of matter into Spirit. Love purifies our affections and renders them spiritual. It demands the sacrifice of self, the giving up of all for Truth, and thus only can we realize that God is Love and Love is All,—that Soul governs man by spiritual laws; therefore the real man is governed harmoniously and is not subject to the laws of *materia medica* or orthodox theology. We thus come to see that our work is the recognition of spiritual existence here and now, the overcoming of the false testimony of the senses which leads us to believe that we live in material conditions. Through purity of thought alone can we gain this realization, and sin has to be cast out and demonstrated over ere we reach perfection. By this most satisfying study of Christian Science, life on the lonely ranch or in the secluded village grows wide beyond all narrow limits. We recognize ourselves as dwellers in the realm of divine Mind, happy children of the one Father, possessed of all things good and needful.

SELECTED ARTICLES.

THE LARGER FRATERNALISM.

A larger fraternalism is the spirit of the hour. Among those who direct, this is acknowledged as heaven's handwriting on the wall. As Dr. Lyman Abbott has lately said, "We are rapidly passing out of the reign of the monopolist, that has held as a tyrant those that toil; out of the age of the many who struggle for the mastery, with 'the devil take the hindmost' as their creed, into the age of fraternalism, where the government is to come to the loving sense of its great fatherhood of the people, who are brothers all. New Zealand has shown us already how this is in many ways so practically possible. The spirit there born is rapidly sweeping the world. From the heart of those directed, as well as those that direct, the same spirit is being most rapidly born. Socialism, with all its many faults in the past and many more to overcome, has this clear message that we must all acknowledge is born of heaven—the message of comradeship, the message of a great common brotherhood, with a government which insures the paternal adjustment of the rights of all."

So from both sides of the great barrier between us we are tunneling to the common center, and already back and forth from one side to the other, the directors and the directed, are we passing along to the coming heart conviction of the real great comradeship—the thought of the great fraterhood. The purpose of the Church is to get into the hearts of all the one common spirit of Jesus, the great mediator of all our difficulties.

Jesus showed this spirit of brotherhood even to the meanest. He wanted to break bread with the publican, the meanest monopolist of the hour. When he did this the stone heart of the man was broken; it melted like wax in the presence of such a warmth of love. To-day followers in his footsteps on both sides of the barrier are doing likewise, and every such willingness to be a brother to those most unbrotherlike has brought a new light to the dark social problem we have to solve.

Men only fight like wild beasts because they think their opponents are trying to injure them. Let them once see that it is love that prompts the action—a desire to come to a real comradeship and brotherhood—and the savage in us goes. We are like the wild lions; all our savageness is plucked out when once we feel our keeper is our lover and we have nothing to fear.

Sam Jones, the "Golden Rule" mayor of Toledo, once said, as he was leaving Hull House, that there are no conditions in life where a man should not use as his only defense the weapon of love. There never has been nor ever will be a problem to meet in the social life, or any life, where this is not the great panacea. Though all is law, still all is love. When this takes hold of men's hearts we begin to count our *frater-nosters* with our *pater-nosters*. Then we, like Christ, walk upon the waves of a life tempest and say, Peace, be still; in place of fearing, like timid disciples, that we will be forever lost in the storm of social struggle that drives men like the furies in their war of words and their war of deeds.

Extracts from sermon by REV. FRANK N. RIALE.
The Chicago Sun.

Mrs. Eddy, the author of the Christian Science text-book, "Science and Health with Key to the Scriptures," affirms that it is the divine Mind alone that heals, and inasmuch as God is the only healer it is the realizing prayer of His omnipotence, omnipresence, and omniscience that overcomes sickness and sin. The student therefore who has the clearest and highest sense of this grand fact is best qualified to heal the sick, and he who in the largest degree dispossesses himself of human will and overcomes all sin in his own

Digitized by Google

consciousness meets with the most success in the healing of both physical ills and moral depravity. As multitudes have been healed perfectly and permanently of disease and sin through Christian Science when all other means had failed, and have also been uplifted spiritually by its teachings, any assertions or insinuations to the contrary will have little weight with the large majority of well-informed people at this day and hour. CALEB H. CUSHING.

Portland (Me.) *Press.*

AMONG THE CHURCHES.

CHARLOTTE, MICH.

The sale of the Episcopal church property, corner of Lovett and Washington Streets, has been consummated this week, the same passing into the hands of the Christian Science Society of this city as purchasers. This corner was bought and church built by the Episcopal people in 1889, and until about five years ago regular services were held a greater portion of the time, since which only occasional meetings have been held. The location is a most desirable one, being as central as it could be and yet sufficiently retired to avoid confusion from the outside. The building is an excellent one of its kind, and with some repairs will be as good as new.

In the purchase of this property the Christian Scientists here have secured to themselves a pleasant church home which will conveniently accommodate their needs for some time, and which will not only serve their needs but better encourage such of the public as may wish to attend the Sunday and Wednesday evening meetings of the society. Their present rooms in the Tribune Building are very pleasant, but not as accessible or inviting as the church will be when placed in order and arranged for their use.

This society is entitled to considerable credit and consideration in its steady advancement since its first formation about five years ago. While there has been no semblance of urging, or methods to unduly attract an inquiring public, there has been no step backward, but a steady gain in strength. In fact it is noticeable and worthy of thought that these churches do not turn backward wherever established. It is not for us to attempt to explain why, or make any comparisons with other organized bodies of Christian workers, but it is observable by many who have watched the progress of the Christian Science movement that its members seek to be devoted to the basic truths upon which it is founded, rather than yield in any way to world pressures. The simple but useful services indicate great loyalty and that foundations are laid upon the teaching found in the Sermon on the Mount. The society is to be congratulated in securing so pleasant and inviting a home. May it grow and expand in usefulness.—*Charlotte* (Mich.) *Leader.*

CHARLESTON, W. VA.

First Church of Christ, Scientist, of Charleston, held the initial services in their new hall on Aug. 19. The seeming adversity, the fire that visited us about a year ago, bound the members together yet more closely with ties of sympathy and love, and aroused new energy and enthusiasm. There is a feeling of deep thankfulness that the difficulties of the past months have been surmounted and that the needs have been met. The new rooms are in the same location, the entire second floor having been constructed to meet the requirements of the church. The Reading Rooms are large, bright, and homelike, and the auditorium is capable of holding nearly two hundred people.

Though Christian Science at first met with opposition and prejudice in this community, it has gradually spread its influence until now there is a far more kindly feeling. The lecture at the Opera House on May 26 was well attended by the city's most thoughtful people, who expressed deep appreciation. As a whole and as individuals the church endeavors in the spirit of Love to "do all things without murmurings and disputings," and to be obedient to the counsel of our Leader.—*Correspondence.*

BROCKTON, MASS.

While it has not been definitely decided what line of action will be taken by the Brockton First Church of Christ, Scientist, respecting the recent gift from Mrs. Clara Snow of the twenty-thousand-dollar Cobb estate on North Main Street as a church site, members are looking forward to the erection of a handsome edifice, similar in type to those built by the Christian Scientists the world over. All the members of the church who have expressed their views are of the same opinion—that no time should be lost in raising the amount of money necessary to put up a church building which will fully meet the needs of the society now and for years to come. The local church has been established between seven and eight years. There was a very limited membership at the start, but interest has steadily developed in the work until at present the numbers have been increased to over one hundred.

When Mrs. Snow purchased the Cobb estate recently there was considerable conjecture as to what disposition she was to make of the property, and when, at a special meeting of First Church, Wednesday evening [Sept. 12], she presented the deed, it came as a great suprise and all the members present could say was that it was a magnificent gift. It was all done very quietly and proper words of appreciation were expressed. The society has never had a permanent church home, but has held its meetings in various halls about the city.

Brockton (Mass.) *Times.*

THE STREET IMPROVEMENTS IN CONCORD.

We feel sure that our readers will be pleased with the following excerpts from a few of the letters received by Mr. J. Wesley Plummer in connection with the fund for the improvement of certain streets in Concord, N. H.; in fact, all the letters received by Mr. Plummer express the pleasure of the writers in taking part in these improvements which will contribute so much to the comfort of our Leader.

"Please accept the enclosed check to be used for street improvements in Concord. It is indeed a privilege and pleasure to help, ever so little, to 'smooth the pathway' of our beloved Leader, who has done so much for us in showing the *high-way* to health and holiness, wherein and whereby we have been inexpressibly blessed in innumerable ways."

"I feel the deepest gratitude that I am privileged to add the enclosed amount to help complete our Leader's desire, for through the study of her wonderful works my pathway has been illumined with peace and happiness."

"The opportunities are so very few wherein we can contribute to our beloved Leader's comfort, that we gladly welcome this occasion to show in a measure our love for Mrs. Eddy and for her home city."

"My debt of gratitude to our Leader in Christian Science is greater than can be expressed. It is a joy to find even a small way in which to add to her comfort."

"Enclosed find check to go toward the pavement fund in Concord, of which you are acting as treasurer. I deem it a privilege to add my mite."

"This is only a small token of our love and affection for one who has done so much for us and the world at large."

"We are very glad that there is something that we can do in this way to express our gratitude to our Leader."

"I am pleased to have this opportunity of adding to the comfort of our beloved Leader."

THE LECTURES.

THE BOARD OF LECTURESHIP.

The appointments for the year ending June 30, 1907, are:—

Miss Mary Brookins, C.S.B., 925 N. Y. Life Building, Minneapolis, Minn.

Hon. Clarence A. Buskirk, C.S., 1337 Mt. Clare Place, St. Louis, Mo.

Clarence C. Eaton, C.S.B., 624 N. 3rd Street, Tacoma, Wash.

Judge William G. Ewing, C.S.B., 541 St. John's Avenue, Highland Park, Ill.

F. J. Fluno, M.D., C.S.D., 1368 Franklin Street, Oakland, Cal.

Judge Septimus J. Hanna, C.S.D., 1532 North Nevada Avenue, Colorado Springs, Col.

Prof. Hermann S. Hering, C.S.B., 91 N. State Street, Concord, N. H.

Edward A. Kimball, C.S.D., Post Office Box 518, Chicago, Ill.

Bliss Knapp, C.S.B., 4 Batavia Street, Boston, Mass.

Frank H. Leonard, C.S.B., 305 Temple Bar Building, Brooklyn, N. Y.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

William N. Miller, K.C., C.S.B., 6 Sumner Terrace, S. Kensington, London, England.

Mrs. Sue Harper Mims, C.S.D., 575 Peachtree Street, Atlanta, Ga.

Rev. Irving C. Tomlinson, M.A., C.S.B., 82 Warren Street, Concord, N. H.

Rev. Arthur R. Vosburgh, C.S.B., 517 Central Building, Rochester, N. Y.

Bicknell Young, C.S.B., 243 Wabash Avenue, Chicago, Ill.

RIVERSIDE, CAL.

A large audience assembled last evening [Sept. 25] at the Loring Theatre to listen to a lecture on Christian Science delivered by Bliss Knapp of Boston. Judge Densmore introduced the speaker, saying in part,—

It is not my purpose to remark even generally upon the subject of this lecture. I am not capable. It is a subject beyond me. I know generally that Christian Science teaches truth, and that Christian Scientists are the happiest, most thoughtful, and best people in our land, and whatever rule of action produces such results is worthy of our most careful consideration and thought.

Riverside Enterprise.

DANVILLE, ILL.

Mrs. Sue Harper Mims, Christian Scientist, lectured at the Grand Opera House last night [Sept. 28]. She was introduced by R. B. Holmes, who said in part,—

During the past decade Christian Science has had a most remarkable growth, and many have been attracted to this church, whose doctrine seems to be "the faith of the fathers," resurrected, as it were, by that brilliant woman, Mrs. Mary Baker G. Eddy. Though I am not a Scientist there is much in this belief that appeals to me. It is wonderfully comforting to be able to accept literally such statements of the Master as, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

Danville Democrat.

DAYTON, O.

Twice First Church of Christ, Scientist, on South Boulevard, was taxed to its full capacity, Sunday afternoon and evening [Sept. 30], to listen to a lecture on "The Idealism of Jesus," by Rev. Arthur R. Vosburgh of Rochester, N. Y. At the afternoon lecture he was introduced by Rev. G. F. Deal of this city, a United Brethren minister. In introducing the lecturer, Rev. Mr. Deal said,—

There are many thousands of good Christians in the churches who oppose Christian Science because all they know of it they have learned from its enemies. All these will become its friends when they learn that Christian Science stands for all they have hoped or prayed for, and that it helps them to realize it. Up to two years ago I opposed this church, for all I knew of it was what I had learned from its enemies; but since I have studied its text-book, read its literature, and mingled with these people in public and in private, I have entirely changed my opinion, and now I believe Christian Science to stand for primitive Christianity, as no other church does. I have not changed my faith in the Bible and its great truths, only these have become clearer and better understood.

All who are here know full well that Christ and his early disciples healed all manner of disease. This was so common that it was expected of them, so that the people brought their sick and laid them on the streets. For years I have felt that these signs did not follow them that believed, as Christ said they should, and I could not explain why. Christian Science, in healing the sick by divine power, fills the commission as no other church to-day. The proper understanding of God and of man and their intimate relation to one another is the greatest knowledge within the reach of man. The demonstration of these great truths brings peace and blessings beyond all description. Many of earth's best Christians suffer in pain for days, months, and years, believing that this is the will of God. When they learn and understand that God does not want His dear children sinful or sick, they will throw off sickness, as they do sin, by divine power. When your blinds are down on a bright day your room is dark; remove these and it is filled with light. This is no miracle; it would be a miracle if it were not so. This is the teaching and faith of Christian Science. None are so sinful or so hopelessly afflicted but that divine Love and infinite power and goodness will heal them when they come truly and lawfully and really in contact with it. Christian Science gives us an insight into these deep spiritual things in a way that it becomes easy and natural to live under the shadow of the Almighty.—*Dayton Herald.*

LECTURES AT OTHER PLACES.

Blue Rapids, Kan.—Hon. Clarence A. Buskirk, Sept. 21.

Greensburg, Pa.—Rev. Arthur R. Vosburgh, Sept. 23.

Galena, Kan.—Judge Septimus J. Hanna, Sept. 23.

Wheaton, Ill.—Bicknell Young, Sept. 23.

South Bend, Ind.—Mrs. Sue Harper Mims, Sept. 23.

Topeka, Kan. (First Church).—Hon. Clarence A. Buskirk, Sept. 23.

Los Gatos, Cal.—Dr. F. L. Fluno, Sept. 24.

Sheboygan, Wis.—Bicknell Young, Sept. 24.

South Haven, Mich.—Judge Septimus J. Hanna, Sept. 25.

Elgin, Ill.—Rev. Irving C. Tomlinson, Sept. 25.

Lincoln, Kan.—Hon. Clarence A. Buskirk, Sept. 25.

Hastings, Neb.—Edward A. Kimball, Sept. 25.

Lawrence, Kan.—Hon. Clarence A. Buskirk, Sept. 27.

Rapid City, S. D.—Judge William G. Ewing, Sept. 27.

Hoopeston, Ill.—Judge Septimus J. Hanna, Sept. 27.

London, Ont.—Bicknell Young, Sept. 28.

Oak Park, Ill.—Rev. Irving C. Tomlinson, Sept. 28.

Sabula, Ia.—Judge Septimus J. Hanna, Sept. 28.

Lead, S. D.—Judge William G. Ewing, Sept. 28.

Minneapolis, Minn. (First Church).—Rev. Irving C. Tomlinson, Sept. 30.

Dubuque, Ia.—Judge Septimus J. Hanna, Sept. 30.

Logansport, Ind.—Mrs. Sue Harper Mims, Sept. 30.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

A USEFUL BOOK.

Beloved Editor:—I recommend to the readers of our papers the book, BRYAN AMONG THE PEACE MAKERS, edited by Hayne Davis, a lawyer and a Christian Scientist. It is filled with useful information for the members of our denomination. MARY BAKER EDDY.

Pleasant View, Oct. 11, 1906.

[The following letter to Mrs. Eddy from Mr. Davis, the editor of the book above referred to, will prove interesting to our readers and we are glad to give it prominence in our columns, dealing as it does with topics of world-wide interest.—EDITOR.]

New York, N. Y., Oct. 8, 1906.

Beloved Leader:—You will doubtless be interested to hear of the following way in which your efforts are bearing fruit. On the day that the Peace of Portsmouth was announced in Europe, a delegation from the United States Congress proposed to delegates from eighteen other National Parliaments, the creation of a Permanent International Parliament, as a step toward introducing a reign of law in international affairs, so as to give to the people of all countries as great a measure of justice and peace as human governments can supply.

At the request of the President of the American delegation, I formulated a basis for such a Congress, and he decided that this plan should be presented without alteration. A number of Europe's most eminent statesmen were appointed as Commissioners to report on the American plan. Though I was only the secretary of the American delegation, I was invited to visit several of these gentlemen while they were arriving at their conclusions, and had the privilege of aiding in the preparation of their report. In June a special session of the Inter-Parliamentary Union was called, to convene at London, to pass upon the reports of the Commissioners. The little book I am sending you explains how the conference was induced to declare for the three essential ideas of the American plan, which, taken together, constitute a complete proposition. The President of the American Delegation has expressed his appreciation of the services rendered by me, and so have some of the European Parliamentarians. I am indebted to you for what I was able to accomplish. Before turning to Science, but after attending service at First Church, New York City, several times, I spent some months in Europe. This idea came to me at that time. I wrote a good deal on the subject, but never got anything published.

In January, 1903, I broke the resistance which had held me from Science, and began reading Science and Health and attending First Church of Christ, Scientist, New York City regularly. In July, 1903, I was received into membership in this church. In February of that year an article by me appeared in a leading magazine, and in July an article of mine was published which brought me in touch with the leaders of this international body. Divine Love has supplied the means for me to attend its sessions since then, and to aid in its work.

This movement seems to be the fulfilment of the prophecy in Daniel, chapter 2. The world-wide government now being formed seems to be the last of the human governments, and the stone cut from the mountains is undoubtedly the Science which you have apprehended and made available to all mankind.

In sending a word of gratitude and of reverence for the way in which you have accepted the mission that has devolved upon you, I must confess that at the outset I was far from appreciating the qualifications demanded for participating in the work which the Master instituted and which you will finish. Compelled to go along the way that would give me cleaner hands and a purer heart for ascending the "hill of the Lord," I rejoice already in some sins destroyed, and look forward to the destruction of all sin through a fuller understanding and demonstration of the truth revealed in your writings. I desire to draw near you by following in the way you have taken, and always to be a worthier representative of Christian Science.

Gratefully a student of your loyal student,

HAYNE DAVIS.

THE LECTURES.

WE are again prompted to enter a plea for a larger and more liberal thought regarding the lectures, and to urge that the most ample provision be made for the accommodation of the vast and ever-increasing number who wish to hear these authoritative expositions of Christian Science. Those who have to do with the arranging of these lectures in the branch churches can confidently count upon a widespread desire for information on this subject, and if they provide sufficient accommodations for large audiences and give proper and dignified publicity to the occasion, they will not be disappointed in the attendance. If, however, Christian Scientists themselves regard these lectures as small and limited affairs, they will reap only as they have sown.

The desire for authentic information regarding Christian Science is well illustrated by the large audience which assembled last Tuesday evening in The First Church of Christ, Scientist, in Boston,—an audience which completely filled the vast auditorium and exceeded in number by almost one hundred per cent any previous assemblage in Boston for the same purpose.

It should not be supposed, however, that all that is needed to build up a Christian Science church or society in any community is to have a lecture delivered by a member of the Board of Lectureship. This is a step which can be profitably taken only after a foundation has been laid by the healing work which accompanied our Master's ministry and which must accompany the ministry of Christian Scientists. Without this foundation preaching is vain.

An exact science needs orderly methods, and it has been found that as such methods are followed by Christian Scientists in their public work, the best results are obtained. The first in order in any field must necessarily be the healing, and after that will come the society, the church, the Reading Room, the Wednesday evening meetings, and the lectures. Thus will normal conditions and a healthy, permanent growth be assured.

The lectures are doing splendid work in correcting misstatements about Christian Science, and in clearing up misconceptions of its teachings which are due to misinformation, and they will do yet more and better work if they are used to their full capacity for good.

ARCHIBALD MCLELLAN.

PERFECTION ATTAINABLE.

THE beginner in Christian Science is sometimes at a loss to know how he may reconcile his former views with the ideals presented in its text-book, but he soon learns, and the sooner the better, that in so far as his concepts of being are erroneous, to that extent they are irreconcilable with

Digitized by Google

the truth. Our Leader says that "inverted thoughts and erroneous beliefs must be counterfeits of Truth;" indeed she says that mortals "were counterfeits from the beginning, to be laid aside for the pure reality" (Science and Health, pp. 207, 409). Now, no Christian Scientist desires either to pass or to accept a counterfeit of any kind in the mental realm, any more than in the physical realm, so-called. He has started out with Truth as the basis of all his thinking and acting, because he has learned that divine Principle and His ideas constitute the all of reality. He also sees that all his false concepts must be given up, in order that the divine ideals of health and holiness may be realized by him. To do this quickly and effectively he must, like the virgin's son of whom Isaiah writes, "know to refuse the evil, and choose the good."

While Christian Science teaches that all of God's ideas are good, like himself, it never teaches that sin, disease, or death are either good or real, and only a careless or superficial study of our text-book could leave on any student's thought such a mistaken sense of its teachings. After accepting Christian Science, we constantly find ourselves placed where we must choose between the spiritual and the material, the good and the evil, the real and the unreal, and here it should be remembered that unless evil were to put forth some sort of a claim to be real or good it would have no recognition at all. In view of this tendency we need to guard against what Mrs. Eddy calls "false charity" (Science and Health, p. 447), which is only a deceptive counterfeit of the true. It is false charity to claim perfection for mortals. Even the most sincere student of divine Science can only say as did Paul, "Not as though I had already attained, either were already perfect . . . but this one thing I do . . . I press toward the mark."

Our text-book makes it very clear that "mortals are not like immortals, created in God's own image;" that they "are a discordant race, and are oft-times false brethren" (Science and Health, pp. 295, 444). Happily, however, it presents the true model,—the perfect man,—and teaches us how we may realize and express this idea and so maintain perpetual harmony. True charity separates all evil—whether sin or sickness—from our concept of man, and maintains the possibility as well as the necessity of each one's reaching the perfect standard of perfect manhood. Any attempt to call that good which is not good must result in disappointment, as it should.

When error presents itself under any guise, whether it be open or insidious, the student is ready to meet and overthrow it, if he is living in obedience to the spirit of our Leader's dedicatory Message, "Choose Ye," published in *The Christian Science Journal*, July, 1906. Well does she say of such an one, "A Christian Scientist verifies his calling." This we can do only as we reject the evil—knowing its nothingness—and "cleave to that which is good," for thus only can we reach "the measure of the stature of the fulness of Christ."

ANNIE M. KNOTT.

DR. FLUNO'S LECTURE.

[THE following letter is self-explanatory.—EDITOR.]

The Christian Science Publishing Society,
250 Huntington Avenue,
Boston, Mass., Oct. 13, 1906.

Mr. Lewis C. Strang, Associate Secretary,
Pleasant View, Concord, N. H.

Dear Brother:—I am pleased to receive your letter of yesterday regarding Doctor Fluno's lecture.

The Board of Trustees will take great pleasure in carrying out the wishes of our Leader, Mrs. Eddy, and will have the Doctor's lecture printed in pamphlet form and placed on sale at the Reading Rooms throughout the country.

Sincerely yours,
A. V. STEWART.

LETTERS TO OUR LEADER.

Boston, Mass., Sept. 27, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—I wish to tell you how deeply grateful I am for the confidence made manifest in my selection to fill the vacancy on the Board of Trustees of The Christian Science Publishing Society which was caused by the passing away of our faithful, loving, and loved brother, Joseph B. Clark. My earnest desire is to do my utmost in the work of the great Cause of Christian Science, wherever I am placed, and I am praying for guidance and wisdom in this most sacred trust. When the call came, I arranged to come here without delay, but I must say I came with some misgivings regarding my fitness for the place; however, the welcome accorded me by all of the splendid staff of workers here at headquarters was most hearty and kind, and I am encouraged to press forward, to live and work with the understanding I have gained of your teachings, believing that my shortcomings will be dealt with in a loving manner.

I wish to assure you, my dear Mrs. Eddy, if there is any way whereby I can in the least degree contribute to your comfort and pleasure, it will be a great joy for me to do so.

Again thanking you, I am
Sincerely and gratefully your student,
ALLISON V. STEWART.

San Diego, Cal., Sept. 22, 1906.

Mrs. Mary Baker G. Eddy,

Beloved Leader:—It is with great joy and gratitude that we announce to you the dedication of our church,—First Church of Christ, Scientist, of San Diego, Cal. We realize that it is because of your unselfed labor of love for mankind that we have been enabled to make this demonstration; also that the revelation of the true idea of God and man to this age has made possible such a church.

In common with the rest of our brethren, we have had many problems to face, much of error to meet and overcome, many trials to endure, but all this has impelled us to look more steadfastly to that divine Love which governs us, and thus to stand together in the unity of Spirit. Since coming into our new church home last December, our numbers have steadily increased, and we trust that the seed of truth sown in this field during past years will now bear an abundant harvest.

We pray that this branch my be ever loyal to the Vine, glorifying God in all its work, and manifesting its gratitude to you by ever reflecting Truth and Love. We are striving to realize that our growth depends upon our meekly following in the footsteps of our blessed Master,—and our obedience to you, the Wayshower to this age. We pray that this church may stand in this community a monument to the healing power of Christian Science, "Till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Ever yours in the Love that is God,
ANNA S. PORTER, *Clerk*.

Pipe Creek, Tex., Sept. 23, 1906.

Mrs. Mary Baker G. Eddy,

Dearly Beloved Leader:—Because of a very deep feeling of gratitude and love to God, and our Leader, we make this attempt to express what Christian Science has done for us. About eighteen months ago we were presented with a copy of "Science and Health with Key to the Scriptures." After reading the book through, we were fully convinced of the truthfulness of Christian Science, and since reading it we have had several demonstrations. We are most thankful for this wonderful truth through which there

Digitized by Google

is revealed a new world, and our only desires are so to live that we may reflect Love as taught by our Leader. The Bible and the Christian Science text-book are our daily studies. Well may we pray as did the disciples, "Increase our faith."

ELMIRA and JULIA DUNLAP.

Ottawa, Ont., Sept. 25, 1906.

Mrs. Mary B. G. Eddy.

Beloved Leader:—We, the members of the 1906 class of Mrs. Elizabeth Higman, C.S.B., your loyal student, desire, on this closing day of our class, to express unitedly our gratitude for your marvelous teaching, which brings to our comprehension the "here" and "now" of Spirit,—the new heaven and new earth, including the new man and new woman of God's creating. We see, more clearly than ever before, the place that you, our dear Leader, should occupy in the thought of those who are so richly blessed through your sacred discovery,—so precious to you, so generously bestowed, so lovingly guarded. The very thought of your life—your wondrous patience, tenderness, and fearlessness in rebuking sin—inspires us to more consecrated living, that we, too, may demonstrate Christian Science through healing the sick and the sinful.

Most gratefully yours,

MILLICENT BRENNAN,
JOHN STEWART,
Committee.

Massillon, O., Sept. 15, 1906.

Beloved Leader:—Having been restored to health from a life of semi-invalidism, with some hopeless conditions attached to it; having been given a knowledge of God, when before I had not even a belief of one; having seen the opposition of family and friends melt away, my husband give up a medical practice of many years and turn with earnestness and expectation to the teaching of Science and Health; having seen our church acquire a respected place in the community within three years of its organization, I thought I realized my great cause for gratitude to Christian Science and to you. But this was so illy manifested that I was one of those who went to Concord during this Communion season, and this has caused me deep, if unavailing regret. Since this experience there has come, however, a renewed endeavor to rise from the sense of person to a better understanding of man; to be more watchful, to do better work, and I am hoping thereby to be more worthy the name of Christian Scientist.

In devotion to our Cause and to you its Leader, I am

Sincerely your follower,

ANN DELIA PEASE.

New York, N. Y., Sept. 25, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved and Revered Leader:—I do not feel worthy so great a privilege as that my letter should come under your personal notice, but I wish to express the gratitude I feel for Science and Health and your "Miscellaneous Writings;" for the light that has enabled me to discern your unselfed love,—your work for all humanity. Words seem inadequate, and a sense of reverence fills my thought when I reflect on the example you have set for all to follow who love Christ, Truth,—an example of patience and charity beyond words to express. You are truly obeying Christ's command, "Love your enemies;" taking up the cross, and with unremitting toil striving lovingly to have all go and do likewise. My duty is to work more faithfully, to be meek, to purify my own thought, and to reflect universal love. By this only can I in a measure pay my debt of gratitude to you for showing me the way to find Life eternal.

Faithfully and gratefully,

FLORENCE K. PAULSON.

TESTIMONIES OF HEALING.

I came to Colorado from Mississippi in 1880, hoping to obtain relief from a severe stomach and bowel trouble with which I had been afflicted for several years. I had had the faithful attention of good physicians, had used mineral waters, baths, etc. I took every remedy prescribed by physicians, and spent all that I made for more than twenty years in my efforts to recover health, meeting with only occasional temporary relief. My official and professional duties required constant and personal attention, but occasions were rare when I was free from pain. It would be tedious and uninteresting to go farther into details. During the early winter and spring of 1901 I suffered with severe kidney and bladder trouble, and submitted to the most painful treatment, administered by two eminent physicians, one of whom informed me that a surgical operation would be necessary. In April, 1901, I visited a Christian Scientist, with whom it had been my pleasure to become slightly acquainted. She began giving me treatment, and from that day I have advanced in health, harmony, and happiness. I have ceased to rely upon doctors or medicine, and have increased in weight about twenty pounds. Error has occasionally presented itself, but in every instance it has been overcome by the teachings and treatment of Christian Science. I eat whatever I desire, take no medicine, my morals have wonderfully improved, and my habits are changed.

I am in my sixtieth year, and have never known what health was since early manhood until I accepted, and to some extent understood, the teachings of Christian Science. The ordinary meaning attached to the word gratitude does not properly express my feelings towards Mrs. Eddy. I know that I cannot fail to realize health, harmony, and happiness if I practise the teachings of Christian Science. I endeavor every day to rise to a higher sense of Life and Love, to realize that there is no Truth in pain, and that this Truth when understood will free mortals from every belief in pain and poverty.—J. M. ELLIS, Denver, Col.

I cannot remember the time, before coming into Christian Science, when I was not afflicted almost continually with the most severe suffering. Finally, after putting in a miserable time through my school years, it was said that my eyes were the seat of all my trouble, and I wore glasses for a year or so, but without much relief. In the fall of 1899, the leading optician in San Francisco, who was a personal friend, determined to relieve my sufferings, if such a thing could be possible. He spent many hours testing my eyes, and said it was the worst case that had ever been met in his experience. He straightway took me to the finest specialist in the city and arrangements were made for treatments. I spent the better part of two years visiting his office, during which time six operations were performed on my eyes. I also put on glasses, which I was emphatically told I must wear all my life. I received partial relief for about a month after each operation, but only under the condition that I never use my eyes. When I complained about this to the oculist he said, "Why, with eyes like yours you must never expect to read for more than fifteen minutes at a time." And it seemed that I couldn't.

I next tried "exercising" my eyes from two hundred to five hundred times a day for weeks. This, too, gave me only temporary ease, and in the depths of despair I was persuaded to try Christian Science. I took six weeks' treatment, although I was really healed in five weeks, and from that day, the first of March, 1904, to this, I have never known what it means to be restricted in the use of my eyes. I am in a position where I use them all day and often read for hours at night. My glasses are a thing of

Digitized by Google

the past, as I took them off at the end of the five weeks' treatment.

Many times a day I thank God for this glorious blessing, and also Mrs. Eddy, who has given it to the world. This is my greatest demonstration in Christian Science, but there are many more that have been made for me and by me during the past year and a half.

MARY B. LUDLOW, San Francisco, Cal.

I retired one evening in my usual health, but awakened about midnight with a great sense of illness, and it was only in a feeble way that I was able to declare the truth. Morning came and I had not overcome the trouble. It seemed impossible for me to read, so I closed my eyes and repeated the 23rd Psalm, knowing that every word was true and that Truth is all-powerful. A great sense of peace came to me, and I slept to awake in an hour well, and so thankful. The truth had healed me. This is only one of the many proofs I have had that Christ, Truth, does heal all our discords. "Harmony is universal, and discord is unreal" (Science and Health, p. 414), and it is therefore only temporary. It is such a blessed thing to know that we do not need to be ill. The gospel of peace comes to each one who will accept it, and what a comfort it is! It teaches us to be more charitable and kind and to look for nothing but good.

Words are feeble to express my great thankfulness for Christian Science, but I am trying each day to live it.

ELEANOR K. SMITH, Chicago, Ill.

It is almost twenty years since I first heard of Christian Science. It appealed to me at once; I felt that the human mind ought to be treated instead of the body. Some months later we had occasion to test it. One of our children, four years old, was very ill, and was given up by the doctor, who said it was already a dying child. He was then dismissed, and a Christian Science practitioner sent for. The child began to improve, slowly but steadily, and after a week or two he was entirely healed. The alarming throat trouble never returned, although he had suffered from it quite often before. I became so interested that I took up the study of Christian Science, and in a family of six we have not used medicine since. The truth has never failed, and it has proved the fear of contagion untrue. Every day brings its blessings. One morning I slipped in running downstairs, and injured my ankle so that it pained me severely. I took Science and Health and sat down to read it, but became unconscious. I soon recovered, however, and declared the truth. I went on with my work again, not thinking any more about it, till all at once I felt the ankle bone go back into place. On another occasion one of our boys came home from work feeling very ill. I declared the truth to him audibly, and finally managed to get him to bed. I then read to him from the Bible and Science and Health and worked for him until we both went to sleep. Next morning he was entirely healed. Other severe ailments have also been overcome.

Above all I feel thankful to God for the spiritual help gained. I had always tried to live a Christian life, but felt sorry that I did not live in Jesus' time. Now I know, as dear Mrs. Eddy teaches, that the Christ has never left us. I thank God every day for Christian Science.

One of our children was completely healed of a dreaded disease in one treatment. After the practitioner was gone, the child exclaimed, "If praying helps so quick, why do not all people pray when they are sick?" All parents ought to understand Christian Science; then the burden of watching over little children would be lifted from them; for they would leave the little ones in God's care. It is a great joy to watch the children apply the truth; they teach us some grand lessons.

I cannot be thankful enough to God that He has revealed the truth again through Mrs. Eddy, and that Christian Science has aroused the world out of its material slumber.

MRS. J. D. F. HARMS, Detroit, Mich.

For a year and a half I suffered with my right arm to such an extent that I had almost lost the use of it. I tried medicine, and one surgeon used the X-rays three times a week for a month, only to give up the case as hopeless, as other physicians had done. I then made a trip to Florida, in hopes that the tropical climate might do me some good, but all to no avail. My last medical adviser told me that medicine would not bring relief, but that if I ever gained the use of my arm again it must be from some other source. I was discouraged and disheartened, but a kind friend advised me to try Christian Science, saying that it could do no harm and that Christ had not lost the power to heal the afflicted. Acting upon his advice and trusting in God's Word, I began treatment in Christian Science. At first it was hard for me to let go my old belief, but finally, as I yielded to the spiritual, I became whole. I am now following my usual occupation; can use my arm freely, and have gained strength again. I advise the afflicted to try Christian Science.—B. F. SHEIDLER, Tiffin, O.

In 1888 I was pronounced incurable from heart disease by my physician. For ten years I had been a great sufferer. I was attended by skilled doctors, and after failing to heal me, they advised change of climate. I accordingly tried different places, and stayed for long periods, but these changes were of no lasting benefit and were a great expense. When I came to Washington, thoroughly discouraged, I concluded to submit to the inevitable. I was stricken down again, and then the doctors who held a consultation concluded that the case was of such long standing that nothing more could be done.

At this time a friend who was under Christian Science treatment heard of this verdict, came to see me, and asked me to try Christian Science. I had become very skeptical by this time, but my family begged me to try it, which I finally did. I did not take treatment, but began the study of Science and Health, and in three weeks was well. I have been in perfect health for fifteen years; have never taken any medicine in all this time, and have also been able to help others.

My daily prayer is that God will bless Mrs. Eddy, who has given to a waiting world this blessed truth which makes free indeed.—MRS. LUCY E. JORDAN, Port Angeles, Wash.

From earliest childhood my great desire was to be a music teacher, and I finally graduated in music, but was told that I had overworked and would probably never be strong again. Soon after I went to California, where it was supposed I would recover my health and strength. I commenced teaching, but my physician ordered me to leave for the mountains as soon as possible. This I did, and returned home in six weeks, in some respects much worse. For eight years I was an invalid, and during this time underwent three surgical operations, was treated by seventeen physicians, among whom were some of the best physicians and surgeons in San Francisco and northern New York. So far as I know they all considered my case an incurable one.

While in New York in 1897 I was very seriously ill with a fever, and almost before I was able to travel my physician urged me to come to Dakota to be with my mother and near relatives. At that time I could not even read, and was told by the physicians that very serious results would follow if I attempted any kind of mental work for at least a year. I came to South Dakota with no hope of ever seeing my friends in the East again.

On my arrival my friends fully realized that immediate help was needed, and they suggested that I try Christian

Digitized by Google

Science. I knew nothing of it, but I consented to call a practitioner, and that day I can never forget, for it was the beginning of my freedom from bondage. Nervous illness, serious heart and lung troubles, and weakness of the eyes for which I had been obliged to wear glasses for two years, were a few of my ailments when I came to Christian Science for help. A bladder trouble which the physicians had said could never be cured was healed instantaneously and has never returned, my glasses were laid aside in just ten days, and I was lovingly told to begin teaching if I wished to do so.

I can never express my joy at hearing these words; one pupil was ready to begin music immediately, and my class gradually increased until it numbered over sixty. I also took a position as organist in a church in about one month after beginning treatment and held the position for two years without missing a service. I then resigned that I might attend the Christian Science services. Health and strength were certainly restored to me through the application of this wonderful truth and have remained with me all these years.

These are a few of the numerous blessings I have to be thankful for in Christian Science, and I wish to express my deepest gratitude and appreciation for all the writings of Mrs. Eddy, the Discoverer and Founder of Christian Science, also for the benefit received from our *Quarterly*, *Sentinel*, and *Journal*.

MRS. MABEL SIMONDS MYERS, Watertown, S. D.

Mrs. Eddy says, "According to human belief the lightning is fierce and the electric current swift, yet in Christian Science the flight of one and the blow of the other will become harmless" (Science and Health, p. 97). For many years I had been a great sufferer during electric storms, the electricity always making me very sick and causing great pain all over my body. My wife kept medicine on hand for this, but after I became interested in Christian Science a storm came on, and I thought I would treat myself the best I knew. My wife came into the room armed with the usual medicines, but I told her I was all right and kept on reading. She came in many times, always to receive the same reply. I really was not sick one moment. That summer I passed through several storms with the same result. Later I joined a fishing party, and while away a severe storm came on. I excused myself and went at once to my room, read a short time and repeated the Lord's Prayer. The thought came to me, Twelve miles from any doctor, but God is ever present. With that thought I raised the shade. The lake looked like a sea of fire. I left the shade up and retired, and was fast asleep in a few moments. I arose the next morning about five o'clock, well and happy, took my copy of Science and Health to the water's edge, and read until I was surprised by the rest of the party coming up behind me. The first was our Congressman, who wanted to know what I was reading. He had read the book and pronounced it "very good," also said beautiful things of the writer. One of my friends, who is an old graduate of Harvard and a Unitarian, said that I could tell him very little about the book, as he had a copy on his desk and read from it every day.

I am very grateful to Mrs. Eddy for Christian Science and for her writings, which have made many thousands better and happier men. As yet I am only a student.

JAMES HOLLAND DAVIS, Syracuse, N. Y.

Christian Science came to my relief about six years ago, and I wish to give my testimony to what Truth has done for me. About twenty-five years ago my health began to fail and our family physician finally pronounced it a serious lung trouble which I had inherited. He advised my husband to take me West, and this seemed to help me for a while; but finally the disease returned and with it heart trouble. I was confined to my bed most of the time, although my physician worked faithfully for me, but at last he told my husband he was unable to do anything more for me. Two other physicians were then called, and they all advised my going South, which was done, but in a short time I was obliged to call still another physician. Another change of climate was proposed and we started immediately. My children and friends bade me farewell, as they supposed it would be the last time I would see them.

We were compelled to leave California in less than a month, as I was much worse, and we returned home by way of Seattle, where my husband had a sister. When we arrived my condition was most serious. The dear sister asked me at once if I would let Christian Science heal me. I replied that I was willing. My husband and I were members of an orthodox church, but like Thomas he wanted a sign. He said if I was healed he would investigate Christian Science. In five days I was entirely healed of the lung trouble, and in a short time the heart trouble disappeared. The practitioner advised me to get "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I did, and earnestly studied it. In six months every manifestation of disease had gone.

My husband and I returned to Oklahoma and among the first to greet me were my physicians. They had heard that I was healed, but could not believe it until they had seen me. We remained there three months and the climate had no ill effect on me. I can now run up and down stairs, do all my own work, and am in perfect health. My husband and myself are members of The Mother Church.

I thank God every hour for this truth, for certainly this healing proves that the power must be that which healed the sick and cast out error over nineteen hundred years ago. Would I not be ungrateful if I did not love Mrs. Eddy for the wonderful discovery of this new-old truth?

MRS. MARTHA BELFORD, Port Angeles, Wash.

One who had tried nearly every material remedy asked me in utter despair to find him a quiet boarding-place, in the hope that this change might help him. The first house at which I called on this mission was occupied by a Christian Scientist, the first one I had ever met. She advised me to find a practitioner instead of a boarding-place for my friend, and gave me an address. Her earnestness impressed me, and I told her I would advise an investigation of the subject. After leaving, I concluded to see the practitioner at once, and this decision changed the whole course of my life. During a few interviews I became deeply interested, and began attending the Christian Science services. At that time I was suffering from stomach trouble, and for months had lived on a very rigid diet. I had tried various remedies and was then taking medicine daily.

After one treatment I realized that the truth had made me free, and I have for more than a year been without either fear or inconvenience. The gloomy and despondent moods which oppressed me have never returned. I soon found that I was no longer subject to colds, which had previously annoyed me so much. A catarrhal affection which had been my constant companion for a number of years, was no longer in evidence. I had worn a truss since boyhood, —more than thirty years,—but I removed it soon after this time. With one absent treatment I laid aside this lifelong companion, with all the fear that had necessitated its use.

The spiritual uplifting which followed deserves my deepest gratitude. The knowledge of God thus attained has completely changed my attitude toward my fellow-men; has broadened, brightened, and beautified an existence which once seemed dark and cheerless. To live a Christian Scientist is a debt of love I owe to God, and to the one through whom He has revealed this truth and who has made it possible for me to receive so great a blessing.

J. D. CRISLER, New Orleans, La.

Digitized by Google

In September, 1902, I fell and injured my arm severely. The physician who was called in requested the aid of another physician in setting it. They stated that I would not be able to use the arm all winter, and that I might never use it again. The following day I dismissed the physician and began Christian Science treatment. The accident occurred on Saturday, on Tuesday morning I removed the splints and bandages, and in ten days from the time of the injury I used my arm as usual, even carrying water and doing washing. Several weeks after, I was carrying a very heavy basket of clothes and dropped it suddenly on that arm. I again called upon the practitioner for help, and have not had the slightest discomfort from it since, although using it freely and in heavy work.

I am very thankful for what Christian Science has done for me. I have been greatly benefited in many other ways, and I rejoice very much in the understanding I have gained from it and am able to help myself a great deal.

MRS. BELL ROBISON, Billings, Mont.

I was wonderfully healed in Christian Science some years ago, and had another remarkable experience, which is as follows: On June 3, 1899, I fell from a buggy and sustained a severe injury. There was intense pain for a short time, but people helped me back into the buggy and I drove home, about a half mile. When within two blocks of the place of the accident all sense of pain and suffering was overcome by realizing the truth according to Christian Science. When I reached home my son helped me to a couch; friends came hurrying in and with my wife advised me to send for a surgeon. I did so, and soon one was present. He insisted on setting the bone and said if it were not set I would not be out of the house in six weeks, and that if I lived there was not one chance in a hundred that my leg would be restored to a normal condition. I had no fear, and felt so strong and sure of the truth that I calmly told the doctor I would try it alone with God. He said I surely could not know what I was doing, but I insisted on doing as I said, so he left. I at once put myself wholly in God's care and He delivered me. The work was slow, but sure and good.

The doctor left about noon, and between one and two o'clock I sat at the table and ate a hearty dinner. I never missed a meal. I was about with a crutch in three or four days, rode in my buggy wherever I wanted to go, and was walking up and down stairs within two weeks, without a cane, crutch, or any other artificial help. On the 25th of June I made a trip of five hundred miles by rail, carrying my grip and making the changes without help. I attended a Christian Science lecture on the evening of the 26th, walking over to the church and back, and returned home with no bad effects. As I am over sixty, and quite heavy, people predicted all manner of bad results, but nothing of the kind happened. I clung to the promises in the 91st Psalm. Rumor got out that I was dying, and finally that I had died; while the truth was that I had no pain or suffering to speak of after the first five minutes, and there was not one day that there was not a decided gain over the day before.

JOHN H. ROE, Salt Lake City, Utah.

Having been thoroughly healed through Christian Science of a disease known to *materia medica* as incurable, I joyfully contribute my testimony. For five years I was a sufferer from this disease, and was finally advised by my doctor that an operation was necessary, to which I consented. It soon proved to be of no avail, as the trouble re-appeared worse than before, and one year later I consented to another operation. I was sent to the hospital and after the operation I hoped that I was cured, but one year later the same trouble re-appeared, worse than ever. I again consulted my physician, who advised another operation, which worried me very much. A dear friend who knew of my case, and who is a Christian Scientist, asked me if I would like to try Christian Science treatment. I agreed to do so and went to a testimony meeting. I was very much impressed with the experiences given. As I had not received any help from medical treatment, nor an assurance of any, I decided to try Christian Science. After the first treatment I noticed a change. I took four treatments in all and was entirely healed. I am filled with gratitude for the help I have received. I am also very grateful to our beloved Leader, Mrs. Eddy, who has revealed this grand truth to us,—a truth which not only helps us physically but morally. I hope to know more of it every day, as I have found it to be the way of peace and happiness.

JOSEPH V. ARNHORST, Chicago, Ill.

Some years ago I had severe nervous trouble. I was treated by two physicians of New Orleans and was relieved somewhat, but was not entirely free. After the birth of a child I had what a doctor pronounced a serious affection of the heart, the attacks coming on periodically until 1899. I was under considerable expense for doctors and medicine until I put myself under the care of a Christian Science practitioner. At the end of two weeks I was entirely healed, and have been in perfect health ever since.

MRS. JULIA L. HAAG, New Orleans, La.

In the winter of 1905 our little girl, two years old, fell and injured one of her arms so that she had no control of it whatever. We asked a Christian Science practitioner to treat the child, and the healing was rapid, permanent, and wonderful to us.

MR. and MRS. H. M. SHIPLEY, Chester, Pa.

[Written for the *Sentinel*.]

TRUST.

MARY J. ELMENDORF.

SINCE Thou art near, O Truth, mistrals may blow
And blossoms droop, yet song-thought cannot die!
My anchored heart no doubt, no fear can know,
Since Thou art near.

When sunlight comes, the nightly shadows fly;
So dreams of danger, wheeling mists of woe
Forsake that place where Love is shining high—
Since Thou art near.

Come years with roses laden or with snow,
Faith, quickened, shall their passing sanctify.
For all is harmony above, below,
Since Thou art near.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

FROM OUR EXCHANGES.

The first five books of the Old Testament tell of the great economic struggle and spiritual awakening of the Jewish people, in bondage and slavery and sorely oppressed, in Egypt. Moses we see in outline, one of the great figures of history, the leader of this revolt and exodus. And in these five books, in the Mosaic code, we get the outlines of the government of Righteousness, Justice, and Peace, which became the ideal of the Jewish people. . . . When we take up the first five books of the New Testament, we come to a startling discovery; namely, that the great spiritual awakening which we know as primitive Christianity was almost entirely economic and ethical. And for three hundred years the Christians and their thoughts were chiefly concerned with what we might call *right living*—righteousness. . . . We thus see in the beginning of both these great religions the predominance of the economic and ethical element, with little or nothing in the way of theology or formulated creed. It would not be unreasonable, then, that the great spiritual awakening that every good man in the world would like to see should come as these came, chiefly in the form of economics and ethics. "Seek ye first the kingdom of God;" that is, a righteous social order and its right doing, and all necessary things will be given you.

CHARLES FRANCIS NESBIT.
The Outlook.

Humility is in order to service. The man who abases himself without purpose is obeying no commandment and following no example of Christ. Yet what pains he took to teach his disciples, both by example and by precept, the fruitful, serviceable humility which is equipment for work. To do this was foremost in his mind among the heavy cares of that last evening when he took a towel and girded himself and washed the disciples' feet. This humility is the getting self out of the way that we may be wholly free for the unselfishness of service. For the greatest hindrance to the highest use of self is conscious and assertive self. If a man thinks more highly of himself than he ought to think he can neither be a good servant of God nor of his fellowmen. Nothing mars and hinders our witness-bearing like the obtrusion of self-seeking. That suspicion is fatal to our influence with men.—*The Congregationalist.*

It should be the aim of Christian people to express their doctrinal views so clearly and to live their religion so fully and faithfully as to attract to Christianity, by a kind of moral magnetism or spiritual gravitation, the thoughts and affections of the multitude. . . . Religion which is not of the strait-laced, lugubrious type, but which is reasonable, hopeful, sunny, and happy hearted, while also spiritual and reverential, cannot fail to interest men. There is no life so really happy as the Christian life, there is no cause so essentially ennobling and engrossing as Christ's cause.

The New York Observer.

Why can we not think and speak of the good things of life a little more and the evil things a little less? Why should we not spend some time in the sunshine experiences instead of seeking the shadows? There is something bright and good and wholesome in every life if we will but give it a chance to manifest itself, and at least we can emulate each other's virtues rather than imitate each other's faults. Make goodness and happiness so pronounced that the contagion will spread throughout our world.

The Universalist Leader.

The bane of much theological discussion of the present day is that it is too opinionated. Each man overvalues his own private value judgment. Theology has become lost in the theologies. The forest is not seen for the trees. Every man has his own answer for the question, "Whither?" and the appeal to the Word in any decisively authoritative sense is considered in many quarters a belated procedure.

Zion's Herald.

It is for every man and woman to inquire, by self-inspection, if he is receptive of truth. Each one is in absolute spiritual freedom to become so or not so according to his wish. The fruition of every life is dependent upon the choice made in reference to this matter.

REV. HIRAM VROOMAN.
New Church Messenger.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

A decision of the Supreme Court of the State of Washington declares constitutional certain legislation intended to check the secret society fraternity abuse in schools. An action was commenced by a schoolboy on behalf of the members of his school fraternity against the board of school directors of school district No. 1 in Seattle, to restrain them from enforcing certain rules which deprived members of Greek letter fraternities of the privileges of the high school excepting attendance at classes. The complaint alleged that all the members of the fraternity were of school age and entitled to all the high school privileges; that they were unjustly prohibited from belonging to debating clubs, athletic teams, school bands, glee clubs, orchestras, cadet corps, and other kindred organizations of the school; that unless they should withdraw from the fraternity they would be deprived of the customary honors attending graduation; that they enjoyed no privileges except attending classes; that the offensive rules were in excess of lawful authority; that the fraternity was in every way unobjectionable; that its meetings were held at the homes of members with the consent of their parents every two weeks, in the evening from eight to ten o'clock and never during school hours, and that the school authorities were without jurisdiction. The trial court denied the application for an injunction, and has just been sustained in its position by the unanimous decision of the highest tribunal of the State of Washington.

Subpœnas have been served by the United States Marshal on the controllers, treasurers, and heads of the claim departments of the Great Northern, the Chicago, St. Paul, Minneapolis, and Omaha, the Minneapolis and St. Louis, and the Wisconsin Central Railroads, directing them to appear before a special grand jury in the United States District Court in Minneapolis this week with the books and records of their respective departments. This action is said to have been taken as a result of the investigation of an agent of the Department of Justice of the Federal Government of the giving of rebates by the railroads of the Northwest in connection with the shipments of freight.

The New York Central Railroad Company and its general traffic manager were each found guilty on six counts of giving unlawful rebates in 1904 to the American Sugar Refining Company, by a jury in the United States Circuit Court, Criminal Branch, last week. The conviction makes each of the defendants liable to a fine of $20,000 for each separate offence, or a fine of $120,000 for the railroad and the same amount for its employe. The indictment indicates that about $26,000 was secured by the Sugar Trust in unlawful drawbacks on the transactions set up.

The Lake Mohonk (N. Y.) Conference, in session last week, adopted and ordered cabled to the Brussels Conference a memorial calling for co-operation of Christian nations by treaties against intoxicants and the opium traffic among uncivilized nations, in these words: "Mohonk Conference, emphatically condemning the use of and the traffic in opium and intoxicants, most cordially indorses Senate resolutions of Jan. 4, 1901."

As a result of the conference and co-operation of the Land Office, Census Bureau, and Geological Survey the area of the United States proper is given as 3,026,789 square miles, an increase over the census figures by 1,188 square miles. The area of Alaska is 590,884; the Philippines, 115,026; Hawaii, 6,449; Porto Rico, 3,435; Guam, 210; Samoa, 77, and the Panama Canal strip, 474 square miles.

In the postal estimates for the next fiscal year, to be submitted by the Post Office Department, a radical change will be made in the recommendations affecting salaries. Betterment in pay involving the entire postal system of the United States will be advised.

Former United States Senator Burton of Kansas has been sentenced to imprisonment and fine on the charge of accepting an attorney's fee in a case in which the Government was interested while he was serving as a Senator.

The Hall of Records, New York's ten million dollar office building, just six years behind the promised date of completion, is at last ready for occupancy by the city and county departments and officials.

Postal receipts last month were $6,756,347.14, as compared with $6,506,611.78 in September, 1905.

The world's W. C. T. U. convened in Boston last week.

Foreign.

Persia's first Parliament has been inaugurated. The Shah has made two speeches. The first dealt with the election of new deputies, and in it the Shah declared that he recognized that the principal foundations of imperial power and progress rested on an alliance of the Government and the people, and he had made the strengthening of this alliance the chief object of his reign. He expressed the hope that the gift of the constitution would ever be preserved. The second speech, which had to be read by the Governor of Teheran, took place in the great court of Teheran in the presence of the diplomatic corps, many high officials, army officers, and the entire priesthood. In it the Shah said that for the last eight years a constitution for Persia had been his dream and he now believed that the people were ripe for self-government. He was satisfied that they would not abuse the freedom and that Parliament would give active support to the Government in its efforts for the happiness, progress, and power of Persia. The speech was received with the greatest enthusiasm.

At a meeting of Cubans, Spaniards, and American residents held in Havana last week in connection with the Good Government League of Cuba, it was reported that there were now nearly two hundred members in Havana and that letters of inquiry are pouring in from all over the island. The announcement that the League is not a party but a movement to get the question of Cuba's future government before the people at a general election, is attracting many who have been suspicious that it was an American scheme for annexation. Reports received from all over the island show that agricultural operations are being gradually resumed.

The military forces now assembled in Cuba, or to be assembled there, are constituted an army to be known as the Army of Cuban Pacification. Besides the cost of the transport service in bringing the American army to Havana, there will be the cost of transporting troops from interior points to the Atlantic coast ports by rail and of the animals, wagons, tents and other supplies which were brought or taken from the quartermaster's depots for use in Cuba. The Medical Department and the Commissary Department have been put to considerable extra expense by intervention. The total may reach $1,000,000, all to be defrayed from the Cuban treasury.

The efforts of the Austrian Alpine Society to make more and more of the Tyrolean peaks accessible to tourists are frequently thwarted, it is said, through the influence of wealthy huntsmen, who claim that the sport of hunting is being injured by the invasion of visitors.

It is expected that an imperial manifesto will be issued from St. Petersburg on Oct. 30 granting partial amnesty and abolishing the summary courts-martial.

Industrial and Commercial.

The preliminary figures of the Bureau of Statistics of the Department of Commerce and Labor show that for the nine months ended with September the value of meat and dairy products exported from the United States was $147,795,647, against $122,544,314 in the corresponding months of 1905 and $109,369,576 in the corresponding period of 1904. The only class of meat products showing a marked decline in exports is canned beef, of which the exportations for the nine months of the present year are 31,000,000 pounds, against 52,500,000 in the corresponding months of last year, a part of this decline being due to a large reduction in the demands from Japan, to which the exports of canned beef were 14,250,000 pounds in the eight months ended with August, 1905, and but 99,000 pounds in the eight months ended with August, 1906.

According to the Bureau of Statistics, the value of the foreign merchandise which this country now exports amounts to upward of $25,000,000 annually. The greater part of this foreign merchandise, imported and then exported, goes to nearby countries, but is not limited to these, and the record shows that some shipments go as far as Korea and the Straits Settlements. Canada received nearly half the exported foreign merchandise and Great Britain $5,000,000, Germany about half that amount, and France nearly $1,000,000, while Cuba took as much as France. In all sixty-five countries were the recipients of foreign goods exported from the United States.

Out of a population in New Zealand of a little less than one million one third have money in the savings banks. The wealth per capita is nearly $1,500, which is the largest of any country in the world. Statistics show for New Zealand the highest health and the lowest death rate of any country.

Announcement is made that experiments in making paper by using salt water instead of fresh water have proved successful. The salt water paper was manufactured at the plant of the Publishers' Paper Company, in Portsmouth, N. H.

The price of silver bullion as disclosed by the Government purchases last week was 70.13 cents per fine ounce, the highest point reached since the repeal of the Sherman law in 1893.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MRS. EDDY'S DISCOVERIES.

CONSIDERED IMPARTIALLY BY A MAN WHO IS NOT A CHRISTIAN SCIENTIST.

To the Editor of the *Sun*.

Sir:—Mr. Kiretchjian asks, "What is it that Mrs. Eddy of Concord, N. H., discovered?" He labels this question "No. 1," thereby implying that he is prepared to ask other questions equally dumbfounding.

Now I am not a member of the Christian Science church, nor have I ever taken treatment of a practitioner, but I have studied Christian Science, being led thereto by what I have observed of its effects among many friends near and dear to me, in the matter of their health, their proclivities, their very temperament and disposition. Science and Health, read with no purpose to criticise its literature (which is blunt and sometimes baroque), but with an honest desire to ascertain the meaning of the writer, has answered for me more fundamental questions than any other book I ever read, of philosophy, science, or religion.

With only these qualifications I venture to answer the question of Mr. Kiretchjian as follows: Mrs. Eddy has discovered that mind is not a by-product of chemical combustion, but constitutes the divine essence, the one and only substance, of which all else that is or seems to be is a manifestation. It follows that matter, so called, is merely phenomenal, a product of manufacture from supersensible forces. But when your physicist of to-day affirms that ultimate matter is a "kink in ether," or a "swirl of force," is not her claim demonstrated in the laboratory?

Mrs. Eddy has discovered that Jesus healed all manner of diseases through a spiritual or mental law. It is probable that the abstract ethics taught by him would have given him a meager following had not his teachings been sanctioned by his work. Theological commentators have called his cures miracles. Jesus did not call them miracles. Mrs. Eddy has discovered that they were not miracles; that it would indeed derogate from omnipotence to juggle with its power. By no special act did God cast devils into swine or transmute water into wine. Besides Hahnemann, no other being ever declared a principle of cure; and even Hahnemann, with all his triturations, was more mental than material in his principle. *Materia medica* is pure empiricism. Every patient is a clinic; and I never knew a physician who, taken off guard, would not admit the fact.

Said Jesus,—"Believest thou not that I am in the Father, and the Father in me? the words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works. Believe me that I am in the Father, and the Father in me: or else believe me for the very works' sake. Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Mrs. Eddy discovered that only truth is real. This sounds like an axiom, but it follows that error cannot be real; that it has no actual persistent force, but only the apparent force that mortal mind chooses to assign to it. A man may make a mistake in adding a column of figures. Acting on the assumption that his addition is correct, he may proceed until confusion becomes worse confounded; but by no legerdemain can two plus two equal five.

Mrs. Eddy has discovered that God is good, that God is just, that God is Love. It is impossible to conceive that All-power should be less than this. It follows, however, that evil does not exist except as error. The Bible declares that God is too pure to behold evil, which can only mean that evil has no actual existence in the philosophical sense. God being Spirit and the only substance, it must literally be true that "in him we live, and move, and have our being." This is not pantheism, but the very opposite.

Mrs. Eddy has discovered how to pray with an understanding that insures results—not by petition, for God is without shadow of turning; but by realizing in the very core of one's being that God is power, wisdom, goodness, Love, Spirit, and has made man in His image and pronounced him good, and that all the sin that befouls his nature, all the pain that racks his body, all the care and anxiety that bewilders his brain can have only such reality as the man himself chooses to give to them. In other words, realize the truth, and error must depart. "And ye shall know the truth," said Jesus, "and the truth shall make you free."

Most amazing of all, Mrs. Eddy discovered that Jesus taught all this in words so plain that a wayfaring man should not err therein; that he put sin, sickness, and the mistakes of ignorance in the same classification—aberrations from truth; that he instructed his apostles and disciples to heal after his manner and through the same laws; that he admonished them to go forth and preach his gospel and heal the sick. By what warrant have gentlemen of the cloth disjointed this command?

Now I frankly admit that these discoveries by Mrs. Eddy are more exhumations than discoveries. They are discoveries in the sense that an archeologist discovers a buried treasure. The learned ignorance of the average sciolist seems to beget a mental arrogance and an attitude of patronage that is sometimes irritating. He is not willing to concede that anything is a fact except it take the shape of a brick and fall on him. But loving-kindness is a fact, the greatest fact in the universe and the most stupendous force, the dynamics of which are worthy of all study. Kindness will annihilate malice, hatred, envy, and all unrighteousness. Is it so marvelous that what will banish sin should be able to banish sickness? I doubt not that on final diagnosis every sickness is the consequence of a sin, having its origin in a thought. Is it so marvelous that truth should banish error? I believe, as I live, that for every human being who lives in the spirit of love and in the practice of the offices of love, the apocalypse on Patmos is a prophecy and not a dream. For "heaven is within you."

New York, Oct. 10. H. D. E.

[A clipping containing the above able article from the *New York Sun* was sent to Mrs. Eddy, enclosed in the following letter.—EDITOR.]

New York, N. Y., Oct. 13, 1906.

Beloved Leader and Teacher:—The enclosed clipping from the *New York Sun* of Oct. 11, headed "Mrs. Eddy's Discoveries," may prove of interest to you. It commands

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

especial attention from the fact that it was written by a lawyer.

For each critic who essays to spread a doctrine of doubt or discontent respecting Christian Science, it is found that a defender arises who is more to the public liking, and well fitted by practical experience and profound study to confound the worldly wisdom of the would-be traducers of this glorious faith.

May your cup of joy be filled to overflowing by the realization, brought home through ever-increasing evidence such as this letter illustrates, that your service has lighted the path and lightened the burden alike of rich and poor, learned and ignorant, Jew and Gentile, bond and free.

In grateful appreciation of so much of your achievements as I understand, I remain

Lovingly a student and follower,

H. CORNELL WILSON.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

FROM OUR CONTRIBUTORS.

WATCHFULNESS.

JOHN E. FELLERS.

WHO and what is this composite individuality we call mortal man? In belief he expresses blending parts—something of each and every other person he has met. Committing a poem to memory, it becomes a part of one's general education, but it is only a single composition caught from the realm of rhyme, verse, and song. It may be committed to memory by thousands, and its letter and spirit enrich them all, but it still remains to be learned by other thousands,—and this may be said of all that was ever written, or spoken, or sung. Into each individual consciousness there fall new ideas every day, and they each become a part of the individual, who expresses to others something of each person he has met or that which he has learned, though retaining still that something which he gives. Contemplating this fact, we cannot escape the responsibility which rests alike upon all, of standing guard over our thought, of admitting and reflecting only the purest and the best.

But responsibility implies obligation; obligation demands demonstration, and demonstration requires understanding. This requirement betokens a supply and the supply denotes a source. Christian Scientists have learned that God is the source from which all good comes. Throughout the ages thinking people have believed, in a general way, that God is the infinite source of supply, but until Mrs. Eddy, through Science and Health, pointed the way, humanity did not understand how to reach that source. To believe a great truth is good; to know that truth is better; to demonstrate that truth is best. To believe that we should guard our thoughts is good; to know how to guard them is well, but to actually guard our thoughts is best of all. Surely, *Watch!* is the one admonition which, more than any other, insistently and persistently throbs through every page of our text-book.

Some months ago, after a day of suffering caused by a mistake I had made in an unguarded moment, I took up Science and Health and began to read my favorite chapter—"Atonement and Eucharist." From almost every page the author seemed to rebuke me with the Saviour's words, "Could ye not watch with me one hour?" Laying aside the book, I took up a copy of the *Christian Science Sentinel*. Invested with a beauty and meaning which I had never before observed, the command of our Master, "What I say unto you I say unto all, Watch," seemed like a voice instead of a sentence expressed in print. Three thoughts came to me at once. First, that no more was demanded of me than is asked of all, and in that the impartiality of Truth is expressed. It simply asks that I do my part. Second, our dear Leader had emphasized this command by special lettering of the word watch. Third, she had placed the command on the front page of the *Sentinel* that it might not be overlooked.

With a deep sense of humility I again registered a vow that henceforth I would strive to watch and guard more carefully the avenues through which error seeks to manifest itself. For several days the word *Watch!* kept coming to me as a sweet, guardian command. The Master has left many commandments for our guidance, but somehow this one meant more to me than any other. Watch! Watch!! Five letters. Each letter might stand for many things to be watched and guarded; but there were five which served to show the deep significance of the word.

The first letter, W. What does it suggest? Words. The world would be happier and better to-day if humanity had been watchful of its words. Some one has said, "Words unexpressed may sometimes fall back dead, but only God can kill them when once they are said." The second letter, A, suggests Actions. They speak louder than words. Words may establish reputation, but actions express character. The third letter, T, suggests Thought. Our beloved Leader tells us that we must form perfect thought models if we would express harmony and health. The fourth letter, C, suggests Company. The old adage, "We are known by the company we keep," expresses a fact. Our company should always be pure motives, honest purposes, sincerity, right living. The fifth and last letter, H, suggests the Heart. Jesus said, "Blessed are the pure in heart: for they shall see God." How carefully then we should watch the heart! Watchful words lead to careful action; careful action, clear thought; clear thought, choice company; choice company, a pure heart.

THE PERMANENCE OF THE GOOD AND TRUE.

HON. CLARENCE A. BUSKIRK.

Is not the good thought of the past the only thing which can survive the past? Are not "the proud palaces" sure to become "the baseless fabric of a vision"? Does not the wise thinker, even though clothed in rags, wield a truer and more permanent power than any worldly sovereign? Just as no question can be finally settled until it is settled right, because what is true is all that can survive, so the only thoughts and influences which can live permanently are the good and true. Time weakens material power and dissipates material riches, but strengthens and beautifies the influences of good thoughts. This is because man in his true being is immaterial and his thoughts are not subject to the change which pertains to all materiality.

One's thoughts may be set in dignified prose or delightful poetry, but they will lack something essential to their survival if they do not compel our love and obedience, if their syllables are not set to the rhythm of some celestial music. Why? Is it not because perfect harmony belongs to man's true being? The flower in the cellar seeks to climb into the sunlight which is its true birthplace and home: and so human thoughts are constantly struggling, however feebly and ineffectually, to climb upward into purer conditions.

[Written for the *Sentinel*.]

FROM EVERLASTING.

HELEN ELDRIDGE.

DEAR child, dost feel too sad to pray?
Then clasp God's hand.
Mid doubts and fears in false array,
Just clasp God's hand.
You've but to reach a wee, wee way,
Since He's been waiting you for aye;
He's always known you'd need, *this day*,
To clasp His hand.

SELECTED ARTICLES.

A SUCCESSFUL BUSINESS MAN.

Ironwood, Mich., Oct. 12.—The statements from New York that J. M. Longyear of Marquette, Mich., and Brookline, Mass., is a beneficiary to the extent of twenty-four million dollars from the J. J. Hill ore lands deal with the United States Steel Corporation, have been interesting to northern Michigan people, but they have not occasioned surprise.

The stories emanating from southern Michigan, that these ore holdings have been escaping taxation in this State, are confusing for the reason that the lands concerned are not located in the Wolverine commonwealth—they lie on the Mesaba range, which is in Minnesota. Whether the lands have been taxed anywhere near their cash value by the Minnesota authorities is another matter. Probably they have not, largely for the reason that with few exceptions the various tracts are undeveloped.

In town 57–32, west of Corrigan, McKinney & Co.'s big Stevenson mine on the western Mesaba range, and between that property and the village of Nashwauk, there are about fifty tracts on the formation, each containing forty acres, all of which are the property of J. M. Longyear in association with Pillsbury and Bennett.

On these tracts there have been operated for a long time a total of twelve diamond drills, which have shown up forty million tons of ore, but it is estimated that before the exploratory work is concluded the lands will have been found to contain a total of two and one half times the amount already proved up.

Aside from this, Mr. Longyear is interested in lands elsewhere on the Minnesota ranges. He has, too, extensive interests in Michigan, these latter, however, not figuring in the Hill deal. His most valuable holdings in Wolverine territory are located on the Gogebic iron range. He controls here, among others, much of the fee to the big Norrie mine, operated by the United States Steel Corporation, and which nets him, as royalties on the ore produced, some hundreds of thousands of dollars annually.

The Norrie mine, or group, is the greatest property of its kind in Michigan. Since their opening the various mines of the Norrie group have produced nearly twenty-two million tons of ore, and are mining now at a rate of better than one million five hundred thousand tons per annum.

Mr. Longyear is interested in the fee of other Gogebic range lands, developed and undeveloped, and he has similar though less extensive possessions on the Menominee and Marquette ranges, the exact descriptions of which are not available.

The value of much of these holdings is of course largely prospective—it remains to be determined just how much ore will eventually be taken from the lands—but to judge from the basis figures made public in connection with the Hill deal, so-called, Mr. Longyear is the wealthiest man in Michigan, or rather was, he having transferred his place of residence from Marquette to Boston's aristocratic suburb, although still retaining his business headquarters at the former place.

A decade and a half ago Mr. Longyear built a mansion at Marquette, which is said to have been the most palatial in the State, its value being estimated at upwards of two hundred and fifty thousand dollars, and subsequently, a few years ago, he created astonishment by causing the house to be demolished, stone by stone, shipped to Brookline and there re-erected.

Longyear's business is still conducted from Marquette, being in charge of a confidential man there, but much of the time during later years has been spent by the family in Europe.—*The Boston Globe.*

I am led to speak of the new Christian Science church here in Boston. I had heard and read much about it before coming East, but no product of the imagination can excel its beauty. The dome is larger than the beautiful golden dome of Boston's State House. You can see it from all parts of Boston. Inside it is the most beautiful symphony in gray and gold, the only touch of color being found in the rich crimson of the pulpit furnishings. The organ, soft-toned and mellow, like the touch of a hundred harp-strings, rolls and swells through the long galleries and the spacious corridors. This is midsummer in Boston—an unusually hot one. Every one who possibly can go is off to the beach or the mountains. Yet each Sunday morning this church is crowded to its utmost. I attended one Wednesday evening service. There were over four thousand people present. After an opening hymn, a reading from the Bible and its interpretation from Mrs. Eddy's Key to the Scriptures, and the Lord's Prayer in unison, the meeting was handed over to the people. Dozens were on their feet ready for testimony. Many were still standing when the Reader at nine o'clock announced the closing hymn. Strangest of all, some time before its dedication, requests were sent out over the country that no more contributions be sent in. Everything was paid for; the church could be dedicated free of debt. There were no entertainments given to raise money, simply individual offerings, each from his own purse. I have been to other churches. Not one has been half filled, and if full to overflowing the number might be put in one gallery in The Mother Church. I questioned much with myself. I cannot understand its meaning. I have nowhere else seen so many intelligent and splendid looking young men in an audience. I have found since coming here that the first meeting Mrs. Eddy held in Boston was in my aunt's parlor, the very home in which I lived while here in school.

LUCY TERRELL ELLIS.

The Phoenix (Arizona) *Republican.*

That Christian Science is gaining a strong foothold everywhere, cannot be gainsaid. That it has done quite wonderful things and is to-day doing them, must be admitted. That its tenets are plausible and dynamic; that its followers consist of the highest business and professional people in all cities; that it carries with it no schemes of graft or secret machinations, is apparent to those who look into the comparatively new creed.

Judge Septimus J. Hanna laid stress upon these thoughts in his lecture before a very large audience at the Opera House, Friday evening [Sept. 7]. Judge Hanna is a member of the Christian Science Board of Lectureship of Boston, Mass. Not one auditor of the whole company could consistently enter objections to any statement made by the speaker.

The writer has talked much and written more in opposition to this belief. Why? Because, like the majority of other loud antagonists to these people's ideas and practices, he knew little concerning it. By some effort he was induced, as were many in the assemblage, to go to the lecture. To-day he confesses he could not push away partial persuasion, as he paid strict attention to the assertions of the judge. Christian people to-day profess to believe all the plain and understandable passages of the Holy Scriptures, and this is just the basic teaching of Christian Science, as put forth convincingly by Judge Hanna.

"He that believeth on me, the works that I do shall he do also," is the utterance of the Lord and Saviour, Jesus Christ. On this the Scientists rest deep thought, and argue that men to-day can do what inspired men of old did, if they walk with God, who is considered omnipresent and all powerful. Again may be asked, Why should this not be true?

The 103d Psalm by the sweet singer of Israel is an-

Digitized by Google

other corner-stone in the Christian Science belief. Does it or does it not contain plain and practical truths? It will be remembered that the Bible says if a man's faith be measured up to the size of a mustard seed, he can remove mountains. What does this mean? Was it placed in the great book to fill up, or was it placed there to be taken at its expressed meaning?

All of us who heard that lecture by Judge Hanna, while possibly not wholly convinced, cannot help giving it deep thought and inclining to the favorable side. At least it served to eliminate our scoffs and harshness toward the fast spreading creed. Judge Hanna is one of the most composed and careful speakers that ever addressed a local audience. He gave out nothing that did not evidence study and preparation. He indulged in no "extravagances" or "speculations," as some hearers imagined he would. In fact, he might have told of remarkable experiences in his own family, but he did not. His logic was good, his argument was better, and his straightforwardness was convincing.

Fort Collins (Col.) *Daily Courier.*

In spite of the hard knocks that Christian Science has been given right and left, it has continued to grow until now it must be reckoned as one of the great moral forces of the country. In 1876 Christian Science had only seven advocates; now it has a following numbering many thousands and is going ahead at a pace that holds the attention of the world.—*Trenton* (N. J.) *Gazette.*

AMONG THE CHURCHES.

SAN DIEGO, CAL.

First Church of Christ, Scientist, was formally dedicated yesterday with services in the forenoon and evening. The church had been completed for nearly a year, but owing to the delay in getting the pews the dedication had to be postponed. The address, given by the First Reader of the church, was in part as follows:—

Christian Science was first introduced into San Diego in July, 1887, by two Christian Science practitioners coming from San Francisco and commencing the work of healing the sick and teaching Christian Science. The first organized Christian Scientist association in San Diego was formed August, 1890. In December, 1892, it was decided to organize a church, and April 5, 1897, the church was legally incorporated according to the laws of California. At a called meeting held on July 27, 1904, the president of the church brought before the members the desirability for immediate and united effort to provide a church home of their own, and on Dec. 31, 1904, the corner-stone was laid. A year from this date the opening services were held, Dec. 31, 1905. All the teachers and practitioners that have worked in this field have struggled through deep waters to build the structure of Truth and Love, and during the building of the church the Board of Directors had many hard problems to master, but they held steadfastly to Principle, knowing, except the Lord built the house, they labor in vain that build it.

Christian Science is in accord with the Science of being which Jesus demonstrated, healing the sick and destroying sin. This healing has been lost to the world through clinging to personal sense and sin. Jesus said: "My Father worketh hitherto, and I work." And Paul said, "Work out your own salvation with fear and trembling, for it is God which worketh in you both to will and to do of his good pleasure. . . . That ye may be blameless and harmless, the sons of God, without rebuke." Jesus was governed by God, divine Principle, and this Principle, Love, should govern every man.

Our honored Leader, Mrs. Eddy, discerned anew the application of divine Principle, and restored to this age the Christ Science which heals the sick and sinning. Through her patient, tender love this day of dedication has been made possible. Our hearts go out to her in love and gratitude for the "little book," with its new, new story which is the old, old story of Jesus and his love.

San Diego (Cal.) *Union.*

WHEATON, ILL.

Less than four years ago four members of The Mother Church met and organized a Christian Science Society in Wheaton, Ill. About two years later this organization was given up, and First Church of Christ, Scientist, was organized. The church now has a membership of thirty-four, and a regular attendance of about fifty at the Sunday morning and Wednesday evening services. The Sunday School has enroiled over twenty scholars, with four teachers. Since April, 1903, we have given five lectures. We owe the progress we have made to the loving guidance and selflessness of our dear Leader, whose purity and goodness made it possible for her to give to us our present understanding of God.

ESTELLA L. BINDER, *Clerk.*

SPRINGFIELD, O.

The Christian Science church of this city has established a building fund and is proposing to build a house of worship as soon as the necessary sum can be raised. A substantial amount has already been subscribed—enough for a site—and it is likely that they will arrange for the building of the church in the near future. The local church, which is known as First Church of Christ, Scientist, is at present holding services in the Bushnell annex. It also maintains a free Reading Room, open every day except Sunday.

The notable dedication of the temple in Boston, Mass., has stirred up many to an interest in building which they have not felt before.—*Springfield* (O.) *Sun.*

ASHTABULA, O.

The Ashtabula Christian Scientists are happy over their latest demonstration, the securing of a home that is all their own. The long hoped for and confidently expected church is now a fact, and in its different appointments and situation everything is ideal. The building arrests attention by its snowy whitness, the favorite color of Scientists for their edifices. The opening services in the new church were held Oct. 7 at 10.30 A.M. and 2.30 P.M.

Ashtabula Beacon-Record.

NORTHAMPTON, MASS.

The local Christian Science Society has decided to build a chapel on the property at the corner of Center and Masonic Streets which was recently bought in its interest. Plans will be procured soon.

Springfield (Mass.) *Republican.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

THE LECTURES.

CHICAGO, ILL.

A very large audience at First Church of Christ, Scientist, last evening [Sept. 20] listened to an interesting lecture by Mrs. Sue Harper Mims of Atlanta, Ga. The lecture was repeated at the same place and hour the following evening. The lecturer was introduced by Rev. Willard Brown Thorp, pastor of the South Congregational Church, the nearest ecclesiastical neighbor of First Church of Christ, Scientist. In his remarks Mr. Thorp said,—

I welcome this opportunity of speaking a fraternal word to my Christian Science neighbors. I have watched with the deepest interest and admiration the growth of your spiritual work. I recognize that the Christian Science movement has developed in a notable way certain important lines of genuinely Christian experience, and has made religion a vital thing in the lives of many people where it had ceased to be effective. It has demonstrated the power of a conception of God which is essentially metaphysical, to save and transform lives. It has shown what can be accomplished by the constant inner assertion of the great positive affirmations of faith, and by their resolute application to the specific problems of life. It has put us preachers to shame by building up a great church without any preaching whatever, simply by the discipline of its members in the inner practice of the faith. With some of its teachings and many of its forms of statement I find myself at variance; but for the spirit that prevails among you and for the work you are doing in many lives, I have the heartiest admiration; and I recognize that it is not the first time in the world's history that doctrines pronounced by the wise and learned "foolishness" have been in the lives of multitudes "the power of God unto salvation."

Chicago Journal.

EVANSTON, ILL.

Mr. Bliss Knapp of Boston lectured at First Church of Christ, Scientist, Oct. 11 and 12. He was introduced on the 12th by Judge Thomas G. Windes, of the Circuit Court of Cook County, who said in part,—

It is only ten or fifteen years that this teaching of Christian Science has spread abroad in the world so as to become a subject of general, and I may say intense, interest to hundreds of thousands, yea, millions of people. It is of interest to them because they see and know by the works accomplished through Christian Science that it is the truth, that it is a truth that they have not known and realized in the past. How do they know that it is the truth? Mainly, until they become earnest and careful students of Christian Science, they know it by the works that they see. From five to eight or ten experiences of healing in Christian Science are narrated in the local church every week. These experiences are related in such a manner as to impress any person with the feeling that they are true and there is no question about it. But take the least number, five; that makes two hundred and sixty healings which are published to the world here in this little church every year. There are between nine hundred and a thousand Christian Science churches and societies throughout the country, but cut it down to eight hundred; that will eliminate most of the small ones. What do we have? An average of five experiences of healing in eight hundred churches every year would make in one year's time more than two hundred thousand people who are healed through Christian Science. I do not think that this is overstating it. There are, then, a million of people, within the last five years, who are exponents of Christian Science by their lives in this world, who demonstrate this eternal truth that is taught in Christian Science.—*Correspondence.*

BILLINGS, MONT.

Judge William G. Ewing of Chicago delivered a lecture on the subject of Christian Science to an audience that comfortably filled Elks' Hall last evening [Oct. 1]. He was introduced by P. B. Moss, president of the First National Bank of this city, who spoke in part as follows:—

It seems to me that out of all the various theories and dogmas presented, a sort of haziness has been produced in the human mind regarding religion, and to thinking people a spirit of restlessness has sprung up that the method is wrong and the practical side of religion has been in a large measure lost sight of. For a long time the creeds have been accepted as being all that there was to religious worship, and the study of the Bible has been overlooked. The Christian Science movement, under the leadership of Mrs. Eddy, has led a large number of religious people to pause and ponder as to where they were drifting. The result has been that a great many people have taken up the study of the Bible individually and are questioning themselves on their religious ideas. Never before have so many people been engaged in religious research as to-day; and to those interested in Mrs. Eddy's teaching, religion presents a practical side that is brought into daily use. These people have taken up the study of the Bible and are reasoning for themselves, and this has begotten an individuality in the denomination among the rank and file that no other denomination has. The result has been that to those people the world looks brighter and better than it has before, and the denomination is increasing in numbers at a very rapid rate.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

MRS. EDDY CONTRADICTS REPORTS OF HER DEATH.

THE story that Mrs. Mary Baker G. Eddy, Discoverer of Christian Science, is dead, which has so often gone the round of the press in sections of the country somewhat remote from Mrs. Eddy's home in Concord, N. H., was again started last week, and has been published in a number of newspapers in western Massachusetts and in other States.

The story came to Mrs. Eddy's attention a day or two ago, and elicited the following letter to the *Herald*:—

Pleasant View,
Concord, N.H.

October 19, 1906.

To the Editor of the Boston Herald,

Dear Sir:-

Another report that I am dead is widely circulated. I am in usual good health, and go out in my carriage every day.

Truly yours,

Mary Baker G. Eddy

For ten years past, at intervals, similar stories have been put afloat, with the accompanying statement that the fact of Mrs. Eddy's death was being concealed by the Christian Scientists. Meanwhile, Mrs. Eddy has pursued her usual course of living in Concord, has received visits from her followers who know her personally, and has been in almost daily view of the people of the city in which she has maintained her home for years past.—*Boston Herald.*

TO ONE AND ALL.

Beloved Students:—You have lovingly, lavishly contributed to the fund for paving the streets in Concord, in order to make smooth my daily drive, but you have done enough in this direction.

Now please discontinue sending more sums of money. Accept my deep gratitude, dear ones. Let Mind, not matter, absorb all your thoughts and make your ways pleasant and your paths peace. MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., Oct. 19, 1906.

AN AMENDED BY-LAW.

ARTICLE X.

STEWARDSHIP.—SECT. 4. The individual in charge of Mrs. Eddy's Room in The Mother Church must be a member of this Church, and if called for, it shall be her duty to go to Mrs. Eddy's home and remain so long as the latter shall desire it. Mrs. Eddy shall pay this member the same sum and on the same conditions named in By-law, Article XXII., Sect. 10, "Opportunity for Serving the Leader." Breaking this By-law shall excommunicate a member from this Church.

A HELP TO OUR LEADER.

Pleasant View, Concord, N. H., Oct. 22, 1906.

Dear Mr. McLellan:—Will you through the periodicals kindly impress upon those who contribute to such funds as the Concord Street Fund just closed by our Leader, that they should never make out their checks, drafts, etc., payable to Mrs. Eddy. Checks, etc., payable to Mrs. Eddy, require her personal endorsement, and this labor, insignificant in a single instance, becomes, when the instances are multiplied, a serious encroachment upon her time and attention.

Sincerely yours,

LEWIS C. STRANG, *Associate Secretary.*

"NOTHING BUT THE TRUTH."

IT is generally conceded that a person who has an opportunity to ascertain the falsity of a statement, but fails to avail himself of it and puts forth the false statement as the truth, stands in the same relation to the public as does one who knowingly falsifies; and if this is true in general, why should a different view of such conduct be taken when Christian Science and Christian Scientists are the subjects of misrepresentation?

A case in point is that of the canard which Mrs. Eddy has recently contradicted through the *Boston Herald*. The means for ascertaining the falsity of this story were available to all, yet it was printed without investigation. Certainly this was neither good morals nor good journalism, and the same may be said of the other false and, in some cases, malicious stories which have been circulated concerning Christian Science, its Founder, and its teachings.

Christian Scientists ask nothing unreasonable when they request that whatever is published about them and about their religion be confined to what is true. So reasonable is this request that it should appeal to every person of normal moral and mental make-up; yet it is a fact that about fifty persons are needed in the service of our Committee on Publication to correct the erroneous and misleading statements constantly being made by those who write upon the subject of Christian Science. Christian Science is no longer a new and comparatively unknown system, nor is it at all difficult to obtain authentic information concerning it, its Leader, and its followers. There are practically a thousand places where Christian Science services are held each Sunday, and in connection with almost all these services Wednesday evening meetings are held, at which testimony is given as to the healing of the sick and the reformation of the sinful through the ministry of this Christ-truth.

Digitized by Google

In addition to these public services there are almost one thousand lectures given annually by authorized lecturers, and the widely-circulated literature of the movement is available to all who wish to know what Christian Science is. The text-book, "Science and Health with Key to the Scriptures," and other works by Mrs. Eddy, are to be found in the public libraries throughout the country and at the free Reading Rooms maintained by almost every Christian Science church. Christian Scientists are not hard to find in any community and they are always willing to help those who honestly desire to know the truth. With all these means for obtaining correct information, there seems to be no excuse for the many untrue and sensational statements which have been made concerning Christian Science, and we feel that we are not asking too much of our newspaper friends when we request them to use greater care in verifying sensational reports which come to them.

ARCHIBALD MCLELLAN.

THE BEAUTIFUL AND THE TRUE.

There is no poetry in that which is not true.—MACDONALD.

CHRISTIAN SCIENCE teaches that the reign of Truth in the individual and in all the universe is also the reign of beauty, for "beauty, as well as truth, is eternal;" that the divine ideas are ever presented in "spiritual and immortal forms of beauty," and that we shall be both beautiful and grand "when governed by immortal Mind" (Science and Health, pp. 247, 503, 246). The destructive antagonism to art of the early Christians, the unlovely character and conduct which has characterized much of professed Christianity in all the centuries, and the relative weakness of the hold of modern religious thought upon beauty as a manifestation of Spirit,—all these things indicate that the prayer of the psalmist, "Let the beauty of the Lord our God be upon us," has not yet found its fulfilment. Nevertheless it is quite impossible to think of the perfection of God and his ideas apart from that ideality which is "the beauty of holiness [wholeness];" and if we are to be perfect, even as our Father in heaven is perfect, then this ideality is to be expressed in and through us.

Beauty is often thought of as superficial and decorative, while in truth it is wrought into the very nature of being. It pertains to Life and all Life's reflections, and we are to seek it as we seek the truth; we are to express it, even as we express love, in every word and activity of life. He who worketh in us "to will and to do," "doeth all things well." "He hath made every thing beautiful in its time," says the Wise Man, and we are to be like Him. We thus see that the art of living is the highest and finest art, and that the life which God would have us live is all glorious both within and without.

Looking upon the flaming trees and hedgerows in our northland of late, the appeal of nature's beauty has been felt to be at its full. As the painter who, having added his final touches, blends the pigments upon his pallet into a brilliant souvenir of his completed task, so "Nature's great artist," having finished the summer's masterpieces, has spread upon the forests and hillsides a revelry of color which has dared to compete with the splendors of the sunset. And what has it all signified? Nothing of real gain, surely, but rather loss to him who has simply yielded to the intoxication of an excited material sense. But he to whom

> Nothing in the world comes single,
> A mere itself—cup, column, or candlestick,
> All patterns of what shall be in the mount;

to whom

> The whole temporal show, related royally,
> [Is] built up to eterne significance,
> Through the open arms of God,—

he has seen in these autumnal glories the fitting highway of Him that cometh out of Zion "the perfection of beauty." He has come to know that rightly interpreted nature and true art take of the things of God and show them unto men.

If, as John declares, to know God is eternal life, then the perception, not only of Truth and Love, but of beauty, enters into that life. The perfection of God and his every manifestation, including man, floods the universe, and as this is perceived we have a new and quickening sense both of the divine nature and the divine nearness. Beauty no longer contributes simply to our delight, it becomes an inspiration, a source of nourishment and strength. Those familiar with our Leader's writings will recall the unnumbered passages in which she emphasizes this coincidence of truth and beauty, and points the way to its achievement in our individual experience. Until truth finds its free and perfect expression in us it has not received its due; this is the ideal of life's completeness, its fineness and fidelity of service, to which every student of Christian Science is lovingly called.

It has been said that "the happiest man is he who has learned from nature the lesson of worship," and the secret of this learning is the realization that true beauty is the expression of character. To think of beauty as inhering in materiality is to deny one's self one of the most direct approaches to the divine presence. We may be surrounded by outward beauty, but we shall find no temple, be moved by no impulse of adoration, so long as we are deaf to nature's spiritual appeal. Material sense imparts its own swift perishableness to all that it claims, and the brevity of sensuous beauty renders pain its inseparable companion. True beauty voices the divine, it is a revelation of Truth, a message of Love, and it brings perennial comfort and gladness. He that inquireth in His temple shall behold the beauty of the Lord.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Concord, N. H., Oct. 13, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—In making the arrangements for the lecture on Christian Science to be delivered in this city by Professor Hermann S. Hering, C.S.B., on Sunday, Oct. 28, the committee have thought of inviting the Mayor, Judge Charles R. Corning, to introduce the speaker, if this choice meets your approval. Judge Corning performed this courtesy most acceptably last year, on the occasion of Judge Ewing's lecture.

The committee will be very happy to send you as many invitations as you may desire for use at Pleasant View.

Most sincerely yours,

JOHN H. WORTHEN, MABEL C. GAGE,
MRS. ANNA MEEHAN, *Committee.*

MRS. EDDY'S REPLY.

Beloved Brethren:—I am in receipt of your letter and hasten to say our Mayor, Judge Charles R. Corning, is the very man for the hour and for this introduction. His history armors him with moral mail.

MARY BAKER EDDY.

Portsmouth, Va., Sept. 16, 1906.

Dear Mrs. Eddy:—I do not feel worthy to write to you, yet whatever of spiritual awakening has come to me has been through the medium of your gift to the world, and I would like to thank you for it. You have led me out of a dense theological fog into the white light of Truth. I feel certain that you have found the answer to Pilate's question, and recorded it in your "Scientific Statement of Being." Jesus, the God-crowned, brought the truth to mankind nearly two thousand years ago, yet I regard your resurrection of it, after its crucifixion and burial beneath the error of the intervening centuries, as the full equivalent of an original discovery. Jesus, with the sword of Truth, dealt the beast what seemed to be "a deadly wound," yet, strangely, the "wound was healed"—the truth, by the disloyalty of those who came after, was obscured—and the wound needed piercing again. You have dealt this second blow by your

Digitized by Google

scientific interpretation of being, and through these sword-thrusts of Truth, first by man and then by woman, deliverance is come to the world. This letter is written more particularly to tell you of a profound impression that came to me while attending a service in an orthodox church. That beautiful hymn, "Lead, kindly Light," was being sung, and although it usually, by association, suggested to me sorrow and sadness, on this occasion I suddenly became overwhelmed with its beauty, as I interpreted it to mean the "kindly light" of your marvelous discovery. As I dwelt upon the fact that your revelation was the kindliest light that had ever come into my life, tears of appreciation and gratitude welled into my eyes, and the grand hymn took on a new meaning and far greater beauty than before.

Yours with very highest regard,

RICHARD D. HAMILTON.

Concord, N. H., Sept. 18, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—I have just seen in the State Library that wonderfully constructed book, "Bohemia, but pages 117 to 121 far outshine—transcend—all the rest, for to me your writings are like books of prophecy which are being daily and even hourly fulfilled. Several references, chiefly that on page 312, line 1, of Science and Health, in the recent Lesson-Sermon on "Substance," impressed me as declaring and sealing the doom of all merely human learning, hundreds of crafty creeds, and countless material modes of healing human ills.

How sad to think that millions of costly attempts to cure human pain and woe are worse than useless and must be gone over and over again, sooner or later, until the perfect, spiritual healing is found and applied. This leads me to say that I thank God that you were healed by the divine Word, sent you by Principle, as was evidenced through your Scripture reading on that memorable Sunday when human hope and help had failed.

As I am glad that all my efforts to obtain health, happiness, and prosperity failed me, prior to coming to Christian Science, so from both selfish and unselfish motives am I glad that the Founder of Christian Science was not healed at Portland, Me., nor by any means which she resorted to, prior to her great discovery of 1866. For, had she been healed by any merely human or material means or method, she might not have been permitted, or been able, to show to this age what true substance, Life, and Love are, as she has so wonderfully done in "Science and Health with Key to the Scriptures," and I might not be here to worship God in those grand edifices in Concord and Boston, nor be one of the million or more beneficiaries of Truth and Love—as made known in Christian Science.

Lovingly your disciple,

MELVILLE C. SPAULDING.

Evanston, Ill., Sept. 14, 1906.

My Dearly Beloved Leader:—I do not know that you will ever see these lines, but my heart overflows with gratitude and love to you for all the blessings you have made it possible for me to experience. Your words about "Personal Contagion" have made the way so clear. Having reason to love you very much, I have never wanted to intrude on your blessed quietness, and at times I have wondered if I was lacking in appreciation of your work, because I did not wish to see you personally. Now I know that if you needed me I would walk across the continent to serve you, yet I serve you best by humbly serving the Master, in healing the sick and sinful, casting error out of my own thought each hour, and helping my brother to do the same. And I am so thankful to do this. Thank you also for giving us Mrs. Conger's and Mr. Kimball's letters. He is my teacher; God bless him for his loyalty to you and for his clear, positive teaching. Devotedly yours,

HARRIET L. DAVIDSON.

TESTIMONIES OF HEALING.

It was about eight years ago that I first heard of Christian Science. I was then unable to do any work. My left arm was lame and the muscles seemed to be shrinking away. My eyesight was very poor and the oculist told me one eye was about gone. At this time a growth appeared on my body which the doctors said would soon have to be removed. A neighbor who had a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, loaned me the book. The first time I read it I did not understand it, but by the time I read it through again my thought in regard to the book changed completely, and when I commenced to read it the third time I found I loved it very much. I had never thought that it would heal me, for I was along in years. During this time the abnormal growth gave me much pain, but while reading the book the third time, I found that it did not pain me at all, and I was much surprised when I found that it had disappeared, leaving not a trace of soreness. I knew God had healed me. I began to use my left arm and found that it too was healed.

This happened on Saturday evening, and Sunday I did not say anything about the healing, but kept singing all day. In the afternoon I picked up my book to read, and found that I did not need my glasses, and I have never used them from that day to this. The next morning I surprised my daughter very much by going to the well, drawing a pail of water, and bringing it to the house unaided. I then told her that the truth as taught in Christian Science had healed me.

Four years ago I was taken with kidney trouble. I suffered much at times, but I always took up Science and Health and read, and did my best to overcome it. Two years later I found there was an enlargement of some kind on one side. I kept on with my reading, feeling sure that God would heal me, but I could not tell how. One morning the suffering became intense and I shut myself up alone, declaring that God is all power and there is none other. I voiced the truth the best I could and relied solely on God to heal me. The growth then came away. There was no fever or soreness, and no discharge of any kind came with it.

These demonstrations were made without any help except the reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to whom I am deeply grateful.—MRS. CATHERINE L. MCCLAIN, Callaway, Neb.

Although I am unable to tell of all the benefits I have received from Christian Science, I feel it is a duty to give this testimony. I had the misfortune to lose my mother when young, and when I was still in my teens my father died and I went to live with a sister in Minnesota. I entered the State University but sickness ended my school life in less than a year, and the following year I was married. After the birth of my second child my health became so poor that I finally had to go on the operating-table. Later I was very ill for some time and was left with a severe bowel trouble. I was treated for this trouble by many physicians, but was never helped more than to secure some relief from the attacks of pain. About nine years ago I found myself impoverished, with the great problem of self-support looking me in the face. In a few years I had again to go to a hospital and undergo several operations. The operations were themselves pronounced successful, but as the months went by my health failed completely. I was very much discouraged. Then began a weary round from doctor to doctor. Finally one physician very frankly told me to stop trying to get relief from doctors. He said mine had become a chronic case, and that no doctor knew of any cure for it. I had become a victim to nervous trouble, and owing to the opiates I constantly took, insomnia was added

Digitized by Google

to my ills. By this time the bowel trouble contracted many years before had become almost unbearable. I suffered greatly and my mentality was so weakened that I feared I would be insane.

At length I decided to go to a Christian Science practitioner and ask her if she could help me. This seemed strange, even to myself, as I had always bitterly opposed Christian Science, but there seemed nothing else to try. I asked for treatment for the mental trouble, saying I had no faith in Christian Science for the physical troubles. At once I commenced to be relieved of the suffering; I was able to rest nights, and the opiates were given up. The time soon came when I desired to study and to understand something of the Principle of Christian Science and the reason for my improved condition. I studied every spare moment and gradually the other discordant conditions began to yield. The battle over inertia was long, but that too has been overcome to a great degree. I can but marvel at the patience and love expressed in so many practical ways besides in the treatments. To-day it would be hard to realize that I was ever the sick, puny invalid who came to Christian Science for help. With but a few days of vacation the years since I was restored to health have been spent in constant teaching. My home has been provided for, and many old obligations contracted during the years of ill-health have been canceled. Shattered faith in the mortal has been replaced by an abiding faith in God, good. Hope is no longer a will-o'-the-wisp leading into foul marshes and pestilential bogs. The understanding that Mind is the great builder is lifting me high above human discord and the gloomy scenes of the senses, into the beautiful highlands of the spiritual. Chastened by the stern lessons of suffering, I realize that this discipline can only be productive of blessings as it teaches me more obedience to God and a larger thoughtfulness for my fellow-men.

To our dear Leader, whose pure and unfaltering devotion to *Truth* is bringing humanity back to our Father, my gratitude and love is inexpressible; it increases with spiritual growth, and we know that spiritual growth never ceases.

GERTRUDE EMERY BOARDMAN, Watertown, S. D.

Shortly after the birth of my little boy, an abnormal condition of his head appeared. A physician, upon examination, said that the child could not live, unless possibly by an operation, and even then the chances were small for his life or for his reason. The babe was immediately put under Christian Science treatment, and in five weeks' time, during which he steadily improved, the lump had entirely disappeared and the bone had formed. He is now three years of age and a bright, normal child. I feel very grateful to God for this and many other blessings, and I also wish to express my love and gratitude to our dear Leader, who has brought us this blessed truth.

MRS. MYRTLE A. ROWE, Philadelphia, Pa.

In noticing the question asked by some who are opposed to Christian Science, as to who had diagnosed the case reported to be healed by this method, I wish to mention a case of healing by Christian Science in our own family where a physician had diagnosed the case. After the regular physician had had the case for two weeks, we were told that we could call any other physician we chose, as the child, three years of age, could not get well,—at least, if she did, that she would never know anything. As we were just looking into Christian Science, I asked my brother, the father of the child, to try its healing power, which he did, with the result that after the third treatment the child returned to consciousness, after having taken no notice of anything for ten days. With the seventh treatment she was healed, and to-day, after seventeen years of robust health, she shows no signs of ever having had a brain affliction. I can vouch for the foregoing statement in every particular, as the child is my niece, was born in our home, and lived with us until five years of age. She visited us recently and enjoyed attending the Christian Science church, although her mother is a homeopathic physician in Colorado.—MARY B. CUSHMAN, Lockport, N. Y.

It is with deep gratitude to God that I testify to what Christian Science has done for me. A little over three years ago I was laid up with what the doctors called an abnormal growth, affecting the spine and causing paralysis. I was as helpless as a child. I tried every material remedy that I could procure, all to no purpose. I continued to get worse and the doctors told me I would never be able to work again. Just about this time, in the darkest hour, and when in despair, I heard about Christian Science. Truly it was the hour that precedes the dawn, for at once the light began to shine into my consciousness; I began to improve, and in one month I was entirely healed. I went to work after one month's treatment, and I may say here that I had positive proof that the cure was a radical one, for my work required the running up and down five flights of stairs for ten hours a day. Prior to this, for a whole year, I could not go up one flight without great difficulty.

I am very grateful for the physical help I have received. I realize that God has healed me and that I owe my life to Christian Science. I am also deeply thankful for what this truth has done to change my habits, which were not of the best, and to reform my character. I was addicted to strong drink, loved to gamble, and was for years a continual trouble to my family; but now, thank God, I have been healed of the desire to drink and to live dishonestly. Christian Science has revealed to me a God of love, "who healeth all thy diseases," and has given me a practical, every-day religion that teaches me how to live aright.

I wish to express my thanks to our beloved Leader, Mrs. Eddy, for all she has done and is still doing for myself and for the world at large.

GEORGE WAMBOLT, Halifax, N. S.

When, in the fall of 1903, I began Christian Science treatment, I was encased in a plaster cast on account of a serious spinal trouble. I had learned of Christian Science the fall before and had been reading continuously for a year, but with no special thought of working out of my difficulty, though I had had some beautiful demonstrations over insomnia and other troubles. During the three prior years I had been under seven different physicians, besides having other material treatment. At the time I began Christian Science treatment I was practically reduced to going to and from my office on the cars, and could do little else. As a consequence I was very fearful, but notwithstanding this, after the second treatment I took off the cast and have not had it on since. What a glorious relief it was! My gratitude to God, and to our dear Leader for the great truths given us through Science and Health and for the daily blessings they bring, physically, mentally, morally, and spiritually, is unbounded.

My healing was not a rapid one, as it was about ten months before I realized that the demonstration had been made. I owe a world of gratitude not only for the physical healing, but for the inestimable benefit of the great spiritual uplift I received through the uncovering of the errors of sense. There were times during my treatment when I suffered severely, and nothing but the understanding of Truth which I had gained could have kept me from panic. Since the summer of 1904 I have had a constantly increasing sense of health, until to-day I am the surprise and wonder of all who saw me two years ago.

Had I been relieved through *materia medica* I would still have been the slave of material sense, whereas I now

Digitized by Google

enjoy, in a measure at least, "the glorious liberty of the children of God." I have not taken any medicine since the fall of 1902, the realization of the truth, as taught in the Bible and Science and Health, having been all-sufficient to meet any discordant conditions as they arose. I am, nevertheless, grateful to my physicians for the help they endeavored to give me and for their uniform kindness and consideration: the only regret I have is that they are practising *materia medica* instead of Christian Science.

HARRY C. ROBINSON, Washington, D. C.

After years of suffering and great expense for doctors and medicine, I was still without healing. In December, 1898, the crisis came. Three physicians diagnosed my case, without reaching an agreement. Our family physician, in whom we had implicit confidence, told me my only hope was to submit to an operation for the removal of an abnormal growth. Acting upon his advice, every arrangement was made to go to a hospital, when I was persuaded to try Christian Science. I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to take treatment. In less than six months I was entirely healed, the growth coming away and the organs and functions doing their work harmoniously. For nearly six years Christian Science has been my only remedy and I have enjoyed better health than ever before.

MRS. JULIA MUNGER, Council Bluffs, Ia.

Following the birth of my child, thirteen years ago, I was never well. I had severe abdominal troubles, headaches, etc., and after having treatment from several physicians, one of them told me that I could not live much longer. I did not know what it was to be free from suffering. At last I lost the use of my limbs and was confined to an invalid chair. I was taken to different places for medical treatment and baths, but without any good result. About two years ago, they were taking me to New York to a hospital when I heard of Christian Science and was speedily helped. A copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, was loaned to me and I began to study it at once, but did not take treatment until later. At last I took Christian Science treatment from a practitioner, and I have been healed of all the ailments referred to, with many more that space and time will not permit me to mention. I was brought back from the grave, as it were, by Christian Science treatment and by reading Science and Health. I can now do my own work, and go to church, walking to the car and from it, when for three years I had not walked at all. After receiving Christian Science treatment, I began to improve at once and grew stronger each day. I could never tell what Christian Science has done for me, but would say I am truly thankful every day to God, and to Mrs. Eddy for this blessed truth that makes us free. I indeed suffered many things of many physicians.

MRS. CORA E. WALKER, Youngwood, Pa.

I am very glad to have the opportunity to tell of my healing through the truth. About nine years ago I was taken very ill, though for a year or more life had been a burden. Our family physician said that I had an internal growth which must be operated upon, and he insisted that I should be taken to a hospital for this purpose. Another physician was called for consultation, who agreed with the first as to the correctness of his diagnosis, and said the sooner the operation could be performed the better. Arrangements were made to take me to Baltimore, to the city hospital. I had to be carried to the depot on a stretcher, as I was not able to sit up. There was a lady traveling at the same time who claimed to have been healed by Christian Science. She told me something about it and advised that I take Christian Science treatment; but not knowing anything about it, I paid very little attention to what she said. I told her that as all the arrangements had been made for me at the hospital, I would have to go there.

She left her address with my husband and said if we did decide to take Christian Science treatment that she would gladly assist him in finding a practitioner. After going to the hospital the head physician made an examination, consulted with the one who had accompanied us from home, and said that an operation would be of no permanent benefit to me, even if I were able to stand it. Then our physician said, "I do not know anything else you can do, unless it be to try Christian Science." My husband went to see a practitioner, who took the case and began treatment on Tuesday evening. I had been moved to a hotel near by, and she came to see me twice a day. The first time she came she brought some Christian Science literature for me to read. By Thursday I had improved so that I could walk. My husband had to leave for home, and I asked the practitioner if she thought I was able to go with him. She said yes, and asked me to get a copy of the text-book, that I might learn from it how to keep well. We arrived home Friday evening, and not being expected there was no one to meet us; so we walked home, a distance of several blocks. It was a great suprise to all our people and friends, for there was no one that expected me back alive. In three weeks I was perfectly well and have been ever since.

When we began the perusal of "Science and Health with Key to the Scriptures," we found it all that was claimed for it. During more than eight years we have found its spiritual interpretation of the Bible to be sufficient to meet our every need, in sickness as well as health. Of the former we have had but very little since we learned of Christian Science. I am very grateful to God for this blessed healing and saving truth, and to Mrs. Eddy, our dear Leader, for revealing it to us.

MRS. MAGGIE A. PHILLIPS, Washington, N. C.

For over forty years, up to the year 1900, when I was healed by the reading and study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I had been a sufferer from severe stomach and kidney trouble, etc., which had become chronic, although I was continually using medicines and was frequently in bed under medical treatment for weeks at a time. In 1897 I had a bad attack of insomnia, for which morphine was prescribed. When I discontinued its use the attacks became more frequent and violent, until in 1900 I feared I would become insane, and this fear drove me to seek aid in Christian Science. A kind friend placed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, in my hands, with the request that I should read it; and although I did not at first understand it, and found many things contrary to my long-established opinions, I persevered in the study of that wonderful book until the day dawned and the day star arose in my heart.

Within six weeks from that memorable day every vestige of the ailments was destroyed, and I have had no return of any since. My sight, which was very poor at the time, is now perfectly restored. Since then I have had a few slight ailments to meet, but have always found divine Mind the ever-present remedy. The years spent in the toils of mortal mind, and the money paid out for drugs, I can only guess at,—it is something I wish to forget,—but the blessings that have come into my life and the glorious prospects in Christian Science more than compensate for all.

I wish to express my deep sense of gratitude to our dear Leader for her noble life-work, by which I have been helped on the way to Truth.—R. D. LEWIS, St. John, N. B.

I am prompted to tell of a demonstration which proved to me that "perfect love casteth out fear." It was six years ago, at the birth of our youngest son. There was only one

Digitized by Google

other Scientist here, and as she could not be with us my husband and I were alone. As the time drew near I seemed filled with fear, so I wrote to a practitioner. The fear left me, and in its place the "peace of God, which passeth all understanding," filled my sense. The birth was normal, and I was able to care for the child from the first. We have had many other proofs of God's loving care, in cases of accident and in overcoming the various diseases to which children are supposedly subject. Each time Truth has cast out the error and we have gained in understanding.

We feel very grateful to our dear Leader, who has so faithfully shown us the "true Light, which lighteth every man that cometh into the world."

MRS. B. M. KINSMAN, Rochester, Vt.

It is seven years since I was healed in Christian Science, and it may help some other sufferer to hear that very many afflictions have been overcome for me by the truth. I had been a semi-invalid for about seventeen years, being treated by one doctor after another; using every material remedy I could hear of, and growing worse all the time. After exhausting the skill of several doctors, I was told that there was an abnormal growth, and an operation was suggested, which I greatly dreaded. After some electrical treatment I grew worse, and could not be moved without intense suffering. The doctor could do nothing but give me morphine tablets. A serious condition set in, which baffled the doctor, and he said he could do no more; but contrary to his expectations I lived through it.

All through my sickness a lady who lived near us frequently called to see me, and talked of Christian Science. I could not grasp the meaning of what she said, but often I would think to myself, What if there should be truth in what she has told me of this healing? On the day when the doctors doomed me to the grave, I said to my daughter, who was bewailing my fate, Why not try this new way of healing that our neighbor has been telling us about? My daughter then sought an interview with a practitioner, who told her that all things are possible with God. She came to see me, and after a few moments I grasped the meaning of what she said. I could have shouted for joy! I knew I was going to live. When she asked that the medicine be taken from the room, I felt no fear at seeing my cherished gods banished from my presence. She gave me treatment and I rested that night. O glorious thought, I was going to live! I felt no doubt of it and was happy. In about twenty-four hours after the first treatment, I was better, I felt stronger. I felt "the divine energy of Spirit, bringing us [me] into newness of life" (Science and Health, p. 249). The tenth day after I began treatment I did some baking, and after four weeks' treatment I did what would be called hard work. In these seven years I have never taken any medicine, internally or externally. Truth is my physician. Since I was first healed many physical troubles have come up, but they all vanished into their native nothingness when the searchlight of Truth was thrown upon them. The small pittance which the Scientist charged for the four weeks' treatment was nothing to be compared to the hundred of dollars given for doctors and medicine.

For all these blessings I thank my heavenly Father more than I am capable of expressing. My heart goes out in tender gratitude to our dear Leader for what this knowledge has done for me, the suffering from which it has saved me.—MRS. JOANNA CHILDS, Wichita, Kan.

In November, 1897, I was employed as a compositor on a weekly newspaper in a little town in South Dakota, when I was taken critically ill and had to be sent to my home. This was the second time that I had to quit my work and go home, and I had a feeling that I was going home to die.

The two winters previous I had tried everything possible for my relief, employing three different physicians during this time. The disease was a very severe bowel trouble. When I returned home I was much worse and for nine weeks my physician tried in every way to help me, but gradually I sank until I became helpless. A consultation of doctors was held, and one of them told my father that they did not think I would live an hour.

A friend then asked us to try Christian Science, and I reached out for this last straw. After the first treatment my parents could see a change, but I did not realize it until about the third day, when the "peace which passeth all understanding" came over me and I rested,—something that I had not done for nine long weary weeks. The practitioner told my parents to give me anything I wished to eat, and I ate with a relish the things which the physicians had condemned. About a week afterwards I rose from my bed, dressed, and went for a ride. I am to-day strong and doing all of my own work for a family which includes two small children. I thank God for sending to us in this age our grand and noble Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science, to lighten our burdens and to lift us out of suffering. I am to-day ready to testify to God's goodness to mankind and to the great benefits received through the study of "Science and Health with Key to the Scriptures."

MRS. JESSIE S. HILDERBRANDT, Watertown, S. D.

It is nearly six years since a copy of Science and Health was given me by my dear brother. I did not then know that it was the answer to my prayer for light, but as I studied it I found it did indeed reveal the true meaning of the Scriptures, and I should have loved it had it never healed disease, for the spiritual rest and peace it gave, but at the beginning of my study I had such conclusive proof that Christian Science heals disease that I have never doubted since. Among the first demonstrations was the healing of our baby, then two years old. He had had lung trouble twice before and our fear was very great, for the doctor had said he probably would never outgrow these attacks. This time he seemed to be taken ill very suddenly, and when Christian Science treatment began he had been for three days and nights in a high fever, but in a half hour from that time he was quietly sleeping. In another half hour he was up, dressed, and walking out of doors, and was perfectly well from that time. I felt that we were in the presence of Him who "spake and it was done." I am very grateful for all the blessings Christian Science has brought us, also to dear Mrs. Eddy for her loving, unselfish work.

MRS. EVA S. JERO, Grand Rapids, Wis.

My first knowledge of Christian Science came when I was to pass an examination which was competitive, and the outcome of which was very important. When the day arrived it found me so sick that I could scarcely sit up, and after taking, without relief, everything I knew of and that the doctor could give me, some one suggested Christian Science, and I telephoned a practitioner. Help was received immediately and within fifteen minutes I began my work. The examination lasted all day, and I worked with the freest feeling that I had ever experienced, and was without even a sense of weariness when it was over. This relief was something so new and amazing that my interest in Christian Science was instantly aroused. I have been studying it since that time, and applying it to the many problems that come up each day with the satisfaction that Truth alone can give.

MRS. LILLIAN P. MOKREJS, New York, N. Y.

FROM OUR EXCHANGES.

The Bishop of Birmingham's sermon was sundered by the whole width of human feeling from the commonplace; it contained neither optimism nor complacency. It was, he himself said, the cry of a permanently troubled conscience. The Church of England is normally anxious about its health, but is not easily moved to a conviction of sin. The bishop's tone, however, was that of a penitent. He took for his subject one of those passages of the Gospel which are commonly relegated to the class of hard sayings, and are then passed over with surprising ease: "How hardly shall they that have riches enter into the kingdom of heaven!" It was to bishops oppressed with fatal opulence, to the parochial clergy encumbered with comfortable residences, and to the members of the House of Laymen generally, that he applied this hard but very plain saying. The Son of God chose for the condition of his incarnate life that of the respectable artisan; and that is precisely the class with which the Church of England has least to do. When all account has been taken of its untiring work for the poor, it remains rather the church of the rich; and so it fails to appeal to that class which the Lord himself made most prominent, it moves in grooves which are precisely those from which Christ warned us off. . . . What is needed is the searching of heart that goes down to the root of evils. The evils which affect the Church will not be cured by a facile and growing conformity to current opinion, whether crystallized in a Representative Church Council or fluid in the press. They will be cured by applying to the problems of contemporary life the hard, uncompromising principles of the Gospel.—*The* (London) *Church Times.*

The need of the world is a recognition of the power of the Spirit, the development of a desire in every human heart to give its influence full sway, to foster it by communion and good works, to lean upon its strength, to become strong in character and possibilities through its power.

Religion for the average man is becoming too real and vital a feeling to admit of any further discussion regarding a hell of fire and brimstone, a heaven of golden streets and harps, predestination, or any of those things that formerly occasioned much waste of mental effort. They are all beside the issue, which is, Shall we live the spiritual life *here and now*, finding within ourselves our greatest reward, or shall we ignore the call of the best within us and punish ourselves by a living unrest? . . .

The religion of the future will be the religion of brotherhood. In the mind of every thoughtful man there stands out as never before the one ideal of this religion, the Man of Sorrows, he who said, "Thou shalt love the Lord thy God with all thy heart, and thy neighbor as thyself." The full force of his appeal to men has been lessened greatly by theological discussions. He has been made too mysterious, his brotherhood to man has been lost in the surfeit of his divinity. Christ was "the Son of God," as we are all sons of God; only in him the divine Spirit reached its ideal development and makes him the example for all time to those who would lead the spiritual life. He is one of us, a man among men, perfect in his life, his thought, his union with the Spirit, bringing into his living the perfect character of which we each possess the rudimentary beginning.

RALPH P. SWOFFORD.
The Outlook.

The average man has a religion; and we venture to say that in some important respects his conception of the Christian religion more nearly accords with that of the Master than does the conception that has been current in the Church. . . . The Church has been too apt to think that Christ came to prepare men on the earth for a celestial happiness in heaven; it has been too apt to preach a religion that prepared men to die rather than a religion which fitted them to live; it has too often accepted dismal conditions in this life as inevitable, and tried to content men with their present lot by promising them a better lot hereafter. So did not Christ. So did not his immediate disciples. He told them to pray, "Thy kingdom come on earth:" and his disciples looked for a time when the kingdoms of this world would become the kingdom of our Lord and of his Christ.

The average man can teach the Church something concerning what Christ came to accomplish. The Church can teach the average man something concerning Him under whose leadership and by whose aid and co-operation it is to be accomplished.—*The Outlook.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Unexpected good progress is being made by the Mikkelson-Leffingwell polar expedition, which left Victoria, B. C., on May 20 in the schooner Duchess of Bedford to locate a new continent believed to exist in the mysterious Beaufort Sea, westward of Banks Land. Letters dated July 25 state that Point Hope, originally intended as this winter's base, had been reached two months ahead of programme. After wintering at Minto Inlet, the Duchess of Bedford will start in the early spring on the most daring dash of her voyage—skirting Banks Land to its northern end, where it is proposed to spend the second winter, passing on this run between the great ice-packs and the land through less than a mile of free water. The winter will be devoted to scientific research on and about Banks Land. The crucial event of the expedition is due in February, when the party will make westward across the ice packs for the unknown land. If this land be found a new route to the pole will have been attained.

The Postmaster General has issued an order that on and after Nov. 1, inst., letters originating in New Zealand and prepaid by postage stamps at the rate of one penny or two cents for each half ounce, will be delivered to addresses in the United States without sur-charge or the collection of additional postage. The Postmaster General of New Zealand strongly urged this concession in the interest of the people of New Zealand, who now have to pay five cents letter postage on correspondence delivered in the United States, while correspondence carried in the same vessel and transported across the territory of the United States for delivery in Canada and Great Britain, is carried at the rate of one penny or two cents per each half ounce.

In fining the New York Central Railway Company $108,000 (almost the maximum penalty of the law) and its traffic manager $6,000, Judge Holt of the Criminal Branch of the United States Circuit Court, New York City, used the following language: "Such a violation of law is much more heinous than the ordinary common vulgar crimes usually brought before the criminal courts. Those are crimes of sudden passion and temptation. These crimes we are dealing with were committed by men of education, business experience, and standing in the community, and as such they should be expected to set an example of obedience to the law, on the maintenance of which the security of their property depends."

The Department of Agriculture last week promulgated the regulations under which the recently enacted pure-food and drug act will be enforced. The section respecting the labeling of products requires that the ingredients of the package shall be stated, so that the purchaser may know exactly what he is buying. The label on every product must bear the name of the product, the place of manufacture, and must show whether the article is a compound, mixture, or blend; and must designate the ingredients and proportions, in the case of drugs and foods. The use of any false or misleading statement, design, or device on the label is specifically prohibited.

The Office of Public Roads, Department of Agriculture, and the Bureau of the Fourth Assistant Postmaster General, Post Office Department, have been co-operating in a systematic effort toward the improvement of public highways on which rural delivery service has been established. Good results in the way of generally improved road conditions have been obtained in New York, Illinois, Wisconsin, and Missouri through action taken by road officials in those cities on reports submitted by rural letter-carriers.

"I am sure," says Mrs. Robert E. Peary, "that my husband has found the pole, and will soon be on his way home to tell us all about it. Mr. Peary has been gone fifteen months and we have not heard a word from him since the companion ship to the Roosevelt left him at Etah in September, 1905. I do not expect to hear from him until the last of November, and will not be disappointed if I do not hear from him then, but I have an instinctive feeling that he has achieved the ambition of his life."

At a recent meeting in New York, associated interests representing $70,000,000 of invested capital in the musical industries of the country perfected the permanent organization of the American Musical Copyright League, the object of which is to secure a copyright law which will be fair both to the manufacturers and to the consumers. Certain portions of the bill now pending in committee before Congress are considered unfair by the manufacturers.

The State of Arkansas won a victory last week in its anti-trust suits against the packing companies when Judge E. W. Winfield passed upon the motion filed by the State that the answer of the Hammond Packing Company be stricken from the docket and that the State be permitted to take judgment for $10,000 because of the failure of the officers of the company to testify before the commissioner in the recent hearing in Chicago.

Counsel in New York representing the American Sugar Refining Company has filed demurrers to indictments recently found against that company on a charge of accepting rebates on sugar shipments in violation of the Elkins law. The indictments demurred to allege that the American Sugar Refining Company received $20,000 in rebates in the spring of 1903 from the Western Transit Company.

The famous case of Hearst against the anthracite railroad and coal companies, charging violation of the Sherman Law and of the Interstate Commerce Law, will probably be reopened by order of the Interstate Commerce Commission, in order that more testimony may be taken and the case decided under the new rate law.

A remarkable achievement in wireless telegraphy is reported to the Navy Department from the Pensacola station. That plant has been able to keep in constant communication with the United Fruit Company's steamer Preston from the time that vessel left New York until she arrived at Honduras.

After months of work, the fight has been won against the Colorado River. The Southern Pacific engineers corps have checked its flow into the Salton Sink, whence most of it has been flowing for two years, and have turned it back into its channel leading to the Gulf of California.

Countess Rosalind Frances Stanley Carlisle, wife of George James Howard, the Earl of Carlisle, Viscount of Morpeth, Baron Dacre of Gillesland, has been elected president of the World's Woman's Christian Temperance Union.

Postmaster General Cortelyou, in his estimates for the coming fiscal year of the postal service, asks for salaries $1,528,920 and for the maintenance of the postal service $206,662,190.

Secretary Metcalf says there is every indication that the number of immigrants arriving this year will be greater than ever before, and may reach 1,400,000.

Foreign.

The British battleship Dreadnaught, which had her trials at sea recently, not only developed a speed of more than twenty-two knots, but showed remarkable quickness in manœuvring. The announcement is significant because the Dreadnaught is the first large war vessel to be propelled by steam turbines. The success of these trials has led the Admiralty to give orders for the construction without delay of three other such vessels. One is to be built at Portsmouth, one at Devonport, and one in a private dockyard.

The European Petroleum Union, which has been organized in Bremen to fight the Standard Oil Company, has an initial capital of $5,000,000. It is backed by the Rothschild Company and Nobel Brothers, both Russian concerns, the Deutscher Bank, and other petroleum interests. The Union is designated as a selling agency. The existing selling agencies in the various countries of Europe will be amalgamated and recognized as subcompanies of the Union.

The Italian Council of State has approved a proposition to intrust the Krupps of Germany with the construction of artillery to the amount of $1,600,000. This will entitle Italy to make use of the Krupp patents in the construction of artillery in Italy. A total of $6,000,000 will be employed in providing new cannon.

In their recent mountain climbing among the Himalayas of Kashmir, Dr. and Mrs. Workman camped at an elevation of 21,300 feet and Mrs. Workman reached an elevation of 23,264 feet. Among the Andes Herr Helting, the Swiss climber, in January last reached the top of Aconcagua, 22,800 feet.

Iceland is to have its first railroad. It will run out from Reykjavik, the capital, about forty-five miles through a fertile part of the country.

Industrial and Commercial.

Preparations have been completed for cutting about two hundred and forty million feet of lumber on the Penobscot River this season. One hundred million feet of this will probably be used in pulp-paper mills.

Experts in the broom corn district of Central Illinois estimate that the harvest this year in the United States will furnish sufficient material for the making of 42,000,000 brooms, valued at $15,000,000.

During the year 1905 the oil fields of the United States produced 134,717,500 barrels of petroleum, as against 117,080,960 barrels in 1904.

The traffic on the Mexican International Railroad has grown so heavy that it has been decided to double track a portion of the line.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

BASELESS CHARGES REFUTED.

RECENTLY there has appeared in a daily paper an article, based upon an "investigation" by two of its reporters, in which is alleged, among other things, that for several years Mrs. Eddy's health has been such as to render her unable to leave her house, and that during this period she has been impersonated on her daily drive by Mrs. Pamelia J. Leonard, a member of her household. This latter charge was backed by the affidavit of a man who was formerly the janitor of the building in Brooklyn, N. Y., in which Mrs. Leonard and her son have offices. This man made an alleged "identification" of Mrs. Leonard as the occupant of Mrs. Eddy's carriage on Oct. 22.

The utter falsity of this charge is established by the following affidavits:—

MR. FROST'S AFFIDAVIT.

"67 Pleasant Street, Concord, N. H., Oct. 29, 1906.

"I have known Mrs. Mary Baker G. Eddy for over seventeen years, and have known Mrs. Pamelia J. Leonard for four years. I have seen Mrs. Eddy on her drive frequently during that time, as her carriage passes my house twice daily. During the last two weeks I have seen Mrs. Eddy enter her carriage every day, except once, and on that day I met her at the gate. I was engaged in painting the inside of the house. One day, while setting some glass, I saw Mrs. Eddy at her desk writing.

"I have worked at Mrs. Eddy's house more or less ever since she has lived at Pleasant View, and have done all the painting there for the last four years.

"While Mrs. Eddy has been on her drive, Mrs. Leonard has always inspected our work and conversed with myself and my men, and on Oct. 22 I remember seeing her in the house and conversing with her during the time that Mrs. Eddy was on her drive. I have never known Mrs. Leonard to enter Mrs. Eddy's carriage, nor even known her to go to the door when Mrs. Eddy entered her carriage.

"RODOLPH B. FROST."

"State of New Hampshire.

"Merrimack, ss. Oct. 29, 1906.

"Personally appeared before me Rodolph B. Frost, who, being duly sworn, deposes and says that the above statement made and signed by him is true.

"GEORGE H. MOSES.

"[Seal]."

AFFIDAVIT OF MRS. LEONARD.

"I have been in the home of Mrs. Eddy off and on for the last eight years. Since the 19th day of February, 1906, when last I came to Mrs. Eddy's house, I have not been out of sight of it. I have access to all parts of the house, and go about it, and know absolutely that there are no stimulants anywhere in the house.

"The statement that I have impersonated Mrs. Eddy and ridden in her carriage in her place is entirely false, for I have never stepped inside of her carriage, and have never even looked inside of it.

"There has not been in Mrs. Eddy's room, nor anywhere in the house, and is not now, any sort of galvanic battery.

"At the time Mr. Hennessy claimed to identify me as being down town, I was at home at Pleasant View. Had he taken the pains to have come out here to Pleasant View, I would have gladly seen him.

"I deny most emphatically that Mrs. Eddy has any such disease as cancer, or that she has any other disease. As I am and have been in daily contact with Mrs. Eddy, seeing her many times each day, I am in a position to know as to what I am stating. And she has not palsy of the hand. The story that a physician from Boston is attending her is without foundation, as there is no physician from anywhere attending Mrs. Eddy, nor has there been while I have been in her home.

"MRS. PAMELIA J. LEONARD."

"State of New Hampshire.

"Merrimack, ss. Oct. 29, 1906.

"Personally appeared before me Mrs. Pamelia J. Leonard, who, being duly sworn, deposes and says that the above statement made and signed by her is true.

"JOSIAH E. FERNALD.

"[Seal] Notary Public."

The *Boston Herald* reporter who interviewed Mrs. Leonard on Oct. 28 wrote as follows:—

"A single glance at the figure of the woman shows that all resemblance to Mrs. Eddy absolutely ceases with the color of the hair. They are totally unlike in form and feature. Mrs. Eddy is of a slight, delicate type of scarcely one hundred pounds weight, while her face is cast in a decidedly classical mould.

"Mrs. Leonard, on the other hand, weighs nearly one hundred and forty pounds, and there is no facial resemblance between her and her Leader.

"Mrs. Leonard has a much stouter figure, and while her face is perhaps not less intellectual in its features, it is decidedly fuller and rounder. In weight she is thirty or forty pounds heavier than Mrs. Eddy. It was evident to the newspaper men, all of whom have in times past had personal conversation with Mrs. Eddy, that Mrs. Leonard could not successfully impersonate Mrs. Eddy, even if the attempt should be made."

Mr. Strang, who is Associate Secretary for Mrs. Eddy, has made the following statement regarding the interview which the two reporters had with Mrs. Eddy at her residence on Oct. 15.

MR. STRANG'S STATEMENT.

"I first encountered Messrs. Slaght and Lithchild on Saturday, Oct. 13, 1906. Between 1 and 2 P.M. I was returning to Pleasant View from a walk in the direction of St. Paul's school, when I was stopped just to the westward of the Pleasant View cottage by a man who asked if all the property near there belonged to Mrs. Eddy. I told him the extent of Mrs. Eddy's estate. Later I learned that this man was Mr. Slaght.

"Perhaps half an hour later, when I was sitting in my room, which faces Pleasant Street, I saw the man who had spoken with me come from Professor Kent's house opposite with another man, who I afterward learned was

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

Mr. Lithchild. They got into a hack and drove toward Concord.

"At noon the next day, Sunday, Oct. 14, two men called at Pleasant View. Mrs. Sargent interviewed them at the door. They asked for Mr. Frye, said they wanted to see him on business, and added that Mr. Fred N. Ladd had sent them. They gave no names. Mr. Frye spoke to them and made an appointment with them for three o'clock that afternoon. After Mr. Frye had showed them out, he called me to look at them, and I saw that they were the same two men whom I had seen the day before.

"Between one and two I drove over to Mr. Ladd's house and found out from him that they were reporters of the *New York World*. Mr. Ladd said that he had talked with them until very late the night before and that they had asked many foolish questions regarding Mrs. Eddy and had refused to credit anything that he said in regard to her being alive.

"At three o'clock Sunday afternoon these men returned, according to their appointment with Mr. Frye, and at Mr. Frye's request I was in the room during the interview. Most of the conversation was carried on by Mr. Slaght, and the story he told was in the main features as follows:—

"Mr. Slaght said that he and his companion, Mr. Lithchild, represented the *New York World*. He said that the *World* had received many letters declaring that Mrs. Eddy was dead; that Mr. Frye was the real head of the Christian Science movement, and that money was being received—in short, that a fraud was being conducted.

"Mr. Slaght continued that these letters had interested Mr. Pulitzer to the extent of sending them here to find out definitely whether or not Mrs. Eddy was alive. They were not after a story. They were here simply to prove conclusively that Mrs. Eddy herself was alive.

"He said it was not Mr. Pulitzer's purpose to use the material they had collected, provided they could satisfy themselves that Mrs. Eddy was alive.

"Mr. Lithchild questioned Mr. Frye in regard to a deed for the Pleasant View property, which Mr. Lithchild claimed Mrs. Eddy had given Mr. Frye. Mr. Frye explained that this was a trust deed, and that Mrs. Eddy had taken it back. Mr. Lithchild said that no such action had been recorded up to June, 1901. Mr. Frye sent for a copy of the record the next day, and the date of the recording of the deed was September, 1901.

"Messrs. Slaght and Lithchild were told by Mr. Fyre and myself that Mrs. Eddy was alive and could be seen driving in her carriage every day. They replied that ours was interested testimony and not satisfactory to them, and that they were informed that the person in the carriage was not Mrs. Eddy, but a dummy.

"Mr. Frye asked them what they would consider satisfactory testimony, and they said that they would be satisfied if Professor Kent, who lived across the way, would identify Mrs. Eddy in their presence. Mr. Frye said that he would bring the matter to Mrs. Eddy's attention and let them know the day following what her decision was. This closed the interview.

"On Monday, Oct. 15, Mr. Frye did not speak to Mrs. Eddy about Messrs. Slaght and Lithchild until after she returned from her drive—about two o'clock. She immediately sent John Salchow, one of the men on the place, to see Professor Kent and arrange with him to identify her. Mr. August Mann, Mrs. Eddy's coachman, was sent to the Eagle Hotel after Messrs. Slaght and Lithchild. They reached Pleasant View about three o'clock. I received them, and while we were waiting for Professor Kent, Mr. Slaght remarked that he was glad that their business was to end in so satisfactory a manner, again emphasizing the point which they desired us to believe, that a positive identification of Mrs. Eddy was all that Mr. Pulitzer and the *World* were after.

"As soon as Professor Kent arrived, the three men and myself went at once upstairs to Mrs. Eddy's office. She arose and stepped to the middle of the floor to meet them. She spoke to Professor Kent, saying that she was sorry he had lost the principalship of the Concord High School and that she hoped he would be re-appointed. I introduced Mr. Slaght first. She shook hands with him, and he said that he was very glad to see her. I then introduced Mr. Lithchild. Mr. Lithchild's name escaped me for a moment, and he was obliged to prompt me. Mrs. Eddy shook hands with him. She explained in a few words that her duties made it impossible for her to receive visitors and that this accounted for her seclusion. She signified that this ended the visit, though I believe that she shook hands again with Professor Kent before he left the room. I know that Messrs. Slaght and Lithchild preceded me out of the room and went downstairs. Mrs. Eddy remained standing during the entire visit, and as the men left, turned and walked back to her desk in the bay window.

"When we were going down the stairs Mr. Lithchild said to me, with apparent conviction: 'She is certainly a well preserved woman for her years.' Mr. Slaght also gave me to understand that he was thoroughly satisfied as to the soundness of Mrs. Eddy's physical and mental condition. They furthermore led Mr. Mann, who drove them back to the hotel, to understand that they purposed leaving town that afternoon, the inference being that they intended to return to New York, thus carrying to the very conclusion of our experience with them the intimation that their sole purpose was the positive identification of Mrs. Eddy."

From this interview with Mrs. Eddy these men wrote a story in which they depicted her as a helpless invalid. This story was published Sunday, Oct. 28, and on that day Mrs. Eddy was visited at her home by Mayor Charles R. Corning of Concord, and General Frank S. Streeter, also of that city. Mayor Corning is also Probate Judge for Merrimack county. General Streeter is a leading lawyer and one of the most prominent men in the State.

These gentlemen, immediately after their call upon Mrs. Eddy, gave the following statements to the press:—

MAYOR CORNING'S STATEMENT.

"I have known Mrs. Eddy by sight for many years and have seen her in her carriage many times, and within the past season Mrs. Eddy has passed up Pleasant Street and down Green Street daily, and I know that the sole occupant of the carriage has been Mrs. Eddy. I had never met Mrs. Eddy face to face at her residence, Pleasant View, until to-day. Mrs. Eddy received me this afternoon in company with Gen. Frank S. Streeter, who is and has been an attorney of Mrs. Eddy for several years.

"As I had heard so much concerning the precarious condition of Mrs. Eddy's health, I feared that there might be some foundation for such reports, but the fact was utterly different. I spoke to Mrs. Eddy, and I listened for nearly half an hour to her conversation. She is keen of intellect and strong in memory. She is a surprising illustration of longevity, with bright eyes and emphatic expression, and of an alertness rarely to be encountered in a person so venerable.

CHARLES R. CORNING,
"Sunday, Oct. 28. Mayor of Concord, N. H."

GENERAL STREETER'S STATEMENT.

"I have been counsel for Mrs. Eddy at various times during the past twelve or fifteen years and have known her well.

"I think the last time I saw her at her home, before to-day, was in June of last year, but have frequently met her while driving, down to a few days ago, always receiving a cordial bow of recognition. My attention was called to the article in the *New York World* of this morning, and I was asked by friends to call on her, and be able to speak

Digitized by Google

definitely with reference to her health. The charge that Mrs. Eddy has been physically incapacitated and unable to leave her room, for all or considerable part of three years, and that some one (said to be Mrs. Leonard) was impersonating Mrs. Eddy in the carriage drive, was already, from personal observation, known by me to be false.

"Mayor Charles R. Corning drove out with me to Pleasant View about four o'clock this afternoon. I sent a note to Mrs. Eddy, asking that we be permitted to call on her, and the request was almost immediately granted. She arose and most cordially greeted the mayor and myself, exhibiting no appearance of weakness or decrepitude, but a physical activity not ordinarily to be found in persons many years younger.

"The conversation covered a variety of subjects. She spoke briefly and without bitterness of the false statement being circulated with reference to her health, and even her death, and said that she was in the hands of an infinite God in whom she had perfect trust, and that He would care for her.

"Reference was made to business transactions of some time ago, about which her memory was exact and accurate. She referred to many details of her daily work and her correspondence and study. She also inquired after a certain personal friend, to whom she had recently sent a rare and valuable present, and expressed her warm affection. After a very interesting half hour's talk with Mrs. Eddy, we returned.

"I may emphatically say that Mrs. Eddy is a remarkably well preserved woman for one of her advanced years. Her physical health appears substantially the same as when I last talked with her, something over a year ago. As shown in the talk to-day, her mind is not only unimpaired, but she exhibits the same clearness, strength, alertness, and vigor which have so long distinguished her.

"FRANK S. STREETER."

Later in the day, Mayor Corning, in introducing Professor Hering, who lectured at First Church of Christ, Scientist, in Concord, spoke in part as follows:—

"Thus far I have spoken to you as one who by his official position assumed the right to tell you whether or not Concord owed anything to Christian Science. I now want to say something which a good citizen is bound always to say when the intelligence of Concord people is questioned and ridiculed. I am sure you have heard of the muck-rakers. I wish I might use a better and more euphonious term; but, following the great names of John Bunyan and Theodore Roosevelt, I justify my use of it and speak of muck-raking. More than once I have received letters from many places asking me if I could inform the writers as to whether or not Mrs. Eddy was alive. I have always replied as an honest citizen who wished the truth to be known, but no reply and no assurance seemed to have effect or to satisfy those in search of the sensational and untrue.

"Recently there have been in Concord, representatives of one of the great metropolitan dailies, alleging that Mrs. Eddy was no more. Ladies and gentlemen, this is to me a painful and difficult subject. I have seen Mrs. Eddy, day after day, year after year, riding through our streets, and more recently I have seen the lady riding past my house, and yet strangers come here, foes to this religion, to assert that Concord does not know its own eyes and has lost its own senses. This afternoon, less than four hours ago, for the first time in my life, I stood face to face with Mrs. Eddy for a half hour. I listened to as bright, as vigorous, and as sprightly a conversation as I have ever listened to in my life, and I wish here to bear my testimony to this cruel, bitter falsehood directed against not only you who belong to this church, loving and devoted friends of the lady and Leader, but it is a stigma on Concord which is a sorrow and pain to one of the best and most generous friends the city of Concord has ever had."

On Monday the mayor was questioned by a reporter for the *Boston Herald* regarding his interview with Mrs. Eddy, and answered in part as follows:—

"But I had gone expecting to find a tottering old woman, perhaps incoherent, almost senile. Instead, when she rose to greet me, her carriage was almost erect, her walk that of a woman of forty. I have seen many old ladies, but never one with the vigorous personality of Mrs. Mary Baker G. Eddy. I can think of no more distinguished woman of her years in the world to-day; that was the impression she gave me, and it was the first time I had met her face to face.

"'You have a cosey corner here, I see, Mrs. Eddy,' said General Streeter.

"'Yes, and some people would like to see me in a closer corner,' remarked Mrs. Eddy, quickly.

"I call that good repartee for a woman over eighty," continued Mayor Corning.

"She remembered local incidents and happenings of recent date, talked family matters with General Streeter, and to try her mind he asked her concerning the date of her donation of one thousand dollars annually to the State fair. She remembered within a few days when the agreement was drawn up two years ago. To say that she is mentally vigorous is inside the mark. She is wonderful for an octogenarian. Her face is not full, her figure is slight, but she looks commanding, her eyes are bright, her handclasp is firm. We talked with her for half an hour, and at the end of that time, when she rose to bid us good-by, Mrs. Eddy showed no sign of fatigue. I should certainly say she is capable of attending to her own business. As to whether she does or does not, I cannot give an opinion, any more than I could as to whether the octogenarian president of a bank here manages it directly.

"I went there entirely unbiased. I am not a Christian Scientist."

In response to telegraphic inquiries from several newspapers, Mrs. Eddy's secretaries gave statements to the press, and these statements were embodied later in the following affidavits:—

MR. FRYE'S AFFIDAVIT.

"Pleasant View, Concord, N. H., Oct. 28, 1906.

"The sensational report published in the *New York World* of Sunday, Oct. 28, 1906, to the effect that Mrs. Eddy is physically incapable and mentally incapacitated, that 'for many months she has not left her room,' that she does not drive daily, and that she is impersonated in her carriage by Mrs. Pamelia J. Leonard, or by anybody else, is unqualifiedly false.

"My position in Mrs. Eddy's household is simply that of a paid employe. She conducts her own affairs, financial and otherwise, to-day as she always has, and the statement that Mrs. Eddy is dominated or controlled by any sort of 'cabinet' or combination is positively false—absurdly so to any one who is acquainted with Mrs. Eddy's extraordinary ability as an executive.

"Mrs. Eddy, as she herself wrote to the *Boston Herald* on Oct. 19, 1906, is in her usual good health. She is not slowly dying from cancer, nor has she a cancer or any chronic or organic or functional disease. She has never been visited by a cancer specialist, nor do I or anybody else provide 'old school surgeons and physicians, dentists, and the entire range of pharmacopœia' for attendance upon Mrs. Eddy, as is stated by the *World*.

"Had the reporters of the *World* really desired to learn whether Mrs. Leonard impersonated Mrs. Eddy on Mrs. Eddy's drive, it would have been a very simple matter for these reporters to have called at Pleasant View while Mrs. Eddy was driving and asked for Mrs. Leonard. Had they taken this ready way of verification, they would have had no trouble in seeing Mrs. Leonard herself and talking with her.

Digitized by Google

"When the reporters of the *New York World* called to see Mrs. Eddy personally, what they spoke of as stimulants was not in the room at all. There was no galvanic battery, nor any stimulants or medicines in the room or in the house. There was simply a small table on which was a silver ice-pitcher, a silver mug, and small finger-bowl that Mrs. Eddy uses. There was a wood-box in the room, but nothing else except Mrs. Eddy's own literary materials, books, and papers. Mrs. Eddy has never to my knowledge, while I have lived with her, used stimulants of any kind, nor to my knowledge have there ever been any in the house. My service covers a period of twenty-four continuous years.

"CALVIN A. FRYE."

"State of New Hampshire.

"Merrimack, ss. Oct. 29, 1906.

"Personally appeared before me Calvin A. Frye, who, being duly sworn, deposes and says that the above statement made and signed by him is true.

"JOSIAH E. FERNALD.
"[Seal] Notary Public."

AFFIDAVIT OF MR. STRANG.

"I came to Pleasant View on the 29th of January, 1906, and since the middle of March, 1906, one of my duties has been to hand Mrs. Eddy into her carriage daily and adjust the carriage robes about her. Since the middle of March she has not failed but one day personally to go on her drive. She did not go one day on account of the roads breaking up in the early spring.

"I have been in the house with Mrs. Leonard day after day while Mrs. Eddy was on her drive, and know that Mrs. Leonard has never in any way, shape, or manner impersonated nor attempted to impersonate Mrs. Eddy.

"While I have been at Pleasant View, neither Mrs. Eddy nor any one in the house has used any form of stimulant or remedies of a *materia medica* nature. There is no galvanic battery in Mrs. Eddy's room, in the house, nor about the premises, nor has there ever been while I have been here. Mrs. Eddy herself has never used stimulants while I have been here, and she has never used any sort of an electric battery.

"There is no truth in any claim that physicians have been in attendance here or that any specialist of any sort has been called from Boston or elsewhere. Mrs. Eddy is in unusually good health for a woman of her years. She has, as far as my knowledge is concerned (and I have seen her daily, almost hourly during the daytime while I have been at Pleasant View), no chronic, organic, nor functional disease of any sort. Mrs. Eddy is active, about the house more or less daily, goes up and down stairs at least once a day, when she goes to her drive, and generally more—usually twice a day. She usually goes down stairs in the afternoon.

"I was present at the interview with the *New York World* reporters, Messrs. Slaght and Lithchild, and Professor Kent. Professor Kent stood between Mrs. Eddy and myself, so that it would have been impossible for me to have reached my arm about Mrs. Eddy to support her, as alleged by the article in the *New York World*.

"LEWIS C. STRANG."

"State of New Hampshire.

"Merrimack, ss. Oct. 29, 1906.

"Personally appeared before me Lewis C. Strang, who, being duly sworn, deposes and says that the above statement made and signed by him is true.

"JOSIAH E. FERNALD.
"[Seal] Notary Public."

Mr. P. A. Clifford, who has been employed at Pleasant View at various times, also made the following affidavit:—

MR. CLIFFORD'S AFFIDAVIT.

"I, P. A. Clifford of Concord, in the County of Merrimack, and State of New Hampshire, being duly sworn, depose and say that I have known Mrs. Mary Baker G. Eddy since she came to Concord, in 1889. During the past six years I have been employed at Pleasant View at various times as a plumber and steamfitter. I have been in all parts of the house and have conversed with Mrs. Eddy. I saw her at Pleasant View about three weeks ago. I have been at Pleasant View on numerous occasions when Mrs. Eddy entered her carriage for her daily drive and have seen Mrs. Leonard during Mrs. Eddy's absence. Her health is apparently as good as when I first knew her.

"P. A. CLIFFORD."

"State of New Hampshire.

"Merrimack, ss. Concord, N. H., Oct. 29, 1906.

"Subscribed and sworn to before me.

"A. CHESTER CLARK.
"Notary Public."

The following statement was issued by Professor Hering, First Reader of First Church of Christ, Scientist, Concord:

"Concord, N. H., Oct. 28, 1906.

"This is to certify that Mrs. Eddy stopped at my residence, 91 North State Street, this city, shortly after one o'clock to-day and I had several minutes' conversation with her. The carriage door was open and she shook hands with me cordially. I have known Mrs. Eddy for a number of years and know that she is the same person with whom I spoke to-day. She was very evidently in excellent health and strength. I have also known Mrs. Pamelia J. Leonard of Brooklyn for a number of years, and although I have seen Mrs. Eddy's carriage on State Street almost daily I have never seen Mrs. Leonard occupy it. The occupant has always been Mrs. Eddy herself.

"HERMANN S. HERING."

The *Boston Journal* of Oct. 30 contained the following article:—

Mrs. Eddy is not impersonated by a dummy. In her own carriage, apparently in the best of bodily health and vigor, she rode through the streets of Concord yesterday afternoon.

In view of the published stories of her ill-health, that she was dying of an incurable disease, that during her rides and drives and receptions she was impersonated by a dummy, dressed to represent her, and the interest these reports have aroused from one end of the country to the other, wherever Christian Science is known, particularly centering in Boston, the home of The Mother Church, the *Boston Journal* determined upon an especial effort to establish the identity of the woman who appeared in Mrs. Eddy's carriage.

If it was Mrs. Eddy, it would set at rest all rumors of her dying condition. If it was not Mrs. Eddy, then the *Journal* proposed to establish the identity of the person who impersonated her.

For this purpose the services of a well-known lawyer of Concord, N. H., Mrs. Eddy's home town, were enlisted.

He is forty years old. He has known Mrs. Eddy for fifteen years, since the first week she made her home at Pleasant View, in Concord. He has met her personally several times. Less than three years ago, in 1903, he, with a party, was received by her during the "Pilgrimage."

He is not an interested party. He is not a Christian Scientist. He has never had business transactions with Mrs. Eddy or the church. He is a Roman Catholic and has nothing in common with the tenets of the faith.

But he knows Mrs. Eddy and he knows her well. Also, he knows Mrs. Pamelia Leonard of Brooklyn, who, it is charged, has impersonated Mrs. Eddy in her carriage drives.

This lawyer was commissioned by the *Journal* to es-

Digitized by Google

tablish the identity of the person riding in Mrs. Eddy's carriage. He was given *carte blanche* as to methods.

He made arrangements with the contractor who laid out the Pleasant View grounds, and with the painter who decorated the buildings, both thoroughly acquainted with Mrs. Eddy's personal appearance.

All three of them took positions along the road down which the carriage must go in reaching Concord. There was no collusion. There was no chance of the opinion of one affecting the decision of another. All three announced emphatically: "It is Mrs. Eddy. It is Mrs. Eddy, apparently in the best of health."

THE DETAILED STORY.

This is the detailed account of the identification by the Concord lawyer:—

"I know Mrs. Eddy well. I was born in Concord and with the exception of the time I was at school and college I have lived here. I first met Mrs. Eddy when she came here to live, either fourteen or fifteen years ago.

"In those days she was not so inaccessible as she is now. She frequently walked about the town. Often she drove down in an open carriage. Her face and features have been familiar to me for years.

"The last time I saw her was about three years ago. That was at the time of the pilgrimage here. I accompanied a party that she received.

"Almost every day I have seen her closed carriage drive through the streets of Concord, and I have known that a woman was inside, but I never paid particular attention to just who it was. I supposed it was Mrs. Eddy and I let it go at that.

"When I was commissioned by the *Journal* to establish the identity of the occupant of the carriage, I was confident that I could tell whether or not it was Mrs. Eddy. I knew that I could not be mistaken if the woman should be Mrs. Pamelia Leonard. I know Mrs. Leonard very well.

"Yet rather than have any question I decided to establish the identity with other people, who know her as well or better than I do, if I could arrange it.

"For that reason I arranged with George W. Chesley, a well-known contractor and landscape artist, to accompany me. Mr. Chesley is a married man, about sixty-five years old. He is not a Christian Scientist, but he has done work for Mrs. Eddy for years. It was Mr. Chesley who laid out the grounds at Pleasant View, and he has kept care of them for years.

"Mr. Chesley tells me that the last time he saw Mrs. Eddy to speak to her was about six months ago. Then he discussed some change in the shrubbery with her. She was apparently in the best of health then, he says.

"Mr. Chesley and I left my office about one o'clock, for a telephone call that I had arranged for came then, that Mrs. Eddy's carriage, supposed to contain her, was just leaving her grounds. We walked up Warren Street to Liberty Street. The street there is rather rough, and we knew the driver would have to go slow. For that reason I decided to wait there.

"It was just ten minutes past one o'clock when the carriage came down the street and turned the corner into Warren Street. As we expected, the torn, rough roadway caused the driver to pull up from the comfortable jog at which he was going, and they went at a slow walk.

"Mr. Chesley had crossed to the right side of the street. I stayed on the left side. As the carriage approached we both started to cross the street. A bicyclist was ahead of it, but he paid no attention to us.

"I walked so slow that I got to the middle of the street just as the front of the carriage was crossing in a line from where I stood. Mr. Chesley had reached a place just across from me a little quicker.

"We stood as close as possible to the carriage as it passed, and we bent forward and deliberately peered into the windows. They were up, and the shades were not drawn, and we could easily see the woman.

"The woman was looking toward Mr. Chesley as I peered into the window, and as soon as she saw him she turned her head. That brought it right up by mine. She was sitting almost in the center of the seat, and as she turned she almost directly faced me.

"There is no doubt about it. There cannot be the slightest question. That woman was Mrs. Eddy. And it was Mrs. Eddy in very good health. She looked but little if any older than she did three years ago when I saw her.

"She is rather thin; so was she three years ago. Her hair is snow white; so it was three years ago. Her hands are 'skinny;' so they were three years ago. But she is not emaciated, she is not a mere skeleton.

"She may be suffering from an incurable disease, but certainly she does not look it.

"She is a remarkably well-preserved looking woman. Her eyes were as bright, the poise of her head as firm, her body as erect, as in any woman I ever saw in my life.

"I should judge that I looked directly at Mrs. Eddy for about ten seconds. I even took a step forward to keep her in view. Then the carriage passed, and I turned to Mr. Chesley.

"'Well?' I asked him.

"'Why, that's Mrs. Eddy. That's Mrs. Eddy just exactly as she has looked for the last ten years. There isn't a possible chance of a mistake.'

"'You're certain of that?' I asked.

"'I'd stake my life on it,' he answered.

"There was no more doubt in his mind than in mine. Mrs. Eddy in her carriage drove down Warren Street to Main Street. We followed it to the corner. There we met C. W. Smith, a painter who has worked on the Eddy home and who knows Mrs. Eddy.

"'Well, I guess that knocks that foolish story,' he said to me as he looked at the carriage.

"'Why?' I asked him.

"'Why, that's Mrs. Eddy. I just looked in to see. I wanted to be sure.' His identification was as complete as either Mr. Chesley's or mine.

"We followed the carriage up Main Street to the State capitol, where it turned around and started back to Pleasant View. I then hurried to my office and telephoned the *Journal* correspondent, who had gone to the home while the carriage was out for the purpose of interviewing Mrs. Leonard.

"Over the telephone he told me that he had just left her; that she was in the house; that he had talked with her."

Last night Alfred Farlow, head of the Christian Science publicity department here, gave out a long series of affidavits and statements which, with three exceptions, merely amplify those printed yesterday in the *Journal* from the inmates of Mrs. Eddy's household, etc.

The *Concord Evening Monitor* of Oct. 29 contained the following letters from representative citizens who are personally acquainted with Mrs. Eddy and are not Christian Scientists. In publishing these letters the *Monitor* commented as follows:—

It will be noted that the statements made by Concord people in refutation of these assertions are not from Christian Scientists, but from Congregationalists, Unitarians, Universalists, and Baptists; and from persons who, by reason of their opportunities to know what takes place in Concord, may be relied upon to state facts.

LETTERS FROM REPRESENTATIVE CITIZENS.

"In reference to conversation had with me last evening in regard to statements made to me Oct. 13 by two representatives of the *New York World*, will say that they stated

Digitized by Google

that they were representatives from the *New York Herald*, and hearing persistent reports that Mrs. Eddy was dead, and had long been so, they had come to Boston to ascertain whether they could find any one who could state with certainty that Mrs. Eddy was alive; that they had visited every town and hamlet between Boston and Concord and could not find any one who had ever seen Mrs. Eddy; that they had been unable to find man, woman, or child in Concord who had ever seen Mrs. Eddy to know her, except as I personally stated to them that I had an interview with her in the early part of the summer; that they understood, if Mrs. Eddy were alive, she was so enfeebled and helpless that she was unfit to have any control over her affairs. I made reply to this statement, that if they ever had the honor of meeting Mrs. Eddy, they would at once ascertain that these statements were false. They also stated that they had seen papers showing assignments of all of Mrs. Eddy's property to Calvin A. Frye, her secretary. They said they did not find any one in Concord who believed that Mrs. Eddy was alive. They said that if they did not have an interview with her that they should feel at liberty to print such information as they had received.

"Of course I denied all of these statements and said that they were false, and also stated that my mother had played with Mrs. Eddy as a child and had been associated with her and had been near her for more than forty years; but they were determined not to believe any reasonable statements.

"Perhaps it would be well to state that I am not a member of a Christian Science church, but feel it my duty to contradict such false rumors. I have had the honor of being in the presence of Mrs. Eddy several times a year, and most emphatically say that she is in every way capable of conducting her business affairs. FRED N. LADD,
"Treasurer Loan and Trust Savings Bank."

"I am informed there is a report in circulation, coming from persons outside of Concord, that the person whom I meet every few days driving, and to whom I am always pleased to bow, is not the Rev. Mary Baker Eddy, but some other person.

"Now I have known Mrs. Eddy for a number of years, and have had business relations with her since she came to Concord and made her home at Pleasant View, which relations extend up to the present time. I have also visited her in her home, so that I can state from personal knowledge that it is Mrs. Eddy, and no other person, whom I see riding in her carriage. I will also state that she stands high in this community. I do not find those who speak evil of her in this, her home city, and believe those who come here with evil reports come with malicious intentions.

"I am not a follower of the Christian Science faith, but make this statement as a citizen of Concord who wishes to see the things that are true, the things that are honest, and the things that are just, prevail. J. E. FERNALD,
"President National State Capital Bank."

"I have had the pleasure of knowing Mrs. Eddy for more than ten years, and I have had frequent occasion to correspond with her and to meet her with reference to matters of public importance in this community. These relations with her still continue, and within a very short time I have received from her long letters written from beginning to end in her own handwriting, which from long acquaintance is perfectly familiar to me, and that she is indubitably alive, both physically and mentally, is well attested by these communications.

"Moreover, I see Mrs. Eddy driving in her carriage through our streets almost every day, and I have within a very few days met her carriage and spoken to her as she drove past. That the occupant of the carriage was Mrs. Eddy in *propria persona* is accurate testimony which I am very glad to give, and had any of the newspaper representatives to whom you allude taken the trouble to call upon me during their stay in Concord I would freely have told them as I now write you.

"While it would be futile to assert that Mrs. Eddy is wholly without critics or opponents in Concord, it is entirely within the bounds of accuracy to say that by the vast majority of all our people, and most emphatically by those who by their position in the community are most entitled to represent that intangible spirit which we call public opinion, she is regarded easily as our foremost citizen. Her numerous good works, her constant and consistent charities here, her keen interest in all that makes for the betterment of the community, and her blameless, laborious, and useful life among us, all contribute to make her beloved and respected by the people of Concord, and we all hope that she may live long in her present full possession of physical, mental, and spiritual power to continue her good work among us. GEORGE H. MOSES,
"Editor *Evening Monitor*."

Both the *Monitor* and the *Patriot*—the only daily papers published in Concord—protest against the baseless attack which has been made upon Mrs. Eddy. The following extract is from the *Monitor*:—

"The *World's* story, as we are told, is the result of long investigations in Concord by the *World's* representatives. If this is so, their time here was ill-spent; for no honest investigator could have stayed here even so short a time as a single day without learning from indisputable sources that Mrs. Eddy is alive—and very keenly alive—to all that takes place in the world, and that she is constantly alert and thoughtful to do good to everybody, especially to the city of Concord.

"For more than fifteen years Mrs. Eddy has made her home among us; and she leads a simple and well-ordered life—as befits one who has a daily routine filled with great duties to a great cause. That she fulfils these duties to the last degree is evidenced by the growth and advance of the movement which she heads; and that she finds time for other good works,—for charity, for helpfulness, and for public-spirited co-operation in the affairs of the community where her home is fixed,—thousands of Concord people are ready cheerfully to attest. And they have now come forward with glad alacrity to refute the falsehoods of the *New York World*.

"Some of these refutations we are publishing in our news columns to-day. To them we can add our personal testimony.

"The editor of this paper has enjoyed the privilege of Mrs. Eddy's friendship for more than ten years. During that time he has met her frequently and has corresponded with her almost continuously. Her conversation and her letters—numbering hundreds and written almost entirely with her own pen—are pulsating with but one desire, the desire to do good,—to do good to individuals, to communities, and to the human race. Within a very short time the editor of this paper has seen Mrs. Eddy and with her taken counsel upon public affairs in Concord. She was then in a strength of spirit, mind, and body far beyond what any one would have a right to expect from a woman of her age. Her words were direct and simple, her discernment acute and sympathetic, her manner cordial and unaffected. Since then the writer has met her carriage almost daily upon our streets and its distinguished occupant has never failed to return a smiling greeting of recognition. This has happened within four days, when, in a narrow street where recognition was certain, we met the real Mrs. Eddy, the Mrs. Eddy we have known for years, almost face to face. We knew her and we were known by her.

"We are moved to believe that testimony of this sort, which arises spontaneously on every hand in Concord, is more enduring and worthy than that of any newspaper 'in-

Digitized by Google

vestigators,' whose work shows only too clearly that they trust to their own or to somebody else's imagination for their facts. Concord people may buy the *New York World*, but they do not believe what it says. When any one tells Concord that Mrs. Eddy is not one of our busiest, most helpful, and most beloved and respected citizens, in full possession of her illustrious faculties of mind and in bodily strength beyond what her years warrant, Concord has a prompt and impregnable answer:—

"We all know better!"

The following is from the *Patriot*:—

"In substance the story of *The World* is false from beginning to end, and the manner of telling it most vicious.

"The writer, the editor of this paper, talked with Mrs. Eddy in her home three years ago, he talked with her again in her home two years ago, and talked with her again in her private room much less than a year ago. He has seen her in her carriage and bowed to her, and has had his salutations returned many, many times within the last six months, and within as recently as four days ago.

"He knows Mrs. Eddy well; knows her face and form; would pick that face and form in a glance, from among the faces of millions, and he has not been imposed upon in any way by any substitute which, as the *World* claims, has been riding in her carriage.

"At the different times when he has had the pleasure of talking with Mrs. Eddy, there was no marked evidence of failing health or departing faculties, in one of her years, but on the contrary she showed a quick familiarity with current events and a wonderfully vivid recollection of happenings long passed as well as a surpassing skill in foreshadowing the future.

"During the last five years he has had many letters from Mrs. Eddy, some of quite recent date, and there has never been a doubt in his mind as to the personal autograph of the writer, and the letters themselves carry with them no evidence of an enfeebled condition, mental or physical.

"But a few months ago, at her invitation, he visited her in her private room. When he entered, she was standing in the bay window with her back to the door. As soon as she realized his presence, she turned from the desk at which she was standing, walked toward the middle of the room with form as erect as the ordinary woman of forty, and shook hands in a way that indicated anything but feebleness or physical breakdown."

In a personal letter to Mr. Pulitzer, proprietor of the *New York World*, dated Oct. 27, 1906, Mr. M. Meehan, the well-known editor and manager of the *Concord Patriot*, says of Mrs. Eddy:—

"Few, if any women living have done as much to pass their names to posterity as has the Rev. Mary Baker G. Eddy of this city and State, and we of Concord, regardless of religious belief, have a great respect for this woman, and we resent any indignity aimed at her or passed upon her, and every decent man and woman in our city experiences a sense of shame on realizing that a great newspaper like the *World*, through the overzeal of its representatives, would annoy her or cause her discomfort by appealing to low natures or those given to gossip or envy to secure guesses and opinions unworthy of the *World*, unworthy of Mrs. Eddy, and unworthy of the intelligence, integrity, and manhood and womanhood of New Hampshire's capital city.

"I have met and talked with Mrs. Eddy more than once. I know her, she knows me; have been in her home, in her private room, within a few months and discussed with her many things; I have bowed to her in her carriage within forty-eight hours and my salutation has been returned by her.

"If the intent of the *World's* representative to Concord be carried out in its columns, the *World* will say in substance that Mrs. Eddy is dead and that a mummy or a substitute and not she is in the carriage each day when it passes through the main streets of our city and its occupant is greeted by our people, or it will say that Mrs. Eddy is enfeebled and decrepit and that those brilliant faculties that in the past made her wonderful accomplishments possible have departed.

"To every such a statement, or even insinuation, I, as one who knows, say, 'It is not true in whole or in part, but, on the contrary, is unqualifiedly false.'"

Mrs. Eddy Sees Reporters.

On Tuesday, Oct. 30, Mrs. Eddy consented to meet a number of reporters who had assembled in Concord in consequence of the false reports regarding her health which had been circulated of late. The following is the Associated Press report:—

"Concord, N. H., Oct. 30.—A representative of the Associated Press, who interviewed Mrs. Mary Baker G. Eddy, head of the Christian Science Church, ten years ago, went to Pleasant View, Mrs. Eddy's home, to-day, and was granted another interview by the same woman.

"Although Mrs. Eddy, who was born in 1821, shows her advanced age in some respects, her voice to-day was clear and strong and she gave no evidence of decrepitude or of any weakness not to be expected of a woman now in her eighty-sixth year.

"The interview, which was granted to half a score of newspaper representatives who had assembled in this city after the publication of the sensational stories in connection with Mrs. Eddy's health, was arranged early in the day by H. Cornell Wilson, head of the Christian Science publishing committee, at the earnest request of the reporters. In addition to these there were present Hermann S. Hering, First Reader of the local Christian Science church; Edward N. Pearson, Secretary of the State of New Hampshire; Mr. Wilson, and Calvin A. Frye, Mrs. Eddy's secretary.

"When the newspaper representatives assembled at Mrs. Eddy's home, Pleasant View, they were escorted to the double parlors on the east side of the house. A moment or two after they had been seated Mr. Frye announced Mrs. Eddy.

"The Leader of the Christian Science faith walked to the doorway and stood, unassisted, before her interviewers. She did not approach further than the threshold of the door, and when it was seen that she would not enter the room for a prolonged interview, a woman reporter, who had previously interviewed Mrs. Eddy, was delegated to talk to her to-day.

"That Mrs. Eddy was more anxious to demonstrate that she was in good physical condition than she was to answer questions was demonstrated by the abrupt manner in which she left the assembled newspaper representatives. Just three questions had been asked by the interviewer when Mrs. Eddy turned, spoke a word to her secretary, and started for her carriage, with Mr. Frye escorting her on one side and Lewis C. Strang, her publicity agent, on the other. The interviewers were left in the parlors with numberless questions on their lips, but without an opportunity to ask them.

"The brief interview consisted of the following questions and answers:—

"'Are you in perfect physical health, Mrs. Eddy?' was the first question asked after Mrs. Eddy had made her appearance.

"'I am,' was the brief reply, given with distinct enunciation.

"'Have you any other physician than God?'

"'No, indeed,' answered Mrs. Eddy, with emphasis, and then she added slowly and solemnly: 'The everlasting arms are around and above me, which is enough.'

"'Do you take a daily drive?' was the next question

Digitized by Google

asked, to which Mrs. Eddy replied as briefly and distinctly as she did to the first question. 'I do,' she said.

"It was at this point in the interview, and as the spokeswoman was about to continue her interrogations, that Mrs. Eddy unexpectedly indicated that the interview was at an end, for she turned without another word and walked to the *porte cochere*, at the front of the house, where her carriage was waiting to convey her on her usual drive about the city. She was assisted into the carriage by Mr. Strang, Mr. Frye in the mean time, garbed in a footman's uniform, having mounted the driver's seat alongside of the coachman. She was then driven away, while the newspaper representatives were escorted through her home, which they inspected with interest.

"There was an abundance of proof that the woman interviewed to-day was the woman who, ten years ago, was at the head of the Christian Science church. Secretary of State Pearson, who has been personally acquainted with Mrs. Eddy for a much longer period, assured the newspaper representatives that the woman who stood before them to-day was the Mrs. Eddy of ten years ago, and the representative of the Associated Press and the woman who conducted the interview, both of whom have talked to Mrs. Eddy on previous occasions, corroborated the statement.

"It was apparent to the most casual observer that the details of the interview had been arranged with the utmost care and with a view to demonstrating in a silent but impressive manner that many of the statements recently published were without foundation.

"The visitors at Pleasant View were not able to see whether Mrs. Eddy walked from her apartments on the floor above to the parlors without assistance, for they had been seated in a portion of the room which made such a view impossible. Their first glimpse of the Leader was when she appeared in the doorway, gowned in a beautiful cloak of ermine, which hung loosely from her shoulders and which nearly touched the ground. She wore also a hat and gloves, and in fact was attired in the manner which is customary with her when she goes for her daily drive.

"As if to dispose of the allegation that a member of her household had on many occasions impersonated her, Mrs. Eddy or some member of her household, caused to be present at the interview Mrs. Pamelia J. Leonard of Brooklyn, N. Y., who, it has been said, has been in the habit of driving in Mrs. Eddy's carriage. The contrast between the two women was so great that it was at once apparent that one could not possibly attempt to pose for the other without detection. There was but one similarity to be noted and that was the abundance of snow-white hair which adorned the heads of both women. At that point the resemblance ceased."

MRS. EDDY RECEIVED.

Granted an Interview to Press Representatives at Noon To-day.

OF MENTAL AND PHYSICAL VIGOR.

"No Physician but God," She Replied to a Question Asked Her.

A representative of the *Concord Evening Monitor* was received by Mrs. Mary Baker Eddy at her home, Pleasant View, this noon. He met her face to face, heard her clear and lucid replies to important questions propounded to her, and was deeply impressed by a degree of mental and physical vigor remarkable in one who was born in our neighboring town of Bow in the year 1821.

The interview was granted in the double parlors on the east side of the ground floor at Pleasant View, the same room in which the same representative of the *Monitor* interviewed Mrs. Eddy, the same Mrs. Eddy, ten years ago. The impression made upon him then by her personality was strong and it was evident to him in a moment to-day, not only that the same woman was speaking that spoke then, but that the passing years had left wonderfully slight traces upon her.

At five minutes before one Mrs. Eddy descended the front stairs from the floor above, on which is her study, and was announced by her secretary, Mr. Calvin A. Frye, to the invited guests, who were grouped in a semi-circle to greet her.

Mrs. Eddy did not enter the room, but stood between the parted portieres in the doorway and smiled and bowed graciously to those before her. She appeared, as thousands of Concord people know from personal observation that she always appears, slight in figure and not tall in stature, but with a queenly bearing.

Her clear complexion, the direct glance from her unusually expressive brown eyes, and the abundance of her snow-white hair were the features of her appearance that at once impressed those who saw her for the first time as well as those who had met her before. She was attired for her drive, wearing bonnet, cloak, and muffler.

By previous arrangement, in order to avoid any confusion, questions in behalf of those present were asked Mrs. Eddy by Mrs. Sibyl Wilbur O'Brien of Boston, a newspaper woman, representing *Ridgeway's Weekly*, who interviewed Mrs. Eddy a few years ago and who knew at once that she was talking to the same gracious lady now as then.

"Are you in perfect health, Mrs. Eddy?" asked Mrs. O'Brien.

"Indeed I am," replied Mrs. Eddy promptly and clearly.

"Have you any other physician than God?" continued the questioner.

"No physician but God," said Mrs. Eddy reverently. And then, voicing the sweet solemnity of her thought, she continued slowly and with impressive feeling, "His everlasting arms are around about me. That is enough."

"Do you drive daily?" was the third question asked.

"Yes," was the simple reply, and Mrs. Eddy indicated that the interview was at an end by turning toward the door that leads from the hall into the open air.

There her carriage was in waiting for her customary drive, with her faithful coachman, August Mann, upon the box. Mr. Lewis C. Strang, associate secretary to Mrs. Eddy, handed her to her carriage and tucked the robes about her and closed the door, Mrs. Eddy nodding an adieu to those who were watching her from the windows and from the doorway. Mr. Frye took his usual place beside Mr. Mann on the box and the carriage started away over its accustomed route.

The guests left behind accepted a cordial invitation to view the house and grounds during Mrs. Eddy's absence.

Among those in the group which gathered for the interview was Mrs. Pamelia J. Leonard of Brooklyn, N. Y., the lady who it has been said impersonated Mrs. Eddy on occasion. Mrs. Leonard is of fine appearance, with an abundance of white hair like Mrs. Eddy's. There the resemblance ceases, for Mrs. Leonard is taller and heavier than Mrs. Eddy and her features are of different mould. No one who saw the two ladies in the room together could conceive of any substitution of one for the other being successfully made.

Another person present, at the request both of the representatives of the press and of the Christian Science Publication Committee, which arranged the interview, was Hon. Edward N. Pearson, Secretary of State, who has known Mrs. Eddy for a long time. After the interview he said.—

"I was present by invitation at Pleasant View to-day with the representatives of eleven newspapers. I stood near Rev. Mary Baker Eddy, whom I have known personally for some fifteen years; I distinctly heard her answer to the questions asked her; I saw her leave the room in which the interview was given and walk to the door of her carriage, and I saw the carriage driven towards the city. Mrs.

Digitized by Google

Eddy's voice was clear and strong and her appearance was that of a woman in full possession of her faculties. I am not a Christian Scientist and I am without bias or prejudice in this matter."

In addition to Mrs. Eddy, Mr. Frye, Mr. Strang, Mrs. O'Brien, Mrs. Leonard, and Mr. Pearson, those in the room at the time of the reception and interview were H. Cornell Wilson of New York, of the Christian Science Publication Committee, Prof. Hermann S. Hering, First Reader of First Church of Christ, Scientist, in Concord, Miss Eleanor Ames of Hearst's *Boston American*, Miss Viola Rodgers of the *New York American*, H. A. Vivian of the *New York Times*, Edwin J. Park of the *Boston Globe*, P. Patello of the *Boston Herald*, George E. Witham of the *Boston Post*, W. H. Haggett, stenographer, C. E. Clifford of the *Boston Journal*, Howard Noble of the *Boston Traveler*, John Nevin of the Publishers' Press, and the city editor of the *Monitor*, who is also the Concord representative of the Associated Press.

The interview was arranged by Mr. Wilson, whose efforts to give to the press of the country every opportunity to fully refute the sensational misstatements of one journal are highly appreciated by those benefited.—*Concord Monitor.*

MRS. EDDY INTERVIEWED.

About a dozen of the visiting newspaper men went out to Pleasant View at noon and were accorded a brief interview by Mrs. Eddy.

Mrs. Sibyl Wilbur O'Brien of *Ridgway's Weekly* acted as spokeswoman for the party, and the questions propounded by her and the replies of Mrs. Eddy were:—

"Are you in perfect bodily health, Mrs. Eddy?"

"Indeed I am."

"Have you any other physician than God?"

"No physician but God. His everlasting arms are around about me. That is enough."

"Do you drive daily?"

"Yes." *The Daily Patriot.*

EDITORIAL COMMENT.

The old rumor that has been started so many times about Mrs. Eddy being ill, being represented by a substitute, being out of her mind,—in short, a lot of nonsense,—has been taken so seriously this time that Scientists have been greatly disturbed and have taken committees of prominent people in Concord to call on her and the alleged substitute. These all unite in saying that Mrs. Eddy is well and keen of mind and manages her own affairs, the last being respectfully suggested as a course that her calumniators ought to emulate. There is nothing gained by such baseless rumors. It is a method that does not commend itself to any creed or any following, for the time that is wasted in decrying others inevitably takes away from our own achievements. No matter what the physical and bodily state of Mrs. Eddy, it is the concern of her followers; and if every allegation were true, it ought to be a matter of regret to the community.

This country, this age, permits all degrees of religious freedom. Any man has at any time a right to set up anything that he believes is satisfactory to himself, provided he does not insist on its being satisfactory to his neighbor by compulsion. It is not Christianity to be criticising others' beliefs. So live that they will feel impelled to follow yours if they can.

Again, by their fruits shall ye know them. The Christian Scientists in every community have come to be more than a debatable factor. They are a force for the betterment of the material good, certainly, whether we agree with them spiritually or not. They erect handsome houses, fine edifices that are educational in their beauties of line and ornament; they are friends to culture and refinement and charity of thought and deed. And spiritually a creed that believes in being bright, cheerful, in refusing to consider evil triumphant, and that exemplifies its teachings in its lives, should be regarded by all other creeds as having a right to place, not persecution.—*New London* (Conn.) *Globe.*

The testimony from Concord, N. H., that it's Mrs. Mary Baker G. Eddy herself—and not a masquerading impostor—who goes about in her carriage, and bows to her bowing townsmen, is abundant and convincing. Evidently the *New York World* has been victimized by sensation-mongers.

Monday evening the editor of the *Concord Monitor* told the public that he has enjoyed Mrs. Eddy's friendship for ten years and more, meeting her frequently and corresponding with her "almost continuously." Recently he had occasion to consult her on public affairs; "her words were direct and simple, her discernment acute and sympathetic, her manner cordial and unaffected." One day last week, in a narrow street, he met her carriage; the real Mrs. Eddy, whom he has known all these years, was in it. Very well, then:—

"When any one tells Concord that Mrs. Eddy is not one of our busiest, most helpful, and most beloved and respected citizens, in full possession of her illustrious faculties of mind and in bodily strength beyond what her years warrant, Concord has a prompt and impregnable answer:—

"We all know better!"

That seems to settle it.—*Hartford* (Conn.) *Courant.*

The *New York World* can hardly be congratulated on having been brilliantly successful in its effort to establish the belief that Mrs. Mary Baker Eddy, the head of Christian Science, is fatally ill with cancer at her home in Concord, N. H., and that other persons are personating her and acting for her in various ways. The allegations published in its Sunday issue are met with the most positive denials, not only by the members of her household but by the mayor of Concord, the editors of the two daily papers published there, and other persons.—*Hartford* (Conn.) *Times.*

One does not need to be a Christian Scientist to have a feeling of indignation over the recent treatment of the venerable Leader of that cult.

There is an element of impertinence, indeed of cruelty, in the episode, that does not accord with the sense of ordinary courtesy. To force a woman in her eighty-sixth year to make a public exhibition of herself in order to prove her own existence, to subject her to a formal catechism, to criticise her because she does not evince the lively vitality often absent in persons thirty years younger, is not a pleasant spectacle. The episode does not reflect credit upon the critics of Mrs. Eddy.—*The Boston Post.*

The charge against Mrs. Eddy appears to be that at eighty-five she is not as young as she once was; that she maintains a degree of privacy which is not yet a crime in any lady, and that she has not made public accounting of the earnings of her pen. Her fellow-townsmen repel the attack recently made upon her, and fellow-religionists seem still capable of retaining their characteristic serenity and of holding fast to their sustaining faith.—*Boston Herald.*

The facts established at the interview with Mrs. Mary Baker G. Eddy, head of the Christian Science Church, as reported by the Associated Press on Tuesday, should set at rest all stories to the effect that Mrs. Eddy is even slightly ill. For a woman of her age Mrs. Eddy appears to be remarkably strong, physically and mentally.

New London (Conn.) *Day.*

On the whole, the disciples of Mrs. Eddy have no good reason to complain of the outcome of the latest attack on her. It's a boomerang.—*Boston Herald.*

NO LECTURES BY READERS.—SECT. 5. No lectures shall be given by a Reader during his term of readership. The duties alone of a Reader are ample.

MRS. EDDY IN GOOD HEALTH.

WE have given considerable space in this issue to a refutation of the reports concerning Mrs. Eddy which have had recent circulation, and it would seem that the testimony presented, including as it does the evidence of prominent men who are not Christian Scientists, as well as that of the members of Mrs. Eddy's household, is sufficient to disprove these reports. Mrs. Eddy, as General Streeter has stated, exhibits "no appearance of weakness or decrepitude;" on the contrary, she displays "a physical activity not ordinarily to be found in persons many years younger."

Those who have had business relations with Mrs. Eddy testify to her mental vigor and activity, also that she attends personally to all business of importance, even to the smallest detail. She is in fact, as well as in name, the active, alert, vigilant Leader of the Christian Science movement, and its success is entirely due to her labors, which still continue with vigor and effect. The writer has been in continuous correspondence with Mrs. Eddy during more than four years, and has seen and conversed with her a number of times during that period, his last interview with her being on the afternoon of Oct. 30, within two hours after she had seen the reporters who assembled at Pleasant View on that date. Upon this occasion, as on others, she showed no evidence of disease or decrepitude, and her conversation on business and personal matters indicated no lack of the mental and spiritual qualities which make her the foremost woman of her time.

ARCHIBALD MCLELLAN.

"CHASTENING."

THE question is sometimes asked by those who are becoming interested in Christian Science why man should be "chastened" by God who is Love. Such questions show that the teaching of our text-book in relation to the real man—God's likeness or reflection—has not been clearly apprehended. The word chasten is defined by the dictionaries: "To reduce to order or obedience; to correct or purify." This of course implies the need of correction or purification and could not refer to one who is the likeness of God. Mrs. Eddy says in her definition of man, that he "has not a single quality underived from Deity" (Science and Health, p. 475). The spiritual man has therefore no need of correction or chastening, but no one questions that mortals do need correction from a false sense of God, man, and all that exists.

The human sense, blind to its own interests, has ever rebelled against correction, and much of the time has preferred to remain in bondage to error rather than make the strenuous effort needed to get out of it. It will readily be seen that harmony cannot exist in a consciousness which is dominated by error of any sort, hence the necessity that error be eliminated, and our text-book tells us that this must be accomplished either by "suffering or Science" (Science and Health, p. 296).

The writer of the epistle to the Hebrews evidently understood the difference between the punishments inflicted by human beings and the wise discipline of divine Love. In the 12th chapter the purpose of the heavenly Father's "chastening" is set forth in the telling words, "That we might be partakers of his holiness." Can any price be too great for such a consummation as this? Surely not, and yet mortals shrink from the purifying process needed to remove the taint of earthly tendencies, from the correction sometimes required to reach

The one note the great final harmony needs.

While God does not send sickness any more than He sends sin, disease evidences that we cannot remain at ease in a false sense of existence; viz., the belief that man is material and governed by material law. The nearer one approaches Truth, the more will he be disturbed by this false belief and its consequences, and he may be led to think that God sends suffering upon him as a human parent punishes a disobedient child, a supposition which is wholly incorrect. Even when we are being "chastened," corrected, purified, divine Love is sustaining us, and the writer in Hebrews says, "Wherefore lift up the hands which hang down, and the feeble knees; and make straight paths for your feet, lest that which is lame be turned out of the way; but let it rather be healed." It should never be forgotten that all divine discipline tends to heal. Our revered Leader says, "Through the wholesome chastisements of Love, we are helped onward in the march towards righteousness, peace, and purity" (Science and Health, p. 323).

At this point we may well note the counsel given in the chapter from Hebrews already quoted, "Consider him that endured such contradiction of sinners against himself, lest ye be wearied and faint in your minds." It is this "contradiction" of the truth which ofttimes prolongs the working out of our problem, and leads those who do not understand to doubt the final triumph of Truth; but it is here that we test and prove the supreme value of divine Science which enables us to "endure," to press on, ever remembering the Master's words, "He that endureth to the end shall be saved." When we reach "the end" of error (for Truth has no end), we shall no longer have need of chastening; "we shall be like" Him who is perfect. To reach this goal, however, we must "lay aside every weight," and keep in view the joy that is set before us. Thus we shall pass through our earthly experiences as gold that is tried and purified.

ANNIE M. KNOTT.

A UNIVERSAL PRIESTHOOD.

IT is the very genius of Christianity that its redemptive truths are to be possessed by every believer; that he is to become a king and priest unto God, be "endued with power," whereby he may prove Truth's efficiency in the solution of his life problems.

We are all familiar with the fact that, however extended its ramifications, an electric system remains an absolute unit. Its smallest subdivision is ever at-one with the great generating plant, and therefore clothed with its authority and power. So, too, is every divine idea or child at-one with God, his divine Principle, and in the early Church this fact was abundantly demonstrated. The disciples, for the most part, were crude commoners, without education, rank, or distinction, and yet they were early called to the exercise of the highest spiritual functions, and straightway proceeded to fulfil them. Theoretically this idea has survived in the assertion of individual privilege and responsibility, but practically it was discarded centuries ago.

Digitized by Google

To-day not only is there no thought that the rank and file of Christian believers may possess the healing and redemptive power of Truth, but even the clergy lay little claim to its possession. In creedal statement every believer is said to be related to God, but the healing phenomena of this relation are not anticipated, much less realized, in Christian experience. That the Church has been remiss and that it has suffered a corresponding loss of spiritual power, is being recognized to-day by many Christian people of all denominations.

A prominent church periodical has recently said that those outside of the church who perform physical cures by spiritual means, "have obtained their foothold because the Anglican churches have been false to their own traditions in permitting that sacrament to fall into disuse. . . . The bishop's authority to administer the *charismata* of the church is explicitly recognized, while the commission to a priest at his institution into the rectorship of a parish gives him full authority 'to perform every act of sacerdotal function among the people of the same.' . . . When all our priests teach the whole faith, and show themselves ready to obey the Word of God in using the sacrament of holy unction, our people will not be compelled to ally themselves with the followers of Mrs. Eddy . . . who manifest more faith in the power of the Christ than many who profess to be of the true Israel of God."

This is very interesting, both in its acceptance of the fact of physical healing through Christian Science and in its endorsement of the teaching that this healing is an essential part of Christian ministry. It is very noticeable, however, that the above writer refers to this grace as pertaining only to ecclesiastical authorities. It is a rite to be administered by the priest rather than an understanding to be gained and applied by the layman, and in this the teaching of Christian Science presents a distinctive contrast. Instead of counseling the believer to receive an unction at the hands of others, it encourages him to so apply his heart unto wisdom that he may know, and consequently profit, by the truth which makes free. In the one case conformity, obedience to constituted authority, satisfies the demand, and contentment with a perfunctory service is likely to result; in the other, each individual is impelled to become a demonstrator of spiritual truth, and this can but result in that individual adequacy and completeness in Christ which is the very bone and sinew of spiritual manhood. The whole trend of Christian Science teaching and method is toward the attainment of this result.

To illustrate, the provision of the Lesson-Sermon calls for the daily study of the Scriptures, its spiritual interpretation and application to ever-recurring human needs. The student is thus prepared to listen intelligently when the Lesson is read in the impressive quiet of the Sabbath service. Entertainment and emotional or mesmeric appeal have no place or recognition, and a condition is thus presented which favors the reception and assimilation of truth, the realization of individual growth. The practical significance of Truth-knowing, a sense of the inherent relation of spiritual thought to spiritual overcoming, is engendered, and equipment for priestly service is thus gained. The love of the oratorical, the spectacular, and the entertaining may make its appeal, but earnest Christian Scientists invariably witness to a distinct advance in their spiritual life, as the fruitage of this more personal, more serious, and more spiritual touch with the Word of Truth which the wisdom of our Leader has provided.

The practical realization of man's kingship and priesthood, that relation of the individual to Truth which means ever-increasing sovereignty over error and all that error begets,—this is the religious ideal presented in Christian Science, and the marvelous growth of the movement is explained in large part by the stimulus to individual study and demonstration which this ideal has brought to mankind.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., Oct. 29, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Enclosed please find proofs of the amended By-law, and let me thank you for all you have done and are doing through these By-laws for the good government of your Church and for humanity. Your continued spiritual vision, mental activity, and tireless labors are showing "the pathway of peace" to tired humanity, and we, who know of your good works, are grateful for them, and love you. Lovingly yours,

ARCHIBALD MCLELLAN.

London, England, Sept. 19, 1906.

Dear Mrs. Eddy:—My wife and I returned home ten weeks ago from our first visit to Boston, where it was our privilege to go in order to be present at the dedication of the Extension of The Mother Church, and it is because of the great and growing sense of love and gratitude to you, for all you have done and are doing for the whole of humanity, that I feel impelled to write these few lines, which, however, cannot convey the half of what we feel. As one of that wonderfully organized body of ushers at the six impressive services on that memorable Sunday, I was deeply impressed by the order, good-will, love, and hearty co-operation of that vast multitude, the like of which we had never seen since we first heard the good news given to the world by you in Science and Health. That great gathering seemed indeed to foreshadow the day, "of prophets long foretold," when "nation shall not lift up sword against nation, neither shall they learn war any more," and when the universal brotherhood of man will be established. We are daily realizing more forcibly how grateful we should be that we were able to be present on that memorable occasion, and we feel that the two countries, America and England, are being drawn closer together, united by the bond of brotherly love made possible—I would say inevitable—through Christian Science.

There is much that I would like to tell of how we have been helped by the study of Science and Health and by the endeavor to follow as far as possible the way you have pointed out, whereby one is enabled to help others also; but above all we are grateful for having learned in some measure the true spiritual meaning of much in the Bible, a book which formerly we were unable to read with any degree of understanding. I cannot close this without venturing to thank you for your dedicatory Message, "Choose Ye," that points out so clearly our duty to God and to mankind, which we can to-day fulfil to the extent that we are willing to awaken and free ourselves from the bondage of the belief of life in matter. As superintendent of the Sunday School of First Church of Christ, Scientist, London, it is my privilege to see what great benefits the children derive from the teaching, which is conscientiously done in accordance with the By-laws in the Manual of The Mother Church, whereby they are learning to worship the "only true God," and at the same time are realizing the great debt of gratitude they owe to you, the Discoverer and Founder of Christian Science.

Yours ever sincerely and gratefully,

ALGERNON HERVEY BATHURST.

Kansas City, Mo., Oct. 10, 1906.

Beloved Leader:—I want you to know of the many evidences that I am meeting of the increased interest and good will of the public and many of our foremost citizens towards your beloved Cause. I am told that since the dedication of the Extension to your church in Boston, the calls for healing and good and complete demonstrations are more

Digitized by Google

numerous than ever. I am also told that the lectures are being attended by the largest audiences in the history of the movement. In Grand Rapids there were present, it was said, more than fifteen hundred. One of the papers reported the lecture in full and the others gave liberal and kindly reports. In Minneapolis twenty-five hundred were present and the papers gave excellent accounts. In both cities as elsewhere many of the best people in the community were in attendance. How beautiful it is that our leading citizens and eminent public men are coming into a true appreciation of Christian Science and a right understanding of its revered Leader.

In Chicago I had the pleasure of meeting your faithful students and able lecturers, Mrs. Mims and Judge Hanna, and I have just now had a pleasant call upon Miss Brookins, who was passing through Kansas City. All these lecturers give excellent accounts of the interest manifested in Christian Science and the attendance at the lectures. I hear good reports of the Cause in Kansas City. The churches are growing and First Church is so filled that they expect soon that it will be necessary to send off a new congregation. How good it is to see our Cause grow through multiplication. The lecture last night at Second Church was largely attended by many of the leading citizens of Kansas City.

With sincere love and gratitude, I am

Lovingly,

IRVING C. TOMLINSON.

San Francisco, Cal., Aug. 26, 1906.

My Loved Leader:—Just nine years ago to-day I was instantly healed of lung trouble by reading one paragraph from your dear book, Science and Health, beginning on page 406, line 19. I love the book, I love the paragraph, and most of all I love the one who wrote the words. My work has been almost alone, for I have never been with Christian Scientists very much until I came here, about two years ago. I had class instruction from one of your dear students, and shortly after was in her office, until our city was disturbed and we all had to change our offices. This letter you may never see, my good and loving friend, for you are indeed a friend, but I felt impelled to write a few words, though words fail me when I try to express thanks to you for giving to me and to the world so great a gift.

God bless you, our faithful, obedient Leader, and may I help you in being obedient and ready to work for the dear Father. In loving and tender gratitude for all you have done for me,

MAME A. BREYMAN.

London, England, Sept. 22, 1906.

Beloved Leader:—I want to thank you for the new By-law relating to "Testimonials" and to tell you of an experience which I had. A few days ago I was relating a demonstration to a beginner, and began to enter into details of the suffering connected with the disease that had been overcome, when suddenly and clearly the new By-law came before me, and the description of error was left unfinished. I got a wonderful glimpse, and prayed that I might more constantly and fully obey those words, "Glorify God in your body, and in your spirit, which are God's." I saw that this means another great step forward,—it will help us to "let the dead bury their dead," and to prove "that our conversation is in heaven;" so that "discord of every name and nature be heard no more" (Science and Health, p. 355).

A great sense of love and gratitude went out to you. I occasionally see dimly what your life is and has been, and I do thank God for it,—for you.

Whether you get this or not will be decided by Truth, so I happily leave it there, and with love beg to remain

Your humble follower,

JESSIE LUMSDEN.

FROM OUR CONTRIBUTORS.

THE LAW OF THE CHURCH.

LEWIS R. WORKS.

OUR Leader has said, "Love fulfils the law in Christian Science" (Science and Health, p. 572), and every Scientist endeavors, as his part in the fulfilment, so to regulate his life as to be a faithful mirror of that Love which is the only possible guide for his individual conduct. But there are rules of action to be considered in Christian Science, at least for the present, in addition to the laws for individual guidance, which are necessarily objects of the fulfilment referred to by our Leader. So long as it is necessary for us to have a Church externalized by outward structures and characterized in its worship by a certain amount of form and ceremony, just so long will it be necessary to have Church law laid down for us through the instrumentality of types, ink, and paper; just so long shall we be bound to observe, in addition to the laws for our individual guidance, this law of the Church.

Where is the law of the Church to be found? It is necessary that all law, to be effective, shall be so promulgated as to come to the knowledge of all to whom it is to apply, and that rule, standing as it does for common justice, is peculiarly applicable to the laws which govern our Church. In order that the rule may be observed and the law reach members of the Church in the remotest parts of the world, as well as near at hand, the Manual of The Mother Church has been prepared as the instrumentality through which its promulgation is made.

In saying that the law of the Church is set forth in the Manual, we should always remember that we cannot become or remain members of the Church unless we daily adhere to and practise the teachings of Christianity as set forth in the Bible and in Mrs. Eddy's inspired writings, "Science and Health with Key to the Scriptures" and her other works. (Manual of The Mother Church, Art. VII., Sect. 1; Art. XXVI., Sect. 1.) The Bible and Science and Health are also ordained Pastor over the Church (Manual Art. XIII., Sect. 1). In other words, the study of the Bible and Mrs. Eddy's writings should keep the individual in such moral and spiritual condition as will make him, together with his associates, amenable and obedient to Church discipline under and according to the law of the Church promulgated in the Manual.

In addition to her other writings, we are occasionally the happy recipients of admonitory messages from Mrs. Eddy, her grand and lucid utterance on "Personal Contagion" being a recent sample. These are designed to serve as expositions of the Church law, or as admonitions or remonstrances to prevent its infraction, and are not, strictly speaking, parts of the law itself. For instance, the inspiration which we know under the name of "Personal Contagion" tends to produce a more perfect obedience to Sections 2 and 3 of Article XXII. and Section 15 of Article XXVI. of the Manual and of other portions of it. Such evidences of Mrs. Eddy's loving care are helpful and elevating, and will always be gratefully, reverently, and submissively received by all of us. With the utmost confidence do we look to our beloved Leader for the tender guidance she so uniformly vouchsafes us.

We should always remember, however, that until the time comes when we are able to comprehend the "new tongue,"—the language of Spirit,—Mrs. Eddy's messages, whether they be through the Manual, Science and Health, or her many other writings, can only come to us in human language. When these messages do come we should apply our common sense as well as our Christian Science to their interpretation. Mrs. Eddy has given evidence that she has a masterful command of the English tongue. To her unusual aptness in this direction, —her power to express spiritual ideas through human lan-

Digitized by Google

guage,—thousands of us owe our moral, mental, and physical salvation. Let us, therefore, not look for the hidden in her utterances. We may be sure that she will always endeavor to frame her ideas in terms which we can comprehend. If we are ever at a loss, we should understand that it is her ideas and not her words which are beyond us; then we should resort to that work which, if done aright, will result in demonstration, and the ideas will become plain to us. Where the language is already plain, let us not imagine difficulties out of which we are compelled to work in order to discover that which was already apparent. Let us apply to her statements our ordinary rules of interpretation. A right construction of language is demonstration, is scientific; and Christian Science adequately expressed is right in everything.

IMPEDIMENTS TO PROGRESS.

FRANK H. SPRAGUE.

CERTAIN particulars in the story of Bartimæus, as narrated in the Gospel of Mark, suggest by analogy some of the experiences frequently encountered by those who turn to Christian Science for relief from distress. Recognizing the presence of the healing, saving truth, the blind beggar cried out for help; but the bystanders, offended at his boldness, rebuked him, and counseled him to hold his peace. Undaunted by their protests, however, he cried the more importunately, until his appeal was answered. Casting away his garments, relinquishing every impediment to progress, he bent all his energies toward the achievement of his one great desire,—deliverance from the bondage of a false belief.

In like manner the diligent, open-hearted student, seeking help in Christian Science, heeds not the protests of sense-evidence—material beliefs which challenge every step truthward, subtle arguments that would deter him from the pursuit of spiritual ends,—but, casting aside time-worn opinions, prejudices, personal predilections, pride, carnal desires, and every consideration which proves an obstacle to spiritual advance, he seeks access to Truth unburdened by such encumbrances. In obedience to the call of Christian Science, he endeavors, as fast as practicable, to come out and be separate from all associations and interests which are not calculated to further spiritual growth. Our Leader says: "Gladness to leave the dark landmarks, and joy to see them disappear,—this disposition helps to precipitate the ultimate harmony" (Science and Health, p. 324).

Physical as well as moral healing may be retarded because of the patient's unwillingness to sacrifice some cherished indulgence, uncharitable thought, or unworthy ambition. The writer of the epistle to the Hebrews says: "Let us lay aside every weight, and the sin which doth so easily beset us." Earnestness and persistency in invoking the aid of Truth need to be supplemented by a willingness to forsake everything that interferes with its regenerating work, in order that success may be assured; and only as all these conditions are complied with, is a satisfactory demonstration possible.

PRAISE YE THE LORD.

ELIZABETH E. SOUZA.

Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men.—PSALMS.

THUS sang the inspired shepherd poet. Is mortal man, then, the only object of creation who does not voluntarily praise God, since he is the only one thus exhorted? Let us examine: Beginning with the tiny blade of grass, does not its perfection of outline, color, utility, and beauty sing a loud song of praise to God? and does it not teach a beautiful lesson in humility and usefulness, since it may be crushed and trampled upon, yet takes new root, springing into new life, perhaps stronger than before. Does not the violet praise God in its modesty, fragrance, and dainty beauty, and can we not learn the lesson of self-immolation and modesty from this little flower which seemingly hides itself in the profusion of its own foliage? Should not we likewise hide personality in the foliage of good works, kind words, gentle deeds, and thereby sing a sweet strain of praise to the most High?

The lily praises God, and gives us a lesson in purity of purpose, its perfume of gratitude creating a sweet atmosphere in its beautiful presence. The beech, the hickory, the walnut, and the oak trees all unite in one glorious song of praise, wafted on high in the graceful undulations of their branches, in their shade cool and restful, in their sturdy strength resisting "the vapid fury of mortal mind" (Science and Health, p. 293), bending gracefully and graciously until its fury is passed, rising again in greater strength to meet the next wind when it blows. The birds praise God in their sweet songs, each expressing its own individuality of praise, either in the loud glad song reaching high heaven in perfect abandon of praise and joyousness, or in "a low sweet prelude."

We may learn a lesson of how to love and praise God from every object and every experience, and we may indeed learn to praise Him in perfectness by following our Leader's teachings,—"Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261). Shall we not meekly and humbly strive to express the highest form of praise, in obedience to the command, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself," and by demonstrating the power of Truth and Love to heal the sick and cast out devils (evils)?

[Written for the *Sentinel*.]

TO THEE.

BEN. HAWORTH-BOOTH.

MIGHT I be seen from Thy pure citadel
A child again, and filled with gentle grace;
A holy shrine, where truth and mercy dwell,
For Thy white Christ a fair white dwelling-place,
A temple meet to know the brightness of Thy face.

Would I had faith as he who walked the wave,
And strength as he who bade the tempter fly,
Who conquered death and broke the guarded grave—
For Love beheld and heard earth's bitter cry—
Would I might hold Thy hand and know Thy help is nigh.

In Thee my strength is strong, to Thee I turn
To lift my load, to help my helplessness;
Lest I should lose Thy light, my chief concern
Shall be to have Thee in my heart's recess:
Life of my life, confrol, sustain, uplift, and bless!

O Love divine, I would be staunch and true
And stedfast as the needle to the north,
Stedfast as star in heaven's eternal blue,—
Aloft, alone, aflame to beacon forth
Thy bright reflected beams over the darkened earth.

Still may I look, from out a mist of tears,
To Thee, alone to Thee, to save, to bless?
Beyond the void of heaven, the rolling spheres,
Beyond the wondrous starry wilderness
Soundeth the still, small voice of power that answers,
"Yes."

SELECTED ARTICLES.

CHRISTIAN SCIENCE IN LONDON.

One would have supposed that the stoniest of places on which could fall the seeds of such a creed as Christian Science would be the West End of London. The belief that in religious faith is to be found the only cure for physical suffering has been ridiculed by most people, but chief among the scoffers, surely, one would expect to be the aristocracy and wealthy classes of this land, who combine with religious skepticism the power to pay the heaviest of doctor's bills or to take the costliest of cures.

Strange, therefore, is it to record that it is in "society" that Mrs. Eddy's curious faith has made the most substantial progress on this side of the Atlantic, and not amongst the supposedly ignorant and superstitious proletariat. Society has taken to Christian Science, not because of arguments launched in its favor, but because society has seen with its own eyes its miraculous achievements; it has witnessed cures, not of stage invalids and circus-tent weaklings at the hands of clowning charlatans, but of members of its own sets, people actually known to it, by the simple efficacy of faith and prayer.

Christian Science came among us in 1895, when some ten or twelve people met together in a little flat near Baker Street—in the heart of West-End residence-land. When they had increased to about sixteen, the seating capacity of the room was strained to its uttermost, and the services were transferred to the small hall in the Portman Rooms. Another large increase, and it became necessary to take possession of the old Jewish synagogue in Bryanston Street, remodeled into a Christian Science church.

For six years this church remained the center of the faith in London, and later other churches were formed in Manchester, Edinburgh, and Dublin. So crowded became the congregations, that the aisles and staircases were blocked, and it was necessary to make another move—this time to a site in Wilbraham Street, Sloane Square, which has since remained the headquarters, though there has been added another church in London—at Richmond—making three in all. The Wilbraham Street church has about four hundred and fifty members but can now hold six hundred, and is expected to be able to accommodate sixteen hundred when the extensions are completed.

This extraordinary progress of the Christian Science movement in London is not, as may be superficially supposed, the result of an increasing curiosity, such as would attract people, perhaps, to a Moslem mosque or Buddhist temple if opened to the public. The members of the Christian Science churches are actual *believers*. Until they are convinced by practical demonstration, they do not enter the church. When, however, they are converted, their sincerity for the Cause and energy in its propagation surpasses that of any known sect; for side by side with religious belief marches the knowledge of the actual power to alleviate physical suffering.

In many cases, of course, the faith has only been adopted by people otherwise found "incurable." There was, for instance, the case of one of the best-known society women. For years, said doctors, she was suffering from some internal trouble, and in an operation lay her only chance of a cure. She went home to feed up for the ordeal, and while doing so, a friend recommended her to try Christian Science. She did this, although all arrangements for her operation went on and a house in London was taken. Three weeks or so later she came up to town, and during those few weeks she had been reading Science and Health and had been treated at a distance by a healer. When the surgeon (one of the foremost of the day and well known to you) saw her preparatory to the operation, he found there was nothing to operate on and that she was absolutely cured; since then she has been a firm Scientist.

Conversion to a belief in religion in the despairing panic of the last moment is better than no conversion at all; still, among the society adherents to the faith are not only actual weaklings, but those in perfect health, who have been influenced to a belief in its preventive virtues, and, hearing of cure after cure, men and women have been so astounded that they have flocked to the Wednesday evening public services in the Portman Rooms or the Æolian Hall, and seen for themselves people healed of chronic ailments. As a result, they have formally enrolled themselves. Amongst the well-known people who have signified their adherence to Christian Science are the Marchioness of Bath, Lady Grey-Egerton, Lady Ashbourne, Lady Mildred Follett, Mrs. Luther Munday, the Earl of Dunmore, and the well-known operatic singer, Mr. David Bispham. It may safely be said that these people have been led to their acceptance of the creed by some actual realization of its beneficial effects, and the effect of so wholesale an acceptance of Mrs. Eddy's doctrines cannot be underestimated by those who watch great social and religious movements.

Proudest among all must be that courageous woman herself. A New Englander, descended from the Scottish Covenanters, she had all her life pondered over the saying of the Saviour, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" For twenty years she strove to trace all physical effects to a mental cause. At last, her own immediate recovery from the effects of an injury which ordinary medical methods had failed to heal, revealed to her how the truth which had helped her might help the world. To-day there is probably not a country in which there is not some little band of Christian Scientists working patiently and silently to demonstrate that perfect love which, in casting out fear, heals the sick. For ten years, with nothing but the Bible to guide her, Mrs. Eddy worked on. Then, in 1875, she published the first edition of Science and Health, the text-book of Christian Science, which has since reached its 418th [October, 1906] edition.

It is out of the effort to put into practice the teachings of this book that the Christian Science Church has grown. Mrs. Eddy began by teaching one student. A little later, in the year 1876, she and six students organized the first Christian Scientist Association. That was thirty years ago. To-day, with upwards of eight hundred churches, with a great number of organized societies, with innumerable Sunday meetings, and with hundreds of thousands of adherents, the movement is growing gradually, steadily, irresistibly.—*The Bystander* (London, England).

[We find that there are four Christian Science churches in London, including the one at Richmond.—EDITOR.]

David said, "I shall be satisfied, when I awake, with thy likeness;" indicating his belief that the true man is the likeness and image of God. Christian Science is teaching that mortals need to be awakened from the false dream of life into the consciousness of the reality of being, which constitutes one's true and real individuality. Science does not teach that man has a dual consciousness. It teaches that the only real consciousness is the spiritual; that the mortal consciousness, or mortal mind, is a falsity or illusion; that it is no more an entity than darkness.

Darkness appears to be real to those who are in it, but no one will contend that it is an entity. David said, "The darkness and the light are both alike to thee," which is equivalent to saying, "To Thee all is light and there is no darkness." Now which is deceived, mortal man, who beholds the darkness, or God, to whom there is no darkness? The only answer is, that if to supreme intelligence darkness has no existence, then it has no existence in fact.

AMONG THE CHURCHES.

EATON, O.

For several years the Scientists of Eaton, O., have been holding services, and Oct. 5, 1906, papers were filed with the Secretary of State for the incorporation of First Church of Christ, Scientist. To-day we stand a chartered body with fourteen members. We are proving each day that God is our supply. We have had many splendid cases of healing here, for which our hearts are overflowing with gratitude to God, and to our dear Leader who has taught us the way.—*Correspondence.*

NEW LONDON, CONN.

First Church of Christ, Scientist, is making plans to secure a permanent house of worship for itself by the first of the next year. The transfer of the Lippitt homestead at the corner of Hempstead and Granite Streets a few days ago to Edward S. Root was in fact a sale to the church, for whom Mr. Root was acting in the matter.

It is proposed to tear out the interior partitions of the house and to fit it up as an auditorium capable of seating two hundred persons. The work will be advanced as rapidly as possible and it is the hope of the congregation to get into its new home by Jan. 1.—*New London Day.*

NEWBURYPORT, MASS.

First Church of Christ, Scientist, Newburyport, Mass., with a membership of less than thirty, and an average attendance of not more than forty, contributed six hundred and fifteen dollars to the Mother Church Building Fund, fifty dollars of which was given by the Sunday School, a contribution which represented much loving sacrifice.

Our numerical gain has been small, but we feel there has been much individual growth in our ranks within the last few years, and that a good foundation is being laid for the true Church, "the structure of Truth and Love" (Science and Health, p. 583).

It would gladden the heart of our dear Leader if she could hear the expressions of gratitude coming from the lips of her loving followers at our Wednesday night meeting,—gratitude to God, and to her through whose consecrated life all that we know of this truth has come.

Correspondence.

GRAND RAPIDS, MICH.

The dedicatory services of First Church of Christ, Scientist, which took place at their new building, Washington and Lafayette Streets, yesterday morning [Oct. 14], attracted a congregation that filled the large auditorium at both morning and evening services. The First Reader said in part,—

First Church of Christ, Scientist, of Grand Rapids, had its origin in the cases of physical healing performed in this city in the year 1885 by students of Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science. As a result of this healing a class of students, in December of that year, received instruction in Christian Science. Subsequent classes were taught, and the outgrowth of this instruction was the establishment of a society, which began its religious services in 1889.

The church was legally incorporated in October, 1893, with eight charter members. In January, 1901, a building site was purchased at a cost of eight thousand dollars, the entire amount being paid in that year. July 20, 1902, it was decided to build. The corner-stone was laid June, 1903, and the edifice was completed at a cost, including furnishings, of $63,404.00, and formally opened for service on Feb. 12, 1905.

We are gathered here to-day to dedicate this edifice to the service of God: to reverently and prayerfully consecrate it to sacred uses. We look lovingly on its walls and rejoice that they afford an opportunity for this band of worshipers to unite in prayer to the all-wise, all-loving, and all-knowing God; to gain a more exalted, true, and demonstrable knowledge of the irresistible Christ; to extend a welcome to the weary and heavy-laden and sorrowful, and to lovingly lead them to the Christ, who is now as vital, willing, and efficacious to save from human sorrows, as when Jesus was accomplishing his mighty works in Galilee.

Ever since the seeming estrangement of man from God, there has existed a necessity for the Church, and in every human consciousness, stirred into rightful activity by desires for higher and holier living, and by the hope of salvation, there will be found—unseen to human eye—"the structure of Truth and Love" (Science and Health, p. 583), "whose builder and maker is God." This structure, proceeding from and having its basis in God, the divine Principle or source of all true existence, must, by reason of its divine origin, continue to unfold until human consciousness shall become a sanctuary. The Christly activity which anoints every member of the universal Church, making him a preacher of the gospel, brings its own reward in that every recipient of the healing truth in turn becomes an evangelist, gratefully following the example of the great Master, the Founder of Christianity.

It is this "church of the living God" which Christian Scientists are striving to demonstrate. Christian Scientists recognize that membership with this eternal Church in Mind is not gained through conformity to creeds, rites, ritual, ceremonies, or externals of any nature, but by the assurance of the "still, small voice" within, which answers affirmatively these questions: "Am I surely gaining a victory over evil?" "Am I rising superior to the pleasure of sense and thus conquering sin and disease?" "Am I loving God and man better?" "Am I finding my greatest pleasure in doing and thinking good?" "Is the Christ with me to heal and save myself and others?"

This new-old Church is from heaven, and connection with it is dependent on being born of Spirit. Its members are those who, throughout all ages, both previous to and after the Christian era, have perceived God as Spirit, have loved Him supremely, and have acknowledged the efficacy of Christ, Truth.

The material senses shut out spiritual truth, but the Holy Ghost, or Divine Science, ushers the thinker into the holy of holies, the inner sanctuary where God reveals himself, into which sanctuary the thought that denies revelation is forbidden entrance. We dedicate this temple to the ever living God, as a testimonial of our gratitude to Him for every message and every messenger of His love, from the beginning of time to the present century, when the re-discovery of the laws of God taught by Jesus has been given to a needy world, through His faithful Messenger, the Rev. Mary Baker Eddy, who has given us Christian Science and its healing ministry. Our constant prayer, as expressed in one of our tenets, is that we may have the Mind of Christ; that we may "love one another, and be meek, merciful, just, and pure" (Science and Health, p. 497).—*Grand Rapids Herald.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

THE LECTURES.

OKLAHOMA CITY, OKLA.

Sunday afternoon [Oct. 14] Rev. Irving C. Tomlinson of Concord, N. H., delivered a lecture on Christian Science. In introducing Rev. Mr. Tomlinson to the audience, Mr. S. C. Heyman said in part,—

The expounders of Christian Science are not men and women who have made failures in the other walks of life, but on the contrary are among our most cultured, progressive, and best educated people. They have builded their temple on the foundation of faith, hope, charity, honesty, and brotherly love, and they have builded well, and they should command the respect of every law-abiding and loyal citizen in the universe.

This is an age of science; science dominates, science is knowledge, knowledge that is capable of demonstration. The so-called conflict between science and religion is a thing that has long ago been outlived, and exists only in the minds of the unthinking. I am firmly and conscientiously of the belief that Christian Science has done more than its share towards the betterment of mankind, and it is for this that I respect it and its adherents.

Oklahoma City Times-Journal.

FITCHBURG, MASS.

At City Hall, Friday evening [Oct. 19], Judge Septimus J. Hanna lectured on Christian Science. He was introduced by Rev. G. A. Kratzer, First Reader of the local Christian Science church, who said in part,—

Many of you are Christian workers and are putting forth great endeavors to gain salvation for yourselves and for your fellow-men. In your efforts I think most of you tacitly assume that the salvation promised and to be gained through the gospel of Jesus Christ is a salvation from sin only; and even at that, a salvation not to be gained very fully by anybody in this world, and with doubts as to whether it will be attained by many, even in the world to come.

It has been known by Christian workers that sin is the most prolific cause of sickness and chronic invalidism that there is operating, but these workers have implicitly assumed that if they succeed in reforming the sinner, this is all they can hope for, and consequently it is all that most Christian workers attempt. They have felt that, though sin is repented of and destroyed, yet the sinner must, to a large extent, carry around in his body the marks and sufferings produced by his former transgressions for the remainder of his earthly days. It has not seemed to occur to them that the salvation offered by a loving and omnipotent God ought, in the very nature of that God, to be large enough to include salvation from the consequences of sin, as well as from sin itself, and they seem to have lost sight of the fact that this full salvation from both sin and sickness is repeatedly promised in the Scriptures and was repeatedly demonstrated by the prophets, by Jesus, and by his disciples, and that there are positive commands by Christ to his disciples in all ages to heal the sick as well as to preach the gospel.

I have repeatedly seen it demonstrated that, no matter what the record of the past, through the Science of God which Christ taught, and which men may learn and apply here and now, a man may become not only as holy, but also as healthy and as happy and as prosperous as though he had never been in sin.—*Fitchburg Sentinel.*

TESTIMONIES OF HEALING.

Gratitude prompts me to tell how Christian Science came to me in the midst of what seemed a great mental struggle. A number of years before, as the result of a certain line of reading and reasoning, I had arrived at the conclusion that matter is not necessarily a reality. I saw clearly that there was no more proof of the reality of the material universe, including the so-called material man, than there is of the reality of the images of a dream. I felt that I could not even be sure of my own identity. Lacking any conception of the reality of the spiritual universe and spiritual man, I had absolutely nothing, and this mental condition of extreme agnosticism, though I had no name for it at the time, became unendurable. I seemed to feel that I was a mere atom, adrift on an unknown expanse and not sure even that the atom was there. The pagan with faith in mere wood and stone seemed better off than I. At last, with the intensity of despair, I knelt and prayed that, if there was a God, He would hear my prayer and give me faith in something,—anything. The hungering heart is never turned away empty, and in response to my earnest desire came a sincere childlike faith. With joy I made Job's vow my own,—"Though he slay me, yet will I trust in him."

I soon took an active interest in church work, more especially, however, along the lines of the Sunday School, and this gradually led me to an earnest study of the Bible. Then trouble began anew. I felt more and more that if Jesus meant anything he said, he meant *all* that he said; yet turn where I would I could find no satisfactory answer to the questions that kept arising; no solution to the problems that kept presenting themselves. My blind faith was inadequate—it had given me but a temporary sense of peace, that was all.

It did not once enter my consciousness that I, on my own account, might try to live as I was sure Jesus taught, and so prove to myself the truth of his teachings—that I might wrest my answer from the inspired Word itself by practical demonstration. I seemed to stand still, again almost in despair, knowing no way to go on and not daring to go back to the former void. I felt slain, and yet not able to trust. Like Job I was longing to understand God—good. My friends, like his, failed to grasp my meaning, so I learned to say less and less. In this mental condition the light of Christian Science shone upon the darkness and was comprehended. I did not as before cry aloud, but my whole being longed to know, and the hungering heart was again fed, the earnest desire was answered. "The Light, which lighteth every man that cometh into the world," began to shine for me, and still continues its beneficent work in my consciousness, dispelling the dreams of sense and revealing the things of Truth.

A friend of my sister came to our house at this time, to read the week's Lesson from the *Christian Science Quarterly* with her, hoping thereby to interest her so that she might be healed of her diseases. I was invited to join them. Every word of that Lesson was a revelation to my questioning thought. It seemed to me then to be not merely the dawn of spiritual understanding, but the full-orbed radiance of the Truth of being. This friend stayed until late, answering as best she could my numerous questions, and on going home left me her copy of Science and Health to read. I seemed literally to devour this bread of Life for which I had so long been hungering, and when I felt I must return her book I bought one of my own. From that time on I have found in it and in the Bible, read in the light of Christian Science, all that I desired to know. As in mathematics, the knowledge gained, when correctly applied, becomes a logical demonstration of an infallible Principle. I found that now I could "prove all things" and hold fast the good.

This was to me blessing enough, but, as if my cup of joy

Digitized by Google

should be filled to overflowing, I suddenly realized that I was free from an ailment affecting the head and throat, from which I had suffered for years and which had assumed an aggravated form that winter. I had made no conscious effort for this healing and do not remember that I ever thought of the disease after beginning to read Science and Health. I only remember that one evening, on my way home after the usual day's teaching, I suddenly became aware that I was free, that I could breathe naturally, and that I had not been troubled for some time. The entrance of Truth had cast out the morbid condition.

How can we be other than grateful to our dear Leader for enabling us to see the truth which indeed makes us free, mentally and physically! We have always been told to obey God's laws and to follow Jesus' teachings, but she alone has made plain to our understanding *how* to do this —how we can be obedient and merit the promised blessings. I am indeed grateful to God, the giver of all good, to Jesus, the great demonstrator of God's laws, who made possible the coming of the Comforter, and to Mrs. Eddy through whom Christian Science, the Comforter, has come, —"the Spirit of truth" that guides "into all truth."

LAURA C. MOES, Minneapolis, Minn.

In 1890 Christian Science was but little known in the West, and less understood. In July, 1900, I had heard of one case of Christian Science healing, but I do not remember that it produced any impression on me. A year before I had graduated from college and was pretty well committed to physical science, so called, and particularly to the physiological basis of health,—fresh air, dieting, and exercise,—yet I had suffered from stomach trouble for years and was in general poor health. I believed in God and prayed that I might have health to do my work in the world, but I was unable to work more than a few hours a day. My prayer was answered when one day I saw a book on the library table at home which some one had borrowed but had not been sufficiently interested to read. The book was "Science and Health with Key to the Scriptures" by Mrs. Eddy. The title attracted me. Science I liked, and I was certainly interested in health. I took it up and from the first I accepted every statement without demurring, but I then had no interest in any of the chapters beyond "Science of Being." My health returned and in a few weeks I was stronger than I had been in five years. I have never since paid any attention to exercise or dieting as a means of getting or retaining health, and I was permanently rid of the stomach trouble. The book had, however, overturned the fundamental concept of life which I had held and which all whom I knew held to be true. I was therefore afraid to talk about my new-found treasure, and as I believed I no longer needed the book for health, it was returned to its owner.

Two or three years went by and I finally found that I again had need of the "little book," so I purchased a copy. It never failed to help me when I read it, but the healing came more slowly than it did on the previous occasion. I wanted nothing to do with the spiritual teaching; it was the healing of physical sickness that I was looking for, and that alone. I finally sought out the little meeting of Christian Scientists which was noticed in the local papers, and thus became acquainted gradually with the thought of those who knew more of the subject, and I was proportionately helped, physically as well as mentally. I learned something of the infinite mental and spiritual possibilities of this Science. It must solve all our problems; we cannot "limit, in any direction of thought, the omnipresence and omnipotence of God" (Science and Health, p. 445).

M. P. RICHARDSON, Janesville, Wis.

Several years ago, when I first caught a glimpse of Christian Science, it found me a hopeless invalid, in a new western country, with an infant boy and no particular means, our little store having previously been exhausted in a vain endeavor to get relief for both myself and child through the medical profession. To mortal sense I was suffering from a complication of diseases; with a general breakdown. Worst of all, I had lost hope,—despair had settled upon me,—and I prayed for death to relieve me and end it all. In this state of mind and body my husband asked me if I would try Christian Science, as he had read some lectures on that subject, when younger, and had heard of some cases of healing, but had never investigated the subject thoroughly. I replied that I was ready to do anything that possibly might free me from continual suffering and sorrow. I shall never forget the next evening, when he brought home a large bundle of *Journals* and laid them on the table before me. I began reading at once, and continued to read, for several days, until I had finished every one. Shortly after this, I read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and was not only healed, but experienced a great spiritual uplift which through all these years has never left me. Although at first my footsteps seemed faltering, and at times I have been sorely tempted and tried, yet the little understanding I have gained of Christian Science has at all times and under all conditions truly been my "shield and buckler." I have also had many recent helpful experiences and demonstrations of physical healing. Although I have not the privilege of attending Christian Science services here, I love to read the periodicals and study the Lessons, and in the daily perusal of our dear Leader's works my heart goes out in love and reverence to her who has labored so faithfully and unselfishly to point out to us the way to health and happiness.

MRS. CORA A. MAHURAN, Summerfield, Kan.

It is with overflowing gratitude to the giver of every good and perfect gift that I send this long-delayed acknowledgment of what Truth has done for me. Nearly twenty-one years ago I first heard of Christian Science, and was helped out of a long period of invalidism that had blighted my girlhood. The practitioner was far away, and treatment was given without my knowledge, but chills ceased which physicians had pronounced chronic; other serious ailments were relieved so that I was able to resume school work and do four years' work in three, after being out of school for several years. For three years I was loyal to Christian Science, though I hardly understood its rudiments, but I was practically alone in the thought and did not know how to meet the bitter opposition it engendered. I finally determined that it was too sacred to trifle with, and if I could not be true to its teaching I would give it up. I did so, and the years that followed were full of sorrows and mistakes.

Finally the stone was again rolled away, and Christian Science came to me like an angel, offering me a resurrection from the doom of a life of helplessness and dependence on others. My recovery was very slow, and I had treatment for months. It seemed hard for me to grasp the truth and learn to apply it. I think, however, that I have greater patience with others than I would have had if my own healing had been less prolonged. I feel now that I must give as freely as I have received. Sometimes ailments present themselves, but I am able to help myself and feel the joy of strength renewed and abundant life; mental work is easier, and the absolute knowledge that in Truth "there is no death, no inaction, diseased action, overaction, nor reaction" (Science and Health, p. 428), makes it possible to work more quickly and effectually.

Among the many serious troubles healed were sunstroke and prostration, also eye trouble for which oculists said I must always wear glasses. I hardly knew when I quit using them, but soon after I began treatment I laid them

Digitized by Google

aside, although several times, when it seemed unavoidable, I sewed all night.

I wish to express my love and gratitude to our Leader for the years of unselfish labor she has given to us. The lessons in the *Quarterly* are a great help to me. I desire to use whatever talent divine Love has bestowed on me to help others to attain their freedom.

I. S. GLAZE, Constantine, Mich.

About ten years ago one of my ankles suddenly became stiff, and serious complications set in. For about two years I could not walk without crutches, and was much of the time in a wheel-chair. I improved considerably but the foot was turned out, the ankle joint stiff, and one limb a little shorter than the other. I was then treated for a short time by a specialist in New York City, who placed a shoe with a thick sole on my foot and said I would always have to wear it. With this I could walk, but with difficulty.

After a little treatment in Christian Science and six months' study of the text-book, the limb began to grow longer and the joint more limber, so that I was soon able to leave off the thick-soled shoe and walk without limping. I have always lived in Poughkeepsie and now attend Vassar College, where I take the same exercise as the other girls. I am in excellent health, and have been ever since my healing in Christian Science.

HELEN M. BARNES, Poughkeepsie, N. Y.

In thinking of the peace which Christian Science has brought me, and with the hope that I may express my thankfulness to God, and to Mrs. Eddy, by a life well lived, I would like to tell others of my healing. I was instantly healed of severe lung and kidney troubles. I was raised from a bed of pain to health, and had as great a change in my mental condition. I had lost all faith in medicine and did not know the God who heals all our diseases. Now I know that as we recognize the power of divine Mind our ills, pains, and sorrows cease. In Christian Science we learn that the Comforter heals us to-day, and that God is All in all.—EDWARD R. WELLS, Wilmore, Kan.

To say that I am grateful for what Christian Science has done for me, is to give faint expression to my thought. I did not come to Christian Science for physical healing, so far as I knew; but was prompted to see what new thing in religion it had to offer. My first visit to a Christian Science church made the sixth time I had been in a church of any kind in thirty-four years. In fact I had grown so far away from God that I doubted if He existed, save in the imagination of worshipers, and I was satisfied that if God really did exist we would be obliged to defer any knowledge of Him until a future state of existence—if there was such a thing.

In this mental condition I had plodded along, year after year, each year getting farther away from the true source of Life, when I was led to a Wednesday evening meeting in a Christian Science church, and then how different it all seemed. From the moment I passed its portals I seemed to feel an atmosphere of peace and quiet, and at the close of the service I was convinced that I had found a people who believed in and tried to demonstrate the whole gospel of Christ Jesus, and under these conditions the testimonies did not seem marvelous to me, but natural. This experience gave me a desire to attend a Sunday service. Here in the Lesson-Sermon I rejoiced to find a universal Pastor, and a consistent application of the truth,—the omnipotence, omniscience, and omnipresence of God. Since that time I have rarely been absent from the services. The Bible, Science and Health, and the *Quarterly* have been my daily companions, and the spiritual uplifting received from their use has been beyond what it is possible to express in words.

A catarrhal trouble had been more or less in evidence for many years, and each time I contracted a cold I would be greatly annoyed by it. I had also been on the verge of nervous prostration, but both of these, together with an extremely violent temper, have disappeared; likewise profanity, which kept company with the temper. Further, I had worn glasses for about ten years, when one morning I suddenly realized that I did not need them, and I have not used them since—something more than three years now. All this was without any other treatment than the reading of Science and Health, and the effort to live according to its teachings. The same year that I parted with my glasses, I awoke one morning with a well-defined attack of illness, but it was instantaneously overcome through my understanding of man's at-one-ment with Mind. At another time a heavy boulder rolled over my right foot, but relief from the pain was instant.

I could tell of many demonstrations of the power of infinite Love, did space permit, and is it surprising that my gratitude should seem beyond the power of expression—gratitude to God for the good He has bestowed in sending us this truth, and to our dear Leader for her life of self-sacrifice and toil in our behalf, that we might be partakers with her in that feast provided by divine Love. My dominant desire is to so live that I may be found worthy to follow her as she follows Christ.

FRANK WESTON, New York, N. Y.

I wish to acknowledge that after eight years of intense suffering I came into Christian Science through a cousin who advised me to try it, as he knew of a case of healing where the conditions were similar to my own. At that time I had little or no faith in Christian Science, as I had had two surgical operations without any relief, and had tried almost everything that came to my knowledge during this time. My husband, who had been very kind during all these years, decided with me to give it a trial, as a last resort. I had absent treatment, and although my healing was not accomplished quickly, after six months I was doing my own housework, and improved steadily from that time on. My family is interested in Science, and we have had beautiful demonstrations.

Words can never express my gratitude to God, and to Mrs. Eddy for this truth.

MRS. B. MATTHEWS, Washington, Ia.

I was brought to Christian Science many years ago through the healing of a friend. I was then using material remedies, but they had become a burden to me and I was glad to discard them. I suffered greatly from a severe pain in my right limb, so that I could not walk. I called a Christian Science practitioner and was relieved at once. I have been healed of many ailments, but the spiritual uplifting is far greater than the physical healing. The Bible and Science and Health are my daily companions. I am truly grateful to God, and to our dear Leader, Mrs. Eddy; I am also thankful for the *Sentinel* and *Journal*.

MRS. HATTIE SWAN, Danville, Ia.

I wish to acknowledge the many benefits received through Christian Science. One day I went into a dark closet and injured my eye severely by coming against a nail. Finding that I could not see with the eye, and that I was unable to realize the truth clearly for myself, I telephoned a Christian Science practitioner to help me. Within a few hours I could see somewhat, and at the close of the week the vision was clear. I have since become a member of The Mother Church, and understand and appreciate the Bible, Science and Health, and our Leader more and more each day.—EMMA KINNEY, Hyde Park, Cincinnati, O.

Digitized by Google

I wish to make known to others the many benefits which my family and myself have received from Christian Science. We lived in Wyoming for a number of years, and in 1899 my wife and three children returned to Ohio for a year, as a doctor had told us that our little girl should be taken to a lower altitude on account of ill health. A doctor in Ohio then said she could not live in that climate, but should be taken to a drier one. My wife then told him that she had just come from a dry climate, and he said he could do nothing for her. At this time Christian Science was mentioned by relatives, and a few treatments convinced my wife she had found what she had always wanted. The little girl was soon in good health, and a few attacks which came on later were overcome through my wife's understanding of Science, and some absent treatment.

A few weeks before their return to Wyoming, our three other children and two children where they were staying were taken with an eruptive fever, but with a few Christian Science treatments by a practitioner in Ohio the disease was soon overcome, not even scars remaining. While my wife was away with the little girl, she sent me a *Sentinel* and a letter with a few words of the truth in it. I threw away the material remedies which I had been using for several years, and was healed of bowel trouble. I took medicine only once after this, and it was before I had enough understanding to demonstrate the truth. A very severe ailment that often prevented me from working is now a thing of the past. I am a railroad clerk, and have worked twelve hours a day for fifteen years. Before I understood Science, I had begun to give way to exhaustion and failing eyesight. Now, without taking any vacation, and with hard, steady work, my sight has improved, I have gained health and strength, and have more energy and am more hopeful than I was fifteen years ago. I also work evenings at drawing which requires good sight. This I would not have attempted before reading Science and Health. My hearing is also greatly improved and getting better.

Two years ago my wife had an abnormal growth on her right shoulder which made her entire right side useless, besides being extremely painful. This was overcome by a few treatments. When she was having a severe struggle, she asked me to read to her from our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I did, and she was soon relieved. In a few days she was doing her housework. Many other demonstrations of Truth's power could be told, but best of all is the overwhelming desire I have acquired for a life of honesty and purity, and to be fit to show my gratitude in demonstrating the truth for other needy ones.

GEORGE A. WILLIAMS, Salt Lake City, Utah.

It is difficult for me to find words to express my gratitude for the benefit I have received from Christian Science. I was healed of a severe attack of lung trouble, also of abdominal trouble. I have been interested in Christian Science since 1899. Up to that time I hardly knew what it was to feel well; my children were always complaining and a doctor had to be called very often. Since I first accepted this truth neither my children nor myself have ever resorted to material remedies. We have always found in Christian Science the perfect remedy.

On the 7th of December, 1904, I received word that my son, eighteen years of age, had been thrown from a rapidly moving electric car and was seriously hurt. In falling from the car he struck some rocks, and was badly injured. He was carried into a drug store, and when I reached his side he was unconscious. After he had been brought home, two physicians who had helped to bring him there examined him and said that he was very seriously hurt internally. I thanked them for their kindness in helping to bring my son home, but told them that I was a Christian Scientist and would not need their services further. I then telephoned for a practitioner, who remained with us several hours, and left my son more quiet, although appearances were very alarming for several days.

My family were much alarmed and some of them insisted upon my sending for a doctor, but I told them that my son was in the hands of the great Physician, and that He could and would heal him. My brother said the doctors had pronounced the case a most serious one, and that they thought an operation would be necessary. When they learned that I was a Scientist, they said they thought I took desperate chances.

The accident happened on Wednesday night; on Friday he was conscious at intervals, and from that on he improved rapidly. In one week's time from the day he was hurt there was not a scar, bruise, or discoloration of any kind, except a tiny mark on the ear where the cartilage had been cut through. In two weeks from the day of the accident he was entirely well and returned to work. No material remedies were applied or used; Christ, Truth, healed my son.

I can no longer place human knowledge before divine understanding and I am striving to gain more and more of that understanding which makes free. I feel a deep sense of gratitude to God, and to our Leader, Mrs. Eddy, who has been faithful in showing to suffering humanity this blessed truth which leads them out of darkness into the perfect day.—MRS. LAURA G. C. WILSON, Kansas City, Mo.

I have long felt a desire to express my gratitude to God for the many blessings that have come to us through the realization and understanding of the ever-presence and omnipotence of divine Love. It is over seven years since a neighbor, who is a Scientist, brought Christian Science to our home. I have had many beautiful demonstrations in physical healing. I wish to give thanks for all it has done for me, physically, financially, and spiritually, also for the Christian Science literature, which is so helpful and comforting. I feel deeply grateful to Mrs. Eddy for this revelation of Truth.—MARY L. MCCANN, Ottawa, Ontario.

I am glad to add my testimony to those of many others made happy by Christian Science. I was always considered very delicate and my father paid large doctor's bills for me during my childhood. As I grew to womanhood I did not improve. In 1890 I commenced to grow worse, and in 1898 I moved to a town where I could have the care of a skilful physician. He treated me almost three years, and it seemed as if I grew worse all the time. I asked him one day if I could not be cured, and said I was not afraid to die, as I had suffered so much. He told me that he could not cure me, that all he could do was to relieve me when I was suffering. In 1901 I first heard of Christian Science, and I was benefited so much in my first treatment that I could walk a mile,—something I had not done in several years, and the benefits continue to increase each day. I am thankful to God for giving us this truth. I am thankful to dear Mrs. Eddy for her sanctified life, and her wonderful love for the sick and the sinning. If it had not been for Christian Science as taught in "Science and Health with Key to the Scriptures," I would not be here to-day. It is indeed a wonderful book; and it does unlock the Bible.

I am thankful for my health, but I am more thankful for the spiritual help, for the love that I have for God and for everything that is good. I now have no sickness, and I have no hate. I am so thankful to our dear Leader for the understanding of Love.

MRS. HENRY IDA MALLONEY, Bond, Miss.

FROM OUR EXCHANGES.

The Christian ideal has suffered much from a certain proprietary spirit on the part of those who held it. It would be difficult to say how much the personal salvation schemes attaching to this ideal have insensibly promoted the spirit of selfishness. Up to a very recent time—and it is so even now—the Christian gospel has been applauded and pressed on men's attention from the single point of view of the personal security it was supposed to offer. Natural and even justifiable as this may be, still it places the value of that gospel more on its beneficial relation to the believer than on its absolute merits. This mercenary view is fast passing away; it commands little respect from intelligent minds. Yet never was Christianity better understood or more highly prized for its real merits than in the present age of so-called religious doubt and distrust. While the old belief in its supernatural origin and character grows colder and feebler, appreciation of its true historic worth and beauty and moral necessity grows daily. The new ideal is not always recognized by name, and is sometimes pointedly denied. It is content to lose its identity as such rather than seem to violate the principle of universal brotherhood. Like Christ in the legend, it will strip itself of every recognizable sign, and disguise itself beyond all recognition, if thus it may the more quickly reach and stir the instinct of human compassion; and Longfellow, in "The Legend Beautiful," teaches that true worship is no mere rapt contemplation of the beautiful, but can tear itself away from spiritual delights at the command of conscience, and take up the homely duties of the day.

The (London) *Christian Life.*

Oh! how different would be the position of the Church if we clergy would sacrifice everything to concentrate ourselves upon really bringing out the social meaning of our Sacraments, upon really understanding and giving voice to the spirit of Christian brotherhood, upon really making ourselves the organs for expressing social justice and uttering effectively the Divine wrath upon all that degrades and crushes the weak and ignorant and poor. Oh! how different would be our moral appeal if Christ's claim upon wealth —Christ's claim for great sacrifices, great abandonments, as the normal exhibitions of a converted heart—were really once again the claim of the actual Church upon clergy and laity.

But all this is only to ask that we should, in penitence and prayer, give ourselves to teaching the faith and practice of Christendom as it is in the Bible. How, then, would many of the questions which now bulk biggest as Church questions take a very subordinate place!

The Right Rev. Charles Gore, D.D., Lord Bishop of Birmingham.

The (London) *Church Times.*

The amazing thing is that in these latter reforms the great preaching has not been done from the pulpit. And this in face of the fact that they are each and all primarily and essentially the work of the ministry. They are wars waged in behalf of righteousness. Yet the pulpit has had no message, on any of these subjects, that stands out as a clear call in the name of organized Christianity. Christianity has indeed been preached, whether by the social or political reformer or by the daily press and magazine, but the pulpit has signally failed and the churches in their conventions and synods have failed to name the sins and the sinners that menace society and the nation. Need we wonder, then, that men rebel against the pulpit, while they hear and obey the preaching of the social reformer and the statesman which meets a definite issue in a definite and live way?—*The Churchman.*

Our daily problem is essentially this: to reduce the margin of difference between our Christian profession and Christian practice. We do not live for ourselves. The life we live counts for others. Shall it be for or against their faith? If it is true, if our deeds match our creeds, then those who are struggling for assurance and confidence will find in us their towers of refuge, and we shall be "cups of strength" to them in the critical moments of their lives.

Zion's Herald.

The consciousness of being sincere, of being true to what is best within the heart, makes heavenly joy therein.

The Universalist Leader.

The Christian Science Text-Book.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

The Concordance.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of Science and Health, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

Church Manual.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to Joseph Armstrong, 250 Huntington Avenue, Boston, Mass.

Cards in the German Periodical.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

Clerk of The Mother Church.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

Church Treasurer.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 50 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Government is feeling the effect of the new interstate law enacted by the last Congress. The Great Northern Railroad and Steamship Company has notified the Insular Department that it can no longer transport Government employes at contract prices east of Tacoma. The Government's contract with all the railroad and steamship lines provides for the transportation of officers and Government employes from Manila to San Francisco at the rate of $125 each, to Denver, $145; to Chicago, $165, and to the Atlantic coast for $175. The Great Northern now quotes a rate of $155 from Manila to Tacoma, and full railroad rates east from there.

The Japanese Government is pleased with the action of the Washington authorities, and believes that a satisfactory result may be confidently expected from Secretary Metcalf's mission to San Francisco in connection with the exclusion of Japanese children from schools attended by white children. It is believed that the acute stage in the matter has passed, and that no anti-American feeling exists in any form in Tokio. The action of the San Francisco school authorities is deemed to be a violation of the treaty between Japan and the United States.

The pressure from bankers and others for larger and more regular supply of small denominations of currency continues unabated. The Treasury is without resources for the issue of small bills to comply with their urgent requests, until Congress enacts legislation that it has under consideration, which will bring full relief from existing conditions.

The withdrawal of all but two of the force of American warships which have been patroling Dominican waters since last June, has been decided upon by the Department of State.

The net result of the ordinary revenues and expenditures for the fiscal year 1906 was a surplus of $25,669,322, as compared with a deficit of $23,004,228 for the preceding year.

Foreign.

The first vote in committee of the House of Lords on the Education Bill was taken last week and resulted in the defeat of the Government by a majority of two hundred. The vote came on an amendment to the first clause in the bill. The amendment, which was offered by Lord Heneage, Liberal, makes religious instruction compulsory during a part of the daily school hours in all public elementary schools. Among the majority were the Archbishop of Canterbury, twenty bishops, and the Duke of Devonshire. The galleries of the House were thronged with peeresses and members of the House of Commons anxious to watch the progress of the measure.

The House of Lords continues to make radical changes in the various clauses of the bill. There is a distinct atmosphere of tension in the upper house. It has apparently been determined that the Ministry will not tamely submit to the Lords. "It was absolutely intolerable," said Mr. Lloyd-George, President of the Board of Trade, speaking at Spalding, "that the House of Lords should override the decision of the people at the last election, and the Government was determined to persevere with the bill."

Sir Robert Hart, director general of Chinese imperial customs, has issued a circular to the foreign colony at Shanghai, saying that he has received assurances that his status with regard to Chinese customs will not be changed, and that he is satisfied there will be no undue interference with foreign control of the customs. An imperial edict last May appointed Tieh Liang to be superintendent of customs affairs, and it was believed by the foreign legations that this would affect the status of Sir Robert Hart, as all foreigners and Chinese employed in the service were placed under the control of the new head.

Surveys have been begun and the construction will be commenced early in 1907 of a railroad to join the Trans-Baikal and Ussuri branch railroads, thereby providing a northern outlet for the Trans-Siberian trunk line to Nikolaievsk, at the mouth of the Amur. The railroad will tap the rich gold and coal areas of the upper Amur. The project is identical with the original plans sanctioned by Alexander III., who intended to form this northern branch, but which was abandoned after the acquisition of Port Arthur in favor of the southern route.

The president of the Hankow-Canton Railway, a Chinese, has resigned. In the speech in which he tendered his resignation he said that the Chinese engineers in charge of the work were incapable of building the line, and urged the engagement of English, American, or Japanese engineers. The speech was applauded, and it is the general opinion in Hong Kong that the advice of the retiring president will be followed.

The final list of rewards for the rank and file of the Japanese forces engaged in the war with Russia is now gazetted. The recipients number in all 516,426, of whom 439,926 receive decorations and all pecuniary awards. The officers have not yet been gazetted. The list shows incidentally that there were nine Japanese armies in the field, including the garrison of Korea.

Industrial and Commercial.

The *Iron Age* reports: "The effect of the strain for larger outputs in October is more pronounced in steel-making lines. In some cases ore and coke supplies have not been sufficient for record-breaking operations. The Steel Corporation finishes the month with a general breaking of its previous high records of March, this year. Up to Oct. 27 its ingot production had reached 1,120,000,000 tons. In the same time the finished material output was 825,000 tons, as against 770,000 tons in an equal period in March. The Edgar Thomson rail mill had reached on Oct. 27 the remarkable record of 70,000 tons. Export business has kept up well. After several months of inability to take on new rail business for export the mills are again booking orders. In the past week 30,000 tons was closed for the Guayaquil and Quito, the well-known Ecuador line, for shipment in the latter half of 1907 and the early months of 1908. The domestic rail business which is pending amounts to over 200,000 tons, including a large block for trolley lines."

Some figures have been prepared by officials of the Santa Fé Railroad on the corn crop of the year, which are attracting much attention. The year's crop is estimated at 2,730,000,000 bushels. If weighed it would amount to nearly 80,000,000 tons. If shelled and sent to elevators, it would tax to the utmost the full capacity of forty-six centres of distribution, each as great as Chicago. If put into cars, each containing 1,000 bushels, the corn would require 89,000 trains of thirty cars each to carry it to market. There is enough of this corn to supply every living person in the world with two bushels. Even after this country's own vast consumption has been fully provided for there will be enough left to give every person is Russia's vast empire one bushel. At present market prices this crop would be worth $1,310,400,000.

The immense tracts of cacti-covered lands of the Southwest may become a source of enormous profits to their owners if the claim which has been made by chemical experts who have been examining the cactus plant is well founded. A series of experiments have been made of distilling wood alcohol from the leaves of this plant, as a result of which it is stated that there is hardly an acre of wild land in this section that will not produce $100 worth of wood alcohol from cactus. It is said that a ton of cactus leaves will yield nearly half their weight in wood alcohol. Much of the land upon which the cactus grows in profusion has heretofore been considered practically worthless.

A transaction in coal lands, consisting of the holdings of the Northern Coal and Coke Company of Eastern Kentucky, in the great Elkhorn coal fields, was closed in Chicago a few days ago. The property, which was acquired by a Western syndicate, consists of 355,000 acres of coal land, and it is said that $20,000,000 is involved. The tract is located in Pike County, Kentucky, and the vast sums of money being expended by the railroads to reach that section are pointed to as an indication of the value of the mining possibilities.

The Standard Steel Car Company of Butler, Pa., will make important improvements at New Castle, among which will be the building of a plant for the manufacture of steel street cars, thus further extending the uses of steel. A steel car wheel press, costing $50,000, the largest in the world, will be installed. Car wheels and steel passenger coaches will also be made in the big new plant.

In last week's issue the *Manufacturers' Record* estimates that the true value of real and personal property in the fourteen Southern States is at least $18,000,000,000, which is nearly $2,000,000,000 more than the true value of the property in the whole country in 1860, with the South's population at present four or five million less that the total population of the country in 1860.

The representative of a large English syndicate and some Eastern capitalists have purchased property in Chattanooga, Tenn., where a big cotton mill will be erected. The new mill will absorb about a million dollars in its construction and equipment, and will give employment to many hundred people.

Sugar imports from Cuba fell in September to 93,000,000 pounds against 230,000,000 pounds in the month preceding and 172,000,000 in September of last year. This temporary check to the movement of sugar from Cuba was due apparently to the unsettled conditions in the island during that month.

The eight-hour-day open shop has been adopted by the Methodist Book Concerns, East and West, and became operative Nov. 1.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

AT PLEASANT VIEW.

EDITOR OF THE PATRIOT AND ASSOCIATED PRESS REPORTER INVITED TO THE HOME OF REV. MARY BAKER G. EDDY TO CORRECT ERRORS RESULTING FROM INTERVIEW GIVEN PRESS REPORTERS LAST TUESDAY.

ON last Tuesday afternoon a dozen or so representatives of Boston and New York papers were invited to Pleasant View to see and interview Mrs. Eddy.

In commenting upon what took place at that time, all regretted that owing to the drawing of the portieres in the doorway leading from the hall to the parlor where they were, they were unable to see Mrs. Eddy descend the stairs.

In the report to their papers some of them said they did not believe Mrs. Eddy came down the stairway at all; others hinted that because they were not allowed to see, she must have been carried down; while others told the story just as it was, leaving each reader to draw his own conclusion.

At one o'clock to-day [Nov. 1] Harlan C. Pearson, local representative of the Associated Press, and the editor of the *Patriot*, by invitation of Mr. Frye, Mrs. Eddy's private secretary, were in the hallway in Pleasant View when Mrs. Eddy came down stairs for her daily drive.

They were standing at one side and to the rear of the stairway, but in such a place that they could see Mrs. Eddy from the time she put her foot on the first step until she reached the bottom. There was no other person on the stair when she came down. She received no aid in coming down from any one. She descended the steps without hesitation, her right hand gliding along the banister and her left touching the wall.

Mr. Frye stood immediately in front of the stairway on the ground floor, and when she reached him he removed a pair of mittens that she uses in coming down stairs as protection to her gloves, and then she walked to her carriage, which was in waiting at the front door, leaning very lightly on the arm of Mr. Strang, who handed her into the carriage.

When in the hallway she joked with Mr. Frye, and when in the carriage kept up a conversation with Mr. Strang, who was wrapping the robes about her feet.

Just prior to the closing of the carriage door, a lady member of the household approached and adjusted a cushion, and as she withdrew, Mrs. Eddy said to her and Mr. Strang, in a voice sufficiently clear to be heard through a closed door of the house by us who stood inside, "It is a little colder than yesterday, but still pleasant," and with a smile she indicated that the carriage door be closed.

Mr. Frye told us that Mrs. Eddy did not know that we were in the house, and that the way in which she came down stairs and entered her carriage and had her wants attended to had been as they were every day she went out to drive.

Notwithstanding whatever may have been said by outside reporters touching the physical condition of Mrs. Eddy, the *Patriot* wishes to repeat that Mrs. Eddy came downstairs absolutely unaided by any one, and came as rapidly as any woman of mature years would be likely to come when not hurried; that she stood erect in the hall and walked to her carriage practically unaided beyond that which courtesy would suggest; that in so doing she showed no feebleness nor frailty nor tendency to collapse.

The Associated Press correspondent who was present, on looking out of the window said to the editor of the *Patriot*, "Mrs. Eddy looks twenty-five per cent better than she did when all the reporters were out here," and Mr. Strang remarked that doubtless this was due to the excitement under which she labored at the time; that she was usually more or less embarrassed by strangers.

Concord Patriot.

REPORTERS AT PLEASANT VIEW.

LOCAL EDITORS SEE MRS. EDDY WITHOUT HER KNOWLEDGE.

THE city editor of the *Monitor* visited Pleasant View again at noon to-day [Nov. 1], without the knowledge of Mrs. Mary Baker Eddy but upon the invitation of members of her household.

He was accompanied by M. Meehan, editor of the *Daily Patriot*, and the two newspaper men stood in the hallway where they could see very plainly Mrs. Eddy as she descended the stairs from the first floor to the front door, preparatory to taking her daily drive, but where she could not see them and was unaware of their presence.

At the usual time, a few minutes before one o'clock, Mrs. Eddy came down the long flight of eighteen stairs. She was unaccompanied and unaided in any way during the descent. The ladies of the household remained on the first floor, and Mr. Frye and Mr. Strang, her secretary and assistant secretary, stood at the bottom of the stairs.

Mrs. Eddy passed through the opened door and was assisted into the carriage and the robes tucked in by Mr. Strang. The newspaper men had by this time advanced to the windows on either side of the door and looked out at Mrs. Eddy, who was still unaware of their presence.

Mrs. Eddy talked vivaciously with Mr. Frye and Mr. Strang and smiled and bowed a good-by to those of the household left behind as her carriage drove away.

The impression made upon the *Monitor* representative to-day by Mrs. Eddy's appearance was even deeper as to her strength, health, and complete possession of all her faculties than on Tuesday.—*Concord Monitor.*

MRS. EDDY GIVES PROOF OF HER MENTAL VIGOR.

SINCE Pleasant View, where eleven reporters had an interview with Mrs. Mary Baker Eddy on last Tuesday, has been closed to newspaper representatives forever, the few words which the Leader of Christian Science spoke on that occasion, and the opportunity to have seen her and to have observed her at close range, are made doubly significant and interesting.

Many have declared that Mrs. Eddy is without a vestige of mentality left; that she is bereft of her senses and is an absolute physical wreck.

Knowing the currency of such reports, I took occasion the more closely to scrutinize the remarkable woman, and

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

I stepped up near the door where she stood during the interview, to see if such conditions really existed.

When one considers her eighty-five years of activity, her manner, her physical condition, the careful and exquisite regard for her personal adornment and appearance, are nothing short of remarkable.

She was dressed in a fashion of no distinctive period—neither old nor yet modish, neither garish nor prim. It was a style that was distinctly a part of the woman's very personality—it was a garb eminently suitable to a woman whose life has been unique.

Her face pale, with absolutely no application of rouge (which also has been ascribed to her), was fuller and more round than I had expected to see it. Her cheeks were not shriveled in the least, but were unusually smooth for a woman so far past her prime. Whether her white hair was a wig, I could not tell. If so, the fact was marvelously well concealed. It was parted and waved becomingly about her forehead.

Her eyes were large and seemed to show signs of age in that they were without sparkle, but during the interview she looked up appealingly to heaven and clasped her hands together as she said with great fervor: "God is my physician; His everlasting arms are round about me."

That the interview was short indicated in no way that it was due to Mrs. Eddy's infirmity, as some have indicated, but rather to the deviation from a habit which she has broken but once or twice in thirty years—that is, her refusal to receive interviewers. She has felt strongly that such a thing was more or less undignified in a woman holding her exalted position in a cult which she has founded, her friends say, and for that reason it was painful to her to accede to the urgent request of her followers and see the reporters in order to prove the falsity of published statements regarding her physical and mental condition.

With such an interpretation of her anxiety to close the interview, her physical inability to continue it, as was suggested by some, had no bearing at all on the incident.

Mrs. Eddy herself declared that she was without bodily ill or pain, and at least three responsible persons among her followers, who were present at the house and who have resided there for months, say that she is in excellent mental condition and proceeds daily as she has done for years with her business.

The day she was interviewed she personally wrote a business letter to one of her editors, which was signed upon her own letterhead, in which she spoke of a number of business arrangements, which showed that she was well informed and cognizant of the details of her business. The letter, which it was my privilege to see in part, was the most convincing evidence to me of her mental vigor, and I left Concord feeling that the facts about Mrs. Eddy had been distorted by persons who had not had the opportunity which I had at that memorable interview to observe her and judge of her condition.

VIOLA A. RODGERS.

New York American.

City Marshal Rand visited Pleasant View yesterday afternoon [Nov. 1], and was received most cordially by the Rev. Mary Baker G. Eddy. After inquiring as to the condition of the marshal's health following his recent illness, Mrs. Eddy spoke of municipal matters and evinced the liveliest interest in the marshal's presentation. The conversation continued for about ten minutes.

The Concord Daily Patriot.

Mrs. Eddy, head of the Christian Science Church, has now appeared in the flesh to doubting journalistic Thomases, and there would appear to be no further need of sensational statements regarding substitution of one person for another in that connection.—*Burlington* (Vt.) *Free Press.*

EDITORIAL COMMENT.

Disreputable journalism strikes its lowest depths when it attacks an aged woman, and more especially a woman who has grown old gently and gracefully in living and teaching what she and thousands of her followers believe to be the essentials of pure thought, pure speech, and pure acts.

It remained for one of New York's representatives of degenerate journalism to invade the privacy of Mrs. Eddy's home in Concord, to print an alleged interview with her, and to say certain things about her that another New York newspaper—openly opposed to Mrs. Eddy's teachings—has shown to-day to have been unqualifiedly false.

Twelve newspaper representatives were courteously received in Mrs. Eddy's home yesterday. They went there to verify or to disprove, according to the facts, the manifestly biased story of a few days before. What did these twelve reporters discover?

The New York *Sun* prints the result of their visit to-day. The *Sun* is unfriendly to Mrs. Eddy's teachings, yet what it says to-day bears the impress of truth and fairness. Mrs. Eddy stood during the interview, steadying herself by holding on to a portiere; her voice trembled slightly, but was remarkable level and deep; her face was white, her head and hands trembled, her features were thin and pointed; at the close of the interview she walked to her carriage with "stately, languid grace, hardly suggestive of old age." In a word, the visitors discovered that a woman eighty-five years of age had the ordinary appearance of being old.

How many persons of eighty-five could have conducted themselves as Mrs. Eddy did during this trying newspaper inquisition? To attain such an age, to carry it gracefully, to be able to go for a drive daily, to walk with a "stately, languid grace," usually means to have lived a clean and wholesome life.

Such a life unquestionably has been that of Mrs. Eddy. For forty years she has been teaching what she believed to be a doctrine of pure thinking and pure living. Thousands all over the world have thought enough of her teaching to follow her, to revere her, to honor her. The lives of these followers are open to their fellows, and the average of these lives is of a high order.

Now Mrs. Eddy has grown old. Physically she shows the ordinary marks of age; mentally she appears to be as young and as strong as ever. One does not need to subscribe to her teaching to see in her a woman of extraordinary force of character, a woman who has followed her ideal of what life should be, a woman who has earned the respect that all right-minded people pay to old age.

Mrs. Eddy, the woman, is worthy of our regard. Hers has been a life of doing good, of trying to make the world better, according as the light has come to her. One need not believe that her way is the only way, but one cannot be just to oneself and to one's best impulses and not condemn, with all the strength that words can convey, that cowardliness, meanness, uncharitableness, and unmanliness that would seek to cast disrespect and ridicule on this gentle, pure, high-minded, earnest, aged gentlewoman.

Chicago Post.

It would be interesting to know just exactly why the *New York World* thought it necessary to make a bitter and untruthful attack upon Mrs. Mary Baker G. Eddy, the respected Leader of the believers in Christian Science.

The attack was offensive in a threefold manner:—

It was an attack upon a woman.
It was an attack upon old age.
It was an attack upon religious belief.

It is not necessary to share a religious belief in order to respect it.

It is not necessary to be very much of a man to realize

Digitized by Google

that a woman who has committed no crime should be left in peace, free from bitter, uncalled-for criticism.

And it doesn't take very much manhood in a newspaper editor to realize that a woman eighty-six years of age is entitled to veneration from every man, especially when her life has been exemplary and when she has done no one any harm.

We are glad that Mrs. Eddy's good health made it possible for her personally to refute the inexplicable, slanderous attack upon her.

And we trust that the *New York World*, as far as it is possible, will see fit to confine its attacks to men, and, if it must attack women, that it will at least exempt those past fourscore.—*New York Evening Journal.*

We hold no brief for Christian Science or its Founder, but we cannot forbear remarking, in passing comment on a newspaper story, that the *New York World's* expose of last week has exposed only the *World*. There were three counts in its allegation—first, that Mrs. Eddy was physically unable to take her daily drive and that a Mrs. Leonard of Brooklyn, made up to resemble her, was masquerading in her stead; that Mrs. Eddy was suffering from a cancer and was being treated by a cancer specialist; and that her immediate attendants were taking advantage of her physical and mental infirmities to their own pecuniary benefit. The first count was answered by the appearance of Mrs. Eddy in her carriage, and by the affidavits of many respectable citizens of Concord, who know her well, that she and not Mrs. Leonard was the occupant of the carriage. The second was disposed of in the same way, for the *World* could not, or at least did not, produce the alleged specialist treating Mrs. Eddy for cancer, and there was no evidence that she was so suffering visible to any of the reporters who interviewed her. And as to the third count, it was based on nothing more substantial than insinuation. If Mrs. Eddy is a charlatan and Christian Science a delusion it will require something more than such a cheap chapter in yellow journalism to prove it.—*Ridgway's.*

Christian Science, as a religion, may or may not appeal to us, and its teachings are properly open to reasonable and rational discussion. As followed by millions of excellent people, as honest, as sincere, and as wholly worthy of esteem as the millions who differ from them, it is entitled to respectful treatment; moreover, the congregations of this church, by their practical works, their devotion, zeal, charity, and generosity, very often offer an example which it would be well if other religious bodies would emulate. It follows that the Founder of this very large and constantly growing denomination should be held as one entirely worthy of fair play and the utmost courtesy.

Setting aside any and all other claims upon the respect and honor of mankind, the fact that Mrs. Mary Baker Eddy, the Founder of Christian Science, is a woman should secure for her immunity from persecution, and the further fact that she is nearly eighty-six years old would, in the estimation of any self-respecting person, be amply sufficient to protect her from personal annoyance of any sort or kind. Such considerations, potent and all-sufficient with any other class of beings on the face of the earth, have been powerless to restrain the press of the United States, be it said to its shame, from invading the privacy of her life, from inventing sensational stories regarding her, and from harassing, or seeking to harass, her with their unwelcome attentions.

What manner of man is it that would deliberately annoy a harmless, quiet, peaceable lady, eighty-six years old, who has done nothing to invite publicity or deserve attack? What sort of a man is it that would invent a preposterous story and put it in print, to the effect that she was in a dying condition but, refusing to admit it, was fraudulently misleading the public by substituting a dummy, rigged out to look like herself, on her daily ride? Has newspaper human nature fallen so low that it would take for its victim a gentle old lady and drag her through the mire of sensational journalism, merely to gratify its lust for news?

The spectacle, as reported in the press despatches, of "half a score of newspaper representatives" assembling in Concord for the purpose of running down this defenseless lady and forcing her to appear before them in order to set at rest the story of her death, is such a shameful exhibition of ruthless impudence and vulgar, inexcusable curiosity that it is a wonder any newspaper would have the courage to describe it.

It has not been claimed that Mrs. Eddy will live forever. We do not understand that she possesses the gift of immortality or that any of her followers expect or demand it of her as a proof of her sincerity or of the truth of her teachings. Having survived fourscore years, and having during the course of her long life been able to point out the way the following of which has undoubtedly brought peace of mind and spiritual content to millions of people, it would seem but fair and decent that she should be suffered to pass the remainder of her days in peace and quiet, free from obnoxious attentions which must be both dangerous and repugnant. Her brief and simple answers to the half-score of inquisitors who had the effrontery to demand from her a demonstration in the flesh of her ability to walk and talk and go riding, were in themselves a rebuke which would have been keenly felt by any save the most thick-skinned.

Well might these representatives of an enlightened press have slunk away, ashamed and disgusted with their unmanly errand. Instead, they rushed to the nearest telegraph office to spread the details of their experience before a public that could not help but feel contempt and scorn for such an exhibition of brutality. Common, ordinary decency demands that this periodical persecution should cease, and Mrs. Eddy be permitted to live as she pleases without further molestation. The press might well find a better vent for its surplus energy than spying upon a harmless woman who is justly entitled to all the privacy with which she can surround her life.

The Bellman (Minneapolis, Minn.).

Religious toleration is one of the basic principles of our republic.

It is one of the fundamental truths of a free government.

In spirit, at least, whosoever practises religious persecution is guilty of treason.

In this land of liberty, every one is free to believe according to the dictates of his own conscience.

He may belong to this church, or to that church, or to no church.

He may be a Christian Scientist, for instance, or he may be uncompromisingly opposed to that doctrine.

In all this, he is acting strictly within his rights. He is still the good American citizen.

Simply because he has not invaded the equal rights of others.

But let him begin to persecute.

Let him begin to slander.

Let him begin to bear false witness, simply because he desires to injure those who agree not with his religious faith.

Then he ceases to be a true American citizen.

Then he has violated the spirit of our fundamental law.

He has invaded the most precious rights of others.

This is what has been done toward Mrs. Eddy, head of the Christian Scientists.

The treatment of this venerable lady by a class of newspapers is a disgrace to American citizenship.

It is an everlasting disgrace to American journalism.

This is an absolutely impartial view.

The *Optic* has not the slightest interest in Christian Science.

Digitized by Google

But it has a very deep interest in justice, in fair play.

It has the greatest repugnance toward religious persecution.

And, even as a matter of policy, those who have thus been persecuting Mrs. Eddy make a mistake.

Where is the instance in history of a religious doctrine that was rooted out by persecution?

On the contrary, persecution helps a religious doctrine.

And the reason is on the surface.

Persecution arouses a spirit of defense on the part of those who do not even pretend to have faith in the doctrine, but who have an abiding faith in fair play.

Those who persecute Mrs. Eddy will simply help Christian Science.

That will be one of the inevitable results.

But none the less is the persecution contemptible and un-American.—*Quincy* (Ill.) *Optic.*

To many readers of the Associated Press despatch from Concord, N. H., printed in the *Day*, this week, describing a visit to her home and a brief interview granted to newspaper representatives by Mrs. Mary Baker G. Eddy, the respected Leader of the believers in Christian Science, the thought must have occurred: "Alive or dead, is Mrs. Eddy all there is to this wide-reaching religious movement?" Evidently convinced that Mrs. Eddy was "all," and tricked by a constant, inexorable impulse to pander to morbid sensationalism, a New York paper had printed a "spread" feature story in which it was alleged that Mrs. Eddy was dead and a so-called "dummy" was impersonating her. The interview with Mrs. Eddy was arranged to refute the unwarranted and distressing story—and the outcome was tremendously convincing that the Christian Scientists have absolutely nothing to conceal.

That Mrs. Eddy submitted to the indignity of appearing before a group of strange men and women as proof that she is still in the flesh and possessed of physical and mental power remarkable for a woman in her eighty-sixth year, was nothing short of heroic. How pathetic it must have been can be realized alone by those who feel that "a mother is a mother still, the holiest thing alive." And yet there, in this woman's home, gathered this unsympathetic group, brought together by curiosity and for no other purpose than to confirm or disprove the offensive story of a yellow-newsmonger. For a woman of culture, refinement, sensitiveness to have withstood the natural agitation of such a moment, would seem to prove Mrs. Eddy possesses an extraordinary control of herself and full freedom from bodily and mental ills.

The hearts of freedom-loving, freedom-respecting people of common sense must have been poignantly touched by this embarrassing incident. The miserable story itself was disgraceful enough, without going to the other extreme of proving the cruel attack a falsehood. Never again should the loyal friends and followers of Mrs. Eddy allow sensationalism to becloud one moment of the days that are yet their beloved Leader's.

The motive that may be back of this attack on Mrs. Eddy and the Christian Science movement is not appreciable, nor is there likelihood that it will be discoverable in probing the source from whence it emanated. It would not be surprising were it to be productive of additional strength to the Christian Science Church, for in its very aspect of persecution it arouses sympathetic interest, and when sympathy is aroused the host of protectors ready to march in defense of the persecuted is not far off and only awaiting the call. So, after all, however unfortunate in many ways this inexplicable attack has been, it may yet redound to the glory of Mrs. Eddy and of the Christian Science Church, to say nothing of its broadening influences on religious toleration in these free United States.

New London (Conn.) *Day.*

It is somewhat surprising that Mrs. Eddy, the venerable Founder of the great Christian Science cult, should find it necessary, periodically, to submit to newspaper inquisitions to establish anew, to the curious and dubious world, the fact of her own identity.

Perhaps never in the world's history has a respectable, amiable, and inoffensive person been made the victim of such persistent and malignant newspaper attacks as has Mrs. Eddy. It would seem that now, as she approaches the ninetieth year of her life, her enemies and detractors, in newspaper offices and elsewhere, might be content to let her spend the sunset of life in peace. But for some reason this remarkable woman's advancing age seems but to add new incentive to the assaults that are made upon her. In this most recent instance the offender is one of New York's great newspapers, which attacked her as an impostor so vigorously as not only to challenge the state of her bodily health, but to intimate that she had died and was being impersonated by another impostor.

It is not necessary to subscribe to the tenets of Christian Science to reject as absurd the theory that Mrs. Eddy is an impostor. To intelligent men it has long been apparent that she is one of the world's wonderful women—a woman wonderful through her faith, that quality which most of all illumines and ennobles womanhood; the same quality that made Joan of Arc immortal.

Rather than brand Mrs. Eddy a charlatan, it is easily conceivable that the wiser and more enlightened people of future ages will do her honor as one of the pioneers in the search for truth; one who was among the first to stand knocking at the inner door of the temple of the Great Secret of the universe. This much, at least, the trend of modern science and philosophy might be interpreted to indicate.

Mrs. Eddy has done a great work in the world; she has set great forces in motion; she has done much good, we believe, and little harm. In the days of her advanced old age let her rest in peace.

Omaha (Neb.) *Daily World Herald.*

From the standpoint of a long-distance observer, the interview with the Rev. Mary Baker G. Eddy which was given to eleven newspaper reporters on Tuesday the 30th, was one of the most pathetic affairs which has come under our observation in many years. That a woman who has devoted her entire life to the good of others; who has established a church which at the age of twenty-seven years outnumbers some of the older denominations and owns a magnificent church property aggregated at several millions of dollars; who has written a book which has been so acceptable to the public as to find a circulation of several hundred thousand copies, and whose deeds of charity are known throughout this country, should be literally forced to parade herself before the public in order to prove her very existence, seems to us nothing short of barbarism.

A company, including some of the most favorably known and most substantial and level-headed business men in the State of New Hampshire, visited Mrs. Eddy on Oct. 29, and reported her in excellent health, strong mentally and bodily, and spoke especially of her remarkable memory and the keen grasp which she had upon the affairs of the day. Others, some Scientists and some not Scientists, have corroborated their report. Two days later another interview was held with Mrs. Eddy, after which there seems to be a disagreement as to what was witnessed.

The general outcome of these experiences raises the question, After all, what is accomplished by the interview? That Mrs. Eddy is still alive is proved beyond a doubt. The consensus of opinion establishes the fact, beyond doubt, that Mrs. Eddy is well preserved bodily for a woman of her years, and that mentally she exhibits not even the slightest degree of infirmity, but is unusually keen and alert. That the real Mrs. Eddy is vividly before the public in her

Digitized by Google

ethical, scientific, and practical writings, is a fact which does not deal with materiality, and which is not subject to any charge of feebleness and decrepitude.

After all the good that she has accomplished for the general weil being of mankind, why not allow Mrs. Eddy the retirement and peace which her life-work so richly merits?—*Boston Times.*

Whatever may be one's opinion of the tenets of the Christian Science faith, one cannot fail to feel a thorough respect for the manner in which the believers in those teachings conduct themselves when their Cause is made the subject of unjust and brutal attack.

Such an experience has just come to that organization, and the country at large is afforded another opportunity to learn how these people bear the onslaughts of those who would destroy the Christian Science influence in the world.

No bitter replies have been made to the charge that the head of the church is a fraud, and has been imposing on her followers.

No counter-charges, no threat of libel suits. The Church simply points to proof of the falsity of the declarations and goes its way quietly and uncomplainingly.

There may be other religious organizations which would practise equal forbearance under similarly aggravating circumstances, but we do not recall any similar instance anywhere else.—*Maryville* (Mo.) *Tribune.*

We are bound to say that the sensational stories of our esteemed contemporary, the *New York World,* regarding Mrs. Eddy's condition and surroundings, seem to have fallen to the ground completely. Judging by the publications of to-day, she has adopted the wisest possible policy. The *World* asserted that she was in the last stages of decrepitude and illness from cancer and was being represented by a dummy made up to resemble and impersonate her. Mrs. Eddy yesterday appeared in person before fifteen or twenty reputable newspaper reporters, including an agent of the Associated Press, established her identity, and granted an interview. This settles the whole question and removes all doubt.

The News Leader (Richmond and Manchester, Va.).

Every time a metropolitan paper wants a sensational story, they either publish the death or sickness of Mrs. Eddy, the Discoverer and Founder of Christian Science. The *New York World* is the latest to spring this old story, and it has been necessary for the mayor of Concord, who knows her well, and for the leading attorney of the State of New Hampshire, General Streeter, her counsel, to visit her personally, and then certify to the fact that she is alive and well. These sensational stories must be annoying, and they are growing decidedly uninteresting because of the fact that each one shows how little basis there was for it. According to the gentlemen named, several of the bank officials, and other leading citizens of Concord, who are not Christian Scientists, Mrs. Eddy is not only alive, but in remarkably good health for one of her advanced years.—*Westfield* (Mass.) *Times.*

The sensational story, to the effect that Mrs. Mary Baker G. Eddy, the Founder and present head of the Christian Science Church, was being impersonated by another in order that the true physical condition of the head of the Church might be kept from the public, is not borne out by the facts.

She was seen yesterday at her home in Concord, New Hampshire, by representatives of different newspapers, one of whom interviewed her ten years ago, and while she shows her advanced age, her voice was clear and strong and she gave no evidence of decrepitude or of any weakness not to be expected of a woman in her eighty-sixth year.

Hartford (Conn.) *Post.*

The Associated Press yesterday sent a capable representative to Mrs. Mary Baker Glover Eddy at Concord and certifies that Mrs. Eddy is not dying, and is not represented by an understudy. General Manager Stone did exactly what the *News* suggested he might do with advantage to the press of the country and to the millions of Scientists who look to the newspapers with eager interest for authentic reports of the welfare of the remarkable Leader of their faith at Concord.

The interest is not confined to Christian Scientists. Mrs. Eddy looms large among the great leaders of the time.

Buffalo (N. Y.) *Evening News.*

Not to be unduly critical, it is still permissible to inquire why the sensational newspapers in Boston and New York are so wrought up over the disposition and whereabouts of Mrs. Eddy's fortune. What business is it of theirs where Mrs. Eddy's money is or to whom she may have given it? Are the yellow editors perchance legatees expectant, that they take such an interest in the matter? Are not the resources and emoluments of yellow journalism sufficient unto themselves? The whole Eddy sensation is a piece of preposterous insolence quite in keeping with the keyhole and camera work of scavenger newspapers.

Chicago Chronicle.

Periodically the slanderers of Christian Science rage into print, declaring that the Leader of Christian Science, Mrs. Eddy, who resides at Concord, N. H., is suffering an incurable disease; does not appear in public, and in other ways is imposing on her followers. Mrs. Eddy has dispelled all these absurdities by granting an interview to representatives of the press; by proceeding on her customary drive, and by her dignity putting to shame the would-be calumniators.—*The Mystic* (Conn.) *Times.*

It is a very foolish and unwarranted sensation which some of the papers have stirred up over Mrs. Mary Baker G. Eddy, head of the Christian Science Church, who is alive and in good health for a person of her age. There has been a disgraceful effort to represent her as at the point of death and trying to fool the people with a "dummy."

North Adams (Mass.) *Transcript.*

In view of the overwhelming testimony from reputable citizens of Concord to the effect that Mrs. Eddy still retains her normal vigor and has full control of her faculties, it would appear that the *New York World* had perpetrated a cruel and baseless fake. And the *New York World* is not generally classed as yellow, either.

Lowell (Mass.) *Daily Mail.*

The damaging story started by a New York newspaper, affecting Mrs. Mary Baker G. Eddy, head of the Christian Scientists, seems to be a gross falsehood worked up for sensational purposes.—*Champaign* (Ill.) *Gazette.*

The preponderance of evidence is that Mrs. Eddy is reasonably active and enjoying good health.

Lawrence (Mass.) *Eagle.*

FROM OUR CONTRIBUTORS.

LOVE OR WAGE?

LOUISE DELISLE RADZINSKI.

THE significance of the parable of the laborers hired to work in a vineyard, some of them early in the day, others later, at different hours, even so late as the eleventh, and yet all paid the same wage, has come to me with singular force. The first laborers hired agreed with the owner of the vineyard upon a price for their day's work; we have every reason to believe they were satisfied that it was a fair price, a just reward for their labor; it was agreed upon, and they knew precisely what to expect at the day's end. This thought of a fixed wage is a very comforting one to mortal mind; it gives a sense of safety that for a while obscures the fact that it is a limit to one's resources, in fact, a fetter; but to the laborer who looks no farther than the end of his day's work, when he may receive his day's wage, eat and rest, this is quite enough and he is satisfied.

The master of the vineyard went forth again and again to hire men whom he found in the market-place waiting for some one to hire them. He did not fix a price with these, as he had done with the first ones, but told them he would give them whatsoever was right; and they, trusting him, went without dispute, and labored in his vineyard. Then, when evening had come, the lord of the vineyard told his steward to call the laborers and to give them their hire, beginning from the last to the first; and when they came that were hired about the eleventh hour, they were paid, every man a penny.

When those who were hired first came to be paid, and received no more than those who had not borne the burden and the heat of the day, they were discontented and they murmured against the lord of the vineyard. But he reminded them of the bargain they had made together, and that although he had paid the last ones hired the wage he paid them, they were not wronged, they received all they had a right to expect; he, the master of the vineyard, had the right to do as he would with his own.

This parable is often quoted by those who believe themselves antagonistic to the Bible and its teachings, as an example of arbitrary action that verges upon injustice, not understanding that what Love demands of us is not just so many hours of toil, manual or mental, but that attitude of readiness to respond to the call, and of confidence in the justice of Love, which is manifested by prompt obedience in the service of the Master. No matter at what hour the call comes, those whose hearts have been waiting for it, longing for it, and who are willing to leave all to follow the Master's voice, to do whatever his service demands and leave the wage to him, these are blessed with a sure and full reward.

But this is not what strikes me most in this lesson of the laborers; it is the fact that the first laborers agreed with the master for a certain wage, thereby *limiting* themselves, putting themselves in bonds; and this thought brought forth questions we all need to consider and answer to ourselves, that we may understand upon what foundation we stand, so we may work aright in the vineyard of Love, not merely for hire and wage, but in love and faith, knowing that the Master holds all good things in His hands or power, that He is not only just, but merciful, and that He faileth no man.

The market-place in Eastern cities, and in the older European towns and villages, is a large, open space where men gather to hear the news and discuss affairs, and where servants and laboring men and women (each with some tool or implement that denotes the work he is ready to do) come and stand, waiting to be hired; the reapers together, the vintagers together, and each group distinct, so there is no time wasted in looking for the laborers wanted; and none stand there who do not look for work, their being there indicating that they are ready to be called.

Are we standing in that place, maintaining that spiritual attitude in which we are available when the Master has need for us? He alone has power and right to call and to determine our wage; are we ready and waiting to follow Him at once, or would we parley and bargain with Him, letting worldly prudence and wisdom be our light and guide? Are we counting that so many hours of toil shall bring such or such a reward? Are we measuring and weighing what we must give of service or devotion to the Cause of Christian Science, in order to receive an equivalent in the demonstration of Love's healing power and other good? Will we give so much to receive so much in return?

If this sense is abroad, it will sweep like a pestilential wind all the empty spaces that should be filled with love, truth, devotion, and obedience, and we know that the only protection against the tempter's ill is to keep the house of thought filled with the knowledge of God as All in all; our Father-Mother, for whom alone we labor,—labor for Love in love, and trusting that divine Love which "always has met, and always will meet, every human need" (Science and Health, p. 468).

With this sign or evidence of ready, loving obedience, we shall conquer, not only adverse material conditions, as the Roman emperor conquered his pagan opponents with the token of the cross, but we shall overcome the bonds of human weakness, the fears and limitations which handicap aspiration, and render our service an exchange for wage instead of that offering of love which is wholly acceptable unto God and which He will reward with every needed good.

WATCHFULNESS.

ADA B. HOSTETLER.

To comprehend fully the significance of this word, we must close the door upon the world and enter the inner consciousness where is found sweet communion with Soul. Deep in the secret sanctuary of fervent desire to be more Christlike, there we may watch with the Master,—watch and pray that the same Mind may be in us that was also in Christ Jesus. Does it sometimes happen, however, that the hour is not half spent before the door of the sanctuary swings ajar and the watcher, becoming weary of his holy vigil, forgets his duty and wanders into the realm of mortal illusion? Can we not watch one hour,—one brief hour from the unreal pleasures of earth to listen to the voice of him who said, "Lo, I am with you alway, even unto the end of the world"?

We are apt to forget that it is only he who digs deep into the hidden recesses of the earth that brings to light the beautiful gems which lie hidden there; only he who dives far from the sight of mortal eyes into the deep and quiet seas of thought that finds the precious pearl.

Heavy-hearted and disappointed by the faithlessness of his disciples, the blessed Master kept his lonely vigil, and received that unspeakable peace which passeth the understanding of them who grow weary in watching. "Could ye not watch with me one hour?" The words come down through the centuries, and are being spoken to-day to each of us as truly as to the three who slept in Gethsemane. Are we sleeping to-day? Are we turning deaf ears and blind eyes to the things of Spirit revealed by Christian Science? Are we chasing the phantasmagoria of false pleasures along the winding labyrinths of sense perception? Can we not watch one hour for the glorious dawn of Truth?

The voice of Truth is still calling. Let us listen to it, nor turn aside to sleep in the delusions of material sense; for the resurrection from error draws near, and if we are faithful we shall rise with Christ, Truth, into "newness of life."

A WEDNESDAY EVENING TESTIMONY.

SOME years ago, at the annual banquet of the Medico-Legal Society of the city of New York, being invited to speak, I made use of the opportunity afforded to flippantly deride Christian Science and ridicule its Founder, Mrs. Eddy. I have frequently, on various public occasions, denounced Christian Science as a species of self-induced hypnosis and warned my hearers to be on their guard against its insidious encroachments. Whereas I was then woefully blind, I now see, and I desire publicly to retract, and publicly express my profound humility and regret for the statements or misstatements uttered upon various occasions.

Though given many opportunities to come into the light of Truth, I rejected and turned away from each blessed opportunity, because of my unreasoning prejudices against Mrs. Eddy,—prejudices which kept me for many years from coming into the possession of the kingdom. Not until I grew into the unfolded consciousness that led to the uncovering of error, and revealed my prejudices as the manifestations of petty envy and jealousy engendered in the human mind, because of its innate hatred of Truth and Love, did I realize the immeasurable distance between where I stood and the heights of exalted spiritualized consciousness to which Mrs. Eddy had attained and to which I must aspire.

We may be sure that when an individual expresses unkindly criticism of Mrs. Eddy, when he declares that he likes Christian Science, and would be willing to accept it if Mrs. Eddy were not mentioned so frequently, we may be very sure that this individual is far from the kingdom of God, very far from the country toward which we are traveling in the upward journey from sense to Soul. The unjust and unfounded criticisms of our great Leader are nurtured in the miasma of intolerance of the truth,—the deadly atmosphere of envy and jealousy,—and these noxious vapors must be driven out, utterly consumed in the crucible of divine Love, before we can wear the crown that is promised to those who overcome. The positive application of truth can alone disclose the nature and demonstrate the absolute unreality of what is erroneous.

When I remember all that this consecrated woman has done for me, all that she has suffered and uncomplainingly endured that she might bestow upon me, upon all the children of men, the liberty of the "sons of God," I am overwhelmed with shame that I should ever have dared to criticise this blameless life. For the freedom which is ours she has paid a great price. Sneered and jeered at by the enemies of Truth, misrepresented on every hand, the mark of the world's hatred and senseless ridicule, she moved out alone, steadfastly, though with bleeding feet, climbing that upward, lonely road which only the immortals tread. She did not offer us the untried, hasty result of her mental research, but toiled in the Master's vineyard till the shadows of evening fell, that she might gratuitously bestow upon the world the well-ripened, well-tested fruit of the white years of her unblemished life. She returned blessing for malediction, smiles for sarcasm, liberty for slavery, and gave us the positive knowledge of the ever-presence of infinite, divine Love, to drive forever from the hearts of men the horrid specters of fear and superstition,—specters which she has taught us are but the shadows of a false sense of being. She has silenced all the doubts and dogmas of the centuries, driven error into its last hiding-place,—the stronghold of ignorance,—filled the measure of human life with purer purpose, deeper, sweeter meaning, and led us into the realization that there is no love but divine Love, and that God, good, alone can fill the consciousness with peace unsurpassed and joy everlasting. She has so lived; so ordered her every thought and act that, consciously or unconsciously to human sense, she is being borne out upon a current of divine power that moves always toward the great deeps, where the tides that set toward the Almighty are full and strong.

Like the undertow of the great ocean, our beloved Leader, Mrs. Eddy, is carrying civilization with irresistible force toward a higher altitude of spiritualized and ever unfolding divine consciousness. We may well be grateful that we are living in the same day and age with this divinely illuminated woman whom omnipotence has selected as the voice of Truth to an unbelieving generation. Living in the age which her presence has glorified, we feel a new sense of our dignity and importance as children of the most High, and are moved and inspired to consecrate ourselves anew to the fulfilment of the manifold duties which press about us.

Can we do less than render to her the homage of our loyalty and love, the poor tribute of our grateful praise? Can we do less than keep her example before us and clothe ourselves with the white garments of her righteousness? Can we do less than follow the light which she has placed in the window of the twentieth century,—a light which shines far out across a desolate and lonely country to guide the wandering feet of men to their true home? Can we do less than accord merit where merit is due, and associate her name, the name of Mary Baker G. Eddy, indelibly with the great world-movement, the great God-movement of which she is the Discoverer and Founder?

Can we do less than acknowledge—publicly acknowledge—that this Christly woman is lifting humanity, lifting the whole world toward God, and that through her divinely inspired instrumentality the old heavens and the old earth are being rolled away like a scroll, and, behold, "a new heaven and a new earth"?

MRS. MARY ELIZABETH LEASE.
(Lecturer for the Board of Education, New York City.)

THE PRESIDENT'S PROCLAMATION.

THE time of year has come when, in accordance with the wise custom of our forefathers, it becomes my duty to set aside a special day of thanksgiving and praise to the Almighty because of the blessings we have received, and of prayer that these blessings may be continued. Yet another year of widespread well-being has passed. Never before in our history, nor in the history of any other nation, has a people enjoyed more abounding material prosperity than is ours; a prosperity so general that it should arouse in us no spirit of reckless pride, and least of all, a spirit of heedless disregard of our responsibilities, but rather a sober sense of our many blessings, and a resolute purpose, under Providence, not to forfeit them by any action of our own.

Material well-being, indispensable though it is, can never be anything but the foundation of true national greatness and happiness. If we build nothing upon this foundation, then our national life will be as meaningless and empty as a house where only the foundation has been laid. Upon our material well-being must be built a superstructure of individual and national life lived in accordance with the laws of the highest morality, or else our prosperity itself will in the long run turn out a curse instead of a blessing. We should be both reverently thankful for what we have received and earnestly bent upon turning it into a means of grace and not of destruction.

Accordingly, I hereby set apart Thursday, the twenty-ninth day of November, next, as a day of thanksgiving and supplication, on which the people shall meet in their homes or their churches, devoutly acknowledge all that has been given them, and to pray that they may in addition receive the power to use these gifts aright.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington, this 22d day of October, in the year of our Lord one thousand nine hundred and six, and of the independence of the United States the one hundred and thirty-first.

[Seal] THEODORE ROOSEVELT.

By the President:
ELIHU ROOT, Secretary of State.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From the *Concord Monitor*.]

MRS. EDDY'S DAILY DRIVE.

THE following communication has been received at this office. It is written entire in Mrs. Eddy's own hand, which is unmistakable and characteristic, and which, it may be added, is in clearness and steadiness superior to that of most people who communicate with newspaper editors.

Pleasant View, Concord, N. H.

Dear Editor of the Monitor:—I have changed the hour for going out in my carriage from 2 P.M. to 1 P.M., owing to my business demands.

Cordially yours,

Oct. 30, 1906. MARY BAKER EDDY.

AN AMENDED BY-LAW.

ARTICLE XVII.

COMMITTEE ON BUSINESS.—SECT. 8. The Christian Science Board of Directors shall elect annually a Committee on Business, which shall consist of not less than three loyal members of The Mother Church, who shall transact promptly and efficiently such business as Mrs. Eddy, the Directors, or the Committee on Publication shall commit to it. There shall be a Committee on Business, of one or more members, wherever Mrs. Eddy resides. The members of these Committees shall be paid from the Church fund.

MISREPRESENTATION CONDEMNED.

THE very general protest which has followed the recent publication of false and sensational reports regarding our Leader, Mrs. Eddy, is a hopeful sign of the times, inasmuch as it indicates that a spirit of fair play and decency animates the newspapers of the country, notwithstanding the methods used by some few sensational journals. Under the caption, "Editorial Comment," we are printing in this issue a number of editorials from papers widely distributed throughout the United States, which leave no doubt of the security of Mrs. Eddy's position in public esteem, and the general abhorrence of such means as have been employed in the latest efforts to misrepresent her and her work.

We believe the following excerpt from an editorial in the Pasadena, Cal., *News* to be typical of the way in which such methods of journalism are regarded by newspaper men in general, and from other comment that we have heard there is no doubt that newspaper readers share the same view. The *News* says:—

"In every profession and calling are those who contribute nothing to its credit and those who positively detract from its honor. Newspaper men are no exception. Journalism may well disclaim, if it can, those 'news' purveyors who have persistently hounded Mrs. Eddy and intruded themselves into her private affairs, sending broadcast every now and then false and often malicious reports, even reporting her death on several occasions.

"The fair-minded public has no sympathy with the criticisms of a woman over eighty years of age whose doctrine is centered in charity and love and whose private life is characterized by gentleness. One need not be a follower of Mrs. Eddy to resent this intrusion, although Christian Scientists, who simply claim to be very practical followers of the simplest and purest of lives, of which she also only claims to be a lowly disciple, are men and women who in point of intelligence and Christian character compare favorably with any other class or collection of citizens.

"The reporters, of course, found the stories of Mrs. Eddy baseless, and even then misleading headlines in many cases were made to cover up the force of the facts. This whole matter has reflected no credit on a profession and calling in itself honorable and useful."

We feel sure that fair-minded people without regard to their religious affiliations will heartily indorse the views of the Portland, Oregon, *Journal*, which says editorially:—

"If Mrs. Eddy is well, it is a matter of rejoicing; if she is ill, it is a subject for regret . . . But, sick or in health, Mrs. Eddy should have the kindly, sympathetic regard of the people of this country, as it is not straying beyond the bounds of verity to say that her ideas have brought sunshine and sweetness into the lives of this generation."

As we have said before, Mrs. Eddy is attending to her personal affairs and the affairs of her Church with her customary vigor, and is in the best of health.

ARCHIBALD MCLELLAN.

EXPLORERS AND THEIR ACHIEVEMENTS.

THE recent newspaper notices of Commander Peary's achievements in polar research not only recall the many attempts to reach the North Pole which have been made in the past, but also bring to memory the heroic efforts which led to the discovery of this continent. In both cases the brave navigators had to encounter the distrust and incredulity of the greater number of their fellow-men, and opposition which was based upon the assumption that certain things are impossible and therefore should not be attempted.

In reviewing the history of many who have marked out the way of the world's progress, in any direction, it is easy to see that their greatest hindrances have come from the opposition of those who knew little or nothing of the problems involved, rather than from the inherent difficulties of these problems. The so-called mortal mind tends to go on forever in the narrow orbit of its own limited concept of man's possibilities, and resents the thought that the universe is an open book to him who apprehends God aright. Because the Virgin-mother heard and heeded the angelic assurance, "With God nothing shall be impossible," Christ Jesus came to bless the world not only in his own day, but to time's latest hour, by leading the way to "the new heaven and the new earth" of Spirit's creating.

In scrutinizing the mental conditions of mankind which seem to retard progress, we find indolence and superstition very prominent. It is simply astounding how many there are who seek the easiest way rather than the best way,—the way which is alone worthy of serious consideration,—and yet it becomes more and more apparent that nothing less than constant and strenuous effort in the right direction can perceptibly advance the individual or the race. It should be equally apparent that such efforts develop latent possibilities which are perchance unknown to the one who makes the effort, but which are at length recognized by all as the logical result of intense devotion to a high ideal. Thus is indolence displaced by activity, which in time transforms the individual, until he perceives that nothing is impossible to him who seeks ever the highest and best.

Referring to another foe to progress, our revered Leader says, "When Columbus gave freer breadth to the globe, ignorance and superstition chained the honest limbs of the brave old navigator, and disgrace and starvation stared him in the face; but sterner still had been his fate, if that discovery had undermined the favorite inclinations of a sen-

Digitized by Google

suous philosophy" (Science and Health, p. 120). In Christian Science we come to see that any false sense of God is superstition, which necessarily includes a false sense of man and the universe. We also see that the true idea of God replaces superstition with Science and makes possible "painless progress, attended by life and peace" (Science and Health, p. 224).

In our own day the discovery by Mrs. Eddy of the Science of being takes first place because of its vital importance to all mankind, in that it reveals the divine Principle of all being and the way to universal harmony. In this instance, also, Mrs. Eddy had to venture into regions unknown to human sense, and on her way had to pass through the frozen tracts of bigotry, ignorance, and prejudice; but she pressed on, opening the way for the countless thousands who would fain follow Christ and find the realm of Spirit —the kingdom of God—but who knew not how to reach it. Through her efforts the way has been made plain to unnumbered wayfarers, who have found that as the obstacles of mortal sense, the beliefs of sin and suffering, are cleared away the goal does not seem distant and it is ever in sight. In the words of Holy Writ, those who "desire a better country, that is, an heavenly," are shown in Science how to find it here and now; "wherefore God is not ashamed to be called their God: for he hath prepared for them a city."

ANNIE M. KNOTT.

"AS ONE HAVING AUTHORITY."

A NOTED Scotch divine has recently said that "nothing is more apparent than the disappearance of authority from the modern church," and these words immediately relate themselves in thought to any lack of interest in spiritual things, which may be manifested by professing Christians as well as others. Men love to be spoken to with an authority which they respect, and nothing more surely and more speedily enfeebles and defeats any organization than the loss of respect for its constituted sovereignty; surely no army, no commercial enterprise, and no church could possibly succeed under these circumstances. It cannot be questioned that a large proportion of the intellectual and reform leadership of our times is maintained by those who are not identified with organized Christianity. Nevertheless, standing as they do for what they apprehend and affirm to be provable propositions, they are honored by religious people as well as others, and the inference is inevitable that if religious leadership would exert a determinative influence over men, it too must speak with the authority which demonstrable truth alone confers, an authority which proves its right to rule, even as has that which has led the world's commercial and industrial advance.

In the childhood of the race, as in the childhood of the individual, the sense of authority is inevitably connected with personality. Parents and teachers have ruled over us, and for the most part kindly and patiently, and as a result history has been shaped largely by the native willingness of humanity to consent to the continuance of an order to which we have all become conformed in our youth. Jesus came to a people who were yet under this sense of personal authority. The concept of Deity which they venerated was patterned after the kingship of the world. Their fealty continually took counsel of their fear of God as a supreme autocrat, "the King of kings," and therefore Jesus' teaching, that they were to know and honor Him as infinite Love and Truth, seemed to them a new and "strange doctrine." Yet more astonished, however, were they that Jesus himself taught them "as one having authority," and not as the scribes, "for," said they, "even to foul spirits he issues orders, and they obey them" (Ferrar Fenton's Translation). The repose of an exalted command characterized his address, as well as his attitude toward evil,—all sin, disease, and death. As one has said, "He was not a herald, he was a plenipotentiary. He was not a thinker before a problem, he was a doer before a task." More wondrous yet, he taught and commanded his disciples that they too should exercise this authority. When he commended the seventy to their mighty enterprise it was with the words, "Behold, I give unto you power to tread on serpents and scorpions, and over all the power of the enemy." Their sovereignty was to be all-inclusive, supreme. They were to act as possessing plenary powers from Him in whom they lived and for whom they spoke.

The word of the early Church was therefore spoken with the authority of Truth, and it retained this supremacy until the glamour of a world-sense despoiled it of its inheritance. So completely had the individual realization and exercise of this spiritual authority passed, even from the thought of Christian people, that when forty years ago the Discoverer of Christian Science called to humanity, saying, "Rise in the strength of Spirit, to resist all that is unlike God. He has made man capable of this, and nothing can vitiate the ability and power divinely bestowed" (Science and Health, p. 393), her words seemed strange, her thought so unfamiliar, that even the theologically wise were again astonished at this doctrine.

Christian Science is the re-assertion of the teaching and demonstration of Christ Jesus that Spirit is supreme, and that man reflects the might of Mind. It teaches that divine Truth comes to reconstruct human consciousness, to dispel its falsities, to free it from its bondage to sin, sickness, and death, and to mold it after the pattern of the Christ-idea.

It is clear that our effectiveness as Christian Scientists is measured by the completeness and content of our individual reliance upon this dynamic authority of Truth. The relation of Truth to error is necessarily one of autocratic intolerance, its sovereignty is irresistible and immediate, and it is ours to recognize, with an absolute faith, this essential nature of every right idea. We are to know that every least increment of the Christ consciousness reflects the omnipotence of Truth, and as Truth's righteous dominion is thus asserted and demonstrated in us, the Church of God is established, "with power," its authority is honored among men, and God's kingdom is come on earth, "as in heaven."

JOHN B. WILLIS.

THE WORK OF THE AUDUBON SOCIETIES.

[THE following letter to Mrs. Eddy from the President of the National Association of Audubon Societies is self-explanatory. Mrs. Eddy authorizes the statement that the work of this association, as expressed in Mr. Dutcher's letter, meets with her approval, and she is emphatically in favor of the reforms for which it is laboring so disinterestedly.

Christian Scientists are actively in sympathy with every movement of this kind, and they will be glad to see an end put to the cruel, brutal, and inhumane slaughter of birds of plumage which has disgraced recent years.—EDITOR.]

New York, N. Y., Nov. 2, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

My Dear Madam:—The Audubon Societies have for a long time been trying by every possible means to stop the sale and curtail the use of the plumes of the White Herons, commonly known by the trade name of "aigrette." In some measure they have been successful, but there is yet much that can be done before the small remnant of these birds still left in the United States will be saved, even with the special care given to them.

I am informed by some of your devoted followers that one of the fundamental principles of the Christian Scientists is kindness to all helpless creatures, especially birds and animals, and I therefore appeal to you as the Leader

Digitized by Google

of the Scientists to say to your followers that you disapprove of the use of "aigrettes" for millinery purposes.

If you will give me a letter expressing your disapproval of the use of "aigrettes," or, better still, if you will publish your disapproval in any one of your prominent organs, I believe that you will be the means of preventing the sale of thousands of these plumes, and in some measure help to stop the merciless slaughter of the White Herons that is now going on all over the world.

I send you herewith two of our circulars, one giving the history of the slaughter, and the other statements showing the attitude of President and Mrs. Roosevelt in this country and of Queen Alexandra in England.

Trusting that I may have your favorable co-operation in this matter, I am, with great respect,

Yours very sincerely,

WILLIAM DUTCHER, *President.*

LETTERS TO OUR LEADER.

New York, Nov. 1, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved and Revered Leader:—My students, assembled to-day at the annual meeting of their association, unite with me in conveying to you our loyal love; we re-affirm our instant and constant allegiance. We are individually watching and working with you; realizing that we also rise with you in proportion to our understanding and demonstration of your teaching, by precept and example, of the eternal law which governs and controls all created things; because, in this sacred hour, from your cloistered communion in the secret place of the most High, you are demonstrating the immortality of life manifest in individual man. We look for the appearing of the ideal man, made in God's image and likeness, never to disappear,—reflecting forever the presence, power, and peace of the eternal Mind.

AUGUSTA E. STETSON.
President of the Students' Association of the New York City Christian Science Institute.

Chicago, Ill., Nov. 1, 1906.

Dear Mrs. Eddy, Our Most Beloved Leader and Teacher:—In this hour of cruel and unmerited persecution I am impelled to write a few words to you, expressing gratitude and love for you who have done so much for the whole world, and words cannot express my own indebtedness to you, my dear Teacher. In the year 1889 I called at your home on Commonwealth Avenue, Boston, to see you. You were receiving a caller in your reception room, and I was shown into your parlor, and while waiting for you I could not help hearing the conversation. The gentleman said, "I have watched you from your childhood, and your life has been such that this great revelation of Truth could come to you because of your purity." More than this was said, but this much of the conversation has remained with me. After he was gone you came into the room where I was waiting and said to me, "I am sorry to have kept you waiting, but this friend was a very old gentleman whom I have not seen for a long time. He was my pastor when I was a child." You seemed very happy to have seen him.

One of the blessings from Matthew comes to me so often: "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you." It is a great demonstration to overcome the indignation against personality, which involuntarily arises when we see and hear the untrue, unjust, and unwarranted attacks upon one who has been a blessing and only a blessing to the whole world. There is a satisfaction in feeling a righteous indignation at the error, enough to wipe it out as "neither person, place, nor thing."

With my best love, I am, most devotedly, one of the "twins." The other one joins in love. Your student,

MARY M. W. ADAMS.

Grand Rapids, Mich., Oct. 4, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—This church is founded in the healing from sickness and sin, the healing that came to us through your words and works. Those who first brought this truth to us were your own students. The study of your works and the instruction received through your college have enabled us to continue this healing ministry. It is therefore with loving gratitude to God for you, His Messenger, that we ask you to rejoice with us in the dedication of this beautiful temple which your prayers have made possible. It would give you joy to know of the many conquests over evil that have been ours, and of the greater love and unity that is being manifested here. This church was organized nearly thirteen years ago with seven members; to-day we have thirty-one times that number. We realize that only through greater and more loving obedience to your teachings, and more earnest striving to overcome sin in ourselves and others, can we reach the unity and love which Christian Science demands we shall attain. To this end we desire to consecrate ourselves anew, that we may so lift up the Christ, Truth, that all men may be drawn to it. Words are nothing of themselves, but deeds are powerful, and we pray that our fruits may speak for us.

Lovingly and gratefully yours,

CARRIE B. WOLCOTT, *First Reader.*
IDA M. STUDLEY, C.S.B.
Committee for the Church.

New York, Oct. 31, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader and Guide:—At this meeting of the Boards of Trustees of Second, Third, Fourth, and Sixth Churches of Christ, Scientist, called for the purpose of fuller co-operation and to unify our interests in the joint maintenance of the Central Christian Science Reading Rooms, we take this opportunity for testifying to the further propagation of the gospel in the healing of the sick and the reclaiming of the sinful,—a proof positive of your foresight and wisdom in suggesting that such Reading Rooms be maintained by the New York churches.

Yours in loving loyalty for the above-named churches,

IONE REVENAUGH, PEGRAM WENTWORTH,
ROBERT BRUCE, BYRON WINSLOW,
Committee.

Braintree, Mass., Sept. 14, 1906.

Beloved Leader:—Your untiring watch and patient love stand out to my spiritual vision this morning as did the snow-crowned summit of Mt. Blanc against the wondrous blue to my material vision, when a schoolgirl in Geneva, Switzerland. How God's celestial sunshine envelops you! I am so happy and thankful for my first, as I believe, truly spiritual glimpse of the spiritual interpretation of the pictures in "Christ and Christmas." I have always known I did not understand the pictures, although I have always loved the poem. It came to me suddenly that the picture "Christian Science Healing" means this: The figure in the background is mortal self,—no longer clamoring, but obeying the injunction, "Be still, and know that I am God." (I used to think it was the man's wife.) The figure in the foreground is the "unselfed better self" portrayed in your last message, "Choose Ye." Oh, how good God is to us! And, dear Leader, what can we do for you?

With deepest love, your student,

HELEN A. NIXON.

AMONG THE CHURCHES.

COTUIT, MASS.

The pleasant little First Church of Christ, Scientist, Cotuit, Mass., was formally dedicated Sunday, Oct. 7, two services being held. The regular order of service was maintained. At the close of the Lesson-Sermon an address was delivered by Mrs. Caroline A. Parker, a former First Reader of this church.—*The Barnstable* (Mass.) *Patriot.*

SAN BERNARDINO, CAL.

The growth and prosperity of the Christian Science church of this city is shown by their new and attractive Reading Room on the second floor of the Ruffin Block, which was opened to the public yesterday. The increasing interest in the subject made it necessary to remove the Reading Room from its old quarters in the church on E Street to a more central location, within easy reach of strangers who are passing through the city as well as of permanent residents who are followers of Mrs. Eddy.

The Evening Index.

OLEAN, N. Y.

An important real estate transfer was consummated yesterday [Oct. 16], when the Congregational church building and lot, located at the corner of East State and North Barry Streets, was purchased by First Church of Christ, Scientist, of this city. The property was purchased from the Home Missionary Society of New York, the consideration being five thousand dollars. The Scientists will proceed at once to improve and beautify their new church home, and will take possession within a short time. The organization is in a flourishing condition, and is to be congratulated on having secured so desirable a location.—*Olean Times.*

WARSAW, IND.

On Sunday, Oct. 7, First Church of Christ, Scientist, of this city, opened their new place of worship, which was remodeled from the house on the corner of Detroit and Main Streets. The building has undergone such a change that one would hardly recognize the place. A large ten-foot porch was added to the front, the style of which is in keeping with the colonial effect of the house. The inside of the building has been changed to a Reading Room and church auditorium, the latter having a capacity of about one hundred and fifty seats. Nothing seems to have been left undone to make the place cheerful and modestly attractive. Before the Lesson-Sermon the president of the church delivered an address of welcome, in which he said in part,—

The opening of this church is not a triumph that can be measured in wood or stone. It is another link in the chain of progress symbolizing the upbuilding of the brotherhood of man and the acknowledgment of the fatherhood of God. It is to us a manifestation of love, another mark which points to the death of man's inhumanity to man. Christian Science exalts God as infinite Love, always good, kind, merciful, just, and true—a God who does not afflict His children with disease, sorrow, and death, but one who helps us to overcome them.

We believe that the same Christ-power which healed the sick on the shore of the Galilean sea can do so to-day, and it has been demonstrated in hundreds of thousands of cases that this is true. The grateful hearts which join to-day in thanksgiving to God for His many blessings, are also filled with love and reverence for our beloved Leader, Mrs. Eddy, who has labored so faithfully, fearlessly, and persistently in our behalf and for all mankind. May God's choicest blessings rest upon her.—*Warsaw Times.*

ORGANIZATION IN KIRKWOOD, MO.

First Church of Christ, Scientist, in Kirkwood, Mo., held its first service on Sunday, Oct. 7, 1906, with an attendance of about one hundred. There were about the same number present at the second Sunday service and from sixty to eighty at the Wednesday evening service. Kirkwood, Mo., is an incorporated city, with a population of about five thousand. It is situated in the suburbs of St. Louis, Mo., about six miles from its western city limits. The following notice respecting the formation of this new church was read Sunday, Oct. 7, 1906, at First Church of Christ, Scientist, St. Louis:—

Four months ago this church was called upon to part with sixty-nine of its members, on the occasion of the formation of Third Church of Christ, Scientist, in St. Louis. While the initiative in the organization of Third Church was taken by members of this church, all Christian Scientists of recent membership in any Church of Christ, Scientist, residing in the southern part of the city, were invited to participate in the forming of Third Church. The work begun with many such evidences of clear spiritual understanding and broad-minded Christian fellowship has greatly prospered. The attendance at the public services has averaged several hundred during the summer months, and new members to the number of seventeen were received by Third Church on Communion Sunday, July 8. The spirit of church extension is active in our midst and we have again to announce, almost with sorrow, yet with rejoicing, that another band of our faithful members, twenty in number, have withdrawn from this church and have organized First Church of Christ, Scientist, in Kirkwood, Mo. They likewise extend a cordial right hand of fellowship to all who wish to join with them.

Most happily the Kirkwood Church has been able to secure the use of the beautiful and commodious Choral Hall for its Sunday and Wednesday meetings, in every way a fitting place in which to inaugurate its work. The first service of the church is being held this morning, and they cordially invite the public to their regular services.

Before reading the names of these dear friends who have taken their letters from this church in order to spread the gospel of Christian healing, it is proper to say that we know it has been as hard for them to sever this relation as it is for us to give them up. They have been without exception active and faithful in building up this church; several were among the fifty who joined in its organization, several have served the church as officers and one in the reading desk. We feel that the Kirkwood church will have a large share in the spread of Christian Science in "Greater St. Louis;" we know it can be depended upon to work in unity with the other churches in this field, and its progress will be followed by our genuine interest and affectionate regard.—*Correspondence.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

THE LECTURES.

MARION, IND.

Mayor Field W. Swezey at the Indiana Theatre Sunday afternoon, Oct. 14, introducing Hon. Clarence A. Buskirk, who lectured to a crowded house on Christian Science, said in part,—

In the future, when the student of history turns back the pages of time and comes to this period, one of the things that will stand out in bold relief will be the growth of Christian Science during this period. I am not of this faith, but I most certainly stand for that freedom of thought, that freedom of speech, that freedom of belief which has made this wonderful growth of yours possible. We all of us must and do believe in the influence of mind over matter, the spiritual over the material; and in this age of such marked development also in things material, when even our churches have in some instances been tainted with materialistic notions and ideas, how fortunate it is that the Christian Scientist should come proclaiming with such telling and convincing force the great truth that the spiritual, not the material, is supreme. Certainly that religion which makes men better men, women better women, which softens sorrow, heals the sick, dries the tears, tempers speech, brings peace and comfort to the grief-stricken heart, makes the world better and mankind stronger,—that religion is worthy of consideration and cannot be all wrong.—*Correspondence.*

PROVIDENCE, R. I.

An exposition of the doctrine of Christian Science was given yesterday afternoon [Oct. 14] at the Providence Opera House, under the auspices of First Church of Christ, Scientist, by Bicknell Young of Chicago, before a very large audience. Rev. W. L. Swan, formerly of Westerly, introduced the speaker, saying in part,—

After having preached in the Baptist pulpit for about twenty years, I find myself committed to Christian Science and to Christian Science work. I came by quite definite steps. A near relative, after being pronounced incurable by a large number of specialists, was cured. I decided to investigate and with absolutely fair mind. I said first: "Do the Scientists heal?" And I investigated until I was satisfied beyond a shadow of a doubt that they did what they claimed. Then I said, "How do they do it? I am going to separate the wheat from the chaff." And I began the process of separating. I found it was very easy to write a criticism on Christian Science, but after I became an able critic it was impossible for me to demonstrate it. I said, "I must try again. I do not know much about Christian Science until I can do the work that they do." My experience was that I did better work the nearer I approached the understanding of Christian Science from the viewpoint of the book Science and Health by Mrs. Eddy, and how to work became more clear to me upon my acceptance of the teachings of Christian Science from this viewpoint.

In talking with a leading minister of a denomination other than my own, he asked the privilege of questioning me. And he did so most thoroughly. Then he said, "I believe, certainly, that the church needs to believe all you have said." In the attitude of truth-seekers we must go to one who knows a subject and not pick up information from the street. At first I took my information from the street and I did not believe in Christian Science, and I do not believe to-day in Christian Science as it was presented to me then. If your Christian Science came from the street you do not believe it, nor I either. But I decided that the street was a poor place to pick up information and I went to a prominent Christian Scientist and asked the privilege of questioning him, and after talking with him for about two hours I had much to think about when I went home. I said, "Christian Science is not what I thought it was."—*The Morning Tribune.*

ROCKLAND, ME.

A fine audience at Farwell Opera House last night [Oct. 12] enjoyed the lecture on Christian Science by Edward A. Kimball. Mr. Kimball was introduced to the audience by Rev. Robert Sutcliffe, pastor of the Methodist church, who said in part,—

The most unholy business in which any Christian preacher can be engaged is to attempt to bar the door of the temple against the entrance of reason and truth, and the worst heresy of which a preacher can be guilty is to be afraid of the truth. Knowledge, from whatever quarter she came, has always been a most welcome guest. I have gladly received and entertained her to the best of my ability; therefore, when invited to preside over this gathering I accepted the position, no, the honor, without any hesitation. I can assure the eminent speaker of the hour that I am in a receptive mood. If any bread by him is handed out, I shall certainly partake, even if the wrapping of the loaf is not Methodistic.

The Rockland Courier-Gazette.

MUSKOGEE, IND. TER.

Rev. Irving C. Tomlinson of Concord, N. H., lectured on Christian Science, Oct. 11. He was introduced by Attorney W. T. Huchings, who said in part,—

The nineteenth century was one of education and breaking away from the chains of ignorance and superstition. This naturally developed new views of old problems and fresh, original thoughts of new ones. The wide tendency to materialism and its resulting spiritual paralysis has changed to one of spiritual development—the living of the Christ-life—the making Christ the motive power of the whole life. One of its manifestations is the Christian Science philosophy, whose votaries proclaim that they are not afraid to face a Bible truth and abide its legitimate results; that when the Master said to his followers, Go, preach and heal, he said it because he meant it and because he did not half mean it.

An institution which accentuates and exemplifies the cardinal truth of all great religions—namely, that man, the real entity that is to endure endlessly, is spiritual, the creature and emanation of God; which dares to affirm that the spiritual is greater than and is master of the physical; which in forty years has grown from one person to thousands; which from our personal acquaintance is composed very largely of refined, cultured, and godly men and women, which strives to cement and sanctify the home and family ties, must command our respect and merit our consideration.—*Muskogee Times-Democrat.*

TESTIMONIES OF HEALING.

It is with pleasure and gratitude that I testify to my healing through Christian Science, after ten years of invalidism which rendered all ordinary employment impossible and often kept me in bed for weeks at a time, suffering intense agony. My mortal existence was one weary round of electricity, baths, medicine, and suffering, —and I was always in the hands of some doctor or specialist. In all sixteen physicians were employed, no two ever exactly agreeing as to the nature of the complaint. I was said to have a serious bowel trouble, and could not retain even a spoonful of water. I was taken to a hospital, and at the end of five weeks the visiting specialist at the hospital advised my being taken home, as they could do nothing more for me. Two years of complete invalidism followed; pain and discomfort were constant companions, until another extreme attack made me lose all courage. In bed for six weeks, mostly under the influence of morphine, so weak that I could scarcely lift a finger; the physician's verdict being that he could do nothing more for me—here is where Christian Science found me.

The practitioner came about eleven in the morning, talked to me a little about Jesus and his healing of the sick, gave a treatment, and went down stairs for her luncheon. When she came from the dining-room she asked, "Wouldn't you like something, too?" Aghast at such a proposition, but fully determined to give Christian Science as fair a trial as I had given physicians, whose directions I had followed, whether agreeing with them or not, I asked, "What would it be safe for me to have?" She said, "Why not have just what we have had?" I ate what was brought me, a very substantial meal. I then got up, dressed partly, and sat at the window. Two days after this I walked part of the way to the station to meet her, as she came on her second visit. This was five years ago, during which time I have never been troubled with those ailments from which I had suffered for ten years, have taken no medicine, and people often remark upon my activity and how well I look.

I am thankful to say that I can now demonstrate the truth for myself.——Louise B. Kirby, Bayside, L. I., N. Y.

I have great reason for gratitude for the healing power of God as demonstrated through Christian Science. In October, 1905, while at work on a new building, I stepped on the temporary covering of a stairway opening in the floor, which had been unsafely placed and gave way instantly, letting me drop feet first to the basement floor below, striking my head with great force on the timber surrounding the opening, and rendering me unconscious. I was taken upstairs by my fellow-workmen, one of whom went for a doctor, who took me home, stitched up the cut in the scalp, and pronounced the verdict that I would not live till the next morning, as the injuries were very severe. A Christian Science practitioner was then telephoned to and absent treatment given at once. Before the doctor left the house there was a noticeable change in my condition, so that he qualified his former statement by saying that if I did live, I would always remain in the semi-conscious condition in which I then was. The Scientist came to see me that evening, and also the four following days; I continued to improve, and the rest of the work was done absently. At the end of two weeks I was able to go to her house, and in six weeks I was again at work on the building where I had been hurt, and could have worked sooner if the materials had been ready.

A doctor, an old friend, who saw me ten days after my fall, said that in his opinion I would be unable to work for a year; but I was healed, and thanks be to God for His healing power, and to Mrs. Eddy, His faithful servant, to whom it was revealed and through whom it has been given to the world.

Walter S. Chatfield, Highland Park, Mich.

In the summer of 1894 an old school friend whom I had not seen for over twenty years made me a visit. I had heard she had become a Christian Scientist, but what that meant I did not then know. We had been members of the same church in our school days, and the ministers had preached against Christian Science—that was enough for me. I had been in Florida for years, as all of our family suffered more or less severely from lung trouble. My friend remained but one day. I asked her many hard questions, I thought, but they were answered easily and left nothing for me to say.

When my friend left she gave me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. She advised me to lay aside prejudice and read it from the beginning. I promised that I would and in a few days began in earnest. The first sentence and the pages of the preface were a revelation to me. I honestly wanted to know the truth, as my Christian experience seemed very near a failure to me. I kept on reading daily, and when about half through "Footsteps of Truth," the light seemed to overcome my fears and doubts, as my old-time props and stays had been dropping away one by one. I felt sure this was God's eternal truth and I was willing to stand by it. From that time the pains, ills, and weakness of the flesh began to disappear. Two of the severest ailments have never touched me since. I continued to read and study with very great benefit, and felt I had just begun to live,—to know what Life is. From that time till this, with one exception, I have been able to do my own work, and to speak the words of Truth and Love to make others free. The Bible has become a new book when opened by this "Key to the Scriptures," and the study of our beloved Leader's other writings a daily inspiration to "follow and rejoice all the rugged way" (Miscellaneous Writings, p. 398). I rejoice that Christian Science came in my day, and that I was willing to listen and hear the voice that leads into all truth.

Words are poor to express my gratitude and love to the one fitted and prepared to give to the waiting world "Science and Health with Key to the Scriptures."

Ella S. Risley, Chattanooga, Tenn.

I have desired for a long time to add my testimony to those already published in the *Sentinel*. Were I to enumerate the blessings which have come to me since my first knowledge of Christian Science, they would be more than could be told. I first became interested in the beauty of the Christian Science teachings as set forth in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. A number of ailments have been overcome by the understanding of the truth therein taught. I was brought up to love the Bible, and have always read it with reverence, but seldom with understanding. It is now a new book to me,—a thousand times more beautiful and helpful.

I am only one of the thousands who think of Mrs. Eddy with love and gratitude for making plain to them the Word of God. I am grateful every day for her lovely life and patient labor, and daily am I trying to follow her as she follows Christ.—Mrs. Barbara Ramage, McGregor, Ia.

I first heard of Christian Science in August, 1896. I took treatment for heart trouble and other ailments and was healed. I bought a copy of Science and Health, also the *Quarterly*, and began to study the Bible with them. I began to know what God is, to find Him a present help in every time of need. I had been a church member for over twenty years and tried to live up to its teachings, but I never was satisfied. At that time I could not see one ray of light. I often prayed to God to send some one to show us the true way, and at last I was led to find it. Although I have had trials Truth has prevailed and has rolled away the stone

Digitized by Google

from my consciousness. We have had many beautiful demonstrations in our home, over fevers, colds, broken bones, etc. These were healed with the help of a practitioner and the study of "Science and Health with Key to the Scriptures." My husband and myself read the Lesson-Sermon every Sunday, and a part of it every day. We are members of The Mother Church, and take the *Journal* and *Sentinel*. We have also all the works of our Leader, and appreciate them. I am growing stronger in the love of God, good, and in gratitude to Mrs. Eddy for having brought us Christian Science.

MRS. NAOMI L. WATERS, Ladora, Ia.

Words cannot express my gratitude to God for Christian Science. The effects of accidental poisoning were overcome for my wife through the understanding of Truth. One day I received a message that she was dying. When I reached home I found her in a terrible condition. A Christian Science practitioner soon arrived and began treatment, with the result that in a short time the spasms became less violent and farther apart. The Scientist remained an hour and a half, and after her departure my wife went to sleep and rested all night. In a few days she had entirely recovered, and has never felt any ill effects from the poison since.

I give thanks to God, and to Mrs. Eddy for the blessings that have been bestowed on us through the understanding of Christian Science.—W. J. JEWELL, Fitzgerald, Ga.

Almost eight years have passed since I was healed through Christian Science. Prior to that time I was constantly under the doctor's care, and hardly knew what it was to be free from pain. My chief ailments were female weakness and bowel trouble. I had medical treatment all of one summer, at the end of which time we went West. I had not been there long before I had to go through an operation. I was again disappointed in finding that my health was not improved. I then went to a specialist, who treated me all of that summer. He told my husband that I was a very sick woman, and he did not have much hope of curing me, as I had lung trouble. In December we moved again, and it was not long before I was in a deplorable condition, hardly able to walk across the street without help. I really felt as if there was no hope for me.

At this time "Science and Health with Key to the Scriptures" by Mrs. Eddy, was lent to me, and I had not read more than one third of it, which took me about two weeks, when I found myself perfectly well, and I have never had a return of any of those troubles since. I feel I owe all to Christian Science, and am thankful to God for giving us this truth through Mrs. Eddy. I should indeed be grateful when I think of the help it has also been to us financially. My healing through Christian Science did not cost me anything, as I was made well simply by reading Science and Health. When I was under medical care we spent between five and six hundred dollars for my treatment.

My daily desire is to be worthy of this healing, and I feel a great sense of love and gratitude to God and to our dear Leader for this blessed truth.

MRS. K. MUNRO, Winnipeg, Canada.

In June, 1888, while on duty as a locomotive engineer on the Colorado Midland Railroad, my engine was derailed. I was thrown out of the cab window, and was picked up unconscious. I was placed in a coach and taken to Colorado City, being unconscious most of the way. The company's physician examined me and said that I had received very severe injuries. I was in pain most of the time, but in about two months I returned to work in a weakened condition. Within three weeks I was forced to quit work. I remained with the company a year, sometimes working at light work, and was under their physician's care during this time. I was also examined by other physicians, who pronounced me incurable. The company was good to me, giving me a liberal monthly allowance. I became so weak that I was forced to quit work, and my physician advised me to go to a lower altitude. When I left he gave me a certificate stating that I was so badly injured that I could not perform manual labor any more. I returned to Rock Island, and still having hope that I might get well, I consulted a surgeon connected with the railroad. After treating me for several weeks he pronounced me beyond help, and gave me a certificate to that effect. My case was presented to the insurance department of the Brotherhood of Locomotive Engineers, at a convention held in Pittsburg in 1890, and I was allowed part of my insurance on disability.

Before I went to the convention, Christian Science had been mentioned to me. I then thought it might heal a mental condition, but could not see how it could reach a physical injury like mine. Soon after I returned my condition became much worse. I sent for another physician, but received no help. As a last resort I decided to try Christian Science. After four weeks' treatment I seemed no better. I had been given a copy of Mrs. Eddy's book, "People's Idea of God," which gave me new light and hope. I stopped the treatments, purchased a copy of Science and Health, and on the third day, while I was reading the book, a strange feeling came over me. Immediately the pain and trouble left me. Soon after I was healed, I went to work and have worked five years, realizing good health and strength. I am now in the best of health.

ROBERT M. WATTS, Rock Island, Ill.

In June, 1889, I was taken seriously ill and one of the leading physicians was called in. The case dragged along until about the middle of July, when he took me to Minneapolis, Minn. While there I went through a medical examination and was told that my physician had given me the right medicine. During this time and up to the middle of August I had been coughing a great deal. I then changed physicians, but I got worse every day until the latter part of November, when the physician told me that he could not do anything more for me, and that my only chance would be to go to Colorado or Georgia. My wife then decided to take me to Colorado Springs, and we arrived there on the 1st of December. One of the leading physicians there gave me a thorough examination and diagnosed my case as severe lung trouble, and said that if I gained any I could never live away from Colorado. I kept getting worse every day, until I could not even go to the physician's office. He then told my wife that he could do nothing more for me excepting to give me medicine which would ease the pain.

During all this time my wife wanted me to try Christian Science, but I was not ready for it until one day my wife sprained her ankle while coming down stairs. This sprain was healed with one Science treatment, and this case of healing opened my eyes. I thought if my wife could be healed so quickly, why should I not try it myself? On the 1st of January, 1900, I threw away what medicine I had and called in the practitioner who had helped my wife. He treated me about three weeks and I decided to return home. When we arrived I had the practitioner treat me who had taken my wife's case two years before this. Soon after my return home I started a confectionery store, doing most of the work myself, and afterwards I became deputy sheriff of this county. At present I am working in the Government employ as money-order clerk in the Watertown post-office.

To-day I am a living monument of the health and strength due to God's protecting arm, and to Christian

Digitized by Google

Science as taught us by our never-tiring and patient Leader. The study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, has proven to me and to my family God's ever-presence in time of distress, and I give thanks to God and to our Leader for this enlightenment.

HENRY J. HILDEBRANDT, Watertown, S. D.

Among the many blessings which have come to me through Christian Science, the greatest is a growing realization that God is a loving Father, an ever-present reality; not an unknown and unknowable being, of whom I avoided thinking and was half afraid. This realization, that God is good, and that He made and keeps man in His image and likeness, has healed me of a moody, unhappy disposition, supposedly inherited, which had produced a discordant physical condition. "The blues," formerly a frequent companion, I have learned in Christian Science to recognize as "selfishness" and "self-pity;" and with that sense of the truth came also, through our text-book, the understanding how to destroy this false condition. By patiently striving to learn more of God and our relation to Him and to each other, I am gaining true joy, peace, and health.

Last year several very painful growths appeared on my hands, and as I failed to help myself, I went to a practitioner. She immediately pointed out a very strong sense of self-righteousness which I was holding, told me how to overcome it, and said that she would help me. After a few treatments the growths disappeared, leaving no scar; and criticism and self-justification gave place to love and humility.

I thank God that we are learning to know the truth which makes us free from sin and sickness; and grateful love goes out to Mrs. Eddy, His Messenger to this age, through whose untiring labors we are able to understand and prove this truth.—MARY KING SUMNER, Washington, D. C.

[Translated from the German.]

With a grateful heart I tell of my experiences in Christian Science, hoping this may help to give new courage to some hopeless heart. For fifteen years I suffered from nervous disease and was often tormented with sciatic trouble, so that it was impossible for me to walk and I had to remain in bed. I suffered from sleeplessness and distressing headaches, so that I was unable to work. For five years I had been obliged to wear glasses to work, and as far back as I remember I suffered every winter from a cough. All these ills, I can truthfully say, have disappeared through the power of God as revealed in Christian Science. I now sleep well; I can work better without glasses than I could formerly with them; the headache has appeared only twice in the two years during which I have been attending the Christian Science meetings, and it has not hindered me in my work. When error presents itself I am able, through the understanding that man is made in the image and likeness of God, to overcome its attacks.

I desire to express my sincere gratitude to our faithful Leader, Mrs. Eddy, who has shown us the way to God.

FRAU WITTMER, Zurich, Switzerland.

[Translated from the German.]

Led by a desire to express my gratitude for all that Christian Science has done for me, I give my testimony. As a result of an operation, and preceding troubles, about eleven years ago I was afflicted with heart trouble and suffered much. At one time I had to undergo a very painful operation, but on account of my condition the physician performed it without giving me anesthetics. In November, 1904, I had a child treated in Christian Science, and thereby came in contact with a practitioner, who explained to me its glorious teaching.

During the first few months after I came into Christian Science my trouble seemed to have entirely disappeared without treatment, and the rheumatic pain likewise. Through yielding to error, the heart trouble came up again, in March, 1905, and seemed worse than before. I was, however, treated in Christian Science and felt the effect immediately. Amidst all the anxiety there came a feeling of rest and peace, and although I seemed at first unable to think aright, within six weeks I was perfectly healed. I was never so well as I have been since this experience.

I am very happy over my freedom from the physical suffering of many years' standing, but much more happy am I over other things which Christian Science has brought to me. When I was but a little child I had a great longing for God and prayed to Him fervently. This seeking and longing never ceased, although I found no satisfaction in my religion and seemed to receive no answer to my prayers. To-day I understand the statement: "Ye ask, and receive not, because ye ask amiss," with many other Bible passages which were formerly clouded. I now know that we cannot reap good where we have not sown it. I used to be most unhappy; life seemed to have nothing but trouble for me; I cried on the slightest provocation, and at times I could not listen to music without bursting into tears. This was all changed at once through Christian Science.

How happy I am to know God as the source of all good,—as the Father-Mother God who always surrounds His children with unchangeable love and sends good only. I had often asked why God should send so much suffering, and although I wanted to love God my fear was usually greater than my love. The struggle with error is not always easy, but every victory brings us a step forward in understanding. I cannot think of existence without Christian Science.

How grateful I am to God for leading me in this way; words cannot express it. We cannot be too grateful to Mrs. Eddy for her pure, unselfish life of love, which enabled her to reveal to humanity the truth that leads us from darkness to light. I am also grateful for our German monthly, *Der Herold der Christian Science;* it is a help in my daily work and has lightened many a struggle.

FRAU HELENE SCHMIDT, Berlin, Germany.

I became interested in Christian Science in 1902. For several years previous to that time I was suffering from stomach trouble, and had been under the care of several prominent physicians, but grew worse until my condition became alarming. I was then advised by a friend to try Christian Science. I purchased a copy of Science and Health and began studying it, and was healed in four weeks. I was also healed of the drink and tobacco habits in that same time. I had been wearing glasses for about twenty years, but was able to lay them aside and am getting along very well without them. I had prayed for health, and besides this I received from divine Love peace and happiness.

Words cannot express my sincere gratitude to God, and to Mrs. Eddy, our noble Leader in Christian Science, for all the blessings I have received. I am daily striving to gain more of this grand truth and to know God.

CHARLES F. FALLER, Buffalo, N. Y.

I am thankful for what Christian Science has done for me. I have had many proofs of Truth's power. Some time ago I had an ailment which was quite severe. I suffered greatly until the fourth day; I could not rest at all. I then had treatment in Christian Science, and in a short time the pain was gone. I have not had any trouble since. I desire to return thanks to God, and to our beloved Leader for bringing us this truth.

ERNST HUEBBE, JR., Watertown, Wis.

FROM OUR EXCHANGES.

The average man believes in salvation by character and life, and he does not believe that a man's salvation is dependent on the opinions he may hold on doubtful theological points. He will agree with the minister that good works cannot save him, but the faith, *faith* that the pulpit is urging as all-important, seems to him to involve a considerable number of superfluous beliefs on side issues. And he also feels that it would be a good thing for the church if the minister would preach to some of his most affluent supporters the inexorable necessity of a holy and Christlike character if they expect to be saved. Here scientific theology supports completely the average man's contention, and proclaims that a man is saved by what he is and not by what he thinks, or what he says he thinks, or thinks he thinks. "Saving faith," faith in the only Biblical sense, is simply trust in God, confidence in Jesus, and does not, of necessity, involve any intricate speculations as to the inner constitution of the Godhead, or as to the eternal relation of the Man of Nazareth to that Godhead, or as to the precise stipulations and specifications of the "scheme of salvation." These matters are interesting to the religious imagination, but a man can believe and be saved without reference to any of them. HENRY GOODWIN SMITH.
The Outlook.

The conviction prevails that the pulpit has lost its power. The extent of this conviction is a just cause for anxiety even to those who are persuaded that the conviction is not well founded. With many devout Christian people, there is dissatisfaction with, even distrust and undisguised disapproval of, much preaching that men hear when they claim the privileges of worship. Nothing is to be gained by minimizing or evading this fact. Apologies offered for the preacher because of the indifference or antagonism of the age cannot avail. Passionate condemnation of the age by the preacher will not excuse him. He is sent to save the age. Just here, then, we would express the conviction that preaching has not lost its power. No age has been more eager to hear and obey the preacher who really preached, whether it be from pulpit or platform or editorial chair. And in no nation have the effects of preaching been more effective in shaping its destinies than in our own country to-day. Where the preacher has a message and delivers it under the pressure of St. Paul's standard, "Woe is unto me, if I preach not the gospel," he has hearers and he has followers. Men hear and obey.—*The Churchman.*

Jesus had mastered the problem of making the best moments persistent, at least after the wilderness temptation had been fought out to its end. When we study the Great Life to learn how he did this, we discover that his profound trust in the Father lay back of the serenity of his days and was the warrant of his uniformly high level of life. He carried into the seemingly casual and commonplace action the great motives which came to him as in the moments of peculiar vision. It was all the Father's business, and therefore was worthy of his best self.—*Zion's Herald.*

How slowly we learn that, if we cannot find inspiration in what we call the commonplace, we can hardly find it at all. The transmutation of the common life into a precious product of thought and feeling is the real philosopher's stone, as it is the deepest secret of happiness. Change has its special uses and benefits, but it is mainly good because it opens our eyes to what we have always looked upon, but never have really seen.—*The Christian Register.*

All this speculation about what Jesus would do will disappear when we find one soul that has been so close to and in such constant association with Jesus as to catch his spirit, to be able to look upon the mirror God has let down from heaven and absorb enough of the spirit to transform the life into His image, from glory to glory.
REV. E. V. STEVENS.
The Universalist Leader.

The temperance outlook is favorable as it has not been for many years past. It is not only that a wave of temperance is passing over the country. The wave has, so to speak, come to stay, and the whole question is ripe for action.—*The British Congregationalist.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid 2.25

Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Commander Robert E. Peary of the United States Navy has made a record of "farthest north"—87 degrees and 6 minutes. The highest latitude previously reached was that of the Duke of Abruzzi's expedition, 86 degrees 34 minutes. Herbert L. Bridgman, secretary of the Peary Arctic Club, received from Peary this communication:—

Hopedale, Labrador, via Twillingate, Newfoundland, Nov. 2.

Herbert L. Bridgman:—Roosevelt wintered north coast Grant Land, somewhat north Alert winter quarters. Went north with sledges, February, via Hecla and Columbia. Delayed by open water between 84 and 85 degrees. Beyond 85 degrees six days. Gale disrupted ice, destroyed cachés; cut off communication with supporting bodies and drifted due east. Reached 87 degrees 6 minutes north latitude, over ice, drifting steadily eastward. Returning, ate eight dogs. Drifted eastward, delayed by open water, reached north coast Greenland in straitened circumstances. Killed musk ox and returned along Greenland coast to ship. Two supporting parties driven on north coast of Greenland. One rescued by me in starving condition. After one week's recuperation on Roosevelt, sledged west, completing north coast Grant Land, and reached other land, near 100th meridian. Homeward voyage incessant battle with ice, storms, and head winds. Roosevelt magnificent ice fighter and sea boat. No deaths or illness in expedition.

(Signed) Peary.

The Interstate Commerce Commission has decided to investigate all the Harriman railroad enterprises early in the new year. This investigation may prove as important as that made by the Commission into the combination of the Northern Pacific and the Great Northern, which, as the Northern Securities Company, was dissolved by order of the Supreme Court under the anti-trust law. The Harriman system includes the Union Pacific, the Southern Pacific, and the Oregon Short Line, which should be competing roads, in the judgment of the members of the Commissions; and the newly acquired control of the Illinois Central and the Baltimore and Ohio constitutes a big factor in determining transcontinental rates. The investigation of the Harriman interests will be taken under the amendment to the Interstate Commerce Act, which passed Congress in 1891.

President Roosevelt, on board the United States battleship Louisiana, bound for the Isthmus of Panama, passed out to sea through the capes of Virginia at 6.40 o'clock on the morning of the 6th. The Louisiana was followed by the cruisers Tennessee and Washington as convoys. The Louisiana will not leave the coast shore for any great distance and will be in touch by wireless during almost the entire trip. Arriving at Colon Thursday morning, Nov. 15, that and the two following days will be spent in going over the ground of the Canal. He will leave there on the 18th, will touch at San Juan on the 22d, and will be back in Washington on the 27th.

The Government Bureau of Mines declares that this country will soon be producing the bulk of the world's supply of platinum. At $28 an ounce, its present price, the metal is costing considerably more than gold. Nearly the whole of the world's supply of the metal has been derived hitherto from mines in the Ural Mountains. An examination of the so-called "black sands" of the Pacific coast, which were suspected to contain platinum, shows that they may be made to yield rich returns in that metal.

A conference between the troops and the Ute Indians, who have been causing apprehension in Wyoming and Montana, was held on the 3d. The Indians agreed to return with Colonel Rodgers to Fort Meade, S. D., to be cared for there by the Government, while their chiefs, Red Cap and Black Whiskers, go to Washington to see President Roosevelt. Good feeling is said to exist between the troops and the Indians, who number about four hundred.

The superintendent of the Texas penitentiary system, in his report to the Governor, recommends that the State build a cotton mill and binder twine factory at the Rusk Prison. He also recommends that the convict lease system be abolished.

Foreign.

Captain Amundsen, the Arctic explorer, who has just returned from his trip, which especially investigated the magnetic north pole, says: "It will require about three years to compile all my records. When the work is completed we will probably be able to tell all about the magnetic pole, what its extent is and whether it is stationary or variable. I assume that I reached the magnetic pole, judging from my compasses, which ceased to move, the needle becoming as fixed as a stick. I made constant observations, covering a period of two years, and my notes and figures are very bulky."

The international wireless telegraph treaty was signed at Berlin by all the Powers, but Great Britain, Italy, Japan, Mexico, Persia, and Portugal did not join in the special article containing one of the United States' proposals, that inter-communication be obligatory between ship and ship.

The Italian Minister of the Treasury announced last week an appropriation of $100,000,000 for improvements in State railroads and said the budget for the year would show a surplus of $12,000,000.

Industrial and Commercial.

Never in our history as a great producing nation, says the *New York Commercial*, has there been such a demonstrated and increasing inability to supply the demand for cars, and locomotives to draw them, in the handling of the fall transportation on our railroads. It is not that the railroads have failed to foresee the excess demand for cars, for our news columns testify to the enormous orders for cars placed by the various railroads during the past months; it is because the car manufacturers and locomotive builders simply cannot handle all or nearly all the business that has come to them. The congestion of orders for cars among manufacturers is only equaled by the congestion of freight at stations and in storehouses awaiting the cars to transport it. Any exact measure of the car shortage to-day is impossible, but some suggestion of its extent is gleaned from such reports of their needs as come from the New York Central, which says that it could profitably use five thousand more cars in its Chicago district alone. At Pittsburg, where a few days ago all receipts of freight had to be suspended for thirty-six hours in order to relieve the congestion, it is said that thirty thousand more cars could be used at this time.

New kinds of emeralds and sapphires have made their appearance in the market and it is said that the products, while artificial, are the same in composition and properties as the natural stones that are simulated. The so-called emeralds are really aquamarines, a much cheaper stone, to which the characteristic green emerald shade has been imparted by a secret process supposed to include the application of intense heat and strong acid. Jewelers say that if such a process has been discovered it will mean a revolution in the emerald trade. It is expected that testimony will be offered to show that the sapphires are made by the same process as reconstructed rubies. Because of the great skill of the Parisian chemists in imitating the natural stones, prominent dealers express the opinion that this country should have a law similar to one in force in France, as a result of which a reconstructed stone must be sold explicitly as such.

The Pennsylvania Railroad has announced an increase in wages affecting 185,000 men and increasing the annual pay roll about $12,000,000. It is expected that the directors of railroads west of Pittsburg, operated by the Pennsylvania road, will take similar action, involving 60,000 men and adding $4,000,000 to the annual pay roll. The Philadelphia and Reading system announces an increase of ten per cent to all employes receiving less than $200 a month. This affects about 25,000 men. The Standard Oil Company has decided to increase the wages of its 60,000 men. The Amalgamated Copper Company is also to increase the wages of its 15,000 men. The United States Steel Corporation, which advanced the wages of its 175,000 men in March, 1905, is said to be considering another advance.

The Bremen of the North German Lloyd line, one of the first transatlantic steamships to be equipped with the Slaby-Arco system as now perfected—the "Telefunken" system—on a recent voyage got a message from Naum, a station near Berlin, when she was 1,500 miles away, beating the record made during the last voyage westward by 250 miles. When more than 1,600 miles from Poldhu the operator was able to make out distinctly messages which had been flashed from the wireless station at that point, and on the same day messages from Cape Cod were understood.

The aggregate railroad mileage under contract for construction or in immediate prospect in the United States and Canada, says the *Review of Reviews*, is over 22,000 miles. The aggregate of cash to be used in this construction and in the great projects of the American trunk line railways is over $750,000,000. If the entire gold production of the world in the two greatest gold years of history were applied to this construction it would fall far short of meeting it.

The United States Steel Corporation has decided to build two new blast furnaces at the Duquesne Steel Works, costing about $1,500,000, and one at Donora to cost about $800,000, and a fourth will likely be built at Homestead or Braddock.

Laborers for the Panama Canal still continue to arrive at Colon from Spain. Very few are coming from the West Indies, where planters and others employers of labor are doing their best to retain their men.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MRS. EDDY WROTE HER OWN BOOKS.

If the *World* had been searching among Mrs. Eddy's friends, those who are best informed regarding her affairs, they might have learned that what they assume to be a secret was long ago published by Mrs. Eddy herself, and is well known to all Christian Scientists; namely, that the Rev. J. Henry Wiggin was for some years a literary critic for the Rev. Mary Baker G. Eddy.

He was employed for the purpose of improving her diction, and Mrs. Eddy gratefully acknowledged the fact that he had not disappointed her, but faithfully performed the duties for which he was employed. It should be borne in mind, however, that something besides paragraphing and punctuation, something more than mere grammatical and rhetorical constructions, are needed to constitute such a book as "Science and Health with Key to the Scriptures." One must have ideas, and even the critic quoted in the *New York World* affirms that Mrs. Eddy furnished the substance for the Christian Science text-book, and that she was the last to pass upon it. She alone decided whether or not Mr. Wiggin's suggestions were to be adopted, and she always took care not to let his interlineations or changes affect her meanings.

I have heard Mrs. Eddy speak very highly of Mr. Wiggin and of his work for her. He seemed quick to grasp her ideas and able in the art of making whatever reconstructions were necessary to place them in a condition acceptable to Mrs. Eddy.

Mr. Wiggin himself once published the following statement:—

"Within a few months she has made sacrifices from which most authors would have shrunk, to insure the moral rightness of her book. Day after day flew by, and weeks lengthened into months; from every quarter came importunate missives of inquiry and mercantile reproach; hundred of dollars were sunk in a bottomless sea of correction; yet not till the authoress was satisfied that her duty was wholly done would she allow printer and binder to send forth her book to the world."

In his writings Mr. Wiggin has referred to Mrs. Eddy as the "Founder of Christian Science," and at one time said, "She is the Moses come to lead them through the Red Sea of fear by faith, which they must repose in her teachings, to the land of deliverance—good health and all right opinions."

When conversing with Mrs. Eddy some time ago, she told me that Science and Health was not arranged to suit her, and we assume that she revised it partly for that reason. We cannot emphasize too much the fact that Mr. Wiggin was not employed to change or reconstruct Mrs. Eddy's ideas, nor was he permitted to do this. He was simply her proofreader.

Mrs. Eddy has never posed as a literary prodigy, but even in her childhood she wrote verses which would have done credit to a woman of mature years, and there was a demand for her literary productions during her early years. When about eighteen she wrote for the *Belknap Gazette*, published in New Hampshire, and later for the *New Hampshire Patriot*. When we consider how extensively she has written during the past thirty-eight years, and note that she has ever been highly progressive, we concede that she has acquired literary ability and celebrity. Conpetent judges have placed Mrs. Eddy among the able writers of the age. A few years ago the *National Magazine* named her among the eighteen most able writers of this period.

If Mrs. Eddy's successful career as an authoress has been dependent upon the proofreading of the Rev. Mr. Wiggin, we think we are justified in asking, Did any of the other authors whose manuscript was censored by Mr. Wiggin meet with the same degree of success?

The assertion that Mrs. Eddy inquired of Mr. Wiggin concerning the difference between the meaning of the word "gnostics" and the word "agnostics," and that she told him she thought the two words bore the same meaning, is utterly unreasonable and incredible from any point of view, for even a schoolgirl would know that "gnostics" with the prefix "a" could not have the same meaning as it would have without it. Beside, Mrs. Eddy could have consulted her dictionary or encyclopedia, and thus have reliably informed herself.

Mr. Wiggin is not here to speak for himself, and our readers should take note that Mr. Wright's allegations as to what Mr. Wiggin said to him are not sustained by any evidence beyond Mr. Wright's unsupported testimony. They are alleged quotations from a dead man. Why did Mr. Wright defer the publication of his charges until after the death of Mr. Wiggin?

Mrs. Eddy has written and published much matter that Mr. Wiggin never censored. I have in my possession many letters in Mrs. Eddy's own hand that are excellent literary productions, and no one but myself has ever seen them since they came from her pen.

WHERE TO LOOK FOR THE TRUTH.

CLARENCE W. CHADWICK.

THE futile effort of the human mind to find truth where it is not, is graphically depicted in one of Lowell's essays, where he says, "All men who know not where to look for truth, save in the narrow well of self, will find their own image at the bottom, and mistake it for what they are seeking." Because it cannot penetrate the domain of reality, the effort of material sense must ever be to find truth in matter, good in evil, and life in death. Under the domination of corporeal sense, the poor mortal continues to grope in the dark, until suffering compels him to look beyond the confines of mortal knowledge for that first faint glimpse of spiritual light which appeared to the Magi of old. If left to follow his own native instincts, he would drift farther and farther away from a consciousness of the unseen facts of being, and would try to console himself with that false consciousness that is ever learning without attaining to a knowledge of spiritual truth. Unable to discern the thoughts of God, he would look at his own finite, human concepts and call them real and God-created. Reasoning from material and finite standpoints, he would insist upon comparing material thoughts with divine ideas, in

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

his vain effort to bring God and His perfect creation down to the level of human perception and comprehension. He would delve into his own storehouse of sense testimony and knowledge for the definition of every new word or expression used to convey an accurate idea of the unseen truth. The result would necessarily be a human misconception of the true idea. This is as far as material sense can go in its search for the truth, and here it must learn to receive divine correction and to surrender its material concepts for spiritual understanding.

Thousands upon thousands of earnest Christian people are reading and studying the Bible in a search for that bread of Life which comes from the heaven of spiritual perception and understanding, without being able to find it. Why this failure, after years of faithful search and Christian profession of faith in Christ as the Saviour of mankind? Simply because they have been seeking the truth where it could not be found, and through the medium of material sense,—the acknowledged channel for all that is finite, evil, and perishable, but of naught that is infinite, good, or enduring; because they have not reached the point where sense testimony has been corrected and reason properly directed into spiritual channels; because they have tried to believe in a God who is Spirit while also believing the evidence of five senses which positively deny the power and presence of Spirit. Unconsciously they have relied upon these senses to define the nature of something of which they know absolutely nothing. When reading the accounts of Jesus' mighty works of healing, they have allowed material sense to tell them that these were simply miracles, inexplicable to this age, and that it is unreasonable to think of their ever being repeated for the benefit of suffering humanity. Like Moses of old, they have put the veil of matter over their faces when reading and attempting to explain the sacred Word of God, which has encouraged the education of the material senses rather than the cultivation of spiritual sense. The divine order has thus been reversed, in belief, and matter has been looked upon as the only natural and available remedy in time of need.

Not until the advent of Christian Science was this veil of material belief taken away, and the power of Spirit made practically available in the healing of disease. Thousands of the world's best people are daily turning away from the veiled theology of the past, and are looking deeply into the Science of being, not for a merely intellectual concept of God and man, but for the divine idea, the image and likeness of Spirit. They are learning the lesson of humility, whereby they can come into practical possession of "the unsearchable riches of Christ."—Truth. They are learning the more practical import of self-abnegation, by which they can leave all for Christ and enter into constant, conscious companionship with good. They are learning to become "rich toward God," which enables them to appreciate the sentiment once expressed by Henry Ward Beecher, "In this world it is not what we *take* up, but what we *give* up that makes us rich." In living for humanity they are learning to lose self,—learning to become scientifically altruistic.

Christian Science is taking humanity "back to the Bible" as the one great Book of books. Never before in the history of the world has it been read so eagerly and so intelligently as it is to-day, and for no other reason than that the veil of the temple has again been rent, whereby the scientifically spiritual meaning of Holy Writ stands out in bold relief to those who are wise enough to prohibit themselves "the childish pleasure of studying Truth through the senses" (Miscellaneous Writings, p. 300). The recognition and practical re-statement of the Principle of Christian healing is the secret of the present unusual interest in the Bible. No other demonstration could lead thought "back to the Bible," back to the divinely practical standard of primitive Christianity, when God was understood to be the great Physician, "who healeth all thy diseases." So long as humanity is content simply to believe in Christ, without understanding the practical import of the Word made manifest in the healing of disease as well as sin, it will fall far short of a just estimate of the Bible.

Christian Science, instead of discarding the Bible, as is ignorantly alleged by some people, travels the entire distance back to its spiritual teaching, and relies upon its sacred promises as being practically operative and available in every hour of mental, moral, and physical need. It has demonstrated beyond cavil that it is the will of God that Christian healing should play just as prominent a part in Christian faith and living to-day as it did in Jesus' time, and it establishes the conviction that the only true or spiritual meaning of the Scriptures will be revealed,—not in proportion to individual belief or possession of faith, but to our obedience to that dual command of the Master, "to preach the kingdom of God, and to heal the sick."

THE LESSON OF THE X-RAY.

ESTELLE B. WINSLOW.

In him was life: and the life was the light of men. . . . That was the true Light, which lighteth every man that cometh into the world.
JOHN. 1: 4, 9.

Spirit is light: and the opposite of Spirit is matter, darkness, even as darkness is the opposite of light.—*Science and Health*, p. 504.

AN experience of my own with the X-ray has helped me in my desire to understand Christian Science. I placed my gloved hand under its light, and only the bones of my fingers and thumb, and a ring on one finger were visible. I then held a small box, just brought from the jeweler's, under the light, between my thumb and finger. I saw a thumb bone, a space, then a bar (of gold), another space, and then my finger bone. Glove, flesh, paper, string, box, cotton, more paper, were gone to mortal vision.

If we go into a darkened room, all the objects are dim and perchance distorted. We may imagine them to be very unlike themselves. When we let in the light, however, it is with the expectation of seeing things as they really are; but it has been proven as above, that a given kind and quantity of light will cause all objects of material sense to disappear, and in this is not light the symbol of enlightenment?

The answer is plain. Mortal mind betrays itself. Its own light proves its own nothingness. Physicists practically agree to-day that the old idea of matter must be given up as altogether erroneous. Says our Leader, "The rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously; whereas a thousand years of human doctrines, hypotheses, and vague conjectures emit no such effulgence." "All dream-shadows, dark images of mortal thought, . . . will flee before the light" (Science and Health, pp. 504, 418).

[Written for the *Sentinel*.]

REST.

JEANNETTE A. BECKER.

WHEN work is done,
And sleep broods softly o'er
The closing lids of day,
Breathe thou a little prayer
Of loving gratitude
To th' Eternal One
Whose law, forever sure,
Doth keep thee on thy way
With tenderest care;
And make a place
For peace to enter in
Thy waiting heart. Thus blest,
With joy unspeakable,
Thou shalt find rest.

SELECTED ARTICLES.

IT is worth noting that since the appearance of the editorial in *Outburst* Dr. Adcock's case [in London, England] has been tried and the jury failed to sustain the charge, consequently the prediction that he will have a long term of imprisonment has no opportunity of fulfilment, nor has this case had a tendency to make Christian Science unpopular in England, where the facts were better known than here. On the contrary, there is every reason to believe that there is an augmented interest in this subject now manifest in England. It was brought out at the trial of Dr. Adcock that Major Whyte was a very strong-willed man and managed his own affairs up to the time of his death, so that it is hardly fair to say that he fell into anybody's clutches. Christian Scientists are not going about the country importuning people to take treatment. On the contrary, it is the general custom to insist that prospective patients make their own choice, without outside influence, and choice is usually made, as in the case of Major Whyte, after material remedies have failed to produce results. Dr. Adcock was a licensed physician who had retired from practice. The charge against him was based upon the assumption that he was called to treat the case medically, that as a medical man he knew the needs of the patient and neglected him from a medical standpoint. As a matter of fact, and as the evidence shows, Dr. Adcock was not employed either as a physician or as a Christian Science practitioner, but as a nurse to help Major Whyte's servant dress his wounds. Dr. Adcock professed an interest in Christian Science, but was not a Christian Science practitioner nor a member of a Christian Science church.

The facts show conclusively that Christian Science was not censurable for the part it played in this case. Major Whyte, the patient, was suffering from a broken back, a malady which medical science does not profess to be able to heal. Major Whyte told the first Christian Scientist who visited him in the army hospital at Osborne that the doctors could offer him no hope of improving his condition. In view of this, it seems strange that one of the specialists who testified at the trial, when asked if Major Whyte could have been saved if he had continued to resort to medical treatment, replied with assurance, "Oh, certainly."

Major Whyte had suffered agonies, and so intense was the pain that he had been given frequent injections of morphine and had openly expressed his wish to commit suicide. From the first Christian Science treatment he improved. All pain ceased and he began to sleep peacefully. Of the bed-sores, one healed completely in ten days and the other in six weeks; and the autopsy showed that a new bone had begun to form at the seat of the fracture. He became cheerful and hopeful and withdrew his resignation from the army. He continued to gain and finally thought he could care for himself and dismissed his practitioner. He was subsequently treated for short periods by two other practitioners, but he was not under Christian Science treatment when he died. WILLARD S. MATTOX.

The Orator-Outburst, Spokane, Wash.

The question is being asked again in the State of Ohio, Shall the Christian Scientists be allowed to practise healing among themselves, according to their religious notions, and shall they be allowed to collect a fee for the same?

It seems strange indeed that such questions could be asked in a truly civilized community. The first thing that springs up in the mind of any person who is actuated by any degree of fairness and justice is, Why not let the people alone? They constitute a dignified and sincere religious denomination. They have risen in spite of the taunts and misrepresentations of their enemies. All the churches of Christendom, all the teachers and professors of all colleges, have ridiculed them, have derided them, have called them everything but decent men and women. And yet, in spite of all this, they have steadily grown. Their churches are to be found in every large city, and their believers to be found in every community. . . .

We dare not disturb these people we call Christian Scientists, for the pronunciation of their faith sounds strangely like that primitive Christianity which survived in spite of legal enactments, in spite of personal assaults, in spite of the jeers and contempt of the scholars. We dare not touch these people, lest haply we shall find ourselves fighting against God himself.

For the sake of the many thousand homes that Christian Science has blessed; for the sake of the beautiful temples that Christian Scientists have reared all over our land; for the sake of the multitude of worshipers that assemble every Sunday in all parts of the civilized world, we will let them alone in reverent respect, waiting to see what message they are bringing to the world, waiting to discover what new thing God has to reveal to us through them.—*Medical Talk.*

The foundation upon which Christian Science has its firm basis is God, and the premise of all the conclusions reached in Christian Science is that God is Spirit, All in all; that God made man in His image and likeness; indeed, that God made all that was made, "and, behold, it was very good." In the matter of healing, the basic premise of Christian Science is that Spirit, God, is the healing power. In view of the fact that Christian Science can prove that it has healed all manner of sickness and sin, including many forms of disease pronounced incurable by regular physicians, it is reasonable to conclude that the deductions reached in Christian Science through logical adherence to its premise are correct, since they govern those who study and apply this Science.

As God does not create disease and sin, they must have only a fabulous existence, God having made all that was made. So long as disease and sin are condoned and not overcome, they must be grappled with until destroyed by "the truth," which the Galilean Wayshower said "shall make you free." We all concede that mathematics is flawless, perfect in every instance, notwithstanding the many mistakes made by those who attempt to apply its basic law. This is equally true of God and His creation, and it is upon this ground that it is said in Christian Science that there is in reality no disease; but it is even more fully recognized among Christian Scientists than by others, that it is necessary to uncover and overcome the false and material beliefs which give rise to the inharmonious conditions. To say, as does our critic, that Christian Science is founded on the denial of disease, is to substitute an effect for the cause, and it amounts to a perversion of the teaching of Christian Science. H. CORNELL WILSON.

The New York Sun.

Christian Science does not teach that neither darkness, nor sickness, nor sin, nor sorrow exist in the material sense of things. It agrees that these are about all that are represented by it, including mortal man expressing the carnal mind. But these are not the spiritual realities which Christian Scientists are striving for, and they learn by degrees that they can be put aside for the things of God.

Can our critic mean that the casting out of sin, sickness, and all untoward conditions afflicting mankind, after the manner of Christ Jesus, our Exemplar, is "expurgating common sense"? This Jesus did, and all Christians must agree that he came to destroy the works of the devil, not the realities of God and His creation, and his promise was, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." MARY HATCH HARRISON.

News and Observer, Raleigh, N. C.

LETTERS TO OUR LEADER.

New York, N. Y., Oct. 29, 1906.

Beloved Teacher:—Just a word to tell you how full my heart is with love for you. We are all working to know the truth of what you once said to me in a letter: "Error is not Mind, therefore it is nothing." It thinks it is destroying you, when it is only destroying itself. It thinks to weaken and confuse your followers, but it is only knitting us together more closely, and enabling us to present an unbroken front to the seeming foe. I have thought much about you in the past week, of your sincerity, your faithfulness, and your loyalty to Principle. Many a story in prose and verse has come down through the centuries, of leaders who have given up home and kindred for the sake of the cause they loved, but nothing has ever been told of man or woman that begins to equal or compare with what you have done. Our very hearts burn within us when we think how you, for the sake of poor, weak, suffering humanity, stood alone, with every weapon pointed at you; with shot and shell falling around you; because you alone knew how they could be lifted out of their weakness and their suffering. You alone, of all who have called themselves Christian Scientists, have been in the past, and are to-day, absolutely faithful. This letter seems cold, but my heart is so full of tenderness, of loyalty to you and to the Cause, that I do not know how to express it.

Your loving, grateful student,

LAURA LATHROP.

Boston, Mass., Nov. 2, 1906.

Beloved Teacher and Leader:—It was my privilege to lecture in Cambridge, Mass., last evening, and I must tell you what an absolute joy it was to speak, out of an experience covering almost a score of years, for you and your great Cause and work. Never before had I felt so deeply the full force of the fact, as when I told the audience last evening that no one having any adequate conception of your character and history could but be stirred to the depths of his being by the unutterable pathos and the unmeasured majesty of a life lived so near to God.

During one of my recent lectures in the West, three people were healed. One of the cases was of a serious ailment which had been of several weeks' duration. At another of my lectures, two members of a certain family, who had not spoken to each other for twenty years, were present, and before leaving the Opera House they met, shook hands, and were reconciled. When we see such blessings bestowed upon humanity through the operation of divine Truth and Love, as revealed in Christian Science, it makes the whole combined malice of mortal mind appear to be just what you have taught us to name it,—"earth's harmless thunder." It also draws us closer to the sheltering wings of Love, and to you, Love's messenger, for guidance.

It is such a joy and constant blessing to have the privilege of speaking to the people of your great work and place in history, and of the sane and right devotion of your followers. I pray and strive to be more worthy and efficient in the discharge of the task you have assigned me.

With ever-growing love and gratitude,

Truly and lovingly your student,

MARY BROOKINS.

Chestnut Hill, Mass., Nov. 7, 1906.

My Beloved Teacher and Leader:—It is just nineteen years to-day since I first saw you, and entered your class. Words are wholly inadequate to express my gratitude for the untold blessings that have come to me through your teaching and life. I have been saved from sin, sickness, disease, sorrow, and limitation, over and over again, through the truth you have taught me. When I entered your class it was with the thought to benefit myself and family thereby, but before the close I knew I had gained something of which all the world was in need, and I began at once to practise what I had been taught. Through your teaching I have had the great joy of seeing the blind receive their sight, the lame walk, the drunkards reformed, the helpless, hopeless invalid restored to health and happiness. Both acute and chronic diseases, pronounced incurable by M. D.'s, have yielded—many times instantaneously—to the power of Christ, Truth, as revealed through you. No earthly pleasure can be compared with the joy of helping humanity out of the depths of despair through Christian Science.

Oh, how I thank and love you for your self-renunciation, for your willing obedience to every call from heaven! and how deeply I regret that I have not shown my gratitude in ways that would help you more tangibly than do verbal expressions of love and loyalty. May the beautiful richness of infinite Love ever rest upon you, and may the love of those whom you have blessed grow stronger and greater, until persecutions cease and only joy and gladness fill your cup of rejoicing to the brim.

Gratefully your student,

ELLA E. WILLIAMS.

Chicago, Ill., Oct. 28, 1906.

Beloved Leader:—My heart never went out to you in deeper gratitude or more tender love than to-day, nor have I ever more keenly realized and appreciated your consecration to God; your faithfulness in following in the way pointed out by our Saviour, though it be with bleeding footsteps; your unselfed love in bearing the burden of discovery and in restoring to mankind the healing Christ; your great compassion for a suffering world, and above all your loving and gentle patience, and sweet forbearance with those who, in their ignorance, would trample on and endeavor to destroy the "pearl of great price" which you have shown them how to possess and thereby be lifted out of the bondage of sin, suffering, and sorrow. In this hour when the carnal mind is endeavoring to show more strongly its enmity against the things of God, and His messenger, our heavenly Father is with us, and through His Word, in our Lesson-Sermon to-day, "Everlasting Punishment," points out the end of the evil-doer as follows:—

Matthew, 18 : 7: "Woe unto the world because of offences! for it must needs be that offences come; but woe to that man by whom the offence cometh." And in 2 Thessalonians, 2 : 7, 8: "For the mystery of iniquity doth already work: only he who now letteth will let, until he be taken out of the way. And then shall that Wicked be revealed, whom the Lord shall consume with the spirit of his mouth, and shall destroy with the brightness of his coming."

In our text-book, Science and Health, p. 180, we have this correlative passage: "The only power of evil is to destroy itself. It can never destroy one iota of good. Every attempt of evil to do that is a failure, and only aids in peremptorily punishing the evil-doer."

We have the joy of knowing that when God in His infinite wisdom appointed you His messenger of Truth, He also embosomed you in His love, which will comfort, protect, and sustain you every step of the way, unto that perfect day when the full glory of the Lord shall be manifested on earth.

Faithfully and gratefully,

JEANNETTE R. GOODMAN.

San Francisco, Cal., Oct. 23, 1906.

Mrs. Mary Baker Eddy,

Pleasant View, Concord, N. H.

My Dear Mrs. Eddy:—I have been in this western country for something over a month now, and early in the trip had a most charming experience that I intended to write you about.

Your grandsons acted as ushers at the lecture at Lead.

Digitized by Google

South Dakota, and your granddaughter seemed to be the executive head of the enterprise. The young people I met several years ago at St. Joseph, Mo., but this was my first meeting with your son; still, I think I should have recognized him almost anywhere, from his striking facial resemblance to you and the wonderful similarity of your voices.

Mr. Glover came to me after the lecture and expressed his pleasure and the profit received from the meeting. I had quite a conversation with him and his children, and was very greatly pleased with his general attitude respecting your great work. One of the ladies of the audience told me that he said to her with a tear in his voice: "I want to have a part in the wealth of love that is going from so many thousands of people to my mother." I feel that you would like to know this, and am sure it will be a great comfort to you to know that your grandchildren are so active in their devotion to the great Cause that you have brought from its hiding and given to the world.

I have been in San Francisco for several days, most charmingly entertained, and have had the satisfaction of donating a lecture to the church here, as a small contribution to their heroic effort at rehabilitation. Their temporary church is by all odds the best lecture hall in the city, and while in one sense primitive, it is a beautiful expression of the most modern and up-to-date common sense. Mr. Knapp has been in this State. Dr. Fluno lectures at Berkeley next Thursday. Mr. Tomlinson has a number of engagements here, and I understand that Mr. Kimball will come a little later, so it is very apparent that the earthquake's rock has not materially disturbed the serene and stately march in quest of the ultimate good.

It is most gratifying to me, as I am sure it will be grateful to you, to find everywhere in my going the devotion and love of your students for their great Leader.

Affectionately your student,
WILLIAM G. EWING.

Grand Rapids, Mich., Nov. 9, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—First Church of Christ, Scientist, Grand Rapids, Mich., sends you greetings and love. We know that defamation and misrepresentation are powerless to harm you or our beloved Cause to-day. Already kindly feeling toward you from those who have thus far been silent is finding expression. We know that you are being sustained and helped in this crucial hour until the victory for Truth is won.

Our church is grateful for the privilege given of sending you this little silver bon-bon dish, for use in your room in First Church of Christ, Scientist, Concord, N. H. May the love, loyalty, and consecration it is intended to convey to you, our beloved Leader, and to the Cause of Christian Science, be each day deepened and increased until only the fruits of the Spirit are borne to you.

Thank you for the matchless culture and boundless health and wealth your book Science and Health is offering to the world. No Leader has been more deeply beloved or more lovingly followed than you are to-day. You would have rejoiced to hear the testimonies in our last Wednesday evening meeting, of love and gratitude to you because of the healing wrought through the reading of Science and Health and the practice of your teachings.

Lovingly yours,
CARRIE B. WOLCOTT,
PERCIVAL B. GARVEY, *Committee.*

Brookline, Mass., Nov. 8, 1906.

Our Revered Leader:—We, the students of Mrs. Annie Louise Robertson, in closing the 1906 meeting of our Students' Association, esteem it a glad privilege that we can make loving acknowledgment of our great debt to you, through whose pure spiritual vision the message and wonderful achievements of Christian Science have been revealed and established. As we better understand your teachings and more largely share their fruitage, we are increasingly grateful for the supreme confidence in God and His Cause which you inspire; for the divine guidance and protection which attend you; for your patient, watchful care, and for your gentle forgiveness of those who oppose because they do not understand your mission. We recognize that our gratitude is a very inconsiderable part of the great volume of love going out to you the world over, but we long to make our love effective by embodying it in that true spiritual living and thinking which heal and redeem.

With loyalty and gratitude,
MARTHA L. STRANG, GEORGE H. MOORE,
ALICE M. WHITING, For the Association.

Kansas City, Mo., Oct. 18, 1906.

Beloved Leader:—My last date arranged for is in Southern California on Dec. 11. In that wonderful new land, Oklahoma, soon to be a State, I found excellent healing, and your Cause growing numerically and spiritually. In Oklahoma City the chairman was president of the Business Men's Club, and a Hebrew. During the lecture I read a short passage from Science and Health. At the close of the lecture he said that he should buy that book at once and attend the Christian Science services. I accepted the privilege of presenting him with a copy. He was delighted and said that he should read it carefully.

How beautiful that in your own day, through your revelation of Truth, "the people that walked in darkness have seen a great light." Lovingly,
IRVING C. TOMLINSON.

Rutland, Vt., Nov. 5, 1906.

Beloved Leader:—At this time, when one is so strongly reminded of the "hill of Calvary," the heavy cross, and the jeering crowd, would it cheer and comfort, even a little bit, your faithful heart, to know that among the thousands who are standing firm and true, with staff in hand, is the little church in Rutland, Vt.? Not only for this church can I speak, but as Publication Committee for the State I am sending you to-day the assurance of love, loyalty, and obedience of the combined churches of our State. God blesses you, dear, patient Leader, and with you, us, your obedient followers.

With tender love,
HELEN S. B. ROSS.

Macon, Ga., Nov. 8, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Helper:—We love you at all times, and love you most when you are most misunderstood. You certainly know the Christ-way of overcoming all evil with good, and your place in the affections of mankind, as well as in the arms of divine Love, is as secure as it is everlasting. I often wonder if you realize how much good you are doing by continuing to live and to labor as you do for the coming of the kingdom of God on earth.

Gratefully and lovingly yours,
J. R. MOSLEY.

Knoxville, Tenn., Nov. 4, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

At the regular meeting of the Board of Directors of First Church of Christ, Scientist, Knoxville, Tenn., held to-day, the members unanimously voted an expression of their increased sense of love, loyalty, faith, and confidence in your wisdom and ability as our Leader.

By order of Board of Directors.

JOHN W. CRUZE, *President.*
NELLIE H. MATTHEWS, *Clerk.*

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

"HONOR TO WHOM HONOR IS DUE."

DURING the past two weeks our Leader, Mrs. Eddy, has received more than the usual number of letters expressing the love and gratitude of those who have become beneficiaries of her labors in Christian Science, and we are pleased to devote more than the usual amount of space in this issue to the publication of a very small portion of these most interesting letters. The writers of these letters are cognizant of Mrs. Eddy's labors. They are living monuments to the efficacy of her work in Christian Science, and they know whereof they speak when they say that they are deeply indebted to her for the knowledge of God and His Christ which has healed them.

We happen to be personally acquainted with several of those whose letters appear this week, and we know that their experience differs only in detail from that of tens of thousands of others. These persons have been redeemed by Christian Science in the truest sense of the word. From hopeless, helpless, despairing, and dying invalids they have been transformed into healthy, hopeful, useful ministers of God, and they are now healing and comforting others as they themselves were healed and comforted. Not one of them, however, was able to do this humanitarian work before mastering in some degree the teachings of Science and Health. Truthfully has the editor of the *Portland* (Ore.) *Journal* written in regard to Mrs. Eddy, "It is not straying beyond the bounds of verity to say that her ideas have brought sunshine and sweetness into the lives of this generation." ARCHIBALD MCLELLAN.

WHOLESOME MENTAL FOOD.

IT is interesting to note that the publication of a certain class of sensational reports is prohibited in France, where the press enjoys so much liberty. A number of years ago an attempt was made in England to prevent by legal means the publication of all reports of criminal trials, this being urged on the ground that the reading of such reports had a pernicious and dangerous tendency upon the young. It does not seem, however, that this attempt at reform has yet met with much success in any country, although it is now generally conceded that mental contagion is more insidious and harmful than the so-called physical. We may therefore rejoice when any effort is made to prevent impurity from entering the channels of human thought, through the press or otherwise.

In Christian Science we learn the vital need of seeking our mental sustenance in that which is pure, good, and strengthening,—a need which is unfortunately overlooked by people at large. Most people are wise enough to reject impure or improper food, because it is admitted that the body would suffer in consequence of partaking of it, but Christian Scientists have learned the greater need of rejecting whatever is impure or unwholesome from their mental fare.

A lady once remarked that she was not afraid to read anything, because she had sufficient mental stamina to reject the evil while she was reading about it. A physician who was present, and who had been studying "Science and Health with Key to the Scriptures," replied thoughtfully, "No; if you take evil into your consciousness at all, you will have to suffer your way out of it, though this may teach you a useful lesson." Through the study of this book he had begun to see that not only is the moral sense affected by any evil thought which is entertained, but that the body also must suffer from it. It is not enough that we live up to the world's standard of good; we must go farther, and at every point refuse to take evil into our consciousness, including the records of sickness and sin.

A clear understanding of the laws of Mind and obedience to them brings physical health and also a mental lucidity which enables one to see clearly how to work out each day's problems and to realize the largest possible measure of harmony and prosperity. The elimination of evil from all literature, including the press, would give larger opportunities and wider scope to that which makes for righteousness and human enlightenment. In place of a morbid appetite for the sensational and unhealthful, we would have a keener interest in all that marks the development of the race; the utilization of nature's limitless resources, and the joy of seeing progress based upon a foundation which cannot be shaken; namely, the understanding of divine Principle, and of the Science of Mind, which includes all science.

Christian Scientists should see to it that their valuable time is not wasted in the contemplation and discussion of evil. Our revered Leader's article, "Improve Your Time" (Miscellaneous Writings, p. 230), cannot be too much studied and heeded if we would rise quickly above the discords and limitations of mortal sense. The Master said, "Every idle word that men shall speak, they shall give account thereof in the day of judgment;" and the same law surely applies to what we read. If we take in only what is good, we shall prove the truth of his words, "A good man out of the good treasure of the heart bringeth forth good things." So doing, we shall be truly rich, and shall also help to enrich all mankind. ANNIE M. KNOTT.

"THE LAW OF THE LORD IS PERFECT."

THE concept of truth and of religious duty presented in the Gospels was manifestly destined and designed to replace the Mosaic order of thought. The teaching of the Master, as a whole, makes this clear; yet it makes equally clear the fact that all the moral requirements of the law were not only to be honored by his followers; they were to be exalted. Instead of being respected in the control of selfish and sensual impulses, they were to be fulfilled by the elimination of these impulses. Love for God and for our fellow-men is to transform and sanctify human character, so that a dominating right sense shall do away with the need of extraneous requirement.

It is to be noted, however, that on many occasions Jesus seemed to inculcate a regard for the literal requirements of the Mosaic law, as though this were advisable during the transitional period of spiritual growth. Think not, said he, that I am come to destroy the law, for "till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled." To the ten lepers he said, "Go shew yourselves unto the priests;" and it is added that as they went, in accordance with this Mosaic provision, "they were cleansed." In the instance of another leper, he counseled him to go and show himself to the priests, as Moses had commanded, for a "testimony unto them." All this evidences that, while recognizing that his teaching would ultimate in the passing of the old order, Jesus was careful to impress upon the people that the moral ends of the law were to be preserved intact, and that it were better to err on the side of conformity to the letter of the law than to hazard a lapse, in any degree, from its ethical standards. Christian liberty was never to degenerate into even the semblance of license or selfish indifference. While

Digitized by Google

Christianity was to supplant the Mosaic order, it was to revitalize and fulfil its ethical requirements.

Paul's appeal to the Galatians, that they use not their liberty "for an occasion to the flesh:" and to the Corinthians, that they give heed lest their liberty "become a stumblingblock to them that are weak," hints at the extent of the temptation in this line to which the early Christians were subject; and the fact that this temptation still lies in wait for the unwary is clearly indicated in our Leader's uncompromising and suggestive words, "It is Christian Science to do right, and nothing short of right-doing has any claim to the name" (Science and Health, p. 448). Those who stand for the highest spiritual concept of Christian truth are individually called to be, indeed, "the salt of the earth." It is theirs to emphasize every jot and tittle of moral rectitude, by maintaining that purity, humility, and unselfishness of thought which blossoms in an unfailing honesty, kindness, and integrity of conduct. More than this, it is theirs to see that the law is honored at the hands of those for whom they are responsible. To secure the obedience and bring about the right-doing of children in their home and in their school is often a far more serious undertaking than to conform to the law ourselves; and it is here that the weak may be impelled to make God responsible, by endeavoring to condone the offence of their failure to win and maintain that obedience which the moral law and the child's best interests demand. What ought to be done, here, with God's help surely can be done, but there is need of great wisdom, patience, and firmness for God and the right. To bring into demonstration a home in which spiritual understanding and insistent love effect moral orderliness is of supreme importance; it is to accomplish great things for the world's redemption, and we may well deem it an enterprise worthy of profound and prayerful thought, and of the most earnest endeavor.

Illumined men are subject to yet another urgent call today; namely, to give practical exhibition of the spirit of Christian brotherhood. A condition of things may exist which does not touch us, but which is burdening the many. Shall we "mind our own business" and leave the sufferers to their own devices, or shall we strive to think clearly and Christianly regarding the matter, and become, both in right thought and wise deed, our brother's true helper and friend? There is no question that if Christian people were united for the doing away with unfairness and wrong in our social and economic conditions, nothing could withstand the moral force they would exert. Truth reflected in righteous endeavor is sovereign, and in Truth's name every jot and tittle of the law may be fulfilled. This is our inspiration, our strength, and our joy. Flabbiness of moral stamina upon the part of professed Christians, respecting political and economic wrongs, has ever been the bane of democratic institutions. This is largely the result of confusion and indefiniteness as to the right, hence the importance that here, as everywhere, the reign of Christian Science, the dominion of the Christ-idea, be consented to and championed. For all Christian Scientists the law of eternal right is made clear, and it is ours to stand with the sturdy integrity of a John Knox for its present and complete fulfilment in ourselves, in our homes, and in all the world.

JOHN B. WILLIS.

CORRECTIONS.

In printing the telegram signed by Mrs. Stetson, in our issue of last week, we "followed copy," but unfortunately there had been several mistakes in transmission. The correct reading follows:—

New York, N. Y., Nov. 1, 1906.

To the Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved and Revered Leader:—My students, assembled to-day at the annual meeting of their association, unite with me in conveying to you our loyal love. We re-affirm our instant, constant allegiance. We are individually watching and working with you, realizing that we also rise with you in proportion to our understanding and demonstration of your teaching, by precept and example, of the eternal law which governs and controls all created things. Because in this sacred hour, from your cloistered communion in the secret place of the most High, you are demonstrating the immortality of Life manifest in individual man, we look for the appearing of the ideal man, made in God's image and likeness, never to disappear,—reflecting forever the presence, power, and peace of the eternal Mind. AUGUSTA E. STETSON.

President of the Students' Association of the New York City Christian Science Institute.

Another mistake in the same issue—also due to following telegraphic copy—was made in the signatures to the other letter from New York printed on the same page. The names should have read: Ione Revenaugh, Robert Bruce Pegram, Wentworth Byron Winslow.

THE LECTURES.

SHAWNEE, OKLA.

A large audience gathered at the Becker Opera House, Oct. 15, to hear a lecture on Christian Science by Rev. Irving C. Tomlinson of Concord, N. H., who was introduced by William A. McClelland, M.D., as follows:—

The world is seeking to-day, as it has always sought, primarily one thing, a solution of the problem of life. From time to time there have been offered solutions of this problem, but the only one that has met the need is that of the Man of Galilee. It seems there can be no doubt of the value of a system which teaches the letter of the Christ law and the daily living of its spirit. Let us receive the message of Christian Science in a spirit of prayer; it may prove the opening of a new life to some of us, the inspiration and hope of a new solution of life's problem for us, as it has for unnumbered others.

I confess that I have seen diseases respond to Christian Science treatment, after having baffled the skill of our best physicians; have seen lives made happy that were miserable; have seen harmony restored to homes, where existed discord; have seen prosperity and plenty replace poverty; have seen envy, jealousy, and selfishness give place to love and charity in the individual. Because of what I have received through a study of Christian Science, and also because of what I have seen come to others through this same source, I cannot express to you the pleasure that is mine, to be able to present to you one who comes with authority to tell you this always new-old truth, in the hope that it may lead you to think of it, learn of it, to the end that it may do for you all that I know it has done for others.

Correspondence.

DE KALB, ILL.

In introducing Judge Septimus J. Hanna, who lectured on Christian Science Oct. 7, Dr. John W. Cook, president of the Northern Illinois State Normal School, said in part,—

The development of Christian Science within the last few years is one of the most interesting of modern social phenomena. As a student of society in certain of its phases, I have been strongly attracted by its sudden and extraordinary growth. It has appealed to an extremely intelligent element of our citizenship. It has taken hold of their lives in a most remarkable way. It has gone back to the Bible and endeavored to entrench itself in what it declares

Digitized by Google

to be the abandoned strongholds of the early Church. The enthusiasm of its believers is phenomenal. Money is poured out like water in the erection of superb temples which are not exhibitions of sectarian pride but of gratitude. It declares that Christianity is the saviour of the world in a sense which the modern Church has not dared to assert, for it is able to heal the physical infirmities of men through a renovation of their spiritual natures.—*Correspondence.*

CAMDEN, ME.

The lecture on Christian Science given at the Camden Opera House, Monday evening, Oct. 15, by Edward A. Kimball of Chicago, was listened to by a large and attentive audience. Mr. Kimball was introduced by Rev. C. P. Nash, who said in part,—

You are cordially invited here to listen to a lecture upon a phase of Christianity which is, beyond doubt, occupying the most prominent place, pro and con, in the Christianized and civilized thought of the world to-day. To the Christian Scientist, Christianity and Christian Science are synonymous terms. But Christian propaganda by lectureship is a unique method, and so is Christian Science unique as a modern phase of Christianity. In Springfield, Mass., I recently heard a Christian Scientist say that he had often wondered why diseases were not healed by the Christian Church now, the same as by our Lord and his apostles. Who has not indulged the same wonderment? The Christian Scientist informs us that soul-saving and body-healing not only may but do go hand in hand to-day, as really as in the early Church; of the truth of which they have afforded such proof as has satisfied a number of courts and many investigating committees of State legislatures. The unprecendented growth of the Christian Science Church is *prima facie* evidence of the widespread interest in this most important question, and our presence here to-night testifies of our interest in it. So anxious are we all to know and believe the truth, that I feel sure I may bespeak your most hospitable attitude, with my own, toward and in consideration of the subject-matter of the lecture of the evening.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

TESTIMONIES OF HEALING.

In the summer of 1900, before I knew much of Christian Science, my two children became very ill and were attended for over eight weeks by physicians, who gave little or no hope of their recovery, and who said that in case they lived they would be mentally and physically impaired. All through those anxious weeks two members of my family, who knew of Christian Science, were declaring the truth for us, and I began to get a little glimpse of the power of that understanding of God which was counteracting the asserted laws of *materia medica* that were voiced daily. I could not at first trust my children entirely to God, but found myself clinging to Him as Life,—as those Scientists were doing,—only without understanding. I had scarcely any rest, so I consented to have Christian Science treatment for myself, and also to eliminate my fear for the children. I did not see the practitioner, as I could not leave home, but I soon felt strength and refreshment, and all the awful fear of the whole situation left me.

It was after this that I felt I must try Christian Science, to see if it could heal them of the physical conditions in which the dread disease had left them, and the work brought marvelous results. They were both healed; the only thing that did not respond quickly being an eruption, which was also overcome in time. It was indeed wonderful to see health, strength, and vigor returning to them.

This was five years ago, and they have been and still are so robust and healthy that people frequently speak of it, and I can honestly tell them that it is wholly due to Christian Science, for since that healing they have not had any medicine, and we have relied entirely on the power of Christ, Truth, to heal every discord that has presented itself, whether sickness or sin. If I had been willing to trust them to God sooner, I need not have gone through so much suffering. The disease was epidemic that summer, and on the same street were a number of similar cases to those of my children, and not one of them lived. It is needless to say that it is not possible to express the gratitude we feel for this wonderful truth, as revealed through our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, but we are endeavoring to live it daily, and thus to express our gratitude in deeds rather than in words.

About three years ago I experienced a great deal of pain in my face and head, which became almost unbearable. After a little I was unable to talk, and had to make known my wants by writing. The suffering was most severe, and my husband telephoned for the help of a practitioner. At first I seemed to get worse, but soon the pain began to lessen, and at the expiration of ten days I was healed. Not only was I free, but I was full of joy, and felt as vigorous as if I had never gone through such an experience. This experience gave me a greater sense of gratitude for the wonderful proof of God's presence and power, as revealed to us through our beloved Leader.

I had another proof of the healing power of Truth a year ago. It was an attack of fever with seeming loss of strength, but I constantly turned to divine Love, knowing that in God was my strength, and I was able to be about so that the friends whom I was visiting did not know what a struggle I was having. When I returned home I deemed it wise to have the help of a practitioner, and it was very lovingly given. For a few days the conditions seemed to be alarming, but after a very dark night of fear the fever broke and I realized that I was indeed free, and from then on the change was marvelous. The healing was beautiful, but it is for the spiritual understanding which came to me through the experience that I feel most grateful, as it has been with me ever since.

I cannot close without expressing a word of gratitude to

Digitized by Google

our dear Leader, through whose understanding of God such healing and spiritual unfoldment have become possible.

THEODORA SEWARD BOLLES, East Orange, N. J.

In October, 1904, I was accidentally shot through the arm, the charge badly lacerating the flesh and splintering the bone, indeed a piece of it was gone. We were out in the country at the time, four miles from town. The blood flowed profusely, but through the knowledge of Truth, it was soon stopped. The doctor's verdict was that the hand would have to be amputated, but we objected and it was left a few days. One morning, while dressing the wound, the doctor said that in all his twenty-five years' practice he had never seen such a bad wound heal so fast and with so little inflammation. He added, "I don't understand it." We said nothing, as we were strangers in town, and did not tell him that we were Scientists. One morning he saw Science and Health lying on the table. He began reading it, and seemed absorbed in the little book for a time. He still insisted that the hand must come off, but my grandmother, who was helping me in Science, told him that Truth had healed the wound so wonderfully and it would heal the bone. "Well," he said, "you have more faith than I have, but we will see." He was also an orthodox minister. In less than seven months the bone had filled in entirely, the arm was strong, and I was doing section work on the railroad, and have been ever since. The doctor seems to know it must have been Truth that healed me, but is hardly ready to give up all for Truth, although he tells others of it, and even recommended Christian Science to one we know. We had loaned him a copy of Science and Health.

Words are inadequate to express our thankfulness to our heavenly Father, and to Mrs. Eddy, who has braved the storms to bring this truth to a sin-sick and dying world.

CHARLES V. NORTON, Seymour, Mo.

Three years ago, when on the verge of nervous prostration, with four young children and tied down by lack of means, I turned despairingly to Christian Science. I wrote to a dear friend whom I had not seen for about twelve years, but of whose work in Science I had heard, and said, "If there is anything in Christian Science, help me!" Help came quickly, and in a day or two I was doing my own work, and surrounded, it seemed to me, by a wonderful sense of peace. I felt God's presence very near. Realizing that I had received much, and that there was something I needed, both for myself and my children, I had a long mental struggle, for I knew that the time had come to take a stand, and in accepting this truth old ties and beliefs must be left behind. In the help that was lovingly given me, I was perfectly healed of all the ailments which had seemed so real. I never had another attack, and they had been very severe. I have had good health ever since. My children love Christian Science and we have had many beautiful and happy demonstrations of God's ever-presence and healing power.

During sixteen years of married life we have been held down by the fear that a carpenter is likely to have only four or five months' work in the year, which, with a young family, meant serious lack of means. The winter before last seemed very hard indeed, and when spring opened there was very little promise of any building for the summer months, but by holding fast to the promise that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494), and knowing that there is work for every one of God's children, the demonstration was made and my dear husband had work all summer, fall, and winter, and is now engaged for months to come.

Soon after coming into Science I felt more than ever the need of a settled home for our little ones, and felt very sure that Truth could and would help us to obtain it, and the same dear friend who first helped me sent me some cheering words. In the Lesson-Sermon at that time I found this command of Christ Jesus, "But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Thus was I bidden to look away from the material into the spiritual, and I strove to obey. For eighteen months after taking up this problem there seemed such a sense of lack that all mention of a home was dropped. A few weeks after the demonstration over lack of work was made, the thought of a home was again taken up, and this time by my husband. Led by the "one Mind, which made and governs man and the universe" (Science and Health, p. 539), he found some desirable lots at a low figure. In a short time these were purchased, a loan obtained, and a comfortable house built.

No words can express my deep gratitude to God for Christian Science; and to Mrs. Eddy for her noble, self-sacrificing life and steadfast love, through which she was enabled to give us the truth. I humbly join the great army of the loving and grateful who are striving to show their thankfulness by living this truth.

EDYTH TYLER, Salt Lake City, Utah.

I was healed in Christian Science of a very severe case of poisoning of my right hand. The pain was almost beyond endurance before I had Christian Science treatment, and the appearance was very alarming. Every organ of the body seemed to be out of order. I telephoned for a practitioner to come, as I seemed in a very critical condition, and as soon as she received the call I was relieved in a measure. She came to me on Wednesday and stayed until Friday afternoon. While my hand was useless for several weeks, my general health was perfect. I slept soundly, and suffered no pain, although it was thought that my age was against my recovery, as I was sixty-five years old. Now, after another year, I am doing all my work on a farm. What a debt of love we owe to God, and to our Leader, Mrs. Eddy, for Science and Health and all the publications of our Publishing Society.

FRANCES J. SWANGER, Weiser, Idaho.

As this month rounds out six years and more of study and work in Christian Science, I am prompted to contrast its fruits with those of a university course of four years and a practice of ten years in medicine and surgery. In medical practice I earned much money and had nothing left. My success in work brought disappointment, ingratitude, hatred, malice, complete loss of health and happiness, etc. Theories of the cause and cure of disease were constantly changing, hence new books, apparatus, and post-graduate courses, each in turn being found futile, and discarded.

Now for my experience in Christian Science. It has given me an acquaintance with God and the realization of all good; work now brings love, joy, peace, understanding, and a real home, where Love reigns. The knowledge of God proves the nothingness of disease. The Bible, Science and Health, and "Miscellaneous Writings" by Mrs. Eddy, as well as her other writings, the *Quarterly*, the Concordance, our Church Manual, Hymnal, and all the Christian Science periodicals, increase in value as they are understood. I cannot enumerate all the healing work that this study has wrought in me, physically, mentally, morally, and financially, but if any doubter wishes proof, or any sufferer seeks encouragement to persevere in this line of thought, I will gladly furnish the data.

With our dear Leader, the loved Watcher on Mount Zion, we rejoice that the ramparts and foundations of error are falling and that the soldiers of the cross are standing steady in Love.

LOUISE ELEANOR CHAPMAN, National Military Home, O.

Digitized by Google

Mere words alone can never express all that Christian Science means to me. This glorious understanding of God came to my dark and gloomy thought at a time of great physical suffering. "Science and Health with Key to the Scriptures" by our dear Leader, Mrs. Eddy, was given me to read, and though seven years have passed since that glad day, distinctly do I recall the glorious uplifting that came with this "song of deliverance;" the earth took on a new radiance. I had found the pearl of great price and the way to the Father's house. I received mental and physical healing from reading this great book; the rays of Life, Truth, and Love discerned therein began to scatter the darkness of belief in evil and to establish an understanding of God, good. There have been many trials, struggles, and victories since that glad beginning; but always near, ever at hand, is the good Shepherd, guarding and guiding his own. In the light of Christian Science the Bible is indeed the chart and guide to eternal Life, wherein we find a God of Love, of Life, who is ever ready to supply the human need.

My one desire is to so live the truth that others may, in a measure at least, see the good works of Christian Science, and be led, as I was, to seek and find "that which was lost."—Mrs. Ruth Hatton, Portsmouth, O.

[Translated from the German.]

I had been ill for six years, although I had the best physician available, who did all he could but without helping me. At last he said to me that if an operation were performed I might perhaps get better. I went sadly home, because he could give me no assurance of cure. I grew worse and was in bed all winter. When a physician came from Germany, my husband said that we would try him. He made an examination and said that I could not be freed from the disease, but he gave me medicine and salve, which did not help me at all. After this I wrote to my sister in Sheboygan, telling her how ill I was, and that there seemed to be no help for me. She answered that there were many people in that town who had been healed through prayer to God, and that her own son was one of them. When we heard of the healing of her son, we decided to try it; and my husband said, "Prayer cannot harm you even if it does not help you." We wrote for the address of a practitioner. I was then suffering great agony and was often wishing for death that I might be at rest. My sister sent us the address and said that I should read the 91st Psalm. I myself wrote to the practitioner, and when her answer came it was full of hope, and I wept for joy that I would now get well. I called my husband to my bedside and told him that I felt so well I would try and get up. It was thought that I would not be able to walk, on account of the pain, but to my great joy the pain had disappeared. From that time on I improved daily, and to-day I am well and free from the bondage of disease. My desire to understand Christian Science was very great, and the Scientist wrote me to read my Bible and buy a copy of Science and Health, and thereby I would learn how Christian Science heals the sick. I got the book, but did not at first understand a word, as I could not read English. Later on I learned to read, one word after another, and the more I tried the more help I found. I continued my study every day and have learned that God is almighty and ever-present, and that we should place our full confidence in Him. I have had many fine demonstrations and would like to speak of one of them. One day my husband and I were both of us almost overcome within an hour. It seemed as if we had been poisoned, and that our end had come, but I sat down at the table and opened Science and Health at page 208. Soon we became more calm; my husband went to bed, but I worked on until about four o'clock, when I, too, fell asleep, and awoke with the sun shining on my face. We recognized that God had healed us. Through this and many greater demonstrations have we proven the power of God and His love for man.

We thank God, who in His wonderful wisdom has given us Mrs. Eddy, through whom there has come this wondrous Christ-truth which has healed thousands and will heal many more. I thank God for Christian Science.

Frau Amalie Schmidt, Sheboygan, Wis.

Early in my experience in Christian Science, I had been healed of a chronic ailment, but was always fearful that something might be said at the testimonial meetings which would hurt the Cause or give critics an opportunity to ridicule the Science. One evening a testimony was given wherein it was asserted that a man's arm had been drawn into some machinery and that he had experienced no pain. On our way home my wife and I expressed the opinion that these extreme cases should not be spoken of on Wednesday evening, when some were apt to be present who might scoff. We are now much readier to believe all such statements because of the following experience.

About a year ago I was awakened from sound sleep by a noise which I thought came from the children's room. Half asleep I rushed into the hallway and almost into the arms of a burglar, who met me with a blow on the forehead. This was followed by three more blows before I went down. When consciousness returned my first thought was that life does not depend upon material conditions, and that in God I have perfect strength. I tried to wash away the blood which was flowing, but the confused feeling was so distressing that I decided to go back to bed. I barely succeeded in doing this when I again lost consciousness. A Christian Science practitioner was notified and a physician called to dress the wound. There were very severe injuries and it was a very delicate and difficult undertaking. This occurred at half past three o'clock, Friday morning, and I was out of the house before 11 A.M. of the same day. On the following Monday I was at my desk as usual. I can truthfully say that I felt no pain, that there was no fever, no inflammation, not even a headache.

Words fail to express our gratitude to our Leader, Mrs. Eddy, who has taught us that God is our ever-present help in trouble.—George T. Steen, Chicago, Ill.

I have long desired to tell of my healing through Christian Science. During the latter part of the winter I was attacked with a serious trouble, from which I had suffered many times before, but never before did I have such a healing. I have found Christian Science to be both logical and practical. I now know that God does heal and help all mankind. The spiritual uplifting is what all need in order to do the will of God. I love to study the Bible and Science and Health. Praise God for the gift of His Word, that heals all our diseases. It is impossible for me to express in words my gratitude for this truth. It is indeed the light that shines in darkness.

Mrs. J. A. Willis, Imperial, Neb.

I was brought up an infidel and became interested in Christian Science through the healing of my husband after he had been given up by physicians. I soon learned to love Science and Health, and with it the Bible. No words can express my joy and thankfulness for this truth. In a family of six, we have proof almost daily of what this glorious truth will do for us if sincerely applied. Some time ago a growth showed itself on my face. I began to declare the truth for myself earnestly. The result was that in less than a week's time the growth disappeared. My daily prayer is to be worthy to be called a Christian Scientist.

Mrs. G. A. Walther, Watertown, Wis.

Digitized by Google

I wish to express my gratitude for Christian Science. Through the use of what little I understand of Divine Science, I have been able to make a demonstration over the sense of limitation. About three years ago things looked very dark, as I was earning only a small sum weekly wherewith to support myself and mother. We started housekeeping with the determination to make the best use of what means we had, and to leave the future with God. We met our bills promptly and were never without what we needed. In a short time my earnings were increased considerably; I also found a better situation. This is only one of our many blessings. My mother has had many victories in many ways, and we feel that we have proven the words of the psalmist, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling." We wish to express our love and gratitude to Mrs. Eddy for her work, which is a great blessing to all mankind.

L. MARGARET MATTHEWS, Chicago, Ill.

I am writing these lines, hoping that I may express, even in a small way, something of my gratitude for Christian Science and what it has done for me. I came into Science some sixteen years ago, and was then about ten years old. My mother accepted it at that time and I naturally and gladly followed her. Despite my youth and willingness, however, my advance in the truth was slow, and of this I complained until my unfinished demonstrations piled up and I was obliged to work and work hard. Then I was shown that I was too apt to procrastinate, letting my work run along, intending to take it up at a more convenient time, and that the great fault centered in self. But "man's extremity is God's opportunity," and through severe lessons we finally learn that only continual work will advance us in understanding, and that procrastination is indeed a thief to be overcome.

I have been healed of many things. When I was about fourteen, I was riding on a delivery wagon, and a small snaphook suspended from the wagon-top caught into my eye between the eyeball and the eyelid. With the jolting of the wagon it was wonderful that it did not tear my eyelid away, but the idea that God is ever-present and all-powerful flashed through my thought and the hook slipped out easily. Faith the size of a mustard seed will not only remove mountains, but will forestall error, no matter what the conditions may be. My eye was slightly bruised but never caused me any pain.

Several years later I sustained a fracture, while playing ball, but a week sufficed to mend it and enable me to return to my work. I did not have the bone set, but let Truth do the entire work, and it was well done. My progress has been slow in the overcoming of a supposedly hereditary ailment, but I am very glad to say that last year I was not obliged to be absent from my work at all, while other years I had been compelled to stay at home from one to three weeks.

I am very grateful for all the good I have received in Christian Science. What I have told here is merely a small illustration to accompany my expression of thanks. I can only hope to demonstrate my gratitude by following daily the teachings of our dear Leader, Mrs. Eddy, to the fullest conception of my thought.—J. PAUL JONES, Toledo, O.

For twelve years I suffered from what physicians diagnosed as stomach and heart trouble. During this time I was treated by eight of our leading physicians, without receiving permanent benefit; in fact I was constantly getting worse. I also took two weeks' treatment from a so-called mind-curist with no benefit. The last six months before trying Christian Science I was put upon an extremely limited diet. My efforts to find relief cost me many hundreds of dollars without any permanent benefit, and all my friends had given up hope of ever seeing me well again.

When Christian Science was brought to my attention I had little or no faith in it, but consented to take treatment. I was told to eat anything I wished and that it would not hurt me, and this proved to be true. My first treatment helped me so much, I felt like a new man, but I continued to take treatment one week, when I was perfectly healed. The cost was very trifling. I bought "Science and Health with Key to the Scriptures" by Mrs. Eddy, and commenced to study it. My gratitude is unbounded for the benefits I received, both physical and spiritual. I am grateful to God for giving us a Leader who was so spiritually endowed as to demonstrate this great truth for us in Christ's way. It has given me great joy the past four years to be able to help others, through the understanding gained in Christian Science. I will be pleased to answer any inquiries in regard to my case, if they are for the purpose of knowing the truth.—LOUIS C. SCHILLING, Green Bay, Wis.

For over a year I have been urged by an inward feeling to write and acknowledge the benefits received since coming into the Science, over ten years ago. Last winter I had a good demonstration over the fear of contagion, through the realization of the Divine protection and the unreality of contagion. My children were daily with others who had a supposedly contagious disease, and did not take it. I began the study of Christian Science by reading some testimonies which were published in the *Kansas City Times*. They were wonderful to me and gave me great hope. When I finished the reading, I said, "I am going to have that book, Science and Health, but where can I get it?" I then learned that neighbors who lived two miles from us were Christian Science people, and the good lady loaned me her copy of Science and Health for a few days. Glancing from page to page, trying to take it all in at once, an ailment was destroyed. I had the book only a few days when the owner sent for it, but she loaned me some *Journals*, which I read as eagerly as I had the book.

During the following summer many ailments disappeared. Though I was not considered sickly, I had a number of troubles, all of which disappeared and I found myself light-hearted and happy. During the few years I have been studying the Science other ailments have been met and mastered in the family, for with six children there are many troubles to be overcome.

When I was not able to overcome the fear of sickness I would send to a practitioner and she would help us. This blessed truth has given me a peace and contentment, and a faithful trust in God that I find I could not live without. When one is taken out of the bondage of sickness, selfishness, sin, and fear, and shown how to be healthful, happy, and helpful, how can we keep from loving and honoring the one who has shown us the way. I am grateful to Mrs. Eddy for her life-labor, and try to do all that I understand to be right. I find that this truth is very easily taught to children, because of their earnestness and purity. I have attended only one Christian Science service and one Wednesday evening meeting, but I have the Lesson-Sermon, for which I am very thankful, also the *Journal* and *Sentinel* and our Leader's books, which take the place of personal friends. Several of our relatives have accepted Christian Science. My desire is to hold steadfast to that which is good, and to grow in grace and wisdom.

MRS. ALMA L. SHAFFER, Almira, Wash.

I feel it to be a great privilege to express my gratitude for Christian Science. I was healed of a severe ailment and was grateful for it, but the spiritual uplifting enabled me to lead a different life: it led me to know that God is not far off, but ever near. I am very thankful to our dear Leader for that wonderful book, Science and Health. It has taught me to trust in God for my home and family.

MRS. LAURA WAGNER, Russiaville, Ind.

FROM OUR EXCHANGES.

"An alliance of Christian churches," says Mr. Lloyd-George, "against drink and social injustice would dominate and direct the legislature. No influence, no monopoly could stand against it. Shall it therefore be said, by those who scoff at religion, that the Christian churches only put forth the whole of their strength when they fight each other? Half the enthusiasm and energy spent on both sides over the education controversy would raise myriads of the poor from the mire and of the needy from the dung-hill." We all recognize that this is true, and it is to be feared that we all share the feeling to which Mr. Lloyd-George himself confessed, and are not very hopeful that such an alliance will ever be brought about. Yet we have no right to shrink from an obvious duty because it is difficult, and because the fulfilment of it seems to be a long way off. It may not be so far as we sometimes suppose, and, indeed, there are signs all around us even now that a new spirit is growing up among the churches, and that they are impatient, as they never were before, with that miserable sectarian spirit which ties their hands and prevents them from doing the good that they would.—*The British Congregationalist.*

What, then, is the task of the theologian of to-day? Is it sacredly to preserve the theology of past ages, or to form a theology which shall be for to-day what those theologies were for the ages when they were formed? To see what is wrong both within and without the Church, to meet the failure of the age with Christ's message of redemption, teaching that this world is the footstool of God, where men are to live the life of simplicity and purity which was lived by Christ—this is the duty and the pleasure of the theologian of to-day. Attaining this, ministers, theologians, laymen, will do the work that awaits each as they journey along the path that leads to the light in which Jesus walked, and of which he is both the center and the sun.

The Christian Work and Evangelist.

There are exceptions to the futility of most modern sermons, just as there are splendid exceptions to Bishop Gore's general charge against the Church for social failure. But unquestionably the Church has in large measure lost touch with the plain people. It has not, as a Church, had a vital message for to-day.

What will it do, then? Will it "make life in God the basis of religion, and life for man its evidence, bringing the light and power of the Gospel to bear on all national, intellectual, social, and moral problems; according a glad welcome to all reverent inquiry, and a loving embrace to every kind of truth"? Or will it accept Bishop Diggle's alternative, "shrink into a denomination within the nation"?

The Churchman.

The popular view, for instance, of the clinical function of a minister of religion is that he comes to prepare the sick person for death, and not at all as a therapeutic agent; consequently, the doctors have become increasingly shy of his presence, and enjoin "complete quiet" and no visitors. They are not to be blamed: if a minister brings a death "suggestion," the doctor shows his appreciation of the spiritual factor in healing by refusing him access to the patient. If the clergy regarded sickness as the New Testament writers regarded it, they would be called in by the patient and welcomed by the doctor as a valuable ally.

REV. PERCY DEARMER, M.A.
The Expository Times.

All that is new, that is peculiar to the present condition of religious thought, is the attitude of mind which leads to it, the growing sense of dissatisfaction with a rationalism which is content to appeal only to the "logic-chopping faculty," and which takes no thought of the hunger and thirst of the soul, a dissatisfaction—and here is the point—which is the outgrowth not of "narrow," but of "free," thought.

What, then, is to be said in answer to these things by one who holds that there is no necessary quarrel between "rationalism" and religion? who holds, indeed, that reason offers the only basis for an enduring religion?

ALVERIC S. FRANCIS.
The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines, 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The committee of Senators appointed at the last session of Congress to investigate and report upon the general conditions in Indian Territory, is now making an extended tour for that purpose. The subjects under consideration are remedial legislation and modifications of existing rules and regulations of the Interior Department that would permit a more general sale and rental of allotted tribal lands, the levying of taxes under statehood, the maintenance of a better public school system, the disposal of the segregated coal and asphalt lands in the Choctaw and Chickasaw Nations and the sale and rental of the surface of these segregated lands for commercial purposes.

One of the regulations issued by the Department of Agriculture for the enforcement of the Pure Foods and Drugs Act reads: "Manufacturers of proprietary foods are only required to state on the label the names and percentages of the materials used, in so far as the Secretary of Agriculture may find this to be necessary to secure freedom from adulteration and misbranding." In cases of drugs and medicines the label will only have to show the percentage of alcohol, or the amount of certain drugs or their derivatives which are specifically referred to in the act, if such are contained in the preparation; it is not necessary to show all ingredients in any case.

Culebra Peak, ten or twelve miles west of Stone Wall, Col., is reported from Trinidad, Col., to be in a state of eruption. The peak is in the great Sangre de Cristo Range and is one of the loftiest in the United States, rising far above the timber line, so that the chance of the phenomenon being a forest fire is considered out of the question.

The cost of living in Manila is twice as much as in Washington and three times as high as in New York. This is largely due to the importation of food products which could be, but are not, raised in the islands.

The United States Census Bureau has estimated the total wealth of the country in 1904 to be $106,881,415,009. This shows an increase in wealth over the estimates for 1900 of nearly twenty-one per cent, and is sixty-four per cent over the estimate for 1890.

General Alexander MacKenzie, Chief of Engineers, has reported to the Secretary of War that $16,052,431 will be required to complete the engineer work upon the fortifications projected by the board convened under the President's order of Jan. 31, 1905.

Scarcity of labor on the Canal Zone is hindering the progress of the work on the canal. Two thousand more men could be used to advantage. The daily average for September, including every department on the entire division, was 2,267 men.

Foreign.

Professor Charles Waldstein, professor of Fine Arts at King's College, Cambridge, England, has gone to Rome for the purpose of perfecting an agreement with the Italian Government concerning the carrying out of his project for the excavation of Herculaneum. The professor's plans to this end have been accepted by the Italian Government on the condition that the participation of foreign countries in the work be only in the form of private contributions, and that there be no foreign official interference.

The highest undergraduate honor in the University of Cambridge is the victory in the final examination in mathematics. The winner is known as the Senior Wrangler, and not a few men famous in scholarship and other fields have figured in this honor roll. This has just now been virtually abolished, the desire to win the honor having led too many young men to leave all other subjects and choose only mathematics.

The French Council of Ministers has announced that France, England, and Spain conjointly refuse to accept the reservations the Sultan desires to make conditional on his acceptance of the decision of the Algeciras Conference. The signature of the Sultan is necessary before the programme of reforms drawn up by the Algeciras Conference and signed by the delegates can be put into effect.

St. Helena, the prison and for a time the tomb of Napoleon, has ceased to be a British military and naval station. The island lies in the South Atlantic, twelve hundred miles from Africa and farther from Brazil. It has an area of forty-five square miles.

Santos-Dumont, after several trials with his aeroplane, the Bird of Prey, last week made his best performance. He sailed seven hundred and five feet against the wind in 21 1-5 seconds. He flew about twelve feet above the ground.

Uruguay reduced her national debt by $1,570,450 during 1905. The total debt on Jan. 1, 1906, was $121,455,757, of which about eighty per cent was external. Uruguay is a prosperous country.

The total shipments of cotton from Egypt for the year ending Sept. 1 aggregated 708,015 bales.

Industrial and Commercial.

Plans have been presented for the construction of a Rapid Transit Railroad on Long Island, to be built upon the Behr mono-rail system. If the plans should be adopted, Greater New York will possess the first mono-rail system to be built and operated in this country. Because of the peculiar construction of the track and cars, including the essential fact that the center of gravity of the cars would be below their point of support, it would be possible to make use of speeds of over one hundred miles an hour between stops. The road is estimated to cost approximately $170,000 per mile, and the estimated cost of the cars, which are of exceptional size, is $45,000 each. The rail is six feet above the roadbed, and on account of the low center of gravity the danger of derailment on curves is eliminated.

The new railroad across the Isthmus of Tehuantepec has been formally opened for traffic by the President of Mexico, and is now prepared to transport steamship freight from the Atlantic to the Pacific. The new road is 170 miles long and saves 1,429 miles of the distance between New York and San Francisco by way of the Panama Canal. The completion of the enterprise has been hastened to secure as much of the transcontinental traffic as possible before the Panama Canal is finished, and it is hoped that a large portion of this trade will be retained after the canal is in operation. It is expected that a considerable portion of the sugar tonnage now carried from Hawaii to the eastern ports of the United States by way of Cape Horn will be transferred at once to the new route.

The management of the Rock Island Railroad has issued orders for new equipment to cost $5,000,000. This is in addition to orders previously given this year aggregating $3,000,000. Included in the new equipments are two thousand forty-ton box cars, two hundred and fifty stock cars, one thousand ballast cars, six hundred and fifty coal cars, three hundred flat cars, twenty-five hundred hopper cars, and nearly one hundred passenger, postal, and baggage cars. All the new passenger cars are to have steel under-frame construction, and the mail cars are to be all steel.

Six hundred steel passenger cars are to be built for the Pennsylvania Railroad in the next year. Space for five hundred and fifty cars has been reserved with the American Car and Foundry Company, and fifty cars will be constructed at the Altoona shops of the road. The total cost is estimated at $6,000,000. The order to the American Car and Foundry Company will be divided so as to include coaches for the baggage, express, and mail cars. The company has also ordered twenty-five new freight engines. These will be built at the company's shops at Altoona.

Over $100,000,000 was sent out of the United States in the fiscal year of 1906 in the purchase of luxuries. This total includes over $40,000,000 worth of diamonds and other precious stones; about $40,000,000 worth of laces, edgings, embroideries, and ribbons; about $7,000,000 worth of feathers, natural and artificial; over $6,000,000 worth of champagne, and the remainder miscellaneous articles. If to this is added the value of tobacco, cigars, and cigarettes imported, the total will reach $125,000,000.

The executive officials of all railway lines west of Chicago have decided to ask the Interstate Commerce Commission to become a board of arbitration for the settlement of all disputes between the employes and the railways. Prominent Eastern railroad men have been consulted on the subject. The question which led to the arbitration scheme is the concerted demand made by the engineers of twenty-seven roads for an increase in wages averaging from twelve to fifteen per cent.

The Cape-to-Cairo line has been built over two thousand miles north from Cape Town and some fifteen hundred miles south from Cairo. With the completion of the four hundred and fifty miles section which is now being built northward to the southern extremity of Lake Tanganyika, there will remain only four hundred and ten miles of railroad to be built in order to give a continuous rail, river, and lake route from Cape Town to the Mediterranean.

An increase of ten per cent in the salaries of employes now receiving less than $200 a month has been announced by the directors of the National Express Company. The wages of employes of the American Express, who are paid less than $200 a month, have also been increased ten per cent. This latter increase affects eight to twelve thousand men and will cost the company about $600,000 to $700,000 a year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"CAME TO SCOFF, STAYED TO PRAY."

[THE following expression of gratitude to Mrs. Eddy from one who says of himself, "I, who came to scoff, stayed to pray," is most interesting as proving that the only right concept of Christian Science is to be obtained by the study of its text-book. If all who express themselves in public in regard to this Science would first inform themselves as to its teachings, as did Mr. van Antwerp, many more who come to scoff would stay to pray, and they would receive the same benefit which has accrued to him.—EDITOR.]

City of Mexico, Oct. 29, 1906.

My Very Dear Mrs. Eddy:—No one will ever know—indeed it is hard for me to realize myself—how great a debt of gratitude I owe to you for the wonderful discovery you have given the world. In Science and Health I have found the true "Key to the Scriptures," which until recently have been as a sealed book to me.

I spent seven years of my earlier life in preparing myself for orders in the Episcopal church. After receiving them and having charge of a little church for a brief period, I found that I could not honestly continue in the work. My seven years of study had not prepared me for the ministry, as it had not given me what I was looking for; although I searched the Scriptures, I found not therein eternal life, for I had not the "Key." I drifted away from the early teaching given me by a loving Christian mother and was as "one without hope and without God in the world." Everything seemed so dark and dreary; I was the slave of fear, a prey to appetite and passion. What wonder, then, that this brought sickness and all manner of discord?

About a year and a half ago, in the effort to prove to my sister, a devout Christian Scientist, the error of her belief, I began the reading of Science and Health (fifteenth edition), and then I studied it. I, who came to scoff, stayed to pray. I had found the "Key" at last! The hidden things of God were revealed through the mercy of Him who had given to you the clearness of vision to discern them. I have found that the clearer our conception is of the allness of God the clearer becomes our perception of His immanence. It is this that saves the sinner and heals the sick. As God, immutable good, is All in all, there can be room for nothing else. If sin seems present in this mortal dream, if sickness comes, and at the time they both appear very real, I have come to know that such apparent manifestations of error emanate from mortal mind, which you so well define in "Rudimental Divine Science" as "a false and temporal sense of Truth, Life, and Love." With an increasing consciousness of the truthfulness of Truth has come to me a knowledge of the falseness of error, and the "adamant of error" is being dissolved by the "universal solvent of Love." I have proved your teachings to be "both prophylactic and therapeutic," although it was not for the physical healing that I came to Christian Science, but rather in the hope that a sick soul might be saved. The spiritual uplift that I have experienced, the peace of mind and harmony that have been mine since I have made the Bible, as interpreted by you in Science and Health, my guide, I cannot express in words. My earnest desire is that my life may show forth my thankfulness, for it is only so that I can even faintly evidence my gratitude to you.

Faithfully yours, always,

A. L. VAN ANTWERP.

FROM OUR CONTRIBUTORS.

QUESTIONS HARD TO BE UNDERSTOOD.

SAMUEL GREENWOOD.

THE student approaches the subject of Christian Science somewhat differently from other things that may engage his attention. In acquiring a knowledge of mathematics, music, or any other branch of science, he is seldom hampered by prejudices or antagonistic opinions concerning what he may be taught; while towards Christian Science he stands, as a rule, in the more difficult position of having already, in a manner, been taught regarding the truths it elucidates, and of having formed a concept of God, of His creation and laws, in accord with this education. In entering upon the study or the investigation of Christian Science, it is but natural that he attempts to follow the line of his former beliefs, until he finds that the new and the old will not assimilate, and that this "new wine" threatens to break the "old bottles" into which he fain would pour it. It is at this point that he sometimes begins to question the conclusions of Christian Science, and to demand of its adherents the how and the why of those spiritual truths which relate to God's infinitude, and which cannot be explained or understood from any material standpoint.

The failure to adjust the statements of Science and Health, the Christian Science text-book, to human material hypotheses, or to harmonize them with the opinions of men, should not repulse or disappoint the seeker after Truth, since it should be evident to him that deductions from spiritual premises cannot be made to agree with material observations. The failure of past teachings, although adhered to for many years, to give him a demonstrable knowledge of God, should forestall discouragement if he may not at once grasp the full meaning of Christian Science. Scientific truths must be understood through demonstration, and cannot possibly be reasoned into one's comprehension by any intellectual method. One of the wisest sayings of our Master was that we must become as little children to enter into the kingdom of God; that is, to enter into the knowledge and utilization of the eternal fact of Divine sovereignty; and Christian Science does not point to any broader or easier way.

It is always easier to ask a question than to understand the answer. It requires no knowledge of Christian Science to propound questions relating to its teachings, but to correctly apprehend what may be given in reply, the questioner's thought needs to be loosed somewhat from its material moorings. He must be prepared to accept logical conclusions from the premises which he admits, no matter how far it may take him from the traditions he has religiously cherished. An unthinking contentment with past beliefs, beliefs that have brought no freedom to mankind,

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

marks the dogmatic inquisitor, whose ears are closed to understand whereof he asks; from such as these the wise disciple will gently refrain until divine Love shall open the way. To those awaking to the inadequacy of material systems to meet human need, who are turning unsatisfied from the dead letter of creeds and doctrines, as not fulfilling the purpose of Christianity,—to such the Christian Scientist will lovingly minister of all that he hath: but be he ever so earnest, let not the beginner be dismayed if he does not readily understand all that he seeks to know. The upward ascents are reached only by climbing, and we must rise through spiritual growth to discern the things of Spirit.

Christian Science and all material theories are opposites, and to reconcile or harmonize them as resting upon a common basis is impossible. The acceptance of Christian Science necessarily involves a revolution in thought regarding the fundamentals of human belief, in which a material concept of being is discarded for the spiritual. If one's former beliefs have proved incapable of bringing peace and harmony into his experience, he should be willing to abandon them in seeking the higher way. Could Christian Science be made to conform to the current opinions of men, its advent would have effected no progress for the race; and if its teachings must accord with material doctrines in religion and medicine in order to be understood or practised, they are no improvement upon past beliefs, and in this case it would be inefficient to meet human need and insufficient to satisfy the hunger of mankind for the knowledge of God. Let the inquirer remember this, and he will see that Christian Science must of necessity be different from what the world has heretofore accepted, in order to show mortals the way out of sin and mortality. Let him remember this, also, if tempted to quibble and argue because Christian Science and his former views do not fit together. The prophet said, "I will lead them in paths that they have not known."

The student may be well versed in theologic and therapeutic lore, but he early discovers that human material theories afford no aid to the discernment of spiritual truth: and however familiar he may have been theoretically with the premises of Christian Science, the conclusions which it logically deduces therefrom present to him the human problem and its solution in an entirely new aspect. The difficulty he sometimes experiences in accepting this spiritual view of being is because it involves the relinquishment of the educated belief in the actuality of an evil and material state, and in admitting in all its significance the truth of the allness of God. Although Christian Science may seem mysterious and impossible of belief from the material side, the fact that its ideals are in the highest sense Christian and its practice in every sense redemptive, should disarm hostility and prepare the hearts of earnest thinkers to ponder hopefully its divine message.

The radical departure of Christian Science from old-school teaching and methods may be startling to conservative thinkers, but it is necessary in order to gain the spiritual meaning of Christianity and the ability to demonstrate its teachings. We can never understand the spirituality and immortality of being until we look beyond the horizon of materiality. So long as material sense is accepted as a current standard of judgment, so long must spiritual truths seem vague, mysterious, and hard to understand. The explanation of spiritual Life and Truth can only be given on the basis that God is infinite Spirit, and that the belief in matter is consequently unreal. Let the inquirer reflect upon this obvious fact, and he will not demand that the philosophy of Christian Science, proceeding from the basic truth of the infinitude of Spirit, be explained to him within the scope of his material knowledge, except as its results may be seen in the healing of physical disease.

It may require of mortals much humility to lay aside their material beliefs and opinions and sit at the feet of divine Science as a little child,—as having all to learn and to question nothing that pertains to the allness of God; yet not otherwise can they learn of the Christ, and perceive the spiritual nature of man. They may well challenge anything and everything relating to the belief of an evil power and intelligence: they may well scrutinize and question every theory of a creation or an existence separate from God, good; but why should they doubt or dispute whatever is logically consistent with the Divine omnipotence and omnipresence? It may not be in the human heart not to wonder or speculate concerning what it does not know, but to work quietly on from one's present position, confident that nothing is too good to be believed of God, and nothing but its unreality true enough to be believed of evil, is the wiser and more progressive course.

The Christian Science pilgrim may not see all his way to distant points, but he does discern and appreciate the blessings which even his limited knowledge of Truth brings to him. He may not understand how he has seemed to stray so far from the Father, but he does know that he is returning home. He may not understand just how and when the sense of evil arose in human thought, but he does know that he is daily overcoming and destroying it. Is it not better to rest content that one is progressing in the right direction, than to puzzle over things that are yet beyond our ken? We grow only in practising what we know of Truth, not in wondering why about all that now lies between us and the consummation of our life-work.

Although Christian Scientists would be glad to know, if they might, what may now seem mysterious in the problem of human salvation, they are learning that inordinate curiosity about what they are not yet able to comprehend, retards rather than forwards their growth. All their time is needed to mature and demonstrate, and thereby become capable of imparting to others, what they have already learned of God. We have probably wished at times that we might ask certain questions of Mrs. Eddy, but if this privilege were ours could we understand what might be given us except as we have ourselves grown in spirituality? Sometime we shall discover in the Bible, and in our Leader's writings, the answer to all our questions. Material-mindedness alone obscures the perception of Truth. If willing to follow faithfully the truth we now see, we can well afford to wait patiently the unfolding of what "doth not yet appear."

Christian Science is solving the problem of mankind's deliverance from evil, although it may not be in accord with popular theories and methods. The proof of its correctness is found in the practical good that results from its practice. The healing of sorrow, disease, and sin, with their attendant miseries, is the answer to their questions which men can understand, and this is the only sign that the mysteries of infinite Love are being correctly explained and understood.

THE BEAUTY AND POWER OF GRATITUDE.

REV. JAMES J. ROME.

As the Thanksgiving season approaches it seems very proper that we direct our attention to the great question of gratitude. That it is a great question must be readily granted when we consider the important place it fills in our earthly existence. The smile, the nod, the glance of appreciation, the warm hand-clasp, and the hearty "I thank you so much" of our every-day experience,—what a blighting blast would that be which swept away such a benign and sacred influence. Furthermore, if gratitude between man and man yields such satisfaction, what shall we say of the sentiment which fills the heart to overflowing with thankfulness toward God? Can such an attitude of thought possibly exist without attending influences of the most pure and holy character? Nevertheless, precious though it be, do we have as much of this element in our temperament and experience as we might? Are we as

Digitized by Google

ready to lift our thoughts Godward, in grateful acknowledgment of His goodness, as we should be?

Gratitude generally appeals to us as one of the beautiful traits of human thought. So gracious is its presence, indeed, that we feel compelled to regard it as the product of a higher or spiritual consciousness, expressed through the finer qualities of the human mind. Like the sunshine, it is both beautiful and beautifying. It sheds a glow of gladness and content on all who are touched by its hallowed influence. As has been so beautifully expressed in the poetic lines of Gray,—

> Sweet is the breath of vernal shower,
> The bee's collected treasure sweet,
> Sweet music's melting fall, but sweeter yet
> The still small voice of gratitude.

We find the thought of gratitude pervading the whole of the Bible. The patriarchs built altars on which to make offerings of thanks for God's preserving care and goodness. There were thank-offerings required by the Mosaic law, also the offerings of the first-fruits, so closely allied to our Thanksgiving day. Among the poetic portions of the Bible the most beautiful and inspiring are those in which the psalmist lifts his heart to God in strains of thanksgiving. In the New Testament epistles the writers are constantly reminding the churches to be thankful. In the Christian Science text-book we find the same thought emphasized, especially in the chapter on Prayer.

Not only is the manifestation of gratitude remarkable for its beauty and grace, but it also indicates the presence of confidence, faith, and power, especially when exercised toward God. There is no attitude of thought better fitted to reflect the healing power of Truth. It was prominent in the life of our great Master. How much he seemed to appreciate the gratitude of the leper who returned to give thanks for his healing. In his own experience we find him frequently offering up thanks. When the seventy disciples returned to report their success in healing, the record says, "In that hour Jesus rejoiced in spirit, and said, I thank thee, O Father, Lord of heaven and earth." When feeding the four thousand, Mark tells us: "He took the seven loaves, and gave thanks." We find a still more conspicuous instance in the performance of the greatest of all his miracles, or demonstrations, previous to his own resurrection. At the grave of Lazarus, before it was evident that anything had been accomplished, we are told, "Jesus lifted up his eyes, and said, Father, I thank thee that thou hast heard me." It would appear from this that, even in the highest and most spiritual attitude of thought of this holy Teacher, thankfulness was an important element. Such gratitude is the evidence of the strongest and most unswerving faith. To know well enough that what we desire exists, so that we can thank God for it before it is made evident to the material senses, is indeed a saving faith; such a faith as was found in Abraham when "it was counted unto him for righteousness."

Turning to our own experiences, we may find practical instances of benefits realized through the acknowledgment of blessings already received. Who of us have not been delivered from dark and trying experiences by lifting our hearts to God in thankfulness for His great mercy and love. Those who believed they were sick have been quickly and completely restored by turning their thoughts away from the false claim of disease which seemed to hold them, to thank God for the good they were already able to recognize.

As Christian Scientists we have great reason to have hearts full of gratitude. Individually we have had dark and miserable mortal beliefs displaced by spiritual light and understanding. As a body we can look back, especially over the last year's experience, with gratification and joy. The Mother Church Extension—the work we all had so deeply at heart—has been completed and dedicated; the branch churches have been more firmly established thereby, and beautiful buildings are being erected all over the Field for their better accommodation; the press and public opinion generally are taking on a kindlier tone, and the hearts of men are better prepared for the acceptance of the joyful message of Truth. For the wonderful life and work of our beloved Leader, the Discoverer and Founder of Christian Science, how shall we express ourselves? Best perhaps in acknowledging, by faithful and earnest living, our thankfulness to God for the revelation of Truth through her, and also to her for having been, through her unwavering fidelity, patience, and love, the willing instrument in God's hand of bringing to mankind anew the blessed gospel of health and salvation.

THANKSGIVING.

In every thing give thanks.—I THESS. 5: 17.

C. L. TERPENING.

To one who attends Christian Science services, two features of the worship are especially impressive; viz., the gratitude expressed and the thoughtful attention given to the Lesson-Sermon. It is doubtful whether such a thing exists as an ungrateful or an unthoughtful Christian, but if there is such an one he certainly stands in very much the same relation to the thoughtful, grateful Christian as the savage does to his civilized brother.

It is reported that laborious search among the languages of the natives of Eastern Africa does not discover a single word or group of words which expresses the idea of gratitude. This is also said to be true of some large native tribes of South America, who although great askers or beggars are never thankers. By consulting our dictionaries we find that the words think and thank are closely related in their root derivation, hinting that thinkers and thankers are one. In the prophecy of Isaiah we read this complaint against ungrateful Israel, "My people doth not consider." Mortals, ignorant of man's spiritual inheritance, selfishly ask for physical pleasure in place of pain, for riches instead of poverty, ease instead of disease, and earthly joys instead of sorrows; but though they cry till the setting of the sun, the god of earth-born desires does not hear; for he may be sleeping, or peradventure he has gone on a journey. When, however, we turn our gaze away from earth and its so-called good and evil, and looking to the one source of all good, gratefully consider this source and ask for the true bread, our Father does not give us a stone; heaven itself with its ministering angels comes to us, and we receive more than we can either ask or think.

Though Jesus of Nazareth wept in the presence of sorrow, he had the heaven-born instinct which impelled him to look away from that sorrow, to lift his thoughts to the ever-present divine Life; and as he stood at the open grave of his friend, what were his words? "Father, I thank thee." He who had the power, in a moment of grief, to think and to thank, had also the power to destroy the belief of death, and he said to the one who was bound hand and foot by this belief, "Lazarus, come forth." We are grateful indeed to God for sending His beloved Son into the world, grateful for the words and works of Christ Jesus,—although they have been for so many centuries little understood.

We thank God for sending to us and to this age an inspired woman, Mrs. Eddy, who is both thoughtful and grateful, who is brave, self-sacrificing, and true, so that she alone of all the millions whose privilege it was to eat of the "bread of life," she alone was able to discover the meaning of the words and works of Jesus, so that she could demonstrate and explain them. We are indeed grateful to her for giving us "Science and Health with Key to the Scriptures;" grateful for our teachers, our practitioners, our Reading Rooms and churches. How can we help lifting our voices in praise when we consider what she teaches us of the Love that knows no hate,—our loving Father-Mother God; and as we grow into the understanding of this divine Love, we shall grow in gratitude, until the earth shall be filled with the knowledge of the Lord as the waters cover the deep.

WISE MEN FROM THE EAST.

The originality of the Japanese people is again shown in the religious field. Seven years ago the Mikado appointed a commission to travel in search of the true religion that should be adopted by the Japanese people; but the war with Russia and the diplomatic strained relations preceding the war called attention away from this religious mission. The Mikado has resumed this work and re-appointed the commission and has notified the European powers to that effect. This action seems in keeping with the character and systematic methods of the Japanese.

The story of the wise men from the east in search of the star of Bethlehem seems to be repeated in substance. The ancient wise men were evidently dissatisfied with their own religions and desired better. The Japanese, always tolerant of religions so long as they do not interfere with civil order, are evidently not sure which one among them is the best. Buddhism, during one period the religion of the nation, did not satisfy. Accepted in the ninth century, it was disestablished virtually Jan. 1, 1874. Confucianism from China, and Mohammedanism from Turkey are inadequate to meet the wants of the Japanese, and Shintoism, the native religious belief, is waning.

What the Japanese commission evidently will look for are practical results. The Christian religion has considerable influence in Japan, but the people have only the long-range view. They are not quite sure that the Christian lands are altogether the delightful abodes of such men as the Christian missionaries who are among them teaching ethics and religions. These wise men from the east believe that what they see for themselves at short-range view will have greater weight with them. The best testimony to the worth of a religion is the behavior and moral condition of a people. The commission wish to see whether the principles of Christianity are illustrated and demonstrated in the life of Christian lands. If missionaries have taught them about the love of Christ, they want to see how far this extends in the national deeds of Christian nations. They may expect to find the Sermon on the Mount beautifully fulfilled in industry and politics. They may be puzzled to find so many varying phases or denominations of Christianity, but they can be trusted to regain their composure and find their way out of the labyrinth.

When this commission come to America, as they surely must, they will not see the Golden Rule in full force yet, and they will see inconsistent things in industry and politics, but we will ask them out of charity to us to overlook those for the present and to study the American spirit from its beginning with the colonial fathers. We want them to observe how the foundations of America were laid in religious faith and sacrifice. We invite them to trace the course of this faith as an inspiration in American life, and to see that there are forces steadily at work ameliorating unlovely conditions, and to remember that the American nation is still in the making. They will see that the underlying purpose of the American spirit is preservative of that which is good, however much in the light evils may be for a time. Let the Japanese commission avoid the defects that they may find in the practising of Christianity, forget them and "hold fast that which is good." If other nations have failed in any particular in the practice of Christianity, the Japanese have the golden opportunity to lift the Christian system to a high plane, and in their national life, spirit, and character become truly a Christian nation.

New Haven (Conn.) *Register.*

In assuming that all cause and effect are mental, Christian Scientists run no serious risks and encounter no invulnerable obstacles, since they reason logically to this end from the premise that God is the only cause and creator, and they understand Him to be the divine Mind, or, as the Scriptures say, "Spirit," "All in all." The teaching of Christian Science on this point can be no more radical than are the statements of Jesus Christ, who said, "It is the spirit that quickeneth; the flesh profiteth nothing;" "but seek ye first the kingdom of God, and his righteousness."

AMONG THE CHURCHES.

BEATRICE, NEB.

We have but a small number of workers in our Sabbath School, but they are loyal, and ready for active work, when Love points the way. These little ones send love to Mrs. Eddy, our beloved Leader, who has so reflected divine Love that it has become possible for the sick to rise from their beds of pain. Our most fervent desire is that we may be always ready to demonstrate the truth in our daily lives.

From the Sunday School scholars of Beatrice, Neb.

UNIVERSITY OF ILLINOIS.

The Christian Science Society of the University of Illinois was formed May 18, 1906, with eight members, all members of The Mother Church. Our society is duly organized under the rules of the University, is beginning to attract attention, and is leading students interested in Christian Science to join The Mother Church in order to secure the privilege of membership. The society has arranged for a lecture by Judge Hanna, to be given at the University on Nov. 25.—*Correspondence.*

PROVIDENCE, R. I.

A notable addition to the church edifices of this city is soon to be made, the ground for which will be broken in about two weeks, although the structure will probably not be completed until the expiration of a couple of years. The proposed building is to be erected at the northeast corner of Meeting and Prospect Streets by First Church of Christ, Scientist, and will cost upward of one hundred thousand dollars. A building permit was granted at the City Hall yesterday afternoon, by the provisions of which it is shown that the building is to be square on the ground, the dimensions being 92x92. The height from the ground to the eaves is to be fifty feet. Above the flat-pitched roof will rise a dome, surmounted by a lantern, the finial of the latter being one hundred and forty-five feet from the foundations. The material is to be of brick, stone, and iron. The interior will be so arranged that there will be two stories.

Entrance to the church will be gained by an artistic portico with classic columns into a spacious foyer, from which the Sabbath School and class rooms will open, as well as the rooms devoted to social purposes. On either side of the foyer wide flights of stairs will ascend to the second story, which will be devoted entirely to the auditorium, and will afford a seating capacity for fully one thousand, with the spacious galleries. The first floor will have a height of about twelve feet, while the auditorium will have a rise of fully forty feet, surmounted by one of the most artistic examples of the classic style of dome to be seen in New England. This dome will be fully fifty feet in diameter and will give the building a most picturesque appearance and finish. The floors of the church will be of steel construction and will be designed to safely support one hundred and twenty-five pounds to the square inch. The roof will have copper covering and the cornice will be of stone.—*Providence Journal.*

THE LECTURES.

PORTLAND, ORE.

Before a large and appreciative audience, Clarence C. Eaton of Tacoma lectured on Christian Science, under the auspices of First and Second Churches of Christ, Scientist, at the Heilig Theatre last night [Oct. 18]. In introducing Mr. Eaton, Judge D. J. Haynes said in part,—

About forty years ago a woman from the rocky glades of New England promulgated a new religion, a religion founded upon the fatherhood of God and the brotherhood of man, whose teachings have challenged the admiration and enlisted the support of mankind as none others have since the days of the lowly Nazarene. At first she was scoffed at, but, conscious of the truth of her doctrines and demonstrating their benefit to mankind, she pressed onward in her work, until her followers now number hundreds of thousands, her book and healing methods have reached every nook and corner of the civilized world, and the name of Mary Baker G. Eddy is a household word wherever Christianity abides and the hope of heaven dwells in the human heart.—*Portland Telegram.*

SAN FRANCISCO, CAL.

George L. Putnam, Second Reader of First Church of Christ, Scientist, in introducing Judge William G. Ewing, Oct. 20, said in part,—

It gives me peculiar pleasure to introduce the speaker of the evening, as I am one of unnumbered thousands of his debtors, for it was at a lecture delivered by him in the Metropolitan Opera House in New York City, some six years ago, that I first heard the doctrine of Christian Science correctly stated. Like many another I fondly believed that I already knew what Christian Science was, and not liking *my* concept thereof, I promptly condemned it without a *hearing*. However, when I heard that the speaker had been *for* many years a United States District Attorney, and later a Judge in the Superior Court of his State, I decided to hear *him*. I well remember that I arrived at the Opera House about half an hour before the lecture was to begin, expecting to be able to pick out my seat anywhere I pleased, but to my surprise I was sent to the topmost gallery and there managed to find standing-room. I was not conscious of the fact at the time, but I now know that that lecture marked a turning-point in my life, for from that day on I commenced to question my atheistic beliefs and soon found that they too could not stand the test of reason. One by one they failed me in time of trouble, until at last, when even the husks failed, I arose and started on the journey to my Father, away from despair to hope, a hope that has never failed me.—*Correspondence.*

WALLA WALLA, WASH.

The Christian Science church was packed full last night [Oct. 23] to listen to Rev. Irving C. Tomlinson's able and interesting talk, and none went away without a friendlier feeling to the doctrine of Christian Science. The speaker was introduced by David B. Ogden, U. S. engineer of Portland, who said in part,—

Forty years ago there was but one Christian Scientist—a lone brave woman, the Discoverer, Founder, and Leader of this movement, the Rev. Mary Baker G. Eddy. By reason of a conscious recognition of the present nearness of a God of Life, Love, and health, this one Christian Scientist had been healed, in an hour of extremity, of disease, suffering, and despair. Prompted by a life-long desire to help her fellow-men, she then shared this rediscovered "law of the Spirit of life," which heals and saves, with those about her, and so instructed and equipped them that they in turn might share its blessing with all mankind. Thus the Church of Christ, Scientist, was founded and began its mission of redemption, and to-day the beneficiaries of Christian Science are numbered by hundreds and thousands.

To this end—that the world may at least know the truth about Christian Science, its application and effect—Mrs. Eddy has instituted a Board of Lectureship. The mission of these lecturers is to correct current misconceptions and misrepresentations of the teaching of Christian Science; to enlighten, rather than influence; to say to the suffering and distressed ones on earth—"There is hope! Your loving heavenly Father and His Christ are here to-day to save unto the uttermost." The motive, then, of each member of this Board of Lectureship is but an echo of that loving effort first made years ago and continued by Mrs. Eddy, to freely share this gospel of health with all the world, that men may be blessed and God glorified.—*The Statesman.*

HERKIMER, N. Y.

Judge Septimus J. Hanna of Colorado Springs, Col., lectured before a large and appreciative audience at the Grand Opera House last evening [Oct. 16] on "Christian Science, the Religion of the Bible." The speaker was introduced by Rev. Charles F. Taylor, pastor of the Reformed Church of this village, who spoke as follows:—

Ladies and Gentlemen:—Some nineteen hundred years ago there traveled back and forth over the hills and valleys of Palestine a man who came preaching the gospel of God, and in that gospel included not only a message for the souls of men, but also the healing of their bodies and the control of their minds. When later he gave the evidence of his Messiahship to the followers of John the Baptist; when he sent out his own disciples to do his work; when he delivered his instructions to the seventy, and when, after his resurrection, he uttered his final charge to the apostles, his emphasis was not only upon that which benefited the spiritual nature of man, but quite as emphatically upon that which dealt with his physical and mental existence. The early Church so understood it, and not only in the apostolic age, but if we may believe the Nicene and Post-Nicene Fathers, and other historical authorities on the first centuries of the Christian era, healing of the body and mind were considered a legitimate and important department of the Church's mission. After a time, however, the faithful seem to have lost the knowledge of how to do, and the power of doing, these mighty works in His name. And in these latter days, when the scientific spirit tends to deny the supernatural and reduce all to ordinary facts which can be dealt with under the laws of psychology, the formulas of chemistry, the diagnosis of medicine and the scalpel of surgery, the Church practically teaches that the part of Christ's work and instruction which had to do with the healing of the physical and mental ailments of men is no longer in force.

It is due to the fact that this teaching does not altogether satisfy many thinking persons, that some forty years ago a woman, Mrs. Mary Baker Eddy, was able to come forth, emphasizing this neglected part of the gospel and drawing thousands of the best elements of our communities and churches after her, so that to-day there are multitudes of people over our land and the world who believe that the Lord's arm is not shortened that it cannot save now from physical and mental disease and distress. Christian Science has at least performed a great service to the Church at large in calling attention to the popularity of this part of the gospel with the people.—*The Telegram.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

SOME EXPRESSIONS OF OPINION.

A READER of the *Baltimore American* recently asked that paper to publish "a summary of the Christian Science doctrine," and in answer to this request the *American* of Nov. 2 contained a brief but satisfactory statement of the fundamental faith of Christian Scientists, which we quote as follows:—

"As a religious denomination Christian Scientists believe in God, in the inspiration of the Scriptures, in the divinity of Christ, in the supremacy of God as spirit, in prayer without ceasing, and in all the essentials of Christianity, and claim that the prime office of Christian Science is to destroy evil and reform mankind. They believe that all evil will eventually be destroyed and become extinct."

The *New York World*, notwithstanding its recent attacks on Christian Science, made the following admission in a recent editorial:—

"The teachings of Mrs. Eddy have influenced modern spiritual thought more deeply than any other religious propaganda of the time and have not been without effect even on medical practice. It is only since Mrs. Eddy led the way that the doctrine of disease as an outward expression of sin could be preached in orthodox pulpits or an Episcopal bishop advocate a return to healing through faith; while in the treatment of nervous affections and diseases of personality it has put modern pathology under obligations not always frankly acknowledged."

Superficial critics have contented themselves with the statement that "Christian Science is neither Christian nor scientific;" not so, however, Rev. W. L. Swan, who in introducing a Christian Science lecturer at Providence, R. I., said,—

"After having preached in the Baptist pulpit for about twenty years, I find myself committed to Christian Science and to Christian Science work. I came by quite definite steps. A near relative, after being pronounced incurable by a large number of specialists, was cured. I decided to investigate and with absolutely fair mind. I said first: 'Do the Scientists heal?' And I investigated until I was satisfied beyond a shadow of a doubt that they did what they claimed. Then I said, 'How do they do it? I am going to separate the wheat from the chaff.' And I began the process of separating. I found it was very easy to write a criticism on Christian Science, but after I became an able critic it was impossible for me to demonstrate it. I said, 'I must try again. I do not know much about Christian Science until I can do the work that they do.' My experience was that I did better work the nearer I approached the understanding of Christian Science from the viewpoint of the book Science and Health by Mrs. Eddy, and how to work became more clear to me upon my acceptance of the teachings of Christian Science from this viewpoint."

Rev. Willard Brown Thorp of Chicago recently said,—

"I welcome this opportunity of speaking a fraternal word to my Christian Science neighbors. I have watched with the deepest interest and admiration the growth of your spiritual work. I recognize that the Christian Science movement has developed in a notable way certain important lines of genuinely Christian experience, and has made religion a vital thing in the lives of many people where it had ceased to be effective. It has demonstrated the power of a conception of God which is essentially metaphysical, to save and transform lives. It has shown what can be accomplished by the constant inner assertion of the great positive affirmations of faith, and by their resolute application to the specific problems of life. It has put us preachers to shame by building up a great church without any preaching whatever, simply by the discipline of its members in the inner practice of the faith. With some of its teachings and many of its forms of statement I find myself at variance; but for the spirit that prevails among you and for the work you are doing in many lives, I have the heartiest admiration; and I recognize that it is not the first time in the world's history that doctrines pronounced by the wise and learned 'foolishness' have been in the lives of multitudes 'the power of God unto salvation.'"

On Nov. 3 Mr. John Franklin Crowell of the *Wall Street Journal* wrote to the New York *Sun* as follows:—

"I am speaking as one who is not unfamiliar with the religious and social history of Christendom when I say that Christian Science is the only movement since the Wesleyan revival in the earlier part of the last century which has made any positive contribution to the development of the spiritual consciousness of the western world.

"Because of that fact it is a movement of immense sociological significance. When its results, as a constructive social force, on the small scale to which it has already expanded, are compared with the disappointing futility of nine tenths of our materialistic philanthropy, and with the confessed failure of most of our schemes of beneficence, one can hardly escape the conclusion that now, as in the tottering days of Roman power, the saving of human society from itself must depend primarily upon the capacity of religion to infuse into the lives of men and women the transforming power of the Scriptural understanding, without which no people has ever been able to escape the doom of those who forget God.

"Such is the movement with which the name of Mrs. Eddy is inseparably associated. If its success provokes its detractors to denounce it as 'a pious fraud,' it proves that they have as yet not got the spiritual point of view, and it reminds us that all of the world's great religious movements have been helped to recognition at the start by such unsympathetic opposition."

Rev. Madison C. Peters of New York, in contrasting the results obtained in that city by several denominations, said,—

"Christian Science churches are crowded; their gospel of health and happiness is winning people by the hundreds from all churches. The other Sunday on my way home from my own services I stepped in a Christian Science church. Though the service had long been dismissed, the gathering seemed like a social affair. I never before in twenty-five years' ministry saw such enthusiastic handshaking, such freedom in social intercourse, countenances beaming with such joy. As a stranger, I 'got the glad hand,' and was made to feel I was a brother among brethren."

These expressions are from various standpoints, and the consensus of opinion seems to be that the teachings of Mrs. Eddy in Christian Science are Christian and of value to the world. ARCHIBALD MCLELLAN.

AN ARTICLE BY MRS. EDDY.

The Independent of Nov. 22 contains an able and timely article by our Leader, Rev. Mary Baker G. Eddy. Those who desire to obtain this paper should order at once from THE INDEPENDENT, 130 Fulton Street, New York, N. Y. The price is ten cents per copy.

LETTERS TO OUR LEADER.

Boston, Nov. 8, 1906.

To Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—Recent events at your home have recalled some experiences of years ago, and have shown me anew how vain are the attempts to harm those who have made the Lord their refuge. I remember that soon after you went from Boston to Concord the report was assiduously spread abroad that you had passed on, or that you were incapacitated for further work. Again and again I denied this rumor, but was sometimes told, "Oh, you do not know." At times I felt a deep personal sense of regret that I could not see you, and in October, 1892, I did have the great pleasure of spending an afternoon with you, my beloved Teacher. I can never forget your inspiring words. At the close of this impressive occasion you invited us to look over the house, and I can see you now as you went so lightly up the stairs before us, and can almost hear your words, in playful vein, as you pointed out to us from the balcony your birthplace at Bow. I was happy to tell my students, on my return, that I had never seen any one so much alive as was our dear Leader, and that I had had a glimpse of the work which she was doing for the future of our great Cause.

Since I have had the privilege of serving you and our Cause, as an associate editor of our periodicals, I have learned many new and vital lessons from your close and keen criticism of all our work. I have been much impressed by your growing clearness of mental and spiritual vision, when I have had the great privilege of meeting you in the last two years, a privilege for which I thank you most profoundly.

And now, beloved Teacher, I know not how to tell you of my devotion at this hour when you have had to stand before doubt and incredulity—even scorn of the truth you teach—in order to prove that you still live, and as I read letter after letter from loyal Scientists who are roused by this experience to love and gratitude for their Leader, deeper than ever before, I thank God that you cannot be robbed of the love and confidence of the thousands who, through you, have come to know God and "the power of His Christ."

Lovingly and gratefully,
ANNIE M. KNOTT.

Boston, Mass., Nov. 15, 1906.

Dear Leader and Teacher:—It is a comfort these days to remember that "in the secret place of the most High", the unkindness of those whom you have so long labored to bless can neither harm nor disturb you, and it must be gratifying to you to find that the loyalty and love of an ever-increasing army of faithful Christian Scientists is wafted to you every day, and from every clime. I have just read Mr. Davis' little book and I am very glad you have commended it to the Field; also that you have expressed your hearty approval of the efforts of the Audubon Society. My own thought of the comprehensiveness of the redemptive work of Christian Science expands every day; that it is to permeate, purify, and uplift thought in every department of life and upon every plane of human activity, and I find myself impelled to more frequent suggestion in this line in my editorial writing. The value of an improved belief which evidences the corrective activity of the truth you have addressed to all mankind, and which is preparing the way for that larger revelation of Truth and Love that the study of Christian Science will bring to all as soon as they are prepared to receive it,—all this is growing upon me.

I am planning, in the near future, to say something editorially of this present world-ministry of Christian Science, and to refer to a most interesting discovery which I made recently while looking over some English periodicals.

In the *Hibbert Journal* (one of the leading philosophical and theological Reviews of England) there appeared in 1904 an interesting article on "The Problem of Evil" by St. George Stock, and in answer to some criticism of his position Mr. Stock writes (January 1905):—

"I said that Christian theology was involved in a plain contradiction in ascribing evil to the will of a being who was all-powerful, all-good, and all-wise. It is not necessary to assert that 'God is all,' nor even that 'God is good:' but, if people insist on doing so, they must accept the conclusion that follows from these propositions; namely, 'There is no evil.' If any one doubts whether this conclusion does follow, let him look at the matter in this way. The proposition 'God is all' is an equation between its terms, so that the subject and the predicate may be interchanged. The syllogism therefore may be read thus:—

God is good; all is God: hence, all is good.

"That reasoning stands, and will stand, so long as the construction of our minds and the laws of thought remain what they are. It is not therefore very likely that my critics have done much to upset it. If they lack the courage of the Christian Scientists to assert the conclusion, there is nothing left for them but to deny one or both of the premises."

This recognition in 1905 of the invulnerability of the philosophical position which you maintained in 1875, is significant, and I am sure it will be of great interest to all thoughtful people, whether Christian Scientists or not.

With much love, and ever-increasing appreciation of your splendid life-work, I am

Your faithful student,
J. B. WILLIS.

Boston, Mass., Oct. 26, 1906.

My Beloved Leader and Teacher:—Since the dedication of the church, in June last, the increased interest in Christian Science has been marked in the larger attendance at the services, also in the Reading Room, and in the increased sales of literature to people who apparently have just been awakened to a desire to read it. The sale of "Science and Health with Key to the Scriptures" far exceeds that of last year, and last year that of the year before. It is beautiful to see the eager interest shown by those who are coming in for the first time.

The grand dome of The Mother Church stands as a signal to all passing; it tells of Christian Science, of "its establishment as a permanent dispensation, to remain forever among men" (Science and Health, p. 150). From the many societies and clubs which hold their conventions and anniversary meetings in Boston, streams of people find their way to The Mother Church, and every week hundreds of people visit your room. This is bringing to many who did not know anything about Christian Science, the knowledge that a book has been written, the understanding of which heals sickness and sin; that the author of this book has founded a Church; that she is living at the present time at Concord, N. H., and is at the head of this great movement which has been brought to their attention through the remarkable works it has accomplished.

It is most interesting and animating to come into contact with the awakening thought, and I write thinking you will like to know of the interest shown by so many of the visitors to your room, which often expresses itself in some appreciation of the beauty of the room, and its appropriateness for the one for whom it was prepared.

My beloved Teacher, my gratitude to you for all you have done and are doing for humanity, it is impossible to express in words.

With unceasing gratitude and love,

Your student,
ALICE S. BROWN.

Buffalo, N. Y., Nov. 2, 1906.

My Dear Mrs. Eddy:—Twenty years ago I was a hard-knuckled business man, clamoring for all that is mortal, seeking the superficialities of sensualism and everything sensational, being guided entirely by the evidence of the senses. In a moment the unexpected came, when all that I thought to gain was swept from my delusive thought. For seven long years it seemed as if I were being tossed to and fro in a great sea. Here Science and Health found me and commenced to deliver me from Egyptian bondage and darkness. Is it any wonder, when I commenced to study your writings, that I saw you as personal. Little evidence had I, until the evidence of the senses was somewhat reversed, that all this personality was in myself, and by this process it was being destroyed. Your books, with the Bible, have been my only instructors, and by their constant use I have been giving up all my time during the last three years to the healing of the sick, and many malignant diseases have gone out of sight as the truth was demonstrated in their seeming presence. Thus, by the change in my own thought, I have been able to help change the thoughts of others, whereby many cases have been healed instantly.

Permit me to thank you from the bottom of my heart for all you have done for tired humanity, and for placing me where I could commence to lose sight of my own personality. I find that as I lose sight of my own, I see less of it in others.

Yours in the one Mind,
MANUEL J. BAKER.

Kingston, N. Y., Oct. 30, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of First Church of Christ, Scientist, of Kingston, N. Y., in annual meeting assembled, desire to express our love for you and our loyalty to your teachings. We are grateful to God, and to you for the pure and exalted life through which you became His chosen messenger to sinning and suffering humanity. With grateful hearts we acknowledge your marvelous leadership of this, the greatest movement for the regeneration of mankind that the world has ever known. May we not forget your example of sublime patience with seeming persecution, nor the great love which flows out from you to all alike. May we ever keep in mind that as there must have been the greater light before there could be its reflection, so we can be reflectors of this divine light only as we discern and follow the truth which blesses the world.

With tender love we are, dear Leader,
Your grateful followers,
J. LLOYD PHILLIPS,
CAROLINE F. JAMES,
MERCY NUTTER DAVIS,
Committee.

Chicago, Ill., Oct. 29, 1906.

Beloved Leader:—As I contemplate the magnitude of your labor, and the breadth of your love for God and man, my heart melts in love. If words can be made to convey purpose and desire, then you may know that my whole heart's affection leads me to follow your footsteps in Christ. My loyalty to you was never so great as now, when I realize the importance of strictly heeding your admonition to us, "Come out from among them, and be ye separate." Oh, that our eyes may be opened, dear Leader, that we may know what this means; that we may hear the Voice you hear, and yield obedience as humbly!

Lovingly your disciple,
SAPPHO E. PRENTISS.

TESTIMONIES OF HEALING.

It is over twelve months since I first heard of Christian Science. We had come to California from England to make our home, and after staying in Los Angeles a few months my husband's business took us to Santa Barbara, where I was taken very ill. A doctor was called in, as I was in a high fever. In a few days another trouble set in, for which I had injections of morphine. My suffering was terrible. My landlady at this time begged me to read a book called Science and Health by Mrs. Eddy. I said I would read it whenever I felt able, as Christianity had ever been to me a favorite theme. The book was brought me and I read as often as I was able. At first I could not understand it, although I would often find something to comfort me. As I read on, the worth of its teaching was proved, for all the fever left me, although an operation was declared necessary. At this time I fervently prayed that God would show me in His own way what to do. The revelation came most beautifully to me. I awoke feeling that I was separated from all pain and sorrow. I was very happy, and for the first time in many weeks I used my limbs; they were normal, no pain in any movement. That night I had my first good sleep for many weeks. The operation was performed, but without ether, and was almost painless. I left the hospital to return to Los Angeles and felt no fatigue from the journey, although my illness had lasted about four months. For many years I had taken medicine almost daily for bowel trouble, but this as well as other ailments has been overcome by Truth.

After coming to my home a serious condition appeared, and I felt that something should be done. The thought then came, Who does the healing work? By this time I had gained in understanding, and after an hour or so with Science and Health I lost all fear. I took my troubles to God in the way taught by Mrs. Eddy, and lived as near to this teaching as I could, and in about ten days all signs of the disease had vanished. I was well and have remained so. It seems impossible to describe my feelings during my healing. I was happy, I believed entirely that God would heal me, and that I was suffering only from an illusion of mortal sense; and the proof of this understanding was my healing. I thank God daily for Christian Science. Surely our dear Leader, Mrs. Eddy, has ever her daily bread in the knowledge that her book is helping thousands to know of man's rightful inheritance. My gratitude to her can be best expressed in my daily life, and with God's help I shall prove myself worthy of Christian Science.

ROSA A. EWING, Prospect Park, Cal.

So much good has been brought into my life through the teachings of Christian Science that I feel very grateful to God, and to Mrs. Eddy that through much labor and love on her part we have an inspiring and practical religion. I first heard of Christian Science when seemingly surrounded by fear and doubt, while yearning for something better. The Word of Truth came to me as a ray of light in the darkness, and when the book Science and Health was brought to my notice it was gladly read. I was then suffering from a serious trouble, with no means or hope of recovery. I decided to consult a practitioner, and with much love and kindness she directed me to the study of Science and Health. Within a week I was entirely healed and feeling better than ever before. I began attending the Christian Science services and can never forget the deep impression which the first made upon me: it seemed as if the hall was illumined by Love, and at the close of the service much kindness was shown by every one present.

While crossing the high altitude on our way from Kansas City to Los Angeles, a great sense of faintness came over me, but upon requesting help from one of my boys I was

Digitized by Google

soon relieved and able to eat as usual. Before taking up the study of Christian Science I was always sick during a journey on the cars, but now I can travel any distance without feeling any ill effects. When we reached our journey's end it was Thanksgiving morning and I was very grateful that I was well and able to attend the beautiful service.

MRS. NELLIE M. WHITESIDE, San Jose, Cal.

It is with a deep sense of gratitude to God, and to our beloved Leader, Mrs. Eddy, that I attempt to tell of some of the benefits I have received from Christian Science, spiritually, physically, and financially, during the last three and a half years. I was a sufferer for ten years from severe rheumatic trouble. I was obliged to wear a steel brace, and hardly knew an hour's relief from pain, notwithstanding the fact that I had the best medical attention and hospital treatment. I am grateful for the kindness shown me, but I had no permanent benefit from medical treatment.

I have since been healed through the study of Science and Health and the treatment given in Christian Science. My limbs have become normal in every way; I am walking erect without the aid of either brace, crutches, or cane, which formerly were necessary; and my health is better than for twenty years prior to taking Christian Science treatment. The tobacco habit of years has also been overcome, all desire for it being eradicated solely through the reading of Science and Health.

Only sufferers who have been led out of darkness into light can appreciate the love we hold for our Leader, who has shown us the way and taught us to know the truth that makes us free.—JOHN S. KNAPP, Baltimore, Md.

Christian Science has kept myself and family free from sickness, while prior to gaining this knowledge we seemed to have it all the time. I was a member of an orthodox church when one of my children had a severe illness, and had three different doctors, but found no help. One day a friend stepped in, and when I told her that the doctors could not help the child, this friend, who was a Christian Scientist, said that evil has no power over God's children. Instantly I prayed to God with a new faith, and the child was healed. There was no relapse, and that is now eight years ago. Finding this truth, I became a Christian Scientist, but a few years after my faith was tried by a severe attack of illness. Through the understanding of Christian Science, however, all was overcome without material means. I thank God, and our Leader, for this glorious truth that makes us free from sin and sickness. I am the mother of eight children,—our family with the parents making ten in all.—and I have gained all my knowledge of this truth by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy.—MRS. ELIZA MACKENZIE, St. Paul, Minn.

I joined an orthodox church at the age of fourteen and tried to live up to my profession, but for a number of years before I began the study of Christian Science I was not satisfied. I kept reaching for something which might help me to understand the Bible better, but I did not find the light for which I was seeking until I commenced the study of "Science and Health with Key to the Scriptures."

It was in a very dark hour when a kind lady came to tell me of the wonderful cures that were being made by Christian Science. I had never heard of it only as I had heard it ridiculed, but I was ready to try anything to have my daughter healed. I commenced the study of the textbook at once, and have studied it faithfully and prayerfully in connection with the Bible and *Quarterly* ever since, now seven years, and it becomes more precious every day. I have never used material remedies of any kind since I began to study Christian Science, nor have I had the least desire to do so. My daughter was healed of chronic throat trouble and helped in many other ways. I have been healed of a very severe rheumatic trouble. My healing was slow, but two years have passed and there has been no return of the disease. I have also been healed of an ailment which had given me much trouble for eight years, and another from which I had suffered untold agony for ten years. For all this I am very thankful, but the spiritual help I have received through the study of the Bible and the Christian Science text-book is much more to me than all else. It has made me a better woman, enabled me to be more forgiving and to love my neighbor better. Words cannot express my gratitude to dear Mrs. Eddy for what she has done and is doing for all who will accept the truth as taught by her. I can only show my appreciation by striving to be a better Christian each day than the day before. I thank God for the desire He has given me to grow in grace and in the knowledge of the truth.

MRS. MARY A. WHYBROW, Bloomfield, Ia.

In September, 1901, I was taken seriously ill and the attending physician decided upon an operation. During the weeks following this operation I gradually became able to leave my bed, but only to find myself an invalid, barely able to look after my own wants, much less those of my husband and children. I suffered constantly and severely. My physician suggested that a change might be beneficial, and accordingly I was sent away from home. In my new surroundings the best of care and of medical attention was provided. Both my physician there and the one in Syracuse were skilful and conscientious, but at the end of December I returned to my home in the same helpless condition; still suffering the same pains, and very much discouraged. No hope was held out to me of immediate recovery; I was told that it might be months, perhaps years, before I could be well again. Another operation seemed inevitable, but the cost of medical attendance, nursing, and other items incidental to my sickness were already a burden to us.

While I was away seeking health, Christian Science was brought to my attention, but I did nothing about it. In January, 1902, after my return home, as the discouragement increased, I remembered the kindly words of my Christian Science friend. I then decided to try the Science, but fearing to have it become known, I had treatment out of town. I did not get the physical help desired, and upon the recommendation of my practitioner I sought help from a Scientist in this city. My treatment lasted but three weeks; I was completely healed, and since that time have enjoyed the best of health. In 1899 I had been greatly troubled with my eyes, and was examined by an oculist, who pronounced the trouble serious. I procured the glasses he prescribed, and wore them constantly until during the three weeks' treatment in Christian Science, when I was also healed of the trouble with my eyes and stopped wearing the glasses.

I am grateful, indeed, for the physical help received, but far more blessed is the spiritual understanding which comes through the study of the Bible as illumined by Science and Health. For this I can never cease to thank and love our dear Leader. I am no longer ashamed of Christian Science, but deem it a privilege to live in the age when it is being taught and lived.—MRS. MARY I. GAYLORD, Syracuse, N. Y.

On Dec. 23, 1897, I met with a railroad accident on the C. & N. W. Railroad, on which I was employed as locomotive fireman. I was picked up by fellow-workmen and taken to Milwaukee on the first train. The company's physician was called, and also my family physician, my home at that time being in Milwaukee. My injury then appeared to me very slight, and I felt it my

Digitized by Google

duty to go to work, but the doctor told my wife that an injury of this kind would not develop for about three months, there being a serious lesion of the heart. His predictions came to pass, for I gradually grew worse; consultations of physicians were called at various times, including eight of the best in Milwaukee, and the Brotherhood of Locomotive Firemen, of which I am a member, paid my total disability claim after a rigid examination by their physicians. My family physician told a member of my family that there was no medical record of a patient with this injury who lived longer than three years. I suffered untold agony, and the only relief I could get was by hypodermic injections of morphine.

Having been told by all these physicians that there was no medical help for me, I was in despair and looked upon my time as being very short in this world. At this time Christian Science was brought to my knowledge by a lady who is not a Scientist. I very strongly questioned the healing power of Christian Science, but as my wife was in favor of my giving it a trial, I finally consented, as I could see no other possible channel of relief, and at this juncture I received a letter from my brother and also from my sister, advising me to try Christian Science. I did so, and after taking one treatment I went to bed and slept eleven hours, being the first night's sleep I had had for over two years. I was completely healed in a comparatively short time and have again passed the necessary medical examination required by all railroad companies. I would be pleased to answer any inquiries on this subject.

I cannot find words with which to express my gratitude and heartfelt thanks to God, and to our dearly beloved Leader, Mrs. Eddy, for showing us the way out of darkness into light. To me and my family the spiritual understanding is far greater than even this marvelous physical healing which I have received.

FRANK J. ALBRIGHT, Peshtigo, Wis.

I feel that the health and happiness which is in our home through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, should be hid no longer, and I gladly express my thankfulness to God and to our beloved Leader for these blessings. I am also grateful for all the Christian Science literature. While we are most thankful for the bodily healing which has been experienced in our home, the peace that is now mine is what I am most grateful for. I rejoice in the privilege of helping others and know the only way to prove my gratitude is to be faithful to our Leader's teachings.

LUTIE INGAMELLS, Waterloo, Ia.

I feel so deeply grateful for what Christian Science has done for me that I cannot refrain any longer from sending my testimony. Sixteen years ago it found me a mental and physical wreck. We had three of the best doctors in our city; one thought an operation necessary, the others said I was too weak to undergo it, so I took medical treatment for several months, but without receiving any help. I became very much discouraged and was filled with fear.

I had joined an orthodox church when I was quite young, and had lived up to its requirements the best I knew, but this did not satisfy me nor heal me. I took treatment in Christian Science and was healed, and after I had read Science and Health for one week I was convinced that I had found the truth. I was healed of a great many physical ailments. My physician had ordered a very limited diet, but the Scientist told me I could eat whatever I wished, taking no thought for the body and giving God thanks. I did so, and no harm came to me. In four weeks' treatment every one of my physical ailments had disappeared; I was well and strong,—something I had never been in all my life before. Since I have known of this truth I can take long walks without being tired. Paul's words in the eighth chapter of Romans have been a great help to me: "If Christ be in you, the body is dead because of sin; but the Spirit is life because of righteousness. . . . Therefore, brethren, we are debtors, not to the flesh, to live after the flesh. For if ye live after the flesh, ye shall die: but if ye through the Spirit do mortify the deeds of the body, ye shall live." When I was being healed in Christian Science I was eager to understand this truth, and would ask many questions, but the practitioner would say that the spiritual meaning would come to me, and it did. I remember waking up at night, on several occasions, when the beautiful spiritual meaning of these verses was unfolded to me, and what an uplifting it was! Is it any wonder that we are grateful to God, and to our dear Leader, Mrs. Eddy, who has made possible for us the understanding of this wonderful truth. My greatest desire is to consecrate my life more to God and to His Cause, and that I may prove by right living that I am trying to be a Christian Scientist.

MRS. SADIE D. MANN, Washington, D. C.

I feel it to be a duty and also a pleasure to testify to what Christian Science has done for me. I became interested in Christian Science through the healing of my mother, after physicians had failed to give her any relief. She was rapidly sinking, after three very serious attacks, but was healed by Christian Science in a short time. At this time I was very much opposed to religion, and the Bible seemed to me to be full of contradictions, but later the thought came that Christian Science must be the true religion because it teaches the healing power of Truth, and since studying it the promises in the Bible have been proved to me, and this has cleared up the seeming contradictions. Christian Science teaches us to acknowledge no other than the one Divine power, as the Scriptures declare that God is omnipotent, and that in Him "we live, and move, and have our being." Through this understanding I have been freed from many false appetites and discordant conditions, and I long to know more of this blessed truth which is doing so much for mankind.

I am truly grateful to God, and to Mrs. Eddy for bringing again to the world the true religion of Christ Jesus.

R. CARROLL, Toronto, Ontario.

My deep sense of gratitude for all that we are receiving through Christian Science must now go to where thanks is due. Although far away from all the dear Scientists, I have much cause to return thanks to God, and also to our dear Leader for showing us this living fountain of Truth; for giving us the Lesson-Sermons,—a substantial morning meal indeed; and our dear periodicals. I wish to thank all the contributors.

I send special thanks to Mrs. Eddy for showing us through "Science and Health with Key to the Scriptures" that God is universal Love and is All in all. I have realized through its teachings that God is an ever-present help in time of need, and have learned that only as we start from the right standpoint can we reach the heights of Truth and Love, and be healed. The material senses must indeed be subdued at all points.

BESSIE A. LUDT, Christiania, Norway.

I live in the country and our periodicals come to me like old friends, tried and true. I receive so much help and encouragement from them that I thought an experience which I had might help some mother to conquer fear. All my life I had suffered from fear; and if Christian Science had done nothing more for me than to help me in this particular, I would be deeply grateful for it. In Christian Science I have learned that divine Love governs me and

Digitized by Google

that it is my duty to rejoice always. On account of her vocation, my daughter was obliged to be out two or three evenings a week, which seemed a great trial to her father and myself. One stormy evening she was detained until late. I had sent to the station for her, but she did not come. The time passed for the next train; her father walked the floor and told me of the dangers to which she was exposed in a large city like New York. I became so filled with fear that I went into another room to be alone with God. As I sat there, "The Mother's Evening Prayer" by our dear Leader (Miscellaneous Writings, p. 389) came to me, and as I repeated the words, "His arm encircles me, and mine, and all," I realized that my daughter was divinely protected and sweet peace came to me. I was so glad that the hymn read, "and all," for I knew that there were other young girls who were seemingly alone in the world. In a short time my daughter returned safely. This beautiful hymn has helped me many times and I am constantly finding new thought in it.

MRS. C. A. FARRINGTON, Hartsdale, N. Y.

Christian Science healed me of spinal trouble supposed to be caused partly by an enlarged liver, and a strain afterward left me an invalid for nearly seven years. I was able to walk but a few steps, or even to stand but a few minutes at a time. I was subject to severe attacks which the attending physician said would carry me off. Fourteen years before, I had an attack of lung trouble from which I had never fully recovered. I could not use my right arm without pain, and when I complained of this to my physician he replied that I would always have pain when I used the arm, on account of organic trouble. I told the Scientist who treated me of this trouble and the doctor's verdict. She smiled kindly and replied that God did not make any such law. In a few days I noticed the absence of pain, and it has never returned. This was seventeen and a half years ago. With the healing came freedom from the pain, and in five months I could walk from the carriage into the stores to do shopping, and all about the house. It was the first time I had been conscious of freedom from suffering for so long a time that I did not know any one ever felt as I did when freed. I also ate what was set before me, which was a great relief to the family.

In a few months I was free, and happy in the hope that I might do for some poor sufferer what had been done for me. I felt like the man whom Peter healed at the Beautiful Gate of the temple, and I have never had a sick day since. The sense of rest and peace which came to me from the first was so beautiful, and the best part of it all was that spiritual healing came with the physical. The knowledge of how to overcome evil with good was such a priceless treasure. Words cannot express my gratitude to God, and to Mrs. Eddy for the truth which has led me along these many years in the way our Father has opened, and which makes the Bible teachings practical.

MISS SUSAN W. SCOTT, Toledo, O.

It is with a great deal of pleasure and a very thankful heart that I write of my healing. I was healed of almost unendurable suffering from neuralgic trouble, when this condition had continued, without a moment's cessation except the few minutes I slept, for three days and nights. When about the house I was never without a big silk handkerchief to protect my head in case I should open a door. Even in summer, when I went out I had to wrap my head. This suffering had come to me every two or three weeks for more than twenty-five years. I took one Christian Science treatment, and from that time to the present I have never been incapacitated by this trouble or any other, and it is now more than fifteen years since the treatment was given which brought instantaneous relief. I enjoy my food like a child, and though I am nearly eighty-three years old I am in excellent health.—MRS. M. L. ARNOLD, San Antonio, Tex.

I wish to tell of an experience which may help some one who is trying to find his way from darkness to the perfect light of Truth. Our little son, ten years old, fell and cut his wrist very badly. He started for home, nearly a mile distant, at the same time declaring the truth and knowing that God could do all things. A gentleman caught him and wrapped a handkerchief around his wrist. He asked the boy where he lived, and when he told him, he said, "You will never get home, you must go to a doctor as quick as you can." The child said we were Christian Scientists. The gentleman responded, "Well, Christian Science can never heal this," and was going to take him to a surgeon, but the child begged the gentleman to bring him home, which he did. He sent another little boy to me, as fast as he could run, to tell me what had happened. I went out to meet them, declaring the truth and knowing that God, divine Mind, is a perfect healer and that blood has nothing to do with life. When I met them the gentleman told me that I must have a doctor immediately. I thanked him and told him I would attend to the child. When I was alone with the child I told him that God was his Life and his strength, and he said he knew it. I then loosened the bandage, put a clean cloth on, and kept declaring the truth. After supper he was able to move his fingers and we read the Lesson together. He found the references in the Bible and read them. The next morning he dressed himself and went to school, took an examination and wrote with that hand. This happened Monday evening, and Wednesday the wrist was entirely healed, there being nothing but a slight mark left.

We have had many demonstrations, for which we are very thankful to God, and to our dear, loving Leader, Mrs. Eddy, for giving us the perfect understanding of God.

MRS. B. B. UDELL, Chicago, Ill.

It has been several years since I began the study of Christian Science, and many times I have thought of sending an acknowledgment of its benefits. During the reading of a Lesson-Sermon the thought came to me very forcibly that my silence was a form of denial of the truth and what it has done for me. I am a trained nurse, and became interested in the subject through the healing of one who had been a patient of mine under medical treatment, and who was afterward restored through the understanding of the Christ-healing as taught by our Leader, Mrs. Eddy, in "Science and Health with Key to the Scriptures."

Since beginning this study I have had many proofs of the power of Truth, and have not for an instant thought of seeking any other remedy than that of divine Mind. Through Christian Science I have been protected from many ills to which flesh is heir. Through obedience to the impulse to write this testimony, an ailment of long-standing and tenacity has lessened; which verifies Mrs. Eddy's words, "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (Science and Health, p. 22).—HELEN M. TAYLOR, Hornellsville, N. Y.

We became interested in Christian Science through our daughter's healing from a distressing nervous trouble, after the doctor had said she would be in that condition for years, if she lived at all. She was healed by Christian Science in three weeks. The other daughter had never been well, but both are now in good health and are students of Christian Science, thanks to Mrs. Eddy and our text-book, Science and Health, which truly illumines the Scriptures.

MRS. M. J. HORTON, Altoona, Pa.

FROM OUR EXCHANGES.

The traditional attitude of the Church to the world is altogether wrong. The Church has stood outside and tried to influence the world from a vantage-ground of superiority, instead of serving as the leaven which mixes with the lump. And the world takes its revenge by holding strictly aloof from the Church, and refusing to accept its words as authoritative. The existence of a Church, still less the establishment of a Church, does not make a nation religious. The nation claims the right to judge even the churches, and to test their ideals by those of the religion which they profess. The churches can do much to make the nation religious, but it must be in the way of education and persuasion, and not by any show of authority or privilege. The position just now is critical, not because there is any fresh alienation from religion on the part of the people, but because the churches are not representing religion as they ought to do. Their intense conservatism and their bitter partisan spirit alienate all men who love truth and charity. The churches are too selfish, too intent on their own ends and the maintenance of their own position. They forget that they are only the handmaidens of that kingdom of heaven which means society organized for spiritual ends. Unless they serve these spiritual ends with the utmost zeal and self-sacrifice they are not worthy of their vocation. The religious nation is the nation that seeks these ends also. The nation may find the churches its allies and leaders in the quest, or they may be the greatest stumbling-blocks in the way. How to do the one and avoid the other is the great question of the future for the Church of Christ.

The British Congregationalist.

The great difficulty with those who believe only in nature and reason, that they are not able to see spiritual things, is that they require evidences to the natural [physical] senses, instead of truths addressed to the spiritual understanding. As our knowledge of sensual or material things depends to a great extent upon our coming into relation or contact with them, so, spiritually, we must come in contact with spiritual truth and goodness, that is, must have *experiences* of them, before we can really know them. Hence we read, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." As one must place himself in communication with natural things, become obedient to the natural laws of his senses, before he can see or hear, so he must obey the spiritual laws of his being, which are the precepts of the Word, if he would be brought into assurance of spiritual realities; and he will soon realize that what seemed improbable has now become a reality of personal experience and conviction. Spiritual insight does not depend upon intellectual culture, the ability to reason, or upon learning of any kind, so much as it does upon the state of our will, or love. "If any man will do his will, he shall know of the doctrine." D. V. BOWEN.

New-Church Messenger.

It is not lack of understanding that hinders the Church, but failure to embody that which is seen and believed. It is easy to find a hiding-place behind the imperfections of Christians, and those who do not desire to have Christ reign over them are quick to take advantage of the ever-present shelter. We do well, of course, to insist that one man's meanness does not make another man's goodness; that no one is excused from obedience to God because of the imperfections of Christians. That is all true, but it does not excuse the Christian for unworthy living. The fact is that nothing so affects life as life. The dishonest act of a professing Christian will often upset all that a dozen honest Christians can do.—*The Standard.*

He who lives the life of the Soul, the life that Jesus lived, the life of faith, hope and love; he who hides his life in God, lives always above the flood of years. If from his cleft in the rock he dares to breathe his hope into the ears of men, and sing his song of trust even to the stars, the world will conspire to pass it along and perpetuate it in the heart of humanity.—*The Universalist Leader.*

Hatred is the supreme folly. The man who takes a grudge or jealousy to be the guest of his heart for life, takes a viper into his own bosom. The last thing which we can afford to do, purely on selfish grounds, is to hate any man.—*Zion's Herald.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines, 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

By an executive order issued by President Roosevelt relative to the Panama Canal Commission seven executive departments have been created in place of the three which have formerly existed. The heads of these seven departments are all to be directly responsible to Chairman Shonts of the Commission. They are as follows: Chief engineer, John F. Stevens; general counsel, Richard Reid Rogers; chief sanitary officer, Colonel William C. Gorgas; general purchasing officer, David W. Ross; general auditor, E. S. Benson; general disbursing officer, E. J. Williams; manager of labor and quarters, Jackson Smith.

Flying the flag of the United States which has been placed nearer the pole than any other national standard, weather-beaten and somewhat disabled, the Peary arctic steamer Roosevelt arrived on the 23d at Sydney, Nova Scotia, under sail and steam, after sixteen months' vain effort to reach the pole. The expedition reached 87 degrees 6 minutes north latitude, a point two hundred and three miles from the pole.

Secretary of the Interior Hitchcock admits that charges have been submitted to him that through alleged favoritism on the part of some person or persons in authority the Union Pacific Railroad Company had come into control of large coal land holdings in Wyoming. It is understood that there will be interesting developments in connection with the Wyoming land frauds in the near future.

The Federal Grand Jury in the United States Circuit Court, Criminal Branch, last week found the American Sugar Refining Company guilty of receiving about $26,000 in rebates in defiance of the provisions of the Elkins Act. On the charge of giving these rebates the New York Central was convicted the week previous.

The surplus moneys in the Treasury have exceeded all expectations. At the close of business on the 20th ult. the Government had received nearly $15,000,000 more than it had expended since the beginning of the fiscal year on July 1. A year ago there was a deficit of nearly $14,500,000.

Foreign.

Plans are nearly completed for the visit of a Japanese squadron to the United States in the early part of next year. It is announced that the sum of 500,000 yen ($250,000) has been appropriated by the Tokio Government to pay the expenses of the naval visit. The visiting squadron will consist of a first-class battleship and two armored cruisers of the first class. All will be ships that fought in the Russo-Japanese war and which participated in the battle of Tsushiman Straits where Togo was victorious. The Japanese program provides that the squadron shall make a journey around the globe. From San Francisco it will proceed down the coast, making brief stops at Chilean and Peruvian ports, around Cape Horn and up through the South and North Atlantics to New York. The present plan contemplates a considerable stay on the eastern seaboard, after which the squadron will sail for England. Thence the return to Japan will be made by way of the Suez Canal.

An imperial edict providing for the reorganization of the Chinese Government has been published. The edict outlines many changes in the administration system, such as the consolidation of various boards, the creation and abolition of others, and the establishment of a political council whose duty it shall be to gather public opinion. The edict also points out that the present situation in China is dangerous if both high and low are not made to obey the laws, and it calls on the ministers to act together in order to improve conditions.

A deputation of four Samaritans has been in London trying to sell a manuscript of the Pentateuch dated from 1050 A. D. It is said that poverty induced the Samaritan community to dispose of the treasured manuscript, for which $25,000 is asked. It is a long roll of parchment, mounted on stout paper. It is written in a small, but clear Samaritan hand. The lower part has been damaged by water, but the rest of it is perfect. It has been offered unsuccesstully to the British Museum and will be offered to Oxford University.

The first attempt to exclude Chinese from landing in Great Britain is now occupying the attention of the Immigration Board. Thirty-two Chinamen from Hong Kong, who arrived at Gravesend recently on their way to Liverpool, where they had been engaged to work in laundries, were refused permission to land, the immigration officers contending that the Chinamen lacked means to support themselves. This is the first case under the new Aliens Act and is considered one of great importance.

The Government merger system of Mexican railroads is to be extended southeast from Durango to the city of Guadalajara, a distance of about four hundred miles. The International Railroad, which is a part of the Government system, runs from Eagle Pass, on the Rio Grande border, to Durango, and by extending the line to Guadalajara a new and direct route from the southwestern part of Mexico to the United States will be obtained.

A telegram from Shanghai says that Prince Pu Lun, nephew of the Emperor, who represented China at the St. Louis Fair and is one of the most progressive men in China, has been commissioned to make a study of the naval organizations of Great Britain, Germany, France, the United States, and Japan, with a view to the reconstruction of the Chinese navy.

Madame Curie, who was associated with her late husband, Professor Curie, in the discovery of radium, has been appointed to the professorship of sciences in the University of Paris to succeed her husband. She has already begun her lectures at the Sorbonne College of that University.

The amount of German capital invested in German colonies totals thousands of millions of marks. Herr Dernburg, Colonial Director, recommends the building of railways as being the only means of insuring the economic development of the colonies.

In the German Reichstag last week a supplementary budget amounting to over $7,300,000 was introduced to meet the expenses of the war in German southwest Africa, making $26,500,000 for the fiscal year ending March 31, 1907.

Industrial and Commercial.

Rarely, if ever, in the history of modern industries, either here or abroad, says the *Scientific American*, has there been witnessed such an extraordinary condition as confronts the steel industry in the United States. Already the rail mills are crowded with orders to such an extent that their total output up to the end of next year will barely serve to meet the present demand; and the mills which are devoted to the production of structural steel are overloaded with work and must be pushed to the very utmost to fill orders that are due to be delivered before the spring of 1907. Even more acute conditions prevail at the plate mills, the demand for whose output is to be attributed very largely to the growing popularity of steel cars. These mills have sufficient orders on the books to keep them going at full pressure practically for the whole of next year.

The net earnings of the bulk of the railroads of the United States for the year ending June 30 last, aggregate $787,596,877. The income from other sources than operation amounted to $132,625,982, making a total of $920,221,850. Against this amount were charged as interest, rents, betterments, taxes, etc., $590,380,554, and as dividends, $229,406,598, leaving a surplus of $100,428,707 for the year. The dividends declared in 1906 were $34,248,603 more than in 1905. The total gross earnings of the roads amounted to $2,319,760,030, of which $618,555,034 were passenger earnings and $1,640,042,862 freight earnings, while the operating expenses aggregated $1,532,163,153. These figures include reports from railway companies operating 220,020 miles of line, or about ninety-nine per cent of the mileage that will be covered by the final report of the Interstate Commerce Commission.

Since the ore-selling season opened at Pittsburg, three or four weeks ago, practically all of the ore that will come down the lakes next year has been sold and the market has been about cleaned up for delivery in 1907. Such a thing has never before occurred in the history of the Lake Superior ore business. Practically all of the ore that can be produced during 1907 has been placed under contract.

Immense power, permitted to run to waste for many years, is to be put to commercial use on the Manistee River. From Sharon, where the north branch joins the main stream, there is a fall of four hundred feet to Lake Michigan, and it is estimated that for every foot of this fall one hundred horsepower can be developed.

The amount of cotton of the crop of 1906 ginned up to Nov. 14, according to the bulletin issued by the Census Bureau, was 8,531,486 bales, counting round bales as half bales, as against 7,501,180 last year. The number of active ginneries is given as 27,881, against 28,310 last year.

The total value of wood and its manufactures exported from the United States in the nine months ending with September, 1906, aggregated no less than $50,000,000. In the fiscal year 1806 the total value of wood and its manufactures exported was practically $32,000,000.

The total amount spent in Massachusetts for the elimination of grade crossings of highways and trolley lines over steam roads for eleven months of the present year will be $2,653,394, of which the railroads pay $1,576,309, the Commonwealth $688,507, and the cities and towns $388,487.

to help them; but he is apt to forget that those who ask nothing, and who give neither praise nor blame to his way of thinking, those who are indifferent and unheeding, are as much his neighbors as those who come for healing. These people the young student is apt to call "my mortal mind friends," or "mortal mind people." Does the use of such expressions indicate that one truly loves his neighbor? Does it not rather indicate that he has not yet attained that consciousness of infinite Mind which obliterates the sense of separation and reveals mankind as united in one harmonious family. In asserting for another a mortal mentality we are declaring that which is unreal. What Scientist would speak of "my consumptive friend"? yet a belief in "mortal mind" has no more reality than a belief in disease. As we progress in our study of the power of thought, we shall hesitate and ultimately cease to bind any fellow-man with the fetters of our own unconsidered statement as to their mental status, their relation to God and to us.

Every Christian Scientist immediately registers a mental protest against the reality of disease whenever it seems to manifest itself in his own thought, in any one of his acquaintance, or even whenever he hears it mentioned in conversation. But how many of us protest against the reality of the evil beliefs which Jesus told us defile men, wherever manifested. These he called "evil thoughts, adulteries, fornications, murders, thefts, covetousness, wickedness, deceit, lasciviousness, an evil eye, blasphemy, pride, foolishness," and they may be said to contain the germs of all the disease and distress in the whole world. If we do not destroy them as seedling thoughts, they will bear fruit after their kind. As a student of Christian Science healing, no man would claim for himself any one of the above errors, nor would he claim sickness as a reality for any one on earth. No more should he allow any of these evil beliefs to pass unchallenged in his thought of any. In divine Love there can be no sense of superiority or of pity, and no one loves his neighbor honestly while admitting in him a thing he would not admit to be true of himself.

True love glorifies the loved one and cleanses his image from all taint and shadow. Mortal belief, however, does not make of this cleansing a short or a simple process. The beginning must be made by silencing in our own thought all unfavorable personal comment, even while condemning vigorously the error which mortal man does not know how to guard against. The process will be ended only when all mortal sense is destroyed and spiritual sense reigns supreme, but a little conscious effort, made every day, grows to be an unconscious habit, until we shall find ourselves dwelling in "the house of the Lord," in the consciousness of Love, forever, and that in it are sheltered all God's children. As we see more clearly, in the light pervading that celestial dwelling, we shall recognize "every man perfect in Christ Jesus," and know even as we are known by the Father, who made man in His image and likeness.

[Written for the *Sentinel*.]

TEACH ME, O GOD.

ROBERT E. RICHARDSON.

TEACH me, O God, not with my lips to pray—
The voice of prayer so many a time is drowned
In murky waves of oft-repeated sound
That choke the Spirit's call. Day after day
Strengthen the prayer that Thou wouldst have me say,
And let me know that in my heart abound
The unvoiced longings for Thy love profound:
And to those longings, in Thy blessed way,
Thou wilt give answer. So shall I, Thy child,
Raise glad and trusting eyes above the dense
Enshrouding cloud of this mortality,
And over all the noise of discords wild
That reach the earthly ear, with love intense
And pure desire I'll raise my voice to Thee.

SELECTED ARTICLES.

CHRISTIAN SCIENCE.

While not counted among the disciples of Christian Science, we would not be slow to recognize and admire the earnestness, devotion, and Christian spirit of its people. Men may differ as to its underlying philosophy, but none can question the deep faith of its adherents in God, their true discipleship of Jesus Christ, and the religious vitality of their Church.

They are unfaltering believers in the Christian religion. To their science they give the designation *Christian*, because they are first Christians. Like all of us, they give their own interpretation to the Bible, more literal than we would allow, and they much value that interpretation and that system of philosophy taught them by Mrs. Eddy, an article by whom we publish this week. Accordingly they have the same right as other Christians to unite in an organization and have their own ministers and churches, while there is no reason why those who hold their faith should not, when they please, remain members of other denominations, just as a Baptist or a Methodist may, when more convenient, retain membership in a Presbyterian or Episcopal church.

It is to their credit that their faith shows itself in their works. We do not refer so much to the generosity of their gifts to build noble places of worship, although such a temple as that in Boston might well excite admiration. We have in mind rather that fervor of their faith which reaches the roots of life and death, and makes them fully trust God and their doctrine of the nature of disease and health when they are sick. To those of other training their confidence has seemed fantastic and presumptuous; but in multitudes of cases it has seemed justified, so that the only recourse of their critics has been to refer such cures to the effects of imagination, for the cures cannot be denied.

Nor is their philosophy ignorant and thoughtless. It has appealed, ever since philosophy has been studied, to many wise men. It is the full development of a great school of philosophy which makes mind and thought the basis of fact rather than matter. It finds good and evil wholly in the mind, and so addresses its efforts for physical health, as well as for character, to the mind. Philosophers are divided between monists and dualists, giving us three great schools,—those who recognize both mind and matter as substantial; those who recognize matter only as existent, and are so materialists, and those who hold that the only real existence is mind, and that all matter with its phenomena are forms of thought, and who are therefore idealists. The votaries of Christian Science approach this form of thought in their philosophy, and at least are quite as legitimate in their doctrine as the popular materialism which allows the existence only of matter, and so denies both the immortality and the existence of the soul.

Holding these views in philosophy and religion, and representing unblemished moral and Christian character, it is to their credit that, during her lifetime, they honor their Teacher, Mrs. Eddy. Just as, after their death, other Christian bodies venerate Loyola and Luther, Calvin and Aquinas, Saint Francis and John Wesley, so the person and writings of Mrs. Eddy are almost, but not quite, sacred in the eyes of her disciples. They honor her while she lives; and it pleases them that, under the system she has taught, her life is lengthened out to an extreme old age. Such respect for their great Teacher is a beautiful impulse and deserves honor.

And the faith which they hold appeals to a good class in the community, to those who have a high moral character, and are capable of high ideals, and possess the potential of loyalty. They are of those who wish to look beneath the surface of things, and who can rise above the low levels

Digitized by Google

of coarse matter into the higher spaces of spirituality. There are among them many people of high general intelligence and wealth.

It is natural, with Mrs. Eddy as their Leader, that the Christian Scientists should make much of the ministry of women. We judge that a majority of their ministers are women, and such are those who have taken up the work of healing. While Catholics and Episcopalians and Presbyterians exclude from the higher offices of the Church the sex which is most religious and has most communicants, the pulpits of Christian Science are as much womaned as manned, which shows a progressive and reasonable spirit.

The Christian Scientists have been much spoken against because they prefer their own method of healing, and because people sometimes die under their treatment. But the courts have acquitted them; and we do not see how, when every other sort of healing is allowed as legal, that which makes much of the influence of the mind may not be allowed its place for those who believe in it, as well as systems that depend on water or electricity or massage or infinitesimals.

We are not here defending the philosophy or the system of Christian Science. We only defend its liberty of faith and recognize the multitude of its adherents, their moral earnestness, their spiritual fervor, and the frequent success of their efforts, through the mind, to heal the ills of the body. Editorial in *The Independent*.

RELIGIOUS TOLERATION

The *Journal* is always pleased to receive communications from its readers. It is the wish to publish all that are received, but at times there are reasons why some particular one cannot be used. The average contributor to a newspaper makes the mistake of writing too much. He or she fails to consider that there are other demands being made on the paper's space. Many papers limit all communications to three hundred words, which are sufficient for an expression on ordinary topics. When, however, a question calls for argument three hundred words will not do justice to the writer. But the length of contributions is not always the reason for their non-appearance. Frequently the tone of an article submitted is such that it would only create ill-feeling and start a useless debate. The *Journal* has at hand a communication which illustrates the point in question. A preacher of the gospel, who is credited with doing a great work for the good of humanity, attempts to reply to the recent lecture on Christian Science delivered in this city by Judge Buskirk. The *Journal* reported Mr. Buskirk's lecture by way of news, as it has reported many sermons delivered in the city. What Judge Buskirk believes and what those of his Church believe is no concern of the *Journal*. The Constitution gives him and them the right to worship God as they see fit, and history shows that you can't beat religious convictions out of people. Consequently when our zealous and earnest evangelistic friend makes an attack on Christian Scientists, calling their religion an invention of the devil and consigning them to an old-fashioned hell, he would deny them a right which he claims for himself. Such a communication would start a hopeless religious discussion and do absolutely no good. The world has wasted altogether too much time in religious discussions. A fair-minded discussion of Christian Science might not be beyond the province of the newspaper, but an attack on the Church is on a par with an assault on any other creed or denomination. So far as we know there isn't a Christian Scientist about the *Journal* office, and we confess great ignorance concerning the aim of the creed; but those who have espoused the cause belong to the nation, just as do the converts of our esteemed evangelist, and we would not deny either the right of worship and belief. Let us have more toleration, and whatever judgment may be necessary, let it be left to an all-wise Providence.

Lafayette (Ind.) *Morning Journal*.

THE LECTURES.

CONCORD, N. H.

The annual lecture under the auspices of First Church of Christ, Scientist, in Concord, was delivered Sunday evening [Oct. 28] in the church edifice, corner State and School Streets, before an audience which completely occupied all available space in the commodious auditorium. While there were small parties of Christian Scientists present from out of town, the audience was practically made up of Concord people and represented all faiths and callings, being widely representative of all classes of the city's people.

The lecturer was Prof. Hermann S. Hering. Mayor Charles R. Corning was the presiding officer and his introductory remarks were as follows:—

It is not within my competency, nor is it my purpose to speak to you this evening concerning Christian Science as Christian Science, but I feel that I should not be justified on this occasion if I failed to say a word respecting Christian Science and its relations to Concord. As the representative of all our people, it cannot be unbecoming in the mayor to touch briefly on this subject.

We are all intensely proud of our city, its traditional past, its attractive present, and its bright promises for the future. Whatever has been done, spiritually or materially, or what may hereafter be done for the welfare of Concord, must meet the cordial approval of every good citizen. Concord has the reputation of being cold and slow to respond, reserved, perhaps, rather than enthusiastic. Now this indictment may not be true, and in my opinion it does not count for much either way. Concord is no doubt conservative, but it is not the conservatism of indifference or want of appreciation. I have lived in Concord nearly every hour of my life, and I know the people with whom I live. Do you not recollect the sentiments of pride and delight expressed by our citizens over the building of this exquisite church, and why not? We were proud to behold this stately addition to the most beautiful and ornate collection of public buildings in any public place or square in New Hampshire, if not in New England. Architecturally we have in this church a source of perpetual delight. Surely we owe this church, to say the least, to the affection Christian Scientists have for Concord.

It is not necessary for me to call your attention to a public fact, to wit, the movement for better public roads. The State itself sanctions it. In Concord, however, with more than two hundred and fifty miles of streets and highways, a larger mileage than any city of its size that I know, the question of permanent roads assumes startling importance. We are constructing permanent streets, and I believe the public heartily approve of it, but the city treasury does not bear all the burden. Concord has good and generous friends living all over this republic and even in kingdoms and empires beyond the seas, even in the commonwealth of Australia. In all of these realms Concord has got friends who are begging to aid us in our work of street making. During my first year as mayor, friends of Mrs. Eddy requested permission to pay for the concreting of Main Street in front of the State House and extending north to Center Street. Not a penny did that work cost the city of Concord, and the modesty of those generous friends keeps their names veiled from public eyes. This year the Christian Scientists have given a dollar for every city dollar towards concreting State Street, and I feel that I reveal no secret in saying that the sources of generous gifts are not yet dried up, nor are they likely to be. I speak of these matters because I want the people of this city to understand the relationship existing between the friends of our distinguished townswoman, Mrs. Eddy, and the city itself. We can count the good these people have done to Concord, and I should write myself down a boor and a churl if I did not express my thanks and gratitude at all times and in all places for the

Digitized by Google

material uplift Concord has experienced through the Christian Scientists.

Thus far I have spoken to you as one who by his official position assumed the right to tell you whether or not Concord owed anything to Christian Science. I now want to say something which a good citizen is bound always to say when the intelligence of Concord people is questioned and ridiculed. I am sure you have heard of the muck-rakers. I wish I might use a better and more euphonious term; but, following the great names of John Bunyan and Theodore Roosevelt, I justify my use of it and speak of muck-raking. More than once I have received letters from many places asking me if I could inform the writers as to whether or not Mrs. Eddy was alive. I have always replied, as an honest citizen who wished the truth to be known, but no reply and no assurance seemed to have effect or to satisfy those in search of the sensational and the untrue.

Recently there have been in Concord representatives of one of the great metropolitan dailies, alleging that Mrs. Eddy was no more. Ladies and gentlemen, this is to me a painful and difficult subject. I have seen Mrs. Eddy, day after day, year after year, riding through our streets, and more recently I have seen the lady riding past my house, and yet strangers come here, foes to this religion, to assert that Concord does not know its own eyes and has lost its own senses. This afternoon, less than four hours ago, for the first time in my life, I stood face to face with Mrs. Eddy for a half hour. I listened to as bright, as vigorous, and as sprightly a conversation as I have ever listened to in my life, and I wish to bear my testimony against this cruel, cruel, bitter falsehood, not only directed at you who belong to this church, loving and devoted friends of the lady and Leader, but a stigma on Concord which is a sorrow and pain to one of the best and most generous friends the city of Concord has ever had.

A year ago it was my pleasure to introduce to one of the largest and most intelligent audiences that ever gathered within these walls, a distinguished public man and a lecturer of the Christian Science church, and again on a similar occasion it has fallen to me to present to this audience a learned and distinguished son of one of America's most professionally distinguished families. After achieving large and enviable success in his chosen profession, Professor Hering turned aside from high honors and assured fame and devoted his life to the advancement of Christian Science.

I have the pleasure to present to you Prof. Hermann S. Hering, an honored member of the Christian Science Board of Lectureship.—*Concord Monitor.*

SALEM, ORE.

The Christian Science lecture at the Grand Opera House, given by Clarence C. Eaton of Tacoma, last evening [Oct. 19], was greeted by a large, select audience. The speaker was introduced by Judge J. H. Scott in the following terse words:—

I am not a Christian Scientist. I have never made much of an investigation of the Christian Science doctrine. However, I have noticed several things in the lives of some of my acquaintances who are firm believers in Christian Science, that are very commendable. They seem to have perfect control of their tempers, and most of them look strong and happy and seem to stand trouble and vexation well. These things are very commendable, from whatever source they may emanate. If Christian Science be a practical religion, if it causes men to have a larger and better conception of Christ's teaching, if it causes them to seek earnestly spiritual affairs of this life, its mission is good. Who is it that does not desire to know the truth?

Capital Journal.

MANCHESTER, ENGLAND.

In the Manchester Midland Hall last night [Oct. 29] the Rev. Arthur R. Vosburgh, a member of the Christian Science Board of Lectureship in Boston (United States), spoke on Christian Science in the first of two lectures. Dr. W. F. W. Wilding, who presided, said in the course of his introductory speech:—

It is a happy coincidence that it is just six years ago to-night that I first met a Christian Scientist. I was at that time, and had been for ten years, a doctor practising medicine within twenty miles of Manchester. I had no faith at all in Christian Science, but was persuaded to try it for my daughter, who was then dying from tuberculosis in both hip joints and in the lungs. She had been firmly bound down to an iron frame, the usual appliance in hip disease, and kept always in a lying position, every movement of the joints causing much pain. Everything that medicine or surgery could suggest to help was tried, yet this dread disease had produced so much wasting and emaciation that at the age of eight years she weighed less than twenty-nine pounds. Therefore, with death confronting me, I placed her under Christian Science treatment, and at my urgent request a Christian Scientist called daily to pray for my child. After that first prayer all active disease ceased, and she at once began to walk without pain. The wasted tissues were slowly, gradually, but continuously rebuilt; the stiffened limbs became supple, and from that day (six years ago to-night) she has gone on improving, growing more robust, being able to bicycle, take her part in the gymnasium display at the Manchester high school, which school she attends daily and in all weathers. During all these years she has never had one drop of medicine, nor spent an hour in bed through sickness. These details will show you that she has more than the normally expected amount of health.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From the *New York American*.]

MRS. EDDY'S ACTIVITY SHOWN.

MR. ALFRED FARLOW'S article in the *New York American* needs *correction*. It was a great mistake to say that I employed Rev. James Henry Wiggin to correct my diction. It was for no such purpose. I engaged Mr. Wiggin so as to avail myself of his criticisms of my statement of Christian Science, which criticisms would enable me to explain more clearly the points that might seem ambiguous to the reader.

Mr. Calvin A. Frye copied my writings, and he will tell you that Mr. Wiggin left my diction quite out of the question, sometimes saying, "I wouldn't express it that way." He often dissented to what I had written, but I quieted him by quoting corroborative texts of Scripture.

In Christian Science my diction has been called original. The liberty that I have taken with capitalization, in order to express the "new tongue," has well-nigh constituted a new style of language. In almost every case where Mr. Wiggin added words, I have erased them in my revisions.

Mr. Wiggin was not my proofreader for my book "Miscellaneous Writings," and for only two of my books. I especially employed him on "Science and Health with Key to the Scriptures," because at that date some critics declared that my book was as ungrammatical as it was misleading. I availed myself of the name of the former proofreader for the University Press, Cambridge, to defend my grammatical construction, and confidently awaited the years to declare the moral and spiritual effect upon the age of "Science and Health with Key to the Scriptures."

I invited Mr. Wiggin to visit one of my classes in the Massachusetts Metaphysical College, and he consented on condition that I should not ask him any questions. I agreed not to question him just so long as he refrained from questioning me. He held himself well in check until I began my attack on agnosticism. As I proceeded, Mr. Wiggin manifested more and more agitation, until he could control himself no longer and, addressing me, burst out with:

"How do you know that there ever was such a man as Christ Jesus?"

He would have continued with a long argument, framed from his ample fund of historical knowledge, but I stopped him.

"Now, Mr. Wiggin," I said, "you have broken our agreement. I do not find my authority for Christian Science in history, but in revelation. If there had never existed such a person as the Galilean Prophet, it would make no difference to me. I should still know that God's spiritual ideal is the only real man in His image and likeness."

My saying touched him, and I heard nothing further from him in the class, though afterwards he wrote a kind little pamphlet, entitled "Phare Pleigh."

I hold the late Mr. Wiggin in loving, grateful memory for his high-principled character and well-equipped scholarship.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., Nov. 20, 1906.

THE INFLUENCE OF MRS. EDDY'S WORK.

IT has been said of Mrs. Eddy's teachings that they "have influenced modern spiritual thought more deeply than any other religious propaganda of the time, and they have not been without effect even on medical practice." That this estimate of her work is not exaggerated is shown by the effort now being made by many within the communion of the Episcopal Church to return to a compliance with the Scriptural demand for the healing of the sick through what they believe to be spiritual means.

A proof that the churches are trying to comply with the demand for the healing of sickness as a part of their regular work, is the movement recently started by the rector of Emmanuel Episcopal church in Boston, and that this work has the approval of the medical profession may be inferred from the fact that Dr. Cabot of Harvard University has been prominent in the preliminary organization of the workers in this new departure.

Another proof of the change which modern religious views have undergone since the publication of Science and Health by Mrs. Eddy, is to be noted in the following report of a lecture by Prof. Francis G. Peabody of Harvard University, which we copy from the *Boston Herald*. Professor Peabody said in part:—

"No preaching which is intellectually unconvincing or meager can expect to check the alienation of the modern mind from the modern church. What is the spirit developed by rational theology? Is it sacerdotalism and intolerance? These sins of theology are not properly to be ascribed to the spirit of theology, any more than the spirit of astronomy is to be described by the temperament of the astronomer instead of the character of his task. So the spirit of theology must be defined, not by the foibles of the theologian, but from the vast sublimity of the system with which he is concerned.

"There is a theory that theology is not all-embracing, like the spirit of astronomy. There has been forced upon the modern mind the conviction of the solidarity, the unity of the world. With this expansion of the sense of unity arises a corresponding expansion of the sphere of theology. This means the abolition of the distinction between the sacred and the secular. It means a call to theology which is for the world—not for a person or a church. The purpose of theology is not a defence of a separatist church, but the interpretation of the organic whole. There is a theology of history, science, and art as well as of exegesis and dogma.

"The real theologian is a spiritually-minded man of the world. Theology is spiritual biology. It is a guide into the great mystery and the guide to the great hope. Never was there such a call to theology as in a time which prohibits intellectual provincialism. Through evolution, which has become the most efficient ally of theology, the differences between those who depend upon a sacred past and those who recognize only the revelation to the individual soul must disappear.

"Nothing could be more baseless than the theory that theology is imperiled by the scientific spirit. If it were true, it would assure us of the defeat of theology. The conflict between them has been a conflict between faithless science and unscientific faith. Both see the unity, the wholeness of the universe. What science, then, should be approached in the scientific spirit if it be not the science of theology?

"Good theology is good science. The supreme affirmation of science is the first affirmation of theology—that the truth shall make men free. If it be true that science rests on moral qualities, then its domain is accessible to none but the chastened in spirit. The spirit of theology assumes a responsive, alert will and a conscience void of offence, for none but the pure in heart may see God. The scientific spirit is expressed in the teaching of Jesus, and gave elevation to his conduct and his discourse. Life and death,

Digitized by Google

sin and sorrow, happiness and work, speak to him of the eternal purpose, and he translates them into the message of the kingdom."

For forty years Mrs. Eddy has taught that Jesus' ministry was scientific, and his healing and regenerating works the necessary outcome of an exact (and therefore scientific) understanding of God's immutable law.

ARCHIBALD MCLELLAN.

"AND BE YE THANKFUL."

THERE are many children who are thankful for many things. One is glad because an appetite or desire has been gratified, and when a further want is met he will be glad again; meantime he is sorry for what seems to him the too-long intervals between his successive satisfactions. Another is no less thankful for his gifts but more thankful for the giver. He thinks of the labor and love which have been wrought into his gifts, and his appreciation of the unselfishness and faithfulness of father and mother leads him to be grateful and glad every day. Between these attitudes of thought and conduct there is a great guif, and the contrast between the returns of comfort and joy they bring to benefactors is correspondingly great.

Most grown people are very like children, and many of them also need to be reminded that the worthier gratitude is that which is thoughtful and appreciative of the love that impels the bestowment of good. We may well give thanks for our country, our home, our health, our friends, and our creature comforts; but if the possession of these is the chiefest occasion of our song, then will our happiness prove intermittent and in no sense superior to circumstance. Safe anchorage for gladness is not found in human experience,—not in the material sign, though its possession may in our thought gather to itself the sweetest of pleasures. The springs of true and unfailing gratitude well up from the deeps of spiritual realization, and we shall not come upon them elsewhere. To know, amid all the possible changes of human life, that Truth, the eternal good, standeth fast, and *is for us;* that the reliability of the elementary forces of nature, the sure return of the rain and the harvest, *the* recurring splendors of spring and sunset, all speak for the law-abiding continuity of the manifestations of Mind; *and* to know, further, that these manifestations express infinite Love,—this is to find a resting-place for lasting *faith,* an inspiration for perennial thanksgiving.

This Christian Science has brought to men,—a soul-*satisfying* knowledge of Truth, the clearer apprehension of the righteousness of our God, the immutable Principle of all *being,—and* this gain is established in the practical proofs of the eternal verity of our Leader's words, when she says *that* "*divine* Love cannot be deprived of its manifestation, or object; that joy cannot be turned into sorrow, for *sorrow is not* the master of joy; that good can never produce evil, nor Life result in death" (Science and Health, p. 304).

Those who have come to understand even in modest degree the meaning of this statement, have found a basis for gratitude which is unaffected by human conditions, and their joy has become

> The music of a well ordered soul,
> And sovereign over circumstance.

More than this, the possibilities of a day-to-day thanksgiving are vastly increased by the recognition of the unreality of evil. Looking upon the captivity of his people, the bard of Israel could express neither joy nor praise. Said he, "By the rivers of Babylon, there we sat down, yea, we wept, when we remembered Zion. We hanged our harps upon the willows in the midst thereof. . . . How shall we sing the Lord's song in a strange land?" And who to-day can know of humanity's enslavement and sufferings, its unspeakable sicknesses and sorrows, the trial and torture of sweet innocency all about us—who can look upon these abnormities as having their place in the reality of being, without turning away with a heaviness and grief of heart which precludes the possibility of joy and praise. Whatever may be said of the traditional long-facedness of those who have stoutly believed in the past-time theology of these things, such long-facedness certainly cannot be denominated inconsistent, or out of keeping. In his realization of the unreality of the claims of evil, their illusion and temporality in the light of Truth, and in his new-found freedom to know that only good *is,* the Christian Scientist, and he alone, may sing. For him the passing of evil has begun, and the assurance that this passing will be consummated is established; therefore doth he enter into the joy of his Lord.

To yet another source of thankfulness the Christian Scientist may lay especial claim. His opportunities for comforting, healing, guiding, and inspiring others are peculiarly abundant and rich. All the world is tired of suffering, and a vast number are also tired of sin; and to us is given this great privilege and great joy of being to them, in their time of confusion and struggle, as a light that shineth in the darkness. How many can say to-day, "This is the sweetest joy of all my life, that I have been permitted to bring to this one and that the healing and quickening word of Truth"? In the hour of a demonstrated call to this sweet and sacred ministry they have acquired a sense of the meaning of Thanksgiving which shall never be taken from them, and with a freedom and joy never known before, they respond to the poet's call,—

> Let thy day be to thy night
> A teller of good tidings. Let thy praise
> Go up as birds go up, that, when they wake,
> Shake off the dew and soar.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., Nov. 21, 1906.

My Dear Teacher:—I am conversant with some facts which perhaps have not come under the observation of many of your students, and considering the questions which have recently appeared it may interest you to be advised that I have this information. On the tenth day of January, 1887, I entered your primary class at Boston. A few days later, in conversation with you about the preparation of a theme, you suggested that I call on the late J. Henry Wiggin to assist me in analyzing and arranging the topics, which I did about the twentieth of the above-named month. These dates are very well fixed in my memory, as I considered the time an important one in my experience, and do so still. I also recall very plainly the conversation with you in general as regards Mr. Wiggin. You told me that he had done some literary work for you and that he was a fine literary student and a good proofreader.

Upon calling on Mr. Wiggin, I presented my matter for a theme to him, and he readily consented to assist me, which he did. He also seemed very much pleased to converse about you and your work, and I found that his statement of what he had done for you exactly agreed with what you had told me. He also expressed himself freely as to his high regard for you as a Christian lady, as an author, and as a student of ability. He spoke of Science and Health as being a very unique book and seemed quite proud of his having had something to do with some editions. He always spoke of you as the author of this book and the author of all your works. Mr. Wiggin did not claim to be a Christian Scientist, but was in a measure in sympathy with the movement, although he did not endorse all the statements in your text-book; but his tendency was friendly.

I called on Mr. Wiggin several times while I was in your primary class at the time above referred to, and several times subsequent thereto, and he always referred to you as

Digitized by Google

the author of your works and spoke of your ability without any hesitation or restriction. Our conversations were at times somewhat long and went into matters of detail regarding your work, and I am of the opinion that he was proud of his acquaintance with you. I saw Mr. Wiggin several times after the class closed, and the last conversation I had with him was at the time of the dedication of the first Mother Church edifice in 1895. I met him in the vestibule of the church and he spoke in a very animated manner of your grand demonstration in building this church for your followers. He seemed very proud to think that he had been in a way connected with your work, but he always referred to you as the one who had accomplished this great work. My recollections of Mr. Wiggin place him as one of your devoted and faithful friends, one who knew who and what you are, also your position as regards your published works; and he always gave you that position without any restriction. I believe that Mr. Wiggin was an honest man and that he told the same story to every one with whom he had occasion to talk, so I cannot believe that he has ever said anything whatever of you and your relations to your published works differing from what he talked so freely in my presence. There is nothing in the circumstances which have arisen recently, and the manner in which the statements have been made, to change my opinion one iota in this respect.

It will soon be twenty years since I first saw you and entered your class. During that time, from my connection with the Church, the Publishing Society, and my many conversations with you, my personal knowledge of the authorship of your works is conclusive to me in every detail, and I am very glad that I was among your early students and have had this experience and know of my own personal knowledge what has transpired during the past twenty years. I am also pleased to have had conversations with people who knew you years before I did, and who have told me of their knowledge of your work.

It is not long since I met a lady who lived in Lynn, and she told me she knew you when you were writing Science and Health, and that she had seen the manuscript. These are facts which cannot be controverted and they must stand. Your affectionate student,

EDWARD P. BATES.

To the Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dorchester, Mass.

Mrs. Mary Baker G. Eddy.

My Beloved Leader:—It was my privilege to know Rev. J. Henry Wiggin about eight years ago, and in the presence of my husband, son, and myself he said he had known you and had aided you in your work. This is precisely what Mr. Wiggin said: "I know Mrs. Eddy; have helped her on her work,—that is, in correcting proofs. I am sure she is thoroughly devoted to her work and believes every word of it."

I was not then interested in Christian Science, but since that time have been led to know the truth, as laid down in your book "Science and Health with Key to the Scriptures." Remembering so correctly this statement from Mr. Wiggin, and knowing how much is being said at the present time in regard to his work for you, I felt I must let you know that one of your followers can substantiate the truth in regard to it. You may call upon me at any time to make any further statement. I will also say that, after passing through the deep waters of affliction, I have been brought out into this glorious truth, and I wish to express to you in this feeble way my gratitude.

With kindly love, I remain

Very truly yours,

L. A. BOWKER.

Manchester, England, Nov. 10, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—I send you the enclosed press clippings, in the hope that you may find opportunity to read them, and that they may interest you as coming from this Field, to sense so far removed from you, but where we are daily striving to draw ever nearer to your teaching and your example of selfless labor and love for all mankind. Each day my prayer goes up to divine Love that I may become more faithful in my following of you, and that my gratitude may find a full expression in increasing zeal for the Christian Science Cause.

Faithfully your student's student,

WM. ROYLE.

[The following is one of the clippings enclosed by Mr. Royle.—EDITOR.]

Mrs. Eddy, a woman who has brought the consolation of a simple, clear, and singularly pure idea of religion to many thousands of men and women, surely might be regarded as one somewhat set apart from the curse of vulgar curiosity.—JOHN STRANGE WINTER, in the *Lady of Fashion.*

Berlin, Germany, Sept. 26, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—It is not necessary that you should know of my love and gratitude, but it is my joy and privilege to acknowledge you as the Wayshower,—the divinely-appointed messenger of omnipotent good,—giving to humanity the connection (Key) between the human and the divine Life, "with signs following." I thank you for the sublime courage, enduring love, unending patience, and faithful persistence with which you have taught us that the living of the divine Life is the only savior of mankind, any other way being but one of the blind alleys of erroneous belief. My darkness was dispelled by this great light some years ago, and I am earnestly striving to keep within its shining. In this way only, and by bringing forth the fruits of obedience, can I prove my gratitude to you, its Revelator.

Rejoicing to be numbered among the rank and file of this great army,—which is surely overcoming the world, the flesh, and all evil,—and thankful that our God is round about you, our Leader,

I am lovingly and gratefully yours,

MAY P. CAMERON.

Atlanta, Ga., Oct. 30, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—An ever-increasing love and gratitude for your pure life prompts me to say that for fourteen years I have tested the Principle of Christian Science. Life, Truth, and Love, as revealed through your text-book, "Science and Health with Key to the Scriptures," and, so far as I have understood this divine Principle, I have been enabled to prove Christian Science true in my daily life. It brings health and happiness here and now. Nothing the world may say can harm a Cause founded on this divine Principle. With grateful love,

MARY T. SCOTT.

MRS. EDDY'S ARTICLE IN THE INDEPENDENT.

FOR the convenience of those who might otherwise be unable to obtain copies of *The Independent* of Nov. 22, which contains an article by our Leader, Rev. Mary Baker G. Eddy, The Christian Science Publishing Society has secured a limited number of copies and will sell them at the regular price of ten cents each, prepaid. Address orders to 250 Huntington Avenue, Boston, Mass., U. S. A.

Digitized by Google

TESTIMONIES OF HEALING.

July 6, 1904, I was taken severely ill, and suffered frequent attacks for several weeks, often being confined to my bed for three or four days. My faith in medicine was somewhat shaken, as I received no benefit whatever from the treatment of a local physician, but I concluded to secure advice from one in Portland, as a complication of troubles had arisen, giving me much apprehension. This physician predicted a cure in two weeks, but the pain still continued. I received electrical treatment for more than two months without relief, when I grew discouraged, and consulted an eminent Portland surgeon, who, after a thorough examination, advised me to go to the hospital at once. My husband and I were not satisfied to risk a hospital experience without trying every other means, so we consulted a Chicago physician, through correspondence with my son, who was attending a medical college in that city. Following his advice, I pursued a course of treatments which were of no avail. I still endured constant pain, at times so severe that opiates were administered, and never a day passed without the use of some powder to relieve the pain.

I was confined to the house, scarcely able to leave my room, and much of the time was obliged to remain in bed, scarcely caring if I lived or died. The weary days and weeks had dragged along until the last of March, when we finally decided that something must be done, and began making preparations for a journey to Chicago, looking forward to nothing but an operation. I was completely discouraged and hopeless.

Besides the physical suffering, there was the thought of expense, which had already amounted to a good deal. To this would be added the expenses of myself and husband to Chicago, and large fees while there, but we could see no other solution to the problem. During all these months my attention had been frequently called to Christian Science, but I considered my case too serious to trust to it. I used the usual argument, that it might help people suffering from nervous diseases, but I was too sick, there was something the matter with me, etc.; but at last, upon receipt of an urgent letter from my father, I decided to try it.

I began studying "Science and Health with Key to the Scriptures" by Mrs. Eddy, with a heartfelt desire to grasp the truth it contained, and in a few hours my improvement was marked. Within a week I was absolutely healed. I returned to my home in Roseburg, April 18, 1905, since which time I have performed my ordinary household duties, walked any distance without inconvenience, and all this time have been in perfect health.

For this, and the countless blessings that have come to me and mine through the teachings of Christian Science, I am filled with gratitude to God and to our dear Leader, Mrs. Eddy.—Mrs. Donna L. Hewes, Roseburg, Ore.

Science and Health says on p. 516, "The sunlight glints from the church-dome, glances into the prison-cell, glides into the sick-chamber, gilds the hospital cot, brightens the flower, beautifies the landscape, blesses the earth." When I read this passage it always reminds me of the first experience that the light of Truth brought to me,—behind prison walls and under a life sentence, a condition in which there was not much to look forward to. After serving some time here, I attended a Christian Science service which was being held in the chapel every Sunday morning, and the truth seemed to appeal to me. I was at that time somewhat of a wreck, physically and morally. I had kidney trouble, etc., and was unable to sleep, or to eat much without distress. Tobacco was my only god, and I was using all my allowance. I was, however, anxious to know more of what I had heard, so I purchased a copy of Science and Health, and before I had read it half through the truth was revealed to me in such a degree that I was healed. As I read on, I came to a page that had been marked by the Scientist who brought me the book, in regard to tobacco (p. 406), and when I had read it I could see that I had been worshiping a false god, and the habit was taken away with other beliefs in the supposed pleasure to be found in material things. I can now sleep well, eat anything I like without any distress, and best of all, I have received a spiritual uplifting more than I am able to express, and in this sense I am free. I feel that I am better off than some on the outside of these prison walls who know not this wonderful truth. I own two copies of Science and Health, one of which I keep to loan to my fellow-prisoners who are looking for a better life. I have made several demonstrations, and have a great desire to know more of Christ, Truth.

I wish to express my gratitude to Mrs. Eddy for Christian Science, for the light that shone into my prison-cell and has remained in my consciousness.

Joseph Meunier, State Prison, Jackson, Mich.

I had never been strong as a girl, and after the birth of my third child I became almost incapacitated for the work of caring for my family. For seven years I had the attention of good physicians, spending three months in a hospital, and undergoing two operations without permanent relief. The last few years I spent most of the time lying down, and was burdened with the dread of insanity. I could not walk any distance, read, write, or talk to my friends, without the greatest fatigue. Having heard a few words on the subject of Christian Science, which awakened a ray of hope, I borrowed the book "Science and Health with Key to the Scriptures," in June, 1904. My attention was held from the first line, and to my wonder and delight (not knowing that any one had ever been similarly cured) before I finished reading the first chapter I was well. I immediately attended to some duties that I had not been able to perform previously; also wrote to my mother, telling her that I was well and what had cured me. Then I went back to the book which has wrought a great change in my life, spiritually as well as physically.

I am especially grateful to God, and to Mrs. Eddy for the change that has come to me, and desire to prove my gratitude by a "closer walk with God," in the way taught in Christian Science, for in no other way could I find God to be "All in all," though I had sought Him earnestly and with tears.—Mrs. Jean W. Blair, Burkeville, Va.

As I am always greatly benefited by reading the testimonies in the *Sentinel*, I send this, trusting that it may perhaps be a help to some one. About five years ago we received a telegram stating that my aunt was dangerously ill, and my sister and I, who had been in Science a little over a year, went to see her. On entering the house we found thirty-one of her relatives had gathered, expecting her to pass on at any moment. My sister and I asked if we might go in the room and talk to her. We found her apparently very near death. She told us the doctor had no hope of her getting well, and that she had given away all her things and told her dear ones what she wanted to be buried in. My sister and I calmly told her that she was not going to die; that God was her life, and that He did not make her sick; that He intends His children to be always well and happy. We also read the last chapter of Mark's Gospel to her three or four times, also passages from our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In a short time we noticed a change in the expression of her eyes; she looked brighter, and talked differently. She rested better that night than she had done for some time. In a few weeks she was well,

Digitized by Google

and said that she felt very thankful to us for our visit. She certainly was brought up from the grave by the voice of Truth.

I am indeed thankful for Christian Science; it has done much for me, and my little daughter six years of age relies on it for all her help. Thanks be to God, and to our dear Leader for her tireless labors of love. May God's richest blessings ever rest on her.

MRS. ADA H. CULVER, Wymore, Neb.

If now is the time to be healed, now is surely the time to be grateful for the healing, and I am too thankful for the relief which came to me recently not to hope that my experience may show some one else the beauty and power of Truth in any emergency. I have studied and applied Christian Science for about ten years, but as I have been well practically all the time, this is the first instance in which I have applied its rules to extreme bodily suffering, and now I know for myself that it indeed heals.

One morning I wakened early and arose feeling happy, perfectly well and glad of the day that lay before me. Suddenly, while dressing, a sharp pain ran through my body, which was quickly followed by another, and in an instant I found it necessary to hold on to the washstand to keep from falling. I endeavored to realize and declare the truth, and my strength was sufficient to enable me to walk into my room, where I was glad to lie down. I spoke my brother's name, meaning to ask him to read to me; then it occurred to me that for the first time in my life I was absolutely alone, and that it would be an hour before any one would come within hearing distance of my voice, for I was sleeping in a room quite apart from the others and seemed unable to go to them. Simultaneously with this thought, I remembered that Mrs. Eddy says, "Would existence be to you a blank without personal friends? Then the time cometh when you will be solitary, left without sympathy and alone; but this seeming vacuum is already filled with divine Love" (Science and Health, p. 266). I knew that that hour had come for me, and it is true that I found divine Love there. The pain was like a vice, holding me literally motionless; but clinging to Love's ever-presence, I felt it abate, and was able shortly to go to my brother's room and ask him to read to me. I asked for the "scientific statement of being" (Science and Health, p. 468). This he read and re-read, and then I asked for the answer to the question, "What is Mind?" on the next page. After reading this, I asked him to turn to the page where it says, "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea" (Science and Health, p. 495). He then read from line 16, page 493, to line 25, page 495. By this time divine Love had met the need and I was healed, freed from the most terrible agony I had ever known. There was no return of the attack, and the same day I did work incidental to housecleaning and spent some time on the top of a stepladder, hanging curtains.

I am very grateful to Mrs. Eddy for writing Science and Health. Except for the few statements that I remembered in her book, all existence seemed a blank to me in this experience, but I now realize that I had the rule of Truth to apply to the conditions of suffering and its attendant weakness, and that the rule of Truth thus applied did win, and quickly, the hardest battle with pain that I ever fought.—KATE D. GRANT, Franklin, Pa.

I wish to tell of the healing power of truth over a burn from nitric acid. It was necessary to use this acid in removing a sediment from a cooking utensil, and in so doing I at first used a stick with a cloth on it, but it did not come off as readily as I wished, so I thoughtlessly took the rag in my fingers and commenced to scrub the vessel vigorously. Very quickly I commenced to feel th of the powerful acid, and to experience sharp pai soon extended to my shoulders. The pain was s that I had to lie down. This was about three o the afternoon; there was supper to get, and I was to play the organ at the testimony meeting that I at once asked my husband, who was First Read church, for treatment, and I also declared the truth in an hour all pain was gone; I prepared the s usual, and used those fingers on the keys of the or evening without any special inconvenience, altho nails and the flesh were discolored. There was no manifestation of pain and the fingers soon assum natural color.—MRS. ELLA S. HARVEY, Pocatello, I

From my early childhood I was held under the l hereditary lung trouble and other ailments. I would fined to the house for days, and as I grew older the became more severe and protracted. Medicines fa effect a cure, and even the most powerful remedies ually ceased to have the usual effect. Later I beg decline in health, and a catarrhal condition of the st and bowels set in, also extreme nervousness. I wa about thirty-three. After many medical experime went in 1886 to visit my mother, and while there persuaded to try our old family physician. I was g emaciated, and after an examination he said I ha abnormal growth. He recommended an operatio which I objected. He then remarked that my fathe died from the same condition. I gave him a trial for five or six months, but received little benefit. An physician also said I would never be a well woman wit an operation, and at the same time a noted specialist pressed the same opinion. I had lost faith in material m and was waiting for something, I did not know what. years I had been dissatisfied with my knowledge of G and was seeking for a solution of the life problem.

I felt that if God was all-knowing He must know my n better than I could tell Him, and if there was an ex truth He would reveal it to me in His own time and w In 1888 Christian Science was presented to me with explanation that God is Life, Truth, and Love, the sou of health and strength,—an ever-present help; that G is a saving and healing power, instead of a vague, far-aw corporeal deity. My healing was slow, also my growth in the understanding of Truth, but with the help of a faithf practitioner many hard problems have been solved ar many seeming difficulties overcome by the truth as reveale to me from the Bible and Science and Health, which are m daily companions.

MRS. DORA BRIDGFORD, Eureka Springs, Ark.

[Translated from the German.]

Six years ago last March a little girl was born to us. She was well at first but grew weaker constantly. The physician prescribed medicine which did not help her, and thus almost five months passed by. The doctor said to my husband that she was a very sick child. She refused to take food and was greatly emaciated. On Sunday morning, August 5, God sent us help. My mother had heard of Christian Science and a practitioner was called to see the child. She received treatment and that same day there was a marked change for the better. She continued to gain, until she is now a strong, healthy child, in advance of most children of her age. Since then we have seen other cases of illness overcome through Christian Science.

I am very grateful to God for all that He has done for us through Christian Science, and that He has sent us our dear Leader, Mrs. Eddy, that she might show us the way.

MRS. IDA MEYER, Milwaukee, Wis.

[Translated from the German.]

It is now two years since a dear friend made me acquainted with Christian Science. As I told her of my ailments,—that I had suffered from stomach and bowel troubles, and had consulted several doctors without finding relief,—she gave me that priceless book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. After I had read it for several weeks with good results, it seemed as if everything was turning against me. Since the first day I had the book I had taken no material remedies. At the advice of my friend I then turned to a practitioner, and in two treatments I was healed of a disease of many years' standing. Several times I had to ask for treatment when severe illness made its appearance, but I have always been healed very quickly. Pain, sorrow, and trouble have been removed through the declarations of the truth as taught by our beloved Leader.

I find no words to express my gratitude to God for all the good that I have received, and to Mrs. Eddy, who made it possible for us to know this wonderful truth.

MARIE LOUIS, New York, N. Y.

My healing in Christian Science was remarkable, inasmuch as no less than nine different physicians had my case in their hands at different times, besides others who were either called upon for consultation or who were anxious to examine me. All, however, failed to help me; the trouble seemed beyond their reach. All who knew me then say that they never saw such a change in any one, and that they never again expected me to be what I am to-day. I never had been strong, and when about fourteen years old I had a terrible fall, after which I suffered almost constantly. At the age of eighteen I was married, and after the birth of my first baby I kept getting worse until there seemed to be no way of gaining relief. The doctors said that an operation was necessary, to which I would not then consent. About this time we moved to Cleveland, and my condition was such that I was obliged almost immediately to look for a good physician. I was fortunate in finding a most conscientious man, but he was not able to reach my case with medicine, and recommended surgery. I reluctantly consented, and according to the record of the surgeon there were no less than eleven different operations performed.

It would take too long to tell all that occurred during eight years, and also while in the hospital for two months. *I want to* say, however, that several of the organs were removed, and a pamphlet concerning my case was printed *and a copy* presented to me. The surgeon would also tell other patients of all I had gone through. For a year after *this I* was not able to do anything, and suffered a great deal. My physician was very much discouraged and said *he would* advise no one else to have an operation. A year afterwards he advised me to have massage, at the same time taking medicine from him, but it was all of no avail. Being greatly embarrassed financially, all our money having gone for doctors, and being greatly in debt in consequence, I firmly declared that I would have no more medical treatment. I was also beginning to lose faith in God; I could not understand how I had deserved such great punishment.

Finally a friend asked me to try Christian Science. I did not know what it was and said I could not afford to try anything else, but at last I went to a practitioner and asked a great many questions, although I did not have treatment until two months later. I was immediately benefited, but my healing was very slow; the last physician had said that the conditions were most serious, and if not looked after constantly would grow worse. Such was my condition when I came to Christian Science, and even while I was improving, symptoms of a much dreaded disease were manifested. I was treated for eleven weeks in Science, then treated myself, but finally had help occasionally, yet the trouble was not met. I, however, was determined to cling to the truth, rather than to undergo another operation as the doctors had told me I must. To-day I cannot be grateful enough, for in less than two years after taking up the study of Science, the dreadful condition left, although the physician had said there was not a part of my body which was not affected, and I also had serious heart trouble, besides which I had seemed to be on the verge of insanity.

My healing occurred in December, 1904, and no one can imagine my joy but those who have had like experiences. Words are inadequate to express the gratitude I feel; and also my husband, whose love and patience upheld me, who faithfully stood by me and deprived himself of much that I might be made comfortable. Christian Science has been a Godsend, not only to me, but our whole family has been benefited, physically, mentally, and financially. God not only has supplied our need in one way through the understanding we have gained in Christian Science, but in all ways, and I cling to the promise, "Lo I am with you alway, even unto the end of the world."

I am exceedingly grateful for Mrs. Eddy's works; if it were not for her understanding and interpretation of the Bible I should not be here to-day.

MRS. ANNA STEUER, Cleveland, O.

Ever since I was a very young girl I was sick and each year growing worse, until about my nineteenth year, when my trouble became more serious. I tried first one doctor and then another, but all to no purpose. Finally an operation was suggested, and I was put under the knife three times with but little relief. At last the doctor under whose care I was said I had serious kidney trouble, and the only relief for me was to take ether when suffering pain. She also said that I must bear the pain as long as I could and then have another operation. Of course I was very much discouraged, when at this time I received a letter from a friend asking me to try Christian Science. I was bitterly opposed to it, but after much prayer decided to try it. I began to read Science and Health by Mrs. Eddy, and it was not long before I was greatly relieved. In not more than two weeks my pain was nearly gone, and as I read and studied, and gained a better understanding of the truth, I was entirely healed. I am now in better health than ever before; am doing all the work for our family of four, and am trying to grow in the understanding of the truth each day, also to live it.

About two years ago our little girl was taken with a nervous trouble which became so severe that she could not hold her knife or fork while eating. We put her under the care of a Christian Science practitioner, and she was perfectly healed in seven weeks. We cannot be too thankful to our heavenly Father for revealing to our dear Leader, Mrs. Eddy, this truth which she has given to the world, this truth which does indeed make us free.

MRS. ALICE L. SULLIVAN, Exeter, N. H.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

FROM OUR EXCHANGES.

There is no "growing indifference to religion." There may be indifference to the ordinances of religion, carelessness about church attendance and church membership, but everywhere we shall find a most intense interest in religion itself, a readiness and a desire to discuss it, and, what is of more importance, an increasingly honest effort to live it. Men to-day, in growing numbers, are tremendously and seriously in earnest about religion. The difficulty is that too often the religion that is preached to them in church is not the religion they are interested in. This is said in no spirit of pessimistic criticism. There was no finer phrase in Bishop Gore's Church Congress sermon than that in which he said that his words were the cry of a "permanently troubled conscience." That is the spirit in which we would beg churchmen to consider the pressing religious problems of our day. It is not a voice of complaint that is raised, nor a cry of protest alone: it is a plea that the Church, its clergy and its members, shall face facts squarely, and in the strain and stress of honest effort endeavor to rise to its privileges and opportunities and fulfil its duties.—*The Churchman.*

We have read some of the sermons preached fifty or seventy-five years ago that for practicality and application to the present needs of men are not surpassed by anything of to-day. In fact, if one would find things called by their names and the gospel of Christ applied to existing conditions, let him read the sermons of Chrysostom. While theology occupied a larger place in the preaching of the fathers than it does in our own, yet practical things were by no means neglected. The importance of love, kindness, forgiveness, unselfishness, helpfulness is not a modern discovery. It may also be legitimate to enquire if it be absolutely certain that the neglect of doctrinal preaching issues in added strength and efficiency to the Church. Is it not just possible that the lack of spiritual vigor and general flabbiness deplored so often, results in no inconsiderable degree from breakfast-food sermons? The spiritual life is not greatly built up by an exclusive diet of sterilized syllabub.—*The Standard.*

The average man usually has a good deal of common sense and it is not dormant, and there is a real kinship between common sense and a real and enduring theology. The average man is a dominant element in the theological education of the minister; he does not appear on the faculty of the theological seminary, he does not give lectures and does not write books, he does not begin to get in his work until the school has turned out the man as a finished product. But then by a shrewd remark or a significant action he "sets the parson to thinking," and the parson begins to overhaul his academic equipment and find the flaws and imperfections in it. The first four years after the graduate has left the seminary are not the least valuable in his real education for the ministry. He may think he "knows it all," but consciously or unconsciously he is getting his best training in the great university of experience where the "average man" is dean of the faculty!

The Universalist Leader.

Honesty, honor, and truthfulness require every Protestant minister to teach religious truth in accordance with the teachings of the Scriptures of the Old and the New Testament; to bring his conscience, his reason, and all the resources of scholarship available to the interpretation of those Scriptures; to teach nothing, however it may be enshrined in Church traditions, which he thinks contrary to those Scriptures; to oppose everything, however sanctioned by ecclesiastical authorities or Church traditions, which he thinks contrary to the essential spirit of those Scriptures. This is more than his liberty; it is his sacred duty.—*The Outlook.*

We need not deny the worth of the best thinki
day. We need not, in its largest sense, confine i
to a remote antiquity—the God of Jacob is our re
and for us, as for the olden time, "there is a spiri
and the inspiration of the Almighty giveth them un
ing." But the men of the past and the men of th
are bound together indissolubly by the possessio
same inspiring, perennial, unaging truths of the se
life within them and us and all humanity.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Jamestown Ter-Centennial is to be held on the shores and waters of Hampton Roads, near the cities of Norfolk, Portsmouth, and Newport News, Va., April 26 to Nov. 30, 1907. It commemorates the founding of the first English settlement in America, at Jamestown in 1607. Contemporaneous with the Exposition will be held on the waters of Hampton Roads the greatest naval pageant ever witnessed in the world, in which every type of war vessel from the navies of all foreign nations will participate. Another feature will be the international military encampment, in which detachments of troops of European countries will unite with the soldiers of the United States in a series of drills, maneuvers, parades, etc. More than twenty-five exhibit palaces are now nearing completion. Another feature will be the Government pleasure pier, extending two thousand feet into Hampton Roads. At either end it will be surmounted with light-towers and a working exhibit of wireless telegraphy.

The report of Director North of the Census Bureau, in regard to the finances of cities of eight thousand inhabitants and over, says: "The importance of municipal statistics may be noted from the following facts: The indebtedness, less sinking-fund assets, of the one hundred and forty-eight cities containing over thirty thousand inhabitants in 1903 was $1,106,821,651, and of the one hundred and fifty-one cities in 1904 was $1,228,216,033. The indebtedness of the cities of the latter group increased during the year 1904 by $110,083,797. The indebtedness of cities containing eight thousand to thirty thousand inhabitants in 1903 was $173,718,313, and the last statistics compiled recorded an annual increase of $10,098,061. The aggregate for the two classes of cities in 1903 was $1,280,539,964."

"Taken at that point in production," says Secretary Wilson in his Annual Report, "at which they acquire commercial value, the farm products of the year, estimated for every detail presented by the census, have a farm value of $6,704,000,000, eight per cent greater than that of 1905, ten per cent over 1904, fifteen per cent over 1903, and forty-four per cent over 1899."

Foreign.

The feeling aroused by the House of Lords' treatment of the Educational Bill found expression last week in an emergency meeting of the General Committee of the National Liberal Federation, at which a resolution was adopted unanimously urging the Government totally to reject the Lords' amendments to the bill and to "resolutely determine that the present Parliament shall not come to an end until steps are taken to bring to a final arbitrament the question whether the House of Peers should any longer possess the right of veto on the will of the people as declared by the House of Commons." The meeting was the largest and most representative of its kind which had assembled during the last twenty years.

Dr. von Lecoq, a scientific emissary of the Prussian Government, has arrived at Serinagur, Cashmere, after traveling through the remotest regions of Central Asia. The archeological discoveries he has made will prove to be probably the greatest since the days of Dr. Layard and Sir Henry C. Rawlinson. They include a quantity of interesting inscriptions upon stucco, with, in some cases, backgrounds of gold leaf, and a number of manuscripts of ten different languages, including some in a wholly unknown tongue.

The Appeal Court in London decided last week that gold or silver cases of all foreign-made watches, whether with or without works, must be assayed and "hall marked" before they can be sold in Great Britain. Though hitherto only foreign cases without works were liable to be stamped, an enormous industry in completed foreign watches was built up. The jewelers intend to appeal to the House of Lords.

The Immigration Board, after receiving assurances that the thirty-two Chinamen who arrived at Gravesend Nov. 19 from Hong Kong, would be employed at Liverpool, have permitted their entry into England, the decision thus ending the first attempt to exclude Chinese from landing in Great Britain under the Aliens Act.

Recently two æronauts started in the afternoon from Wandsworth, a suburb of London, and landed at daybreak at Vevey on Lake Geneva, Switzerland, accomplishing the journey of four hundred and twenty miles in sixteen hours. The balloon has a capacity of seventy-five thousand feet of gas.

La Patrie, the Lebaudy dirigible war balloon, which has been formally accepted by the French Government, made its first ascension the other day under the auspices of the ærostatic division of the army. The flight lasted an hour and a half.

The revenues of the Cuban Republic for October, including customs receipts and receipts from internal revenue, but excluding the special loan taxes, amount to $1,951,893, against $2,312,000 for the corresponding month last year.

The Prince of Wales, on the 30th ult., opened the new Cotton Exchange at Liverpool, a handsome building which has just been completed at a cost of $1,750,000.

Industrial and Commercial.

Steel of the highest grade has been produced at Remscheid Haston, Rhenish Prussia, since February by the patented electric process, the invention of Dr. Heroult of France, and after a sufficient trial of the new process the old crucible methods formerly employed have been entirely discontinued. High grade steel is produced from the most ordinary scrap iron rubbish of the cheapest kind and quality, and its condition is quite immaterial, as by the process all damaging substances, such as sulphur and phosphor, are practically eliminated, being reduced to one one-hundredth of one per cent. The cost of this scrap iron varies from $10.71 to $14.28 for twenty-two hundred pounds, and the loss of material in slag and refuse vari six and eight per cent. This rubb melted in a tilting furnace or ov being thoroughly reduced to a flu is poured and conveyed in a retort eling crane to the electric oven, a capacity of from one and one-h tons. In this oven the necessary of carbon, manganese, chrome, silic tungstate, arsenical iron, etc., are produce any kind or quality of stee The whole process of production t two to two and one-half hours. T oping bath is heated by an electri of one hundred-volt tension.

The United Kaolin Properties C with a capital stock of $9,000,000, is ganized in San Antonio, Tex., for pose of developing the kaolin de Edwards County, and to build a lin road from Leakey, Edwards County, point on the "Sunset" route. It is plated to erect great china furn Leakey and utilize the kaolin deposi

An engraving machine has been which cuts letters on a steel plate thr as rapidly as the most expert hand e A new machine has now been perf use in connection with this, whic stamps, and delivers as many impres an hour as the most skilled hand can turn out in a day.

Two large bodies of molybdenite o been found recently in Maine, one ing of forty-seven acres and the o fifty-five acres. There also have be covered four different graphite depo the State. Molybdenite is used in har steel, and its discovery is of interest iron and steel business.

What is said to have been the larges transaction ever made in Mexico wa cluded at Satillo, Mexico, recently, w purchaser from Corpus Christi, Tex., the sum of $4,000,000 Mexican currenc the famous Cedros ranch. The ranch braces about two million acres.

The Treasury Department of the Me Federal Government has just issued a ment showing the foreign commerce of ico during the fiscal year 1905–6, as foll Total imports, $220,651,074.49; total exp $271,138,809.32.

The Central New England Brick Excha in which eleven concerns are represe reports that the output of these compa during the season just ended amounte nearly eighty million of common buil brick.

The German insurance companies do business in Hamburg have agreed to c promise with their San Francisco pol holders. It is expected that the result w be a payment of about fifty per cent of th liabilities.

The Canadian Consolidated Rubber Co pany is the result of the merger of the Can dian Rubber Company, the Granby Rubb Company, and the Maple Leaf Rubber Co pany of Port Dalhousie, Ont. The capit is $5,000,000.

An advance in wages has been announce in cotton mills at Fall River, Providence Newburyport, Taunton, Amesbury. It is ex pected that similar action will be taken a Lowell.

Brier Hill Coal and Coke Company has awarded contracts for the erection of a thou sand coke ovens and the sinking of four min ing shafts at Khedive, Green County, Penn sylvania.

The fall catch of whalebone will not ex ceed twenty thousand pounds, according to advices received at New Bedford from the Arctic fleet.

The increase in the value of Alaska's min ing output increased from $2,400,000 in 1895 to over $15,000,000 in 1905.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

FROM OUR CONTRIBUTORS.

A CONFIDENT POSITION.

SAMUEL GREENWOOD.

So near is God to man,
When Duty whispers low, Thou must,
The youth replies, I can.—EMERSON.

CHRISTIAN SCIENCE has been revealed in this age to carry on to its completion the work begun by Christ Jesus; namely, the redemption of mankind from their belief in evil, not alone through faith in the great Teacher, but through their own understanding and demonstration of the Christ-truth. It emphasizes the apostolic injunction to "work out your own salvation," and to this end presents a concept of both good and evil which is consistent with the nature of Deity as infinite and perfect, and which forms a practical and effective basis for the efforts of mankind to save themselves from the delusions of an evil sense. Beginning with God as infinite good, and examining the whole claim of evil in the light of this truth, it shows evil to be only a human illusion, a condition of human consciousness in which Jesus said "there is no truth." The degree in which the student of Christian Science is convinced of the truth of its basic teaching, which declares the allness of God, will be the measure of his confidence in meeting and overcoming the various phases which a belief in evil would falsely attach to him.

The working out of one's salvation on the basis of Christian Science is not a question of chance, but of faithful, intelligent effort. The results realized may not always correspond with the student's desire, and certain conditions may seem to resist his present efforts, but these limitations will disappear with progress and increased understanding. The rules of Christian Science are impersonal and absolute, each worker in this vineyard of God receiving his just dues without favor or discrimination, be his labor great or small. Confidence in one's ability to succeed is essential to success in any line of work, and Christian Science is not an exception to this rule. This spirit of confidence comes of the assurance that God co-operates with man in every good work, and it is expressed in "patient continuance in well doing," not in discouragement over slow progress or small results. If confident that we are on the right course, and honest in our profession, we shall "run with patience the race that is set before us," "until," as we read in our text-book, "the goal of goodness is assiduously earned and won" (Science and Health, p. 233).

Because the power to do good is of God and not of ourselves, we should know that whatever He requires of us we are able to perform. The truth of God's omnipotence is behind every effort to overcome evil, and if faithfully understood and applied it will carry our right endeavors to their perfect fulfilment. Jesus proved for all mankind and for all time that, when confronted with the understanding of God's supremacy, evil becomes impotent, absolutely powerless and unreal; and it rests with those who believe in him to follow confidently his example, until only good remains in human consciousness. This is working out our salvation, and our success is assured if to every evil suggestion or temptation we say, "I cannot;" while to every demand of Truth for righteous manhood we say, "I can;" and maintain our position on the truth of Christian Science.

One's wilful negligence or sin might well make him tremble; but if living in loyal obedience to our understanding of Truth, doing our best with all that comes to us to do, we can rest confident in the knowledge that God is working with us and that He is caring for the result. Confidence stimulates and sustains endeavor; but to halt doubtingly before our work, fearing lest we cannot meet God's requirements, or idly wishing for the ability or the understanding that, in a degree at least, is already ours, induces a state of weakness and inaction which invites defeat at the beginning. Questioning our moral strength to overcome the evil that may confront us is equivalent to doubting that it should be done. The ability to live righteously is spiritually inherent in man, a truth that confers upon mankind the power of fulfilling the divine law of perfection, if not instantaneously then in progressive degrees. It is possible for each of us to be a little better to-day than yesterday, to express a little more love, to be a little purer of heart, a little nearer the Christ-ideal; and this should banish all doubt of our ability to overcome all evil, step by step, until the full consciousness of spiritual perfection is reached. To be thus faithful in the few things that we can do, adding the little that we can each day to our store of goodness and love, will bring us surely, even if it be slowly, into the full realization of man's sonship with God.

Confidence in one's ability to demonstrate the spiritual truth of being is not self-sufficiency, but self-abnegation, for the material sense of self is therein denied and forsaken, that the true idea of man, as spiritual and immortal, may be recognized and acknowledged. True humility is quite in keeping with the inward assurance and assertion of man's real status as the "likeness" of God, and therefore capable of manifesting all good. Truth never demands more than we have, but it does require of us each day all that we can give. Because we have not worked out our whole salvation, or overcome all of our belief in matter, in a few years' study of Christian Science, is no reason why we should doubt our ability to accomplish what is now plain to us, or that we have not realized all that we have given God the opportunity to supply.

While it is not wise to assert of ourselves what we have not proved, we should not deny our ability to comply with any command of our Master. Paul said, "I can do all things through Christ," and we can safely say likewise if we do so in the same spirit of humility. Although Paul did not always bring out a perfect demonstration of truth, he was joyously confident that God's grace was sufficient for him in what he lacked. He ran his "race" with the certainty of winning "the prize of the high calling of God." hence he never faltered or doubted in the face of opposition or apparent failure. The confident, plodding student always learns faster and accomplishes more than the one who, though quite as capable, wastes valuable time and opportunity in deploring his stupidity, complaining over difficulties, or prophesying failure.

Asserting our confidence in God's care is not boasting of the unknown, but it is the wisdom of knowing that God's

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

love and goodness are infinite, and hence sufficient for all need and for all time. One's present knowledge of the truth of being may not be equal to the destruction of every phase of evil that may be now apparent; but knowing that only what we are capable of is expected of us to-day, let us respond to the Divine call with gladness and confidence.

SALVATION.

C. H. FAHNESTOCK.

Behold, now is the accepted time; behold, now is the day of salvation.
ST. PAUL.

No one phase of religious effort has been so persistently prosecuted as the endeavor to fathom what is termed "God's plan of salvation." Christian Science, knowing as it does the present and eternal perfection of God and His manifestation, affirms most assuredly the fact of universal salvation. Salvation from what? What is it that needs to be saved? Has God caused or even tolerated a condition from which His children need release? Has anything in His immaculate creation, and under the control of His omnipotent, omniscient, and omnipresent care and guidance, degenerated? Has man, God's image and likeness, fallen? This form of inquiry might be continued *ad infinitum*.

God pronounced all His work good. He is "the same yesterday, and today, and for ever." With Him "is no variableness, neither shadow of turning," hence we must search elsewhere for the need or object of salvation: and in so doing we find a so-called man, assuming to be God's child, yet filled with a multitude of beliefs in evil of all sorts: sin, disease, death: a counterfeit of God's man, and a very bad one at that—one that can readily be discerned by those who have had only a faint glimpse of the real. It then dawns upon the thought that all we need to be saved from is an erroneous consciousness, a belief in the verity of unreality which must be given up for a consciousness of reality. In the words of Paul, we are to be transformed by the renewing of the mind. This is accomplished only by knowing God and His idea as the true, and all else as the false. To illustrate: Our Government destroys thousands upon thousands of counterfeit notes and coins—the spurious composition of which has been discerned only by familiarity with the genuine. No amount of acquaintance with the false will save absolutely from deception, but a perfect knowledge of the true will enable the expert to detect instantly the always imperfect stranger and discard it, thereby acquiring salvation from loss. Those expert in any kind of business employ the same method, studying to know only the constituent qualities of the genuine, confident thereby of being able instantly to detect an imposition. The diamond expert studies the qualities of the true diamond. The textile expert knows what constitutes real linen, real wool, real silk, etc., as the case may be.

Jesus said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ whom thou hast sent." He also said, "The kingdom of God is within you." Only through the understanding of Life eternal, are we saved from the baneful effects of the belief that it is not the only Life. Therefore, as we study the Science of Being, we learn that the only plan or way of salvation is to learn, become cognizant of God, good, as the only reality; give up the false concept of God, man, and heaven, for the true; and as this consciousness is attained, the kingdom of heaven, or harmony, is unfolded in the individual consciousness, the growth out of error and salvation from its effects is realized, and the Christ-idea unfolded. This means battling with and overcoming discouragement, temptation, and apostacy; "but he that shall endure unto the end, the same shall be saved." All must pass through the refiner's fire; all must pay the utmost far the purification of self and sense is accomplishe can neither hasten nor retard the process.

The subject of "probation after death" see rise to many doubts and fears, as mortal thou discourage and confuse by numerous suggestio problems to be solved in the future. As well n in the rudimentary course of mathematics wo difficulties he may encounter when he shall confront the astronomic problem of calculating Is it wise to delve into the unknown any farth light penetrates? The promise reads: "As t shall thy strength be." Paul says, "For now we a glass [Greek, in a riddle], darkly." Can we fore, have full confidence in the loving guidance ful God; "rest in the Lord, and wait patiently Thus will we be gifted with wisdom and prop sight, just so far as may be essential and benef journey out of the bondage of material belief promised land "flowing with milk and honey"— of true spiritual existence.

The past is profitable only in that its experi failures warn us against repetitions and show u improve our time and talents. The present, t every moment ours in which to work, watch, and the future, God will provide. In the words of th "Let us hear the conclusion of the whole matter: and keep his commandments: for this is the who man." Therefore, the only plan of salvation, *the* out of our self-inflicted suffering and bondage, lies edge of, and obedience to, God, and we can *begin* and strive to be obedient, *now*. The ultimate at with the Father must and will be gained, "but of and hour knoweth no man."

When we consider what Jesus suffered and en show us the way, and knowing as we do the tr persecutions of the one who has labored and is *lal* assiduously and unselfishly in this age to reveal t shall we not gratefully strive to follow in the foo the Master, and to cheer the heart of our Leader, w patiently and lovingly devoting her life to the endeavor to lead humanity into the way of truth?

Jesus' admonition, "Be ye therefore perfect," was mankind, for all time. It is the goal toward which journey each moment *now*; and when through tribulation, through the conquest of sinful sense, a of separateness from God is eradicated from consci the goal will *now* be won. When the full realiza heaven, harmony, and the revelation of the glories new Jerusalem shall appear, it will still be the *n* victory, "and so shall we ever be with the Lord," never-ending *now* of eternity.

THINKING THE THOUGHTS OF GOD.

ELIZABETH WARREN.

ONE night, as I glanced from my window, my atte was attracted by a bright star, shining so clearly fro the surrounding darkness, that I stopped to take a l look at it; and as I gazed, I thought how much more l tiful every object in the universe becomes to us after begin to understand spiritual reality, than when we beli them to be material. Through the study of Science Health, the text-book of Christian Science, we learn the universe of God's creating is spiritual and perfect; all real things are thoughts of God and express the di Mind. As I watched that star, and tried to realize wh must be in reality, I was reminded of Kepler's saying, he had been thinking God's thoughts after him.

As I continued to look at it, I realized as never bef that the stars are truly thoughts of God, and that m

Digitized by Google

the image and likeness of God, reflects Him in His completeness—thinks His thoughts—when he recognizes spiritually the creation of the divine Mind. As I gazed or, another star appeared to my sight, then another and another, until the sky which had at first seemed so dark was so peopled with stars that the darkness was no longer in evidence, for the sky was full of light. Then the thought came to me that the same experience is ours, whenever we look for the divine ideas instead of the beliefs of mortal mind.

Surrounded by the night of materiality, the tired pilgrim on earth, searching for health, happiness, or wisdom, looks up to heaven for the help which cometh from God alone; and begins to see the clear light of spiritual sense which is waiting to brighten his pathway. It guides him to Christ, —Truth,—as revealed in Science, and he begins to understand God,—infinite Mind,—and to think His thoughts.

Those of us who have already commenced this study know the joy which comes whenever we give up an erring, mortal concept, to think a thought of God; and we learn that the perception and acceptance of one idea of Truth opens our eyes to the next one, waiting close at hand; until, as the stars appeared to me in countless multitude, changing to light what had seemed to be darkness, so in Truth our joys and our blessings, here and now, are found to be more than we can number.

SCIENTIFIC GUIDANCE.

ERNEST G. CROWLEY.

ONE day when my brother was out hunting, and a long way from camp, he became aware that he was lost. Now any one who has ever been lost in the woods will know that this was no pleasant experience. My brother carried a compass, as nearly all hunters do, and of course the first thing he did was to consult it. After taking his bearings, he started in the direction that he should go. He noticed at the time that north seemed south and east seemed west, but having learned in the past to place confidence in the little needle that always points to the north pole, he felt sure he would be led out of his difficulty. He commenced to travel in what seemed the true course, only to find, after several hours had been consumed, that he was at the place from which he had started. He had traveled in a circle. What did he do—become discouraged and lose faith in the compass? No; he knew that while he might have gone wrong, the compass must be right and it still pointed due north. So once more getting the right direction, he started for home. This time, however, he adopted a new method; instead of carrying the compass in the recesses of his pocket, he kept it in his hand so that he could consult it often, and by following this plan he arrived home safe and sound before evening.

Does not this experience illustrate that of Christian Scientists in working out of material bondage, in the journey which we are traveling from "sense to Soul"? By consulting personal sense instead of the truth, do we not at times become bewildered in error, and find ourselves traveling in a circle? Mrs. Eddy says, on page vii. of the preface to our text-book, Science and Health, "The Wisemen are led to behold and follow the daystar of divine Science, lighting the way to eternal harmony." Do we fully realize that we have in our text-book the true spiritual compass that always points to God, good? Do we carry it with us and consult it often? How many times do we have to stay all night in the woods of mortal belief, when we could just as well be in our Father's house, enjoying its shelter. Let us remember we are "Wisemen" only in so far as we follow the "daystar." Surely we should rejoice at every step of our journey, with increasing love for our dear Leader and with unmistakable proofs that our lives are governed by Science.

"COME UNTO ME."

C. LONA MARSTERS.

As the oasis in the desert refreshes the weary traveler, cools the parched tongue, and slakes the burning thirst, imparting new energy and courage to press onward, so the words of truth spoken by Jesus were the fountain in the desert to my weary sense at one time. I had been doing some work to which I was unaccustomed. I felt hurried and anxious, and found myself in a state of nervous trembling, seemingly worn out with fatigue. I dropped into a chair to rest for a moment and to rebuke this sense of inharmony, for I recalled the words "Physician, heal thyself." Involuntarily I raised my eyes to the wall, where hung a card with the Scripture text, "Jesus said, Come unto me, . . . and I will give you rest." My attention was absorbed; I forgot all else save the spiritual significance of this message. "Jesus said." Who, what, and where was Jesus? The man of Galilee, the two-thousand-years-ago experience of human life,—yea, and more,—the "Word" "made flesh;" Mind, Spirit, Soul revealed. "Thou shalt call his name Jesus: for he shall save his people from their sins." Jesus, then, was the Word "made flesh"—Mind manifested; the messenger from the Father, bearing the message to earth's weary ones, "Come unto me!" Come to whom? Me! the Word of Life. "I will give you rest." Come into the consciousness of man's sonship with God—the consciousness of God-given inheritance.

With this came the realization that man is spiritual and not material, and that all may come into the consciousness of a divine origin. I saw that man is not flesh, but the reflection of infinite Mind, unto whom all things are possible. I saw that Christ Jesus was the voice of Truth, clothed with the mentality which men call flesh that he might be seen and heard by their mortal senses, and thus speak the words of Truth to the world-weary hearts. And thus Christ, Truth, speaks to-day, "Come unto me, . . . and I will give you rest." Yes, the consciousness, the realization of man's true, divine nature rests us; it heals all our sorrow and sickness and sin.

Not five minutes had elapsed, but I was fully refreshed, rested, healed. The Christ had spoken to me through my understanding of Christian Science, and I realized a sweet sense of uplifted thought, of conscious, spiritual communion, the benediction from the one Mind. While in this illumined consciousness some one came for help who needed it sorely, and was healed in one treatment, proving that man has dominion.

[Written for the *Sentinel.*]

TO OUR LEADER.

MARY C. PUTNAM.

I DO not need to look upon thy face
To see the light and radiance of Love.
The rare reflection of the Spirit's grace
Is caught and held secure in every place
Where thought turns steadfast
To the one great Light above.

I do not need the pressure of thy hand
To feel the might and immanence of Truth,
Made manifest to mortals through the grand
Uplifting power and purpose and command
Of His wide, new-revealed infinitude.

The demand of the day is for a higher standard and style of Christian life. Every follower of Christ must represent his religion purely, loftily, impressively, before that multitude of Bible readers whose only Bible is the Christian.

AN ANSWER TO CRITICISM.

One of the citizens of Hoboken, who is a believer in results obtained by Christian Scientists, takes exception to the sermon preached Sunday by the rector of St. Paul's church. In commenting upon it he says:—

Judging from your report of the sermon of Sunday morning, it is evident that the rector is not as fully informed on the subject of Christian Science as he might be, for he speaks of it as a "faith" cure. If he had a practical working knowledge of it, he would know that it is not "faith" that cures, but understanding. But assuming that it is faith that cures, why should a clergyman, who takes the Bible as his guide, quarrel with the faith-curist? . . . Jesus not only healed the sick ("Thy faith hath made thee whole"), and gave his twelve disciples power to cure diseases, but he sent seventy other disciples to heal the sick. He also said, "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you." Again he said, "And all things, whatsoever ye shall ask in prayer, believing, ye shall receive."

The rector, if I am not mistaken, is a representative of a church which claims its authority through and by the apostolic succession. Now, if Jesus gave his disciples this power to heal sickness, when, how, and why did that power get lost? Didn't that power come along with the rest of the authority? Why cannot the good doctor heal sickness?

He cannot say that it was given only to the disciples, for Jesus says, He that believeth in me shall perform greater works than these. The Christian Scientists claim, I believe, that they get the power to heal from the understanding of what Jesus taught, and if the archdeacon will read a few numbers of their official paper (*Christian Science Sentinel*) he will find that they can substantiate their claim, for it is filled with testimony to the healing power of Christian Science. . . .

The number of converts to Christian Science cannot all be due to hallucination,—the favorite argument of the skeptic,—for amongst the number are lawyers and doctors of medicine. The conversion of the latter to Christian Science may not seem so strange when a noted physician, writing in the New York *Sun*, Sunday edition, says that "faith is the great lever," and "without faith our drugs would be useless;" and when numerous physicians of the highest standing have stated from time to time that "if the world had never taken a drop of medicine it would be better off." This is "expert" testimony.

I am not a Christian Scientist, never have been, and never expect to be, but as I was cured by Christian Science methods of an ailment which had defied *materia medica* for over twenty-five years, I think it only right to add my testimony. . . . Seven years ago Christian Science cured me in less than half an hour, and I have never had a recurrence of the trouble.

I am sure that a fair-minded gentleman, as I know the rector to be, needs only to be put on the way to seeking the truth in the right place—which in this case is the testimony of sceptics who have been cured—to realize that he does a great injustice to a sect, the members of which try to the utmost to really live the Christ-life of love and charity. . . .

It would do the doctor's heart good to attend any of the Wednesday night services in the Christian Science churches and feel the spiritual exaltation of the thankful men and women who, from being on the verge of materialism, have through Christian Science been brought to that peace that "passeth all understanding," which of itself is the understanding of Jesus the Christ.

[From the *Duluth* (Minn.) *News-Tribune.*]

THE CHURCH AND CHRISTIAN SE

A local minister in his sermon yesterday b forcefully the fact that ninety per cent of present work is merely preparation for Christian service that the building of church edifices, the paym minister's salary, the securing of funds for t church enterprises, and even the attendance at meetings were but the getting ready. These collecting the tools and taking the sustenance ne real service. He also, but rather incidentally, p the fact that church members do not get, because t demand, the results from all this work that they i having from everything else into which they put effort, and money. Right there is much of the the ineffectuality of the Church in reaching those o fold.

The non-churchman looks at the lives of those active membership for results. He sees little but of preparation for work, which is not especially or convincing. Indeed, he feels it as a somethi avoided rather than sought.

But when the minister referred to the Christian Church he might have used it to point the moral amplify the very argument he was making. The of Christian Science comes from the very fact tha give its people something tangible, something rea they have to take into their lives and live in order that faith. It is not a case of choice, but of must. avoids what in other churches makes up most of tha per cent of the work. There is no canvassing am general public for funds, no suppers, no bazars, no n no stated charities.

When they would help the poor it is by making self-supporting. The poor are sought as member membership is made a relief from anxiety and burde not an added worry and care, nor an added responsibi

The other churches have this to learn, also, from tian Science—that it not only brings them something tive, but it makes them of necessity kindly, charitable, tempered; not hurried in judgment, but slow to con It makes them most lovable as neighbors and fe citizens.

Christian Science may be altogether a fallacy; it ma based on a mistaken theory, but it is a theory that is very practical and that attracts by what it gives.

[Boston Letter in *Western Christian Advocate.*]

This letter, if it aims to be at all complete in chronic the chief ecclesiastical events of the past quarter, *can ha* omit the opening of the magnificent cathedral erected by Christian Scientists at a cost of two million *dollars.* certainly has given a great lift to their Cause, and brou them large accessions. I attended the dedication *and a* one of the mammoth midweek prayer meetings shor after, when at least four thousand people were assembl on a bad night in the last of June for prayer and testimon There is no space here to discuss the subject, but *after o* serving, talking freely with members, and reading ve extensively, I am convinced that there is much *more to* said in its favor than those who look at it superficially o from a distance are prone to imagine. The people *who ha* gone into this are not fools or lunatics.

Expect nothing from that on which no love or service is bestowed, and but little even where much is bestowed. The highest reward for your best work is the ability to do better work. Let anything more than this which may come, bring with it the added pleasure of a surprise.—Anon.

THE LECTURES.

ADRIAN, MICH.

The lecture on Christian Science by Hon. Clarence A. Buskirk at the Croswell, Thursday night [Oct. 18], was well attended by a good-sized audience. The speaker was introduced by Clarke E. Baldwin, one of the leading young attorneys of this city, who said in part,—

While it is true that this Church is comparatively new, its doctrines, to my mind, are founded upon the oldest teachings of Christianity. It is simply the working out of those and putting them into practical use, not alone in a religious sense but in every-day life. It is a Science, as I understand, that cannot be practised in churches and on Sundays alone, and simply when you have on your Sunday clothes; but it is a practical Science, which can be used at all times, in all places, and for all peoples, not special occasions, chosen people, nor selected communities.

Hope and faith in a hereafter has been the greatest cleanser of souls from time immemorial; why should not hope and faith be the great healer of those physical ills which are largely contributed to by the mental and moral condition of the patients? Give a sick man hope, faith, and courage, and you give him ambition, and a new desire to live and to throw off the ills of life. You make him independent, you make him hopeful, cheerful, and of some benefit to himself, his family, and society. And as I understand Christian Science, that object and aim is one of its principal doctrines,—to make men realize this power and exert it. And then, if they are successful, they do not perform unseemly things or miracles, they simply bring mankind to a higher moral, religious, mental, and physical standard, and demonstrate the use of divine law instead of simply theorizing.—*The Adrian Times.*

COLFAX, WASH.

Rev. Irving C. Tomlinson of Concord, N. H., lectured on Christian Science Oct. 22. He was introduced by Mr. George H. Lennox, who said in part,—

I am not a member of the Christian Science Church, nor am I a member of any other denomination, but I have read Science and Health, a book written by Mrs. Eddy, and I also read a weekly publication called the *Christian Science Sentinel*, and I wish to make a statement right here, and make it boldly. If there are any present whose minds are filled with prejudice, and who stand ready to ridicule or criticise, to those I say, If you will read either of the publications I have mentioned, or I dare say any of the other authorized publications, and you read them with the same freedom from prejudice that you read the associated press reports of your daily papers, you will become better men and women. That is just what Christian Science is doing, making better men and women all over the world, and if for no other reason, the world should encourage and applaud the uplifting, the upbuilding, and the betterment of mankind.—*Correspondence.*

PRINCETON, IND.

An audience of six or seven hundred people gathered at Gant's Opera House Sunday afternoon [Oct. 21] to hear the address of Miss Mary Brookins on Christian Science. The speaker was introduced by Mr. V. A. Smith, who said in part,—

What the doctrines of Christian Science are, I confess I am unable to say; but we do know that its ideal is a noble and lofty one. Its beliefs and hopes are for better things. Its ambition is to raise mankind to a higher, purer, and nobler life. If the practice of Christian Science can make the world brighter and better and bring sunshine and gladness to the hearts in gloom, if it will bring a ray of hope to the poor, the downcast, and the oppressed of the earth, if it is the balm of Gilead for every conceivable form of disease, if it will bind up the broken-hearted and border the pathway of life with the flowers of love, and draw all mankind nearer to God, then, whether we understand it or not, whether we believe in it or not, we should temper our criticism and condemnation with charity and bid the society Godspeed in its mission of good.—*The Tribune.*

BROOKLYN, N. Y.

A large and appreciative audience gathered at the Orpheum Theatre, on Sunday afternoon, Oct. 28, to listen to a lecture by Mr. Edward A. Kimball, given under the auspices of First Church of Christ, Scientist, of Brooklyn, N. Y. Mr. Samuel M. Gardenhire, a well-known counselor at law of New York City, introduced the speaker, saying in part,—

Religion in some form is the beginning and the end of every aspiration and every hope that animates mankind. And this age and these times need a religion. We need a religion, and the only religion that will suffice is an uncompromising religion. We are not content with any merely moral code. Human consciousness demands something more; daily life, daily needs, the daily relationship of man to man, demand something more. When I first became familiar with Christian Science I treated the subject with levity, but I have gotten over that. Its rapid growth and the eagerness with which the people respond to it are significant. All great movements for reform in a civilized community are educational and evoke opposition. Entrenched prejudice hates new thought; truth always climbs over breastworks to victory.

I lay down these three propositions: A religion is not a mode of moral conduct, it must meet the question of a future life; the religion of to-day must lead the knowledge of to-day; the religion of to-day must prove itself. How nearly Christian Science will conform to the requirements I will leave to its able exponents to say, but religious truth needs a church, an organization militant, aggressive. The emblems of a flag and sword best appeal to many. This is the meaning of a controverted phrase, "Think not that I am come to send peace on earth: I came not to send peace, but a sword," Truth crucified, like truth crushed to earth, will rise again. That is the very poetry of the spheres, and Jesus Christ left it as a heritage with every sacred word he spoke. It lives now, as it lived then; and it comes to us with healing on its wings to dignify, and purify, and save the human race.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From the *Concord Daily Patriot.*]

A BAS-RELIEF OF MRS. EDDY.

MRS. MARY BAKER G. EDDY has just received an exquisitely beautiful work of art, in the form of a bas-relief of herself in marble, done by William Frederick Pope, the Boston sculptor. This was Mr. Pope's last work and was an expression of the genuine regard in which he held Mrs. Eddy. The bas-relief was presented to Mrs. Eddy by Mr. and Mrs. Charles W. H. Blood of Winthrop Highlands, Mass.

Prominent art critics, who have viewed this work, have agreed in pronouncing it of the highest artistic merit, and all have been impressed by the wonderful beauty, purity, and spirituality which the artist has succeeded in manifesting. The bas-relief, which is a full profile showing the right side of the face, is also an excellent likeness, which has the unquestioned merit of growing upon one the more carefully he studies the sculptured features.

Mrs. Eddy's characteristic letter to Mr. and Mrs. Blood is as follows:—

Pleasant View, Concord, N. H., Nov. 30, 1906.

Mr. and Mrs. Charles W. H. Blood,
Winthrop Highlands, Mass.

Beloved Friends:—Deeply grateful, I beg to say I am in receipt of the late William Frederick Pope's bas-relief of me, a fine work of art that already has called forth admiration.

It is true that the ideal of art by successful utterance gives mankind a higher perception of perfection.

Coming as this must from a mind in that mood, articulated by the various vicissitudes of his last delineations, I trust it may lead thought up to touch the hem of divine idealism in Christian Science.

Most truly yours,

MARY BAKER EDDY.

[From the *Concord Evening Monitor.*]

INTERESTING CORRESPONDENCE.

THE following correspondence between the Countess Fanny von Moltke of Frankfurt, Germany, wife of the present head of the famous German family which gave the fatherland one of its most distinguished warriors in Field Marshal von Moltke, and the Rev. Mary Baker G. Eddy, is of interest:—

Frankfurt, Germany, Nov. 12, 1906.

Mrs. Eddy.

Dear Beloved Leader:—This is only to assure you of my unbounded love and reverence. You are truly reflecting Love, forgiving your enemies and returning blessing for cursing like our Master.

My heart goes out to you, seeing the sufferings you have to go through in following the path of Truth, a you the more for it.

In deepest reverence, I am ever yours,

COUNTESS FANNY VON M

Pleasant View, Concord, N. H., Nov. 30.

The Countess von Moltke, Frankfurt, Germany.

My Beloved:—Abiding in the safe secret of divi and with such sweet assurances of sympathy as th the good great leaders in your land and in mine, h faint or be weary in well-doing? Accept my dee for your tender, reassuring letter.

I shall continue to watch, pray, and seek wisdo on high to direct my way,—to love my enemies bless them that would curse me.

With heart warm and pulsating with your sup spiritual understanding, I remain

Lovingly yours,

MARY BAKER G. E

PUT UP THY SWORD.

WHEN Jesus was seized by the servants of those w conspired for his betrayal, one of the disciples dr sword and cut off an ear of a servant of the high This was the method of the world, to meet *physical* with physical force, and to fight with carnal weapons, was not the method of the Christ. Our Master *immed* healed the wounded man, and rebuked the impetuos Peter with one of his greatest sayings, "Put up *agai* sword into his place: for all they that take the sword perish by the sword. Thinkest thou that I cannot *now* to my Father, and he shall presently give me more twelve legions of angels?"

Our Leader, Mrs. Eddy, has shown herself a follow the Christ in her fidelity to the letter and the spirit of teaching, and to every teaching of the Master, and in d so she has set an example which her followers and world may emulate with profit. Her article in *The pendent* is the most Christian utterance since Jesus s "Father, forgive them; for they know not what they and Christian Scientists can do no better than to fol Mrs. Eddy's example, and deal with the attacks of evil the same Christian manner in which she has dealt w them. Good alone is power, evil cannot be overcome w evil; and there is no better time to keep this in mind th the present.

An orderly and Christian method has been provid for the refutation of the false and misleading statemer about Christian Science and our Leader which appe from time to time in the press, and this method is the ver simple one of arraying truth against falsehood,—a metho which requires no intemperate zeal, no passion, no ur charitableness, no abuse. Whether the motive behind th attack be a mistaken sense of right or a desire to sell mor papers, our duty is plain, and when we have done this dut we can afford to wait patiently for the right to appear In the first instance we will hope that the critic needs but to know the truth in order to change his views. In the second instance the speculation will be a losing one, for the reason that public sentiment has been aroused to the baseness of such methods of making money.

ARCHIBALD MCLELLAN.

SPIRITUAL SIGHT.

THE account given in the 9th chapter of John of the healing of one who had been born blind, is peculiarly interesting in that it sets forth the vital purpose of the Master's work, and also because it marks an era in his ministry. Prior to this the great Teacher had, as it were, taken away from scholastic theology every prop on which it relied, in the way of "doctrines of men," and had shown

Digitized by Google

that the foundation of his Messianic teaching and practice must be purely spiritual.

As to how this teaching and this practice were received by those who claimed to be looking for the coming of God's kingdom, we are not left in doubt. Luke tells us that when Jesus announced to the people of Nazareth his complete program, for which he had paved the way by his healing work, "they thrust him out of the city" and attempted to "cast him down headlong" from a precipice. In spite of this, however, he pursued his appointed course, healing the sick and uncovering the false foundations of mortal belief at every point. He was rejected in Galilee, and John tells us that "he would not walk in Jewry [Judea], because the Jews sought to kill him." We find, however, that he did go up to Jerusalem at the time of the feast, that he went daily to the temple and taught, and that it was at this time he gave one of his most wonderful lessons, when he turned the light of Truth upon the accusers of the sinful woman so that they were at once self-convicted. Then it was that he said, perchance in the hearing of this woman, "Ye shall know the truth, and the truth shall make you free,"—words which echo down the long years to this glad day when their full meaning dawns upon the world in Christian Science. These words were scarcely spoken before "they took up stones to cast at him," even within the sacred precincts of the temple.

As he passed out, unharmed by their malice, he saw the blind man to whom reference has been made, and concerning whom the disciples asked whether this man or his parents had sinned. This question implies that they had been led to see the intimate relation between the moral and the physical; but it also shows that they were still influenced by their former theological teaching, which led them to believe that such an affliction must have resulted from some special moral offence, and Jesus hastened to disabuse them of this mistaken belief. He had just been confronted by the most dangerous and obstinate form of sin,—that which in the presence of light chooses darkness, which not only refuses to enter the open door of spiritual opportunity, but which will not suffer "them that are entering to go in." He had already told them that it would be "more tolerable" for the men of Sodom, in the judgment, than for those who rejected the truth which he offered the world. And wherefore? Because, without Truth, sin and suffering cannot be overcome. So long as material belief claims to usurp the place of spiritual truth, the "law of sin and death" will prevail, to mortal sense; the innocent will seem to suffer for the guilty, for innocence which is ignorant of the power of Truth is not sufficient to protect from suffering and death.

A material sense of sight is not one of "the works of God", to which Jesus referred. In Hebrews we read that God's "works were finished from the foundation of the world," and these were brought into evidence when the blind man was healed. The Master had offered the truth to the proud Pharisees, but they had rejected it, and he said of them, "Your sin remaineth." Had the great Teacher gone no farther than to insist upon general obedience to the moral law, doubtless the Pharisees would have been with him; but when he told them, in substance, what Christian Science insists upon to-day; viz., that belief in materiality is an impossible foundation for health, holiness, and immortality, they refused to follow and said, "Away with him." None the less, however, did he maintain the absolute truth, that as God is Spirit, His manifestations, through man and the universe, must be spiritual, not material. The Pharisees said, "We see," when they were blind,—blind to all that constitutes reality,—and, worst of all, they believed that they had God-given sight. Science and Health says, "The corporeal senses can take no cognizance of spiritual reality and immortality. . . . Mind alone possesses all faculties, perception and comprehension" (p. 488).

Spiritual sight is, therefore, one of the "works of God" which reveals the all-power of good, and to know this gives sight to the blind as did Christ Jesus. The one who gains this spiritual sense sees the beauty of holiness and cannot be attracted by sin. He neither loves it nor fears it. The distinctions made by mortals are untrustworthy; they are apt to express either an easy tolerance of sin, or a spasmodic condemnation of it; whereas John says, "Whosoever is born of God doth not commit sin." Thus is the ideal man revealed in Science. ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Los Angeles, Cal., Nov. 16, 1906.

Beloved Leader:—This is a time when your students, and the thousands who have received the blessings of health, the joy and peace of spiritual understanding, and a truer and more helpful and elevating knowledge of God and His relation to man, from your teachings and example, feel drawn to you, more than ever before, by the ties of love and gratitude. Your life has been so consecrated to works of beneficence, so free from any symptom of animosity towards any other church, or creed, or any of your fellowmen, that any attack upon your mode of living, or your motives or acts, seems so cruel, so unjust, that it is hard to look upon it as impersonal and to wholly suppress or overcome a sense of indignation. Your home, from which has come to us such words of admonition, counsel, hope, and wisdom, has seemed to us all as a sanctuary that should be kept inviolate from any worldly intrusion. I have heretofore refrained from adding to your manifold labors by any communication from me, but I feel impelled, at this time when you are being so unjustly assailed, to give expression to my deep gratitude for the inestimable blessings that have come to myself and my family through your teachings, and to say to you how sincerely we sympathize with you in this time of unwarranted and unjustifiable persecution.

Mrs. Works, who, like myself, was healed in Christian Science, joins me in expressing our love and gratitude. We are striving to show our appreciation of the great blessings we have received in Christian Science, by devoting ourselves to its study and beneficent work.

Lovingly yours,

JOHN D. WORKS.

Macon, Ga., Nov. 28, 1906.

Mrs. Mary Baker Eddy.

Beloved Helper:—I want to thank you for your article, entitled "Harvest," in the current number of *The Independent*. It is a beautiful and an inspiring expression of the genuineness and universality of your love. It also contains one of the best statements you have ever made as to the universality of Christian Science. I am glad to see the splendid editorial in *The Independent* which your article called forth. It is one of the many evidences that all things are working together for your good and for our good and for the good of all who desire and love good. As a result of your faithfulness, charity, and love, in times of evil as well as good report, you are being better understood and loved, and Christian Science is being better understood and loved than ever before. Such wonderful things are coming to us as a result of your insight and love that glorious things must be unfolding to you.

Lovingly and gratefully yours,

J. R. MOSLEY.

Fitchburg, Mass., Nov. 30, 1906.

Beloved Leader:—Thanksgiving service in our local church was largely attended. At the close of the formal service more than thirty people spoke briefly of what blessed things God had done for them by the truth revealed

Digitized by Google

through you in Christian Science. As I listened to the testimonies of healing, of release from sin, of comfort under sorrow, of regained prosperity, there came to me these words: "Who can find a virtuous woman? for her price is far above rubies. . . . Many daughters have done virtuously, but thou excellest them all. . . . Give her of the fruit of her hands; and let her own works praise her in the gates." These words it was my privilege to read in giving the closing testimony, in token of our gratitude to you. Mrs. Kratzer joins me in sending a great deal of love, and I am sure the whole church would desire me to speak likewise for them, if they knew that I was writing.

Very respectfully,

G. A. KRATZER, *First Reader.*

London, England, Nov. 2, 1906.

Beloved Teacher and Guide:—All things work together for good. Error's vicious attack upon you has been overruled, through the earnest, loyal work done here, to bring forth an unprecedented demonstration. Queen's Hall, seating four thousand people, was filled at eight o'clock; many were turned from the doors; and *The Tribune* this morning gives a good three-column report, which I enclose to you. These are two things unheard of in London. There is earnestness, loyalty, devotion among the workers here; and for you, most profound affection and fidelity. I believe the error has been thoroughly handled—the error of the recent attack—and it had the effect of giving a news-value to Christian Science which made it possible to get the publication of the lecture, a thing that a London paper has never before done.

With love and loyalty,

Yours in Christ, in Science,

ARTHUR REEVES VOSBURGH.

Belfast, Ireland, Nov. 10, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—We have just had a very successful lecture by Rev. Arthur R. Vosburgh, and are so grateful to you for opening up and organizing this splendid channel, through which we have the privilege of letting others know that God's Word has come to save not only from sin, but also from sickness and death. Our little branch church here is growing very gently and quietly, and we are trying through a very joyful obedience to express our gratitude to God for Christian Science and its beloved Leader, whose life and example are a constant inspiration and impetus, helping us nearer to God. With deep gratitude for the many, many blessings you have unfolded to us, I am very humbly and gratefully striving to be a help, and through humility and love prove my faith by my works.

Lovingly your student's student,

MISS LIZZIE MCKIBBIN.

Baltimore, Md., Nov. 28, 1906.

My Beloved Leader:—I cannot further neglect the great privilege of writing to you, and telling you that I have been healed, protected, and blessed in Christian Science. I owe all I have—and that is much—to you. I owe you more since reading the recent article by your pen in *The Independent.* Such loving humility was a revelation to me.

May God keep you, is my daily prayer.

Sincerely,

CHARLES G. BALDWIN.

Champaign, Ill., Nov. 27, 1906.

Dear Mrs. Eddy:—My heart cries out to you for "Harvest." Such an utterance from God is enough to lift one off his feet. I thank you for it.

Yours,

B. F. STOLTEY.

TESTIMONIES OF HEALIN

Having many times received encouragemen from the testimonies in our periodicals, I desi grateful acknowledgment of what Christian done for me. I became interested in this trut was not satisfied with the understanding of G had. I attended church regularly from childh time went on I longed to know more of the seemed that my progress had come to a stands while searching the Bible, I felt as if there was missing. Soon after this experience, a travelin who was visiting our place of business mentione Science to me, and said, "You know all things a with God." As he spoke of God, I became inte listened to what he had to say. It all seeme to me, yet strange. I could hardly wait until I the text-book, which he advised me to read. I but a few pages when I felt a great sense of pe over me; I realized that I had found what I ha of as missing pages in the Bible. I spent ev moment for two years in studying Science and H soon learned that I needed a healing which is important than the physical,—the healing which un one the false sense of existence and reveals the is now five years since I first heard of Science and know the meaning of Truth and Love. I have p that time that God is the only Physician, and I perfect health.

Words cannot express my gratitude to our Le can only prove my love for her by daily striving t Christian Scientist. I wish to express my thanks Publishing Society for giving to the world, week b this good news.—MRS. MARTHA BOYLE, Detroit, M

When I turned to Christian Science (about eighteen ago) for help, all medical means had failed to bring relief. Christian Science was then suggested to m wishing to give the last medicine prescribed a fair t declined it. I found, however, that I could not us medicine, so I abandoned it and took Christian Science ment. After three days I was entirely relieved of a s bowel trouble for which I had been under constant me treatment for six years. I knew from the change w then took place that none other than the power of God brought this about, and I said so. The use of the mat means previously resorted to had always been followe days of distress. I also had stomach trouble in its seve form. The above, which I considered the least of my were healed by intermittent treatments in Christian Scie lasting about one year, but the chief trouble was healed my daily study of the Bible and "Science and *Health* w Key to the Scriptures" by Mrs. Eddy.

To-day I am enjoying good health, notwithstanding t eighteen years ago all hope of my recovery had been ab doned by my physician and friends. I wish to express m gratitude to God for the Comforter, which is leading m into all truth as our Master promised; and to our Leade who has so clearly shown us how to gain the help of th Comforter.—MRS. E. F. JEWETT, Nashua, N. H.

From childhood I was subject to colds in the head, and early in 1903 I was confined to the house with what seemed to be the grip accompanied with a bowel trouble. I called a physician to my home, who directed that I should remain quietly in bed, and left me three different kinds of medicine to be taken at varying intervals. At the end of two weeks I returned to my office, hoping I was well; but the bowel trouble returned with more or less frequency till February,

Digitized by Google

1904, when I had what is called the grip again, with the old trouble in a more aggravated form. After about twelve days I returned to my office, although my ailment continued. Soon after, I called at the office of another physician and stated to him my condition. He said it was not much use to give me medicine. He did, however, give me a remedy, which I used. I would be somewhat better, but only temporarily. I became frightened, I must confess, and after reading a medical work, I concluded that if I attended to my office duties I should only live about three years if I did not get relief. From the first of April until September, I spent much of the time out of doors, dieting, taking medicine and exercise, which resulted in only temporary alleviation, and in the fall of 1904 I grew worse, till there was constant distress. During this time I felt it necessary to attend as much as possible to my office, for I had been under heavy expense for medical attendance, not only for myself but also for my wife, who, thanks to Christian Science, needs it no longer. I want to say that I have great respect and the kindest regards for the physicians, who are still our friends, even though they know we no longer have faith in drugs.

On the evening of Dec. 17, 1904, I was a little more fatigued, distressed, and discouraged than usual, and I telephoned a Christian Science practitioner, who said he would see me. Two or three evenings later I ate heartily before retiring and experienced no discomfort. I am a well man. My experimenting with material remedies cost me a great deal, besides the expense for my wife and child, who are now both well, thanks to Christian Science. My healing in Christian Science cost me ten dollars for two weeks' treatment; in addition I have bought some fifteen dollars worth of Mrs. Eddy's works and other Christian Science literature. I have been a resident of Concord, N. H., since July 15, 1896. I am a dentist by profession.

JOHN H. WORTHEN, Concord, N. H.

Our daughter was more or less of an invalid for eight years. An attack of lung trouble left her very frail, and was followed by a serious condition of one limb. She went to Idaho Falls, and would go to the hot springs for ten days at a time, but this resulted in little or no improvement. Finally she returned home and accepted the position of assistant principal of the high school, but at the end of three weeks she came down sick. As soon as she was able to travel, we sent her to a hospital in Minnesota, where she was examined by several doctors. Their conclusion was that she had heart trouble, and a growth coming in her neck. In addition to this she had had asthmatic trouble for years. She finally told her mother she would rather die than live.

At this time a friend interceded for her to have Christian Science treatment. We consented, and she took a single treatment. She left here on the noon train, and returned in the evening of the same day. She brought home with her a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and has been an attentive reader of it ever since. It is now about two years since she had treatment, and she has not taken any medicine since; the diseased limb is now as large as the other, and she does not limp or have to drag one foot in going upstairs; in fact, she says she is well. The growth has disappeared. She is now teaching elocution. I look upon this great change in her health as nothing less than a miracle and wholly due to Christian Science.—WILLIAM H. PARKER, Lawler, Ia.

When I first heard of Christian Science and had seen some of the effects of knowing the truth in people around me, I was troubled with a desire for intoxicants, and finally decided to go to a practitioner in order to be relieved of it. I did not care particularly to go on with the study of the Science, but wished more than anything else to be cured of this dreadful appetite. With this thought uppermost in my consciousness, I had not clearly seen the nothingness of it all, nor realized that there was no pleasure in it. The demonstration was not made at once, so I grew somewhat impatient and felt that I would like to give up the Science altogether, but somehow I could not; it seemed to follow me, until at last I realized that there was nothing but suffering in going on as I was; and then grew the desire for the truth itself, as well as for the healing. When I was willing to give up at last, not only the desire for liquor left me, but all taste for tobacco. This is not all, but ailments which had troubled me for years seemed to vanish almost before I recognized that they had left.

As I am a dentist, my work calls for especially good sight. I am often called upon to put in gold fillings, and sometimes, before coming into Science, it seemed impossible for me to do this on account of poor sight. I had thought several times that I would have to wear glasses, but this trouble left me, with many others for which I had not asked treatment. I smoked for eight months after taking up Science, but I really think I wanted to discontinue this habit long before it seemed to leave me, and finally one morning I told my wife that I was going to leave off smoking. I had no desire for it all that day, and have had none since. This was over two years ago. I find that my practice has grown considerably, and I am able to accomplish more alone, since taking up the Science, than I was before with an assistant, and with less fatigue.

It is not for the many demonstrations over physical ills for which I am most thankful, but for the understanding I have gained of the Bible through the study of "Science and Health with Key to the Scriptures," which understanding has lifted many a cloud and dispelled many a doubt and fear. I am most grateful for the many blessings which have come to me through the understanding I have of Christian Science.—G. H. RICHARDSON, Chicago, Ill.

Twenty years ago I was given up to die, with lung and bowel trouble. I consulted the best physicians in this country and tried all manner of remedies, but to no avail. The longest time I was given to live by any doctor was two years. I finally tried climatic change, but without benefit. At last, when all hope was given up, my wife, who was also an invalid, was cured through Christian Science and I was prevailed upon to take treatment. I improved steadily, but was not cured entirely until I was willing to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy; to live nearer to God; to give up my own narrow, wicked way of looking at things, and bearing malice, envy, hatred, and the like. Then and not until then was I cured. If it had not been for Christian Science I would most likely have died years ago; now I have the blessing of perfect health, and know how to think aright, and understand how to love my fellow-men better. I will also state that before becoming interested I was very profane, an inveterate smoker, and a sinner in many ways; but these have all been dropped by the wayside as I have grown to understand God better. Furthermore, I did not believe in a God,—at any rate, not the one that I was told sent both good and evil,—but since I have learned that God is a God of Love only, the true idea of God has been revealed to me in Christian Science, which presents God as Love, infinite, eternal, and ever-present.

T. R. HINSDALE, Helena, Mont.

In the spring of 1898, while working in the field, I suddenly became very ill, and had to have the assistance of my wife to get to the house. As soon as I could, I sent for a doctor, who made me a few visits. I grew no better but rather worse, so I changed physicians. I tried another

Digitized by Google

physician, the best that I could find, but he could give me no relief, and finally my people sent for the Danish minister to come to see me, as they thought I was going to die. For eight weeks I sat in one room, could never lie down at all, and only moved from my chair when I was carried. During all these hard times my family lived on the wages my wife could earn by washing. I had an income from two Danish "sick benefit" societies, which I had joined long before, but all the money I drew from these societies went to pay my doctor's bills. We had three little children.

A lady who knew of my distress came to me one day and asked me to try Christian Science. I did not know what this could be, but she said she knew it could help me. After the first treatment I asked my wife to throw away the atomizer and all the drugs, for I saw that I could get along without them, although I did not understand English very well and all the talk about the Bible was new to me. I can never forget the 91st Psalm as it was read to me at my first treatment. The practitioner gave me an English Bible, but I could not read a word of it. I would read a little from the Danish Bible and then a little from the English, until I learned to read from Science and Health, and now I can read and speak English quite well.

I think I had great help in getting well by giving up the income from the sick benefit societies. The first one I had to refuse because they wanted me to get a certificate from the doctor that I was sick, and Science and Health told me I was well. This society had given me six dollars a week, and though I could not work I gave up the other pension also, which was five dollars a week. I felt that it was dishonest to take this money. It was pretty hard to do this, for all my Danish friends opposed me and my wife thought she could not get along without the money, but I had to do it. I was under treatment for a year and a half. I afterwards had a bad fall, which injured my leg, and it took me quite a long time before I could walk. I have had hard trials, but they are over now.

I think I was the very first Dane who ever became a Christian Scientist, but there are more now. My wife is with me, and my children are taught in the Christian Science Sunday School. For more than three years I have worked every day and can easily do very hard work now. I earn almost double pay to what I ever had before. When I began to do this work, people said that the gas and the confinement would kill me, but they have never hurt me at all. I have as nice a home as any man needs to have. I used to like tobacco and liquor. My last doctor recommended tobacco and strong liquor to me, but since my first treatment I have never had any desire for either. A habit of swearing has also left me. I am glad that my healing was slow, for if I had become suddenly well, I might never have thought much about Christian Science.

I cannot tell how grateful I feel towards Mrs. Eddy. It may be that I can show it by helping other people.

MARIUS RASMUSSEN, Troy, N. Y.

About seventeen years ago an attack of grip developed into rheumatic trouble, and a specialist said there was no help for me, that I could never again do a day's work. Five or six general medical practitioners also expressed this opinion. I then tried various means to get relief, such as massage, baths, etc., continuing these for eight years, but gaining nothing. It was claimed that my disease was hereditary, which increased the difficulty in the opinion of the physicians. I never accepted the verdict of the medical men, but always felt that there was help for me, and about five years ago I was treated by one whose knowledge of Christian Science was acquired from "Science and Health with Key to the Scriptures" by Mrs. Eddy. Within ten weeks I was healed, and for the past five years have worked constantly, without suffering. I walk without help of any kind, if not with entire freedom, and feel that continued study of the Bible and our text bring, with understanding, a perfect physical cond

I am deeply grateful to our Leader, Mrs. Edd light she has thrown upon the Bible and the go done to me and others. I was led to try Christia by the experience of my sister, who, when confro surgical operation, the result of which was doubtf to Science and was restored to health.

CHARLES H. SAGER, Nashua

My gratitude grows daily for the understandin of Christian Science, whereby I am being healed agreeable traits and faults in my disposition. It a great joy to note this improvement since striving the teachings of our beloved Leader. Before a Christian Science, repeated efforts were made to some of my faults, but the results were just opp what I wished. My physical improvement has be great, but I realize that the improvement in my tion is still greater. It is not surprising that a praise goes forth from my heart to the giver of al and my desire to spread the "good tidings" to all n steadily increases.

When I first heard of Christian Science I had t portunity to read the literature, the truth having be cepted by my mother, but I did not avail myself of it. undergoing an operation whereby it was hoped t serious ailment in my eyes would be cured, and sti fering without any hope of betterment, I desired Ch Science healing. I was in constant pain and feared I would lose what sight I had. I procured a copy o ence and Health, but did not then comprehend mu what I read. I had a few treatments and received help, the pain left my eyes and I was able to sleep fortably; but becoming discouraged because I was healed immediately, the treatments were discontinued read the book occasionally, not from a desire to learn o truth, but to be healed physically.

I met with an accident and a doctor and a surgeon m an examination, when it was found that among o injuries sustained my left arm must be put in a cast. Ti days after this I was induced to ask for Christian Scie treatment and discontinued the use of material remed The healing was realized, and in less than three we from the date of the accident the arm was perfectly n mal. The doctor expressed his surprise when removi the cast, saying that he and the surgeon had not expect that I would be able to use the arm for some time.

The reading of Science and Health was continued in perfunctory manner, but it was not until I had been healed of heart trouble that I was willing to acknowledge that had been benefited by Christian Science treatment. Th ailment had become very severe, the frequent attacks leavin me disabled both physically and mentally. I had no hop of being cured, but was using a remedy which was termed the last resort, and I had been warned that it would eventually lose its power. Then I was told to go to a lower altitude and remain quiet. I took a vacation, and while the rest seemed to benefit me greatly, I was compelled to return to my work in order to retain my position, and it was not long before my condition was worse than before. An enlargement appeared above my ear and the pain was intense. My work was frequently neglected. My mother begged me to have Christian Science treatment, but it was several days before I did so, for I was firmly convinced that I could not be healed; however, as the pain became excruciating. I sought help from one of our practitioners. I was healed in one week and worked every day during the time. In three weeks the enlargement disappeared, also the heart trouble. During this week a decided change took place. It was once more a pleasure to work. Every one was

Digitized by Google

considerate and loving. I had hope and the bitterness was leaving me. Sleep and peace came to me. Then it was that I really began the study of the little book with a feeling of gratitude, and as the truth was unfolded to me it seemed beautiful beyond anything words could express.

Through study I have been healed of many ailments, and I am also being healed of extreme nervousness and a sense of lack. I have had many struggles, but it has been proven to my entire satisfaction that Christian Science is a practical religion, and that the Principle is never-failing. I am indeed grateful to our Leader for release from physical suffering, but I prize the Christian Scientist's understanding of divine Love, and the peace and happiness that have come into my life, far more than words can express. I pray that I may become a sincere follower of Truth, and that in deeds I may attest my appreciation for the many blessings received.

NORA HORTOP HENDERSON, Denver, Col.

About twelve years ago, while climbing a tree in quest of some young owls which I wanted for pets, I was badly scratched by the parent bird, so that my eyes were seriously injured. A doctor was called, who did all in his power to relieve my suffering. My eyes healed, leaving me with sufficient sight to get around, but not enough to read the largest headings in the newspapers. About a year later an optician fitted me with glasses with which I could see to read the smallest test type. I wore these glasses for about three and a half years, when my eyes began failing, and one morning I awoke almost entirely blind, so that I could not find my way around in the house. At this point my father took me to an oculist in Tampa, who after a careful examination said he could do nothing for me, and that the worst had not come, that I would shortly experience such intense pain that it would be necessary to have one eye extracted. With this for encouragement we returned home, and I resolved to die rather than submit to an operation. A little later another doctor was consulted, but he gave me very little encouragement, so I did not take his treatment.

At length I was told that there was a Christian Science practitioner in town and advised to go to her, which I did the next day. I was wearing colored glasses and a heavy shade over my eyes, and the practitioner told me to remove the shade, also the glasses, which I did without any inconvenience whatever. My sight gained somewhat, but not steadily, and after taking treatment for about eighteen months I became dissatisfied and decided to change, which I did with excellent results. I began to gain at once, and after about two months' treatment I could see to read, and in six months I was collecting natural science specimens along the Florida coast, making trips of one hundred miles in a small sailboat by myself, and on what was to me a strange part of the coast. I could see the buildings nine miles distant, and can see to read the smallest test type. Although my sight is not yet perfect, it is so much better than I ever expected it could be, that I thank God with all my heart for His message to the present age through Mrs. Eddy.—HOMER M. MOHR, Lealman, Fla.

I am more grateful for Christian Science than I know how to express. I was healed of asthmatic trouble, which I had had for over twenty years, or since childhood, and that by studying "Science and Health with Key to the Scriptures" by Mrs. Eddy. While I am indeed thankful for the physical healing, I feel that that is only a small part of the blessing that has come to me through Christian Science. To me the desire and ability to become a better man is of far more importance than the cure of my disease. It took many years to arouse in my father an interest in Christian Science. He felt that he was too strong-minded to espouse anything that savored of religion. Finally he was grievously ill, and was confined to his bed for many weeks. For a long time he turned a deaf ear to my request that he try Christian Science, but at last he found that medicine was of no avail and wrote to me (I was nearly four hundred miles away) that if I had anything which would do him any good to send it, and send it quick. I immediately telephoned a practitioner to give him absent treatment. In two weeks I visited him, and found, when I arose the first morning, that he had been out for a three-mile walk before breakfast. A few days before this he not only had been unable to walk, but was absolutely helpless. Truly, through Christian Science, the prophecy of Jesus respecting each faithful follower is fulfilled: "The works that I do shall he do also;" and his command, "Heal the sick," is obeyed.

CHARLES A. BROWER, Kansas City, Mo.

It is with an honest desire to express my gratitude to God for the blessings I have received through the study of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, that I send this testimony. Through Christian Science I am beginning to learn that God, good, is Love omnipotent. In constantly meeting friends who are unacquainted with Christian Science, I am helped to realize what a great blessing is mine through this knowledge. About five years ago I was healed in three treatments of a serious condition. Another demonstration was in a case of dentistry, of which I had to sense an awful fear. I had treatment before going to the dentist's and also while there. The work was done without my having any pain. It seemed a wonderful thing to me. Now I am trying to reflect more Love, to live up to my highest light, so that my life may prove my sincerity.

MRS. EDITH CURTIS, Townsville, Australia.

I desire to express my gratitude for what Christian Science has done in my home. Last summer my little boy was bitten by a copperhead snake. I immediately picked him up, ran to a neighbor who is a Christian Scientist, and asked for help. He had been bitten on the foot and the conditions soon became very bad. He seemed to suffer terribly, but in an hour he was playing, and the next day there was no evidence of his having been bitten. I have been reading Science and Health about a year, and am trying to get a better understanding of the truth. I am thankful to Mrs. Eddy for giving us this healing truth.

MRS. HATTIE VANGORKON, McElhany, Mo.

[Written for the *Sentinel*.]

THE LIGHTHOUSE.

MARY J. ELMENDORF.

HIGH on the towering crag it stands,
  This mighty Pharos of animate stone
Not built with hands.
  Impregnable; of its kind, alone,
Yet ever akin by deific decree
  To the sky and the shore and the harbor-bar,
Ships and the strength of the singing sea,
  Mariners staunch and the evening star.

Truth is this rock-girt tower whose might
  Foils the weapons of wind and wave;
And Love is the light,
  Flashing far pinions to succor and save.
By its golden guidance, through tempest and dark,
  Sailors the shelter of Spirit find,
Where each is guerdoned with peace, while his bark
  At anchor rides in the harbor of Mind.

FROM OUR EXCHANGES.

Not as a criticism of prevalent teaching but as a means of emphasizing the messages given, attention is called to a significant Biblical word for salvation—health. Most often, both in the Old Testament and in the New, sin seems to be regarded as a disease; whatever it may be that separates us from God, it is an interference with wholesome living; sin is as leprosy. If sin is a disease, the Healer is God. . . . All health and life are in God; only He can bestow them. The miracles of healing by Jesus were—among other things—but a necessary expression of this truth: contact with the source of life means life, sooner or later, for the entire being. . . .

Look deeper into that word healing; health is wholeness, holiness—spiritual health is salvation, just as New Testament writers describe bodily healing as being saved. To be healed is to be freed from all evil, from all abnormal conditions, all sin.—*The Pacific Baptist.*

The habit of professional belief in religion is loose, vague, equivocal. The habit of science is straightforward, exacting, uncompromising, direct. Therefore the conscience of mankind is on the side of science. And what does not that mean? After all, there is no moral conception so powerful in human life as the idea of truth; there is none which carries with it an influence so vital over the characters of communities and men, and gathers round it such strong reinforcements of moral sympathy. The church which fails to command that sympathy can have at best but a feeble influence on the destinies of mankind. If I mistake not, this is just what the churches are losing and what science is gaining at the present day. It is a perilous situation, and one without parallel in any previous age.—*The Hibbert Journal.*

The fluid condition of theological thought at the present time is manifest enough to any outside observer, and, of all people, ministers of religion cannot evade the responsibility which it brings. That there should be divergence of opinion even on questions of the gravest moment is inevitable, and is hardly to be regretted, so long as no one section claims to possess the whole truth, and so long as no attempt is made to excommunicate any.

The British Congregationalist.

If we seek those things which fill the soul rather than the pockets, if we are content to take the one great gift, if we fix our hearts on getting from God the Divine influences which enrich all the deeper, nobler, diviner thoughts and hopes in us, if we desire only Life, we live in a realm of spiritual liberty untouched and unhampered by laws other than that which is supreme over all, the Law of Love, whose highest expression is the gift of God's life to His Son.

The Universalist Leader.

God may be served in more ways than religion in the past has been accustomed to suppose. And, unless it pursues the fatuous course of identifying itself with the letter rather than with the spirit, with the part rather than with the whole, religion should welcome this tendency; for it conduces both to the worth of life and to the glory of God.

PROF. RALPH BARTON PERRY.
The Christian Register.

Logically the order is, first a good character and then an effective confession. No man can properly confess a character which he does not possess. Be good, do good, speak good—that is the proper sequence of Christian service. A bad man cannot utter a testimony that is worth anything. The life that tells for Christ must precede the tell of Christ.—*The New York Observer.*

The Church must and can so preach Christ as t world to realize the incalculable power and tr Church's creeds and the Church's order, and so both, creed and order, instinct with life as mean instead of stumbling-blocks to those who look f are "pelted by the cold stones of controversy."

The Chu

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Sc Health with Key to the Scriptures" by Mary Baker with latest revisions and additions, and number 700 pages.

For description, price, and other information, see of cover.

THE CONCORDANCE.—A complete Concordance ence and Health with Key to the Scriptures. Th has been compiled from the late revised edition of AND HEALTH, and contains about eighty thousand re (more than ten thousand words being indexed). contains an index to the Marginal Headings, and the Scriptural Quotations in SCIENCE AND HEALTH pages, 10 x 7, bound in cloth, marbled edges. Pric paid, single copy, $5. Twelve or more to one a $4.50 each.

CHURCH MANUAL.—Containing all the By-laws t of The Mother Church, The First Church of Chris entist, in Boston, Mass. This does not include the members. Price, prepaid, $1 per copy; $5 per half d $9 per dozen.

Address all orders for books named above to Jo ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application b will be supplied by The Christian Science Publishing ciety to practitioners who wish their names and addr inserted in the advertising columns of *Der Herold Christian Science.* These applications should be prop endorsed and forwarded to the Society. The rate advertisement will be $2.00 for the first line, and $1.00 each additional line. It is desirable that those who o their names in this way should be able to communicate w patients and inquirers who speak the German langu only.

CLERK OF THE MOTHER CHURCH.—Correspondence lating to membership with The Mother Church and reque for blank applications for membership, should be address to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Chur of Christ, Scientist, Falmouth, Norway, and St. Pa Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church o Christ, Scientist,—The Mother Church,—printed on folde sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of erro dating and enforcing practical Christian Science, thus ing invaluable directions for all true Scientists. The fo are some of the topics treated: SEEDTIME AND H DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR' SION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, I SOUL. 80 pages, cloth covers. Prices, prepaid, 55 $2.50 half dozen; $4.50 per dozen. Leather covers (p $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biogra sketch of the author. The way she was led to the dis of Christian Science; its growth and fundamental ide pages, cloth covers, gilt edges. Prices, prepaid, $1.06; half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance i history and to the readers of Christian Science; conta Dedicatory Sermon delivered at The Mother Church, scintillations from the press on that occasion; 132 p Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per doz

NO AND YES. A brief statement of very important point Christian Science. 56 pages. Pebbled cloth covers. Pr prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pas Emeritus' Message delivered at the Communion Season The Mother Church in Boston, June, 1898. A clear a strong refutation of the charge that Christian Scientists Pantheists. Leatherette covers, 21 pages. Prices, prepa 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Me sage of Mary Baker G. Eddy to The Mother Church o Communion Sunday, June, 1900. Deckle-edged. Prices, pre paid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Only the few yet realize that there is no occasion or excuse, provided the legitimate provisions of the first Hague Conference are fairly put into operation, for any more wars among civilized nations. The immediate necessity is to bring this fact home to the knowledge of all the people in every country. Various efforts are already on foot to establish needful publicity and awaken general interest. First there is a great Interparliamentary Union, consisting of many hundreds of the active members of the Parliaments of the world. Another series of organizations is composed of business men and Boards of Trade in cities. In the United States about one hundred Boards of Trade are already committed in favor of the new method of justice as compared with the old method of violence. Moreover, the Labor Unions are giving their attention to this movement. The organizations of business men, of parliamentarians, and of working men are looking forward to the establishment of an International Congress or Parliament, which shall discuss, if not actually legislate upon, the subjects of common interest to all nations. It is believed that any general recommendations of such a World Congress, with a view to the common welfare, would soon be taken up by public opinion, and, so far as they were reasonable, would come to have, through growing usage, the force of law. It is now proposed to establish a Press Bureau, which shall serve to gather and convey interesting and popular matter favorable to the cause of arbitration and peace as against the use of violence. It is also proposed to hold public meetings and national conferences from time to time in the principal cities of the United States, as such meetings are now held in France and England, for the awakening of public interest in the new movement.

Various great subjects will come before the approaching Hague Conference: The limitation of armaments, a general treaty of obligatory arbitration, the immunity of private property at sea from seizure by belligerents, the establishment of a world Congress, and the provision that hostilities shall in no case begin before an opportunity is given for investigation through the mediation of one or more friendly Powers. The British Parliament has already voted with substantial unanimity that the first of these great subjects shall be urged by their Government.

In response to President Roosevelt's invitation to participate at the Jamestown Exposition these nations have accepted, and will be represented either by warships, detachments of troops, or civil delegations, while some will make industrial and technical exhibits: Great Britain, Germany, Russia, Italy, France, Belgium, Mexico, Venezuela, Denmark, Japan, Costa Rica, Argentine Republic, Chile, Guatemala, Switzerland, Haiti. Many of the States of the Union have erected buildings. Cities that will participate independent of the States in which they are situated will embrace Philadelphia, Baltimore, Washington, Hartford, Syracuse, Milwaukee, Richmond, all of which will make extensive displays, combining municipal, commercial, and industrial features. The Exposition is within a few hours' travel of more than twenty-one million persons, and twenty-four hours of two thirds of the entire population of the United States, easily reached by seven great trunk lines of railways and twenty-six lines of steamships, which center at the tidewater cities of Norfolk, Portsmouth, and Newport News.

Over three hundred millions of dollars were collected in customs duties at the different ports during the past fiscal year ended June 30. New York stood first in the amount collected with $200,698,240; Boston second with $27,337,207; Philadelphia third with $20,532,928, followed in order by Chicago, San Francisco, New Orleans, Baltimore, St. Louis, Tampa, Detroit, Port Townsend, and Cleveland. At all ports, large and small, it cost the past year less than three cents to collect each dollar of customs revenue, the smallest cost yet reached.

All the Governors of New England and many influential business men in the several States have signed a petition to the New England delegation in Congress, urging earnest efforts in behalf of the bill now before the House of Representatives for the establishment of national forest reserves in the Appalachian and White Mountains. The petitioners hope to have the bill passed at the present short session, in order that the denudation of the mountains for commercial purposes may be stopped while there are any forests to save.

The annual report of the Commissioner of Internal Revenue for the past fiscal year shows total receipts of $240,102,738. There was collected from the tax on distilled spirits, $136,905,911; on fermented liquors, $54,051,636; on tobacco, $48,422,007. The cost of collecting the internal revenue during the year was 1.90 per cent, against 2.01 last year.

The Fifty-Ninth Congress began its second session at noon on the 3d. Seven Cabinet changes and one appointment to the Supreme Court Bench were sent to the Senate by President Roosevelt.

On December first 36,914 rural post-office routes were in operation and 2,200 petitions for the establishment of routes were pending. The number of rural carriers now employed is 36,782.

The House has passed a bill creating a game preserve of nearly seven hundred thousand acres within the Olympic forest reserve in the State of Washington.

The sum of $124,362,709 is now on deposit in the savings banks of Iowa to the credit of the people of that State.

The production of gold in the United States for the calendar year 1905 is estimated at $88,180,700.

It cost $10,601,749 to keep the ships of the United States Navy in commission during the past fiscal year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

FROM OUR CONTRIBUTORS.

THE POWER OF EXAMPLE.

The first great gift we can bestow on others is a good example.
MORELL.

CLARENCE W. CHADWICK.

FAITH without works is precept without example, the letter without the spirit. Christians in all denominations profess belief in the precepts of the Master, but they fall short of putting them into practice. They find it easier to believe in the theory of Christianity than to understand and take part in its practical adaptability to human needs. Blind belief in Christ, or Truth, makes no demands upon them for higher thinking and living, while a true knowledge or understanding of Christ as the Saviour of the world, demands the exemplification of our Master's life in daily thought and conduct. "If ye love me, keep my commandments," has no uncertain ring. It means doing and not saying. It means that precept and example are to go hand in hand. One cannot be separated from the other. The immortality of his words was made manifest in his mighty works, and only as we seek to emulate these works can we truly understand his words. It is the healing and saving influence of Truth made manifest in this present hour that is taking thought back to the standards of primitive Christianity with such renewed interest.

The precepts of the Master take on a new meaning for the reason that his priceless example of healing is again being practised by his humble and obedient followers. The student of Christian Science finds in the Bible verification and authority for every statement contained in his text-book, and he marvels that he could have read *this* same Bible for years without any proper conception of either the precepts or example of the great Wayshower. *In the* light of Christian Science he has discovered the unity between Christian precept and example, and just to the extent that he puts into practice the commands of the Master does he recognize their vital spiritual significance to *himself* and to all mankind. One of the first thoughts that comes to him is that there is something for him to do; that *practice* and profession go hand in hand. He soon learns the fallacy of professing to believe in Christ Jesus, while *refusing to* follow his example. He naturally becomes more concerned in the practical import of his mighty works; and the one thing needful for him to understand is, How did Jesus perform these wonderful works? Through prayerful study of the Christian Science text-book this question is answered to his entire satisfaction, enabling him to prove for himself the present possibility and actuality of Christian healing. He no longer asks if the accounts of healing as recorded throughout the New Testament are true,—having discovered the Principle that makes possible their reproduction in this age, he knows they are true. It is then, as never before, that he begins to comprehend the great example of the Master, and to adopt into his own household of thinking that standard of purity and spirituality which enables him to emulate, in part at least, this perfect example of right thinking and right living.

The Master's command, "Be ye therefore perfect," is no longer an impracticable theory, intended only for a future world, and he joyfully enters upon the work of correcting and adjusting his own thinking to conform to this unquestioned standard of righteousness. He ascertains that this one and only Christian standard of perfection is already established, and that now is the time for him to begin to think in harmony with it. It is this new line of thought that enables him to follow in the footsteps of the great Wayshower. By seeking first the knowledge of the kingdom of God, and His righteousness, he actually becomes a new man in Christ; old thoughts—thoughts of sin, disease, discord, and mortality—are cast out to make room for God's healing thoughts. He is no longer characterized by what he professes, but by what his Christlike living proves him to be. He finds that one single case of healing, where the seed of Truth has fallen into good soil, will attract more attention and "save" more "souls" than a thousand eloquent sermons which ignore the present availability of Christ's command to "heal the sick." He realizes most keenly that the only way to encourage a man to "get right with God" is to prove to him that the power of God is to-day within his reach to heal him of his physical infirmities, since it is this healing influence that purifies and uplifts individual thought and stimulates it to lay hold of the great spiritual fact that God made man spiritual, upright, and perfect, and that he has never fallen from his high estate. Only as the true Christ healing is experienced by the individual can he begin to "put off the old man" and enter into conscious unity with God, good, and thereby know that the real man is already right with his Maker.

Christian Science has reinstated the example of Christian healing as practised by Christ Jesus, and no form of Christian activity has attracted such widespread attention in modern times or awakened so much keen interest as has the healing accomplished through the apprehension of the Christ-truth. The much-needed example of a true, practical, working faith in God, such as was practised by the early Christian Church, is effecting a mighty change in the religious thought of mankind. It is an active, energizing, potent influence for good, which thinking people cannot resist, for in it they are beginning to recognize the only hope of the human race. Too long have they fed upon the empty husks of the dead letter of Christianity, which has been and ever will be devoid of healing power. Now they realize their one great need of getting so far right with God that they can prove the omnipotence of good in the actual overcoming of every form of evil.

The example of the great Master stands for all time, and it must be admitted by all Christians that the church which follows most closely in his footsteps, by healing the sick and reforming the sinful through spiritual means alone, is the only one that will supply humanity's need and reveal the kingdom of heaven on earth.

It remained for an earnest woman, after years of patient research,—groping amid the darkness of materialism, but with gaze directed heavenward,—to catch the first sweet strains of that celestial music which was to reveal the present and eternal availability of this great example and to interpret it to a waiting world. May our daily lives afford abundant proof of our gratitude for this heavenly light that has come to the world through Mrs. Eddy.

THE RIGHT ATTITUDE TOWARD CHRISTIAN SCIENCE.

ELMER GREY.

A HIGH dignitary in one of our orthodox churches, a broad-minded, generous-hearted gentleman, remarked the other day that he had read carefully "Science and Health with Key to the Scriptures" by Mrs. Eddy, had pondered over it, and had reached the conviction that Mrs. Eddy had grasped and therein expounded a profound truth. With a genial smile he added, "I am not afraid of Christian Science, however, and I will tell you why. Because I believe in God, and (so far as the other denominations are concerned) I believe that God will take care of the matter. I am not afraid of any sincere searchers after truth, for I know that the truth is amply able to take care of itself." If all Christian people were as sensible, how much better it would be. This is what Christian Scientists believe—that God will take care of the matter. They do not expect that because Christian Science is a revelation of Truth, all other Christian denominations will at once declare themselves unqualifiedly for it, but they do believe that the time is sure to come when the truth of Christian Science will be recognized by all.

The Christian Science Church has, from its inception, been growing with astonishing rapidity; and in the course of this remarkable growth it has gathered into its fold many of the former attendants of other churches. These other churches should not, however, look upon Christian Science as an antagonist; on the contrary, they should extend to it their hand, as to a friend. For just as the Saviour came "not to destroy, but to fulfil," so has Christian Science come not to destroy any of the good in other denominations, but, among other things, to restore one of the most vital and primarily essential features of original Christianity; namely, the healing of the sick by the word of Truth. Christian Science comes to enforce the idea that in addition to the possession of the virtue of goodness, the children of God should reflect in their bodies the health, the strength, and the abounding happiness of an all-wise, all-powerful, and all-loving creator.

This same clergyman was equally frank in his criticism of Christian Science. His objections seemed to be based chiefly upon the literary construction of the Christian Science text-book. Naturally enough, at his first reading, the use of some words, which all Christian Scientists recognize as a part of the "new tongue," had not pleased him. On this point Mrs. Eddy has said, in explaining the necessity for their use, "Apart from the usual opposition to everything new, the one great obstacle to the reception of that spirituality, through which the understanding of Mind-science comes, is the inadequacy of material terms for metaphysical statements, and the consequent difficulty of so expressing metaphysical ideas as to make them comprehensible by any reader who has not personally demonstrated Christian Science, as brought forth in my discovery. Job says, 'The ear trieth words, as the mouth tasteth meat.' The great difficulty is to give the right impression, when translating material terms back into the original spiritual tongue" (Science and Health, p. 114).

"Why does Mrs. Eddy say 'mortal mind'?" the clergyman asked; "I cannot help but feel that she means sub-conscious mind." It was answered that "subconscious mind" is a term that not only could not fill the varied uses to which the term mortal mind is put in Science and Health, but it does not mean at all the same thing. Mortal mind seems to itself to be both conscious and sub-conscious, but its distinguishing characteristic is its temporal character, its mortality. The temporal attributes of erring mortal mind, Mrs. Eddy has placed in clear contradistinction to the attributes of divine Mind, the individual ideas of God. It is no doubt for the sake of exactness that this term mortal mind, and other terms of like unfamiliarity, have been employed in Science and Health. In securing requisite exactness a departure from the common usa words was necessary.

It is here that Christian Science parts company much faulty thinking of our day. Some months a correspondent in a semi-religious magazine asked "v the line shall be drawn between experiences that m either supernatural or psychological in their nat "When I pray," he said, "and find peace of mind, it see me that my condition can be accounted for simply by n processes. Where does God come in?" The ed reply was, "Everywhere. Between the faith that perc God . . . in all experiences and the unfaith that ceives Him in none, we see no middle ground . . prayer is divine, and the answer is divine . . . wha mind does, God does; for man has no power apart God, in whom we live, and move, and have our bei Such a statement is open to serious criticism. If it unqualifiedly true that what the human mind does, does, we should have to hold God responsible for the of criminals and for the crime of the world. Such ina racies of expression are obviated in Christian Science s times by the use of unfamiliar words, with which r exactness can be obtained. Christian Science would qu the preceding statement by saying that good thoughts a are a reflection of God's thoughts; that we are to disting between what Mind does for us and what mortal mind se to do for us, as we distinguish between good and bad, tween light and darkness, between reality and illusi that the sinful imagery of the evil-minded can ne properly be named, or recognized as thought, nor ever pr erly be placed in the same category with the real thought those whose obedience to "the still, small voice" bri them the blessings of God, good.

In Christian Science Life is seen to be wholly spiritua not terminating "with the incident called death." transitory phenomena which pass away with that incid are therefore considered unsubstantial, as having no r existence. To avoid the necessity of much refere throughout her text-book to this and other truths, we sho remember that Mrs. Eddy has incorporated in Scier and Health a glossary, and the chapter "Recapitulation," which the definition of the unusual terms employed is clear stated. In the latter place (p. 468) we find substan designated as "that only which is eternal, and incapable discord and decay." Evil thought, mortal mentality, do not come under this category; and hence, in the light continuous spiritual existence, it is unreal.

Under date of Aug. 5, 1905, in the religious mag zine previously referred to, we find the following remar regarding the announcement of natural science that matt has been found to be composed not of atoms, as had pr viously been supposed, but of force:—

"We talk, write, move about, do this or that: but wha we do is merely to press the button which turns on th current of vital energy that is all of it God's. So when w tax our minds in thinking, the brain power we employ i His, not ours. We think, but so far as what we think i true, it is, it can be, no other than the thoughts of God The need of the man in the street and the problem of the philosopher in the closet are one and the same—to get back to the reality behind the appearance of things. . . . Noth-ing less than a divine revelation is its [natural science's] great discovery that the solid frame of nature is not only made by intelligence, but itself is compact of Intelligent Energy. . . . Thus the solid world, the universe, is found to be compact of active Force intelligently effecting an orderly progress of events. . . . The qualities of what we call 'matter'—its weight, immobility, resistance to touch—are only the manifesting of the Force that constitutes it. Matter is Force, Force is Mind, Nature is Spirit, are the affirmations that the newest Science brings to the ancient truth, 'In God we live'"!!

Digitized by Google

To a Christian Scientist the inaccuracy and misstatement of this paragraph is no less pitiful than astonishing. Such an utter confusion of good and bad, right and wrong, divine Mind and false mortal sense, indicates the imperative demand for that definition of scientific statement which is a distinguishing characteristic of Mrs. Eddy's writings. To say to the sinful man that "when we tax our minds in thinking, the brain power we employ is His [God's]," is to breed a sense of irresponsibility for wrong-doing. Again, matter is not Force, or Mind, or Spirit, as here stated. Matter is but the mortal concept of energy's manifestation—a concept based on the testimony of the physical senses, which are admitted by all to be unreliable. That only on which we can rely, because "eternal, and incapable of discord and decay," is Spirit, and this truth was revealed not through physical science, as here implied, but through Christian Science, the divine revelation which came to Mrs. Eddy and which she has embodied in "Science and Health with Key to the Scriptures." This book is a scientific treatise on Christian metaphysics, and without careful study even the most sagacious are apt to obtain but a partial understanding of it. A partial knowledge of any subject is a dangerous basis upon which to form opinions, one which is always likely to work injustice.

Mrs. Eddy has made no concessions to current forms of phraseology, but has used symbolic utterance as most succinctly expressing the spiritual import of the Scriptures. This symbolic utterance must be studied as a whole, and its parts be thus thoroughly understood, before it can be fairly judged. If students of the Bible did not bring to its perusal a similar friendly desire to extract from its pages more than their surface meaning, the good Book would not long endure as an inspired document. One of the primal qualifications for friendship, either with people or with books, is the ability to appreciate and to understand in them virtues that are not apparent upon casual acquaintance. Christian Scientists do not expect that all are at once to agree with their religious views, but they are *entitled* to the same consideration that any intelligent body of men would accord a new arrrival in their community, *whose* external dress and manner were different from theirs, but whose inner self had not yet made itself known. *Such a* man would not be judged by them until his credentials had been thoroughly and impartially examined; *and his* value to their community would be determined finally by the quality and the number of his good works.

[Written for the *Sentinel.*]

THE COMING OF TRUTH.

PHILIP S. SCOVEL, JR.

A GOLDEN sunbeam dawns upon my path;
A glorious ray, like tender morning light,
Awaking life and peace within, without;
I fain would hold it, lest it take its flight.

'Tis real! I rise from slumber to behold
The joys no mortal tongue nor pen can tell;
A thousand truths their petals pure unfold,
Refreshing as an ever-springing well.

All nature blends in harmony and praise,
Each part its sacred mission to perform;
The tinted pastures bloom and fade and die,
But Truth immortal pierceth through the storm.

And as this glorious light I comprehend,
The fleeing shadows I had thought were true,
Alike with mortal sorrows, pains, and fears,
Have taken flight and vanished as the dew.

SELECTED ARTICLES.

[George Shaw Cook in the *Quincy* (Ill.) *Journal.*]

People generally believe that death is the gateway to immortality, but Christian Science teaches that immortality is attained not through dying, but by gaining an understanding of God as the life of man. Jesus said, "I am come that they might have life, and that they might have it more abundantly;" and "this is life eternal, that they might know thee the only true God, and Jesus Christ whom thou hast sent."

The Christian Scientist does not say, "I am never sick." He says, "I am not sick so often as I formerly was. When I am sick I recover more quickly than formerly, because I now depend upon Mind to heal me, whereas I formerly depended upon matter. My experience teaches me that the new way is the better way." Furthermore, no case of disease is healed in Christian Science without effecting a corresponding change in the patient's mental and moral condition. Its effect is always to build up, never to tear down. Recognizing fear, worry, hate, malice, envy, and all other forms of sin as direct causes of disease, it also shows that complete bodily health can only be attained through the abandonment of these errors, and consequently that through the gradual destruction of human error, disease and its ultimate, death, will finally disappear. Thus the present experience of the Christian Scientists convinces them that they are in the direct line of ultimate victory over death, "the last enemy that shall be destroyed." No Christian Scientist claims to be at this point of growth now, but they all hope and expect to attain perfection sooner or later, and they say with David, "As for me, I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness."

[Anna H. Carter in the New York *Sun.*]

In the definition of its Founder (Luke, 4) Christianity is: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord."

In the practical application of its Founder it is: "And Jesus went about all the cities and villages, teaching in their synagogues, and preaching the gospel of the kingdom, and healing every sickness and every disease among the people."

In the obligation laid upon his followers for all time by its Founder it is: "Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost: teaching them to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world."

Thus the Christ coming was not alone the single appearance of a divinely endowed man, but is the perpetual appearing of the Divine presence to man. Thus the purpose and work of this Christ presence are not alone for the spiritual good of man, but are in the interest of his bodily needs as well. It is this ever-present Christ, coming with healing and power to man from his divine source, that Mrs. Eddy has seen; and it is this perpetual coming of the spirit of the Lord, with its message of present good and its Christ power of present healing, which she has named Christian Science.

[From the *Oakland* (Cal.) *Herald.*]

If there is nothing vital and sustaining in the new doctrine; if it is indeed fraudulent, deceptive, and mercenary, it will eventually pass away to be numbered with the million religions that have arisen, flourished for a brief space, and finally dropped into oblivion. If Christian Science is vital and necessary to the comfort and well-being of

Digitized by Google

humanity, all the power of all the theocracies on the face of the earth cannot prevent it from attaining its full growth, or retard its influence upon the minds of men.

[R. Stanhope Easterday in the *Morning Graphic*, Greensburg, Ind.

The physical healing in Christian Science results from moral regeneration; sin, the foundation of disease, being removed, the body is healed. Dealing as it does with effects only, giving no heed to obvious mental causes, *materia medica* treatment must of necessity be tentative and relief but temporary. It goes without saying, moreover, that if Jesus had thought drugs essential to the healing art he would have used and advocated the same, and insisted upon such knowledge of their nature and operation as would have rendered their use safe and potent, if indeed we can conceive of our Lord using or advocating a remedy doubtful or unsafe. In all his healing ministry, however, including thousands of cases and all manner of diseases and afflictions, he healed by spiritual means, permanently and effectually. He always left his patient better physically, morally, and spiritually, and there was never any reaction or dangerous "after-effects." He urged such healing upon his followers also, as the direct result of living the precepts which he taught, admonishing that the healing in certain cases could be done only "by prayer and fasting." Christian Scientists are again to-day demonstrating the possibility and the practicability of such healing and the superiority of the spiritual over the material in the realm of therapeutics, conscious, however, that all men have the inalienable right to choose for themselves in the matter.

[Ezra W. Palmer in the *Denver* (Col.) *Post*.)

Your issue of late date contained a discussion that appeared in an insurance magazine of the desirability of Christian Scientists as life insurance risks, the basis of the question being that they do not employ drugs or medical attendance in case of illness. The greater portion of this discussion was on the assumed proposition that Christian Scientists are an "extra risk from lack of skilled medical attendance in sickness."

If Christian Science entails extra risk of death among its adherents, it would be evident in the church membership, which is not the case. While no detailed data on mortality has been gathered regarding Christian Scientists, it is evident on every hand that they are a healthy people, and their universal verdict is that they have better health and are physically stronger than before they became Christian Scientists.

The assumption of this writer that Christian Scientists are negectful of their children by delaying the calling of a physician, while they for themselves employ medical aid, is entirely false. Christian Scientists are as careful of the lives of their children as of their own. In both cases they rely on God alone and exactly in the same manner and to the same degree.

[John L. Rendall in the *Sioux City* (Ia.) *Tribune*.]

Christian Scientists stand unequivocally upon the Scriptures and affirm without fear of successful contradiction that the religion of Jesus Christ as practised by him and by his disciples included Christian healing as a vital and fundamental part of its practical demonstration. It is a matter of history, according to Gibbon, that for three hundred years after Jesus' time the early Christians were healers of the sick. Christian Scientists have no contention with either physicians or clergymen, recognizing the world's present need; they simply asked to be spared premature judgment, but rather that they be judged, if at all, on the only equitable basis for judgment, viz., results.

AMONG THE CHURCH

ST. LOUIS, MO.

The words of our hymn, "Thou leade sought ways, and turn'st my mourning into indeed deeply impressed upon me this morning. Third Church of Christ, Scientist, its services in one of the Jewish temples, a first learned that we would not be able to ha Thanksgiving service, on account of the fact ish congregation needed the edifice for thei a sense of intense disappointment came upo came the thought that divine Love meets our there was no necessity or occasion for di Our need was met in the form of invitations f Second Churches of Christ, Scientist, this ci First Church in Kirkwood, to join them in t also an invitation from the Jewish congregat their service. This service was quite an el Rabbis from the leading Jewish churches of t ticipated, and as a courtesy to the Christian was decided that selections from the Scriptures our First Reader, and that our beloved Leade hymn, "Shepherd, show me how to go," be s congregation. The Bible selection was from chapter of 1st Chronicles, beginning with verse read in a way that scattered love broadcast. T the rabbis were most liberal-minded, elevating spiring. When it came to the singing of "She which the congregation was invited to partic hearty manner in which the whole assembly join hymn was most gratifying, and it indeed expr feeling of good-fellowship and love which cha the entire service. It was one of the most ple periences that could be conceived of. The kind fe brotherly love, the harmony, the happiness expre beautiful, and, as one of the rabbis said after the it was a glorious love-feast.—*Correspondence.*

SAN FRANCISCO, CAL.

San Francisco, Cal., Nov. 20, Editor of the *Christian Science Sentinel*, Boston, Mas

Dear Brother:—Thinking that it might be of inte the Field at large to know something of the relief done in this city since the disturbance last April, the of Directors of First Church of Christ, Scientist, i Francisco, Cal., has authorized me to forward to y report of this work.

In meeting the pressing needs of those requiring a ance a large quantity of clothing was distributed, and r copies of the Bible and Science and Health, as wel other Christian Science literature, were supplied. financial statement up to Nov. 15, 1906, is as follows:-

Receipts.—Contributions received, $22,468.66; Bank terest, $68.77; loans returned, $6,033.40; total, $28,570. Disbursements.—Donations and loans, $28,535.45; cash hand, $35.38.

The endeavor of the Relief Committee was to so disbur these funds as to help the recipients to become self-su porting, and many only desired the financial assistance as loan, to be returned when no longer needed. As the abov statement shows, $6,033.40 has been returned, to be im mediately disbursed again, until now the fund is nearly depleted. While there are still a few who need assistance, there is no doubt that loans being returned will meet all requirements, and all are grateful to our friends throughout the Field who responded so generously when it was needed.

Sincerely yours,

FRANK W. GALE,

Chairman Christian Science Relief Committee.

THE LECTURES.

EDINBURGH, SCOTLAND.

The annual lecture on Christian Science was given by the Rev. Arthur R. Vosburgh on Saturday evening, Nov. 3, in the Music Hall, George Street. The hall was well filled; a noticeably large number of men being present. The spirit of the audience was a strikingly earnest one and the lecture was listened to throughout with unusual attention. The title of the lecture was "The Idealism of Jesus," and the subject was treated in a beautiful and original manner, showing clearly that the idealism of Jesus accomplished easily what all the genius and realism of mankind has failed to bring about.

In the course of his lecture Mr. Vosburgh touched on the recent references to Mrs. Eddy in the American and British press, and his contradiction of these reports brought forth very gratifying applause. The lecturer was introduced by Commander J. G. Heugh, D.S.O., R.N., with the following remarks:—

Not only is it a great honor but a privilege that I am able to associate myself with the lecturer and Christian Science. Christian Science is a practical religion, a religion of right thinking, and it is attracting universal attention owing to its regenerative and healing power. To the question "What is Truth?" Christian Science replies by demonstration. Thousands are being healed daily by its understanding and demonstration of the Christ-truth. I am very grateful to God that I am able to count myself one of these. Over five years ago I was in a hopeless condition, and after trying every available material remedy without success, I was healed instantaneously by Christian Science.

I am sure you will all join with me in giving a hearty welcome as well as a patient hearing to the lecturer who has come so far to tell us what he knows of this wonderful truth. It is with great pleasure that I introduce to you the lecturer, a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, Boston, Mr. Vosburgh.—*Correspondence.*

FRANKLIN, PA.

Mrs. Sue Harper Mims, who lectured on Christian Science Nov. 6, was introduced by Mr. H. W. Breckenridge, who said in part,—

I take it that most of us are desirous for the best there is in life, physically, mentally, and spiritually. None of us have attained this perfection, yet may we not all have hope of approaching it? Should we not welcome health and happiness, mental and physical freedom, and the means of their attainment, from whatever source it may come? Christian Science is daily finding many hungry searchers after truth, many weary wanderers upon the face of the earth, pain-racked, sorrowful, and discouraged, to whom it is bringing comfort, health, and peace. The material problems and activities of this busy world seem to engage our attention and consume our energy to such an extent that but little time or inclination is left us to contemplate the deeper things of life. Yet is it not true that whatever will enable us to feel and express greater sympathy and charity in dealing with our fellow-men, and likewise eliminate, or at least minimize, the worries and petty annoyances that confront us, to say nothing of lifting us from beds of sickness, is worthy of our attention? I believe this to be the province of Christian Science.—*Correspondence.*

LYNN, MASS.

Hon. Clarence A. Buskirk, who lectured on Christian Science Oct. 30, was introduced by Mr. Howard D. Kenyon, First Reader, who said in part.—

As a result of a better understanding of Christian Science, many people have awakened to the fact that they were not opposing Christian Science, but a false conception of it. In our temptation to believe unauthorized or malicious reports, or even to account for them, we find a helpful parallel in the early history of Christianity. Unreasonable opposition, misrepresentation, and invective assailed it on every side. In the light of our present knowledge was it just? And yet can you point to any great movement which has proved a permanent blessing, whose followers, and especially whose leader, did not share to some extent the experiences of him who dated the Christian era? But, as we look back over those centuries, how futile the opposition to any truth designed to serve humanity and to uplift and ennoble human life.—*Correspondence.*

BALLARD, WASH.

Rev. Irving C. Tomlinson delivered a lecture at Carnegie Library Hall Tuesday night [Oct. 30]. Prof. J. C. Dickson, of the city schools, in introducing Mr. Tomlinson said in part,—

I know but little of the teachings outlined in the Church of Christ, Scientist, but judging from the daily walk of those whom we know as members, we are led to believe that they are securing excellent results where many have failed. The longer I live the more forcibly it dawns upon me that there are a great many things in this life that we, you and I, know but little about. If sweet disposition, faithfulness, sincerity, devotion, philanthropy, godliness mean anything, we must conclude that the Founder and promulgator of this faith, Mrs. Mary Baker Eddy, has a strong claim to be respected, loved, and revered.

Ballard News.

ASPEN, COL.

W. S. Copeland, editor of the *Daily Times*, in introducing Bliss Knapp, who lectured on Christian Science Nov. 3, said in part,—

While I am not conversant with the doctrine which the speaker of the evening is to place before you, I do know this, that Christian Science is a movement which has called, and to-day is calling louder than ever, many of the best minds of this glorious land to its support, and all, so far as I have been able to observe, with one purpose, the betterment of humanity; therefore, my friends, it is my pleasure to be with you this evening and to have the honor of introducing Mr. Bliss Knapp of Boston.

Correspondence.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

INTERESTING LETTERS.

[We are pleased to give prominence to the following letters to Mrs. Eddy in regard to the late Rev. J. Henry Wiggin and his attitude toward her and her work. These letters and the letter of Mr. Edward P. Bates published in our issue of Dec. 1 make clear the fact that Mr. Wiggin did not claim to have rendered Mrs. Eddy any service other than that stated by her; also that he highly esteemed her as an author.—Editor.]

New York, N. Y., Dec. 7, 1906.

Beloved Teacher:—My heart has been too full to tell you in words all that your wonderful life and sacrifice means to me. Neither do I now feel at all equal to expressing the crowding thoughts of gratitude and praise to God for giving this age such a Leader and Teacher to reveal to us His way. Your crowning triumph over error and sin, which we have so recently witnessed, in blessing those who would destroy you if God did not hold you up by the right hand of His righteousness, should mean to your older students much that they may not have been able to appreciate in times past. I wonder if you will remember that Mr. Snider and myself boarded in the home of the late Rev. J. Henry Wiggin during the time of our studying in the second class with you—the normal class in the fall of 1887? We were at that time some eight days in Mr. and Mrs. Wiggin's home. He often spoke his thoughts freely about you and your work, especially your book Science and Health. Mr. Wiggin had somewhat of a thought of contempt for the unlearned, and he scorned the suggestion that Mr. Quimby had given you any idea for your book, as he said you and your ideas were too much alike for the book to have come from any one but yourself. He often said you were so original and so very decided that no one could be of much service to you, and he often hinted that he thought he could give a clearer nomenclature for Science and Health. I remember telling you of this, and you explained how long you had waited on the Lord to have those very terms revealed to you.

I am very sure that neither Mr. Wiggin nor his estimable wife had any other thought but that you were the author of your book, and were he here to-day he would be too honorable to allow the thought to go out that he had helped you write it. He certainly never gave us the impression that he thought you needed help, for we always thought that Mr. Wiggin regarded you as quite his literary equal, and was gratified and pleased in numbering you among his literary friends. Everything he said conveyed this impression to us—that he regarded you as entirely unique and original. He told us laughingly why he accepted your invitation to sit through your class. He said he wanted to see if there was one woman under the sun who could keep to her text. When we asked him if he found you could do so, he replied "Yes," and said that no man could have done so any better. Both Mr. and Mrs. Wiggin frequently mentioned many kindnesses you had shown them, and spoke of one especial day when amidst all your duties you personally called to inquire of his welfare (he had been ill) and to leave luscious hothouse fruit. On that I think will amuse you: Mr. Wiggin troubled that you had bought your house wealth Avenue, as he was very sure Back would never be worth what you then pai regarded the old part of Boston in which he a greater future than the new Back Bay.

Years ago I offered my services to you in which I could serve you, and my desire has Command me at any time, in any way, belov

With increasing love and gratitude, ever student,

Carrie Har

Chattanooga, Tenn., D

Mrs. Mary Baker G. Eddy.

My Beloved Teacher:—I have just read y correcting mistakes widely published about R Wiggin's work for and attitude towards yo Edward P. Bates' letter to you on the same su reminds me of a conversation I had with Mr. Thanksgiving day twenty years ago, when a were the guests invited to dine with the Wig I had seen you the day before at the Metaphys and received your permission to enter the ne Class (Jan. 10, 1887). During the evening spoke of my journeying from the far South, a months in Boston on the bare hope of a few da tion by Mrs. Eddy in Christian Science. She Wiggin seemed inclined to banter me on such e but Mr. Wiggin kindly helped me by advanc good points in the Science, which were so clearly s I was surprised when he told me he was not a Chri entist. Seeing my great interest in the subject, he t his acquaintance with you and spoke earnestly an fully of you and your work. The exact words I do n but the impression he left with me was entirely in ance with what Mr. Bates has so well written in th mentioned letter. Before we left that evening, Mr. gave me a pamphlet entitled "Christian Science a Bible," by "Phare Pleigh," which he said he had wr answer to an unfair criticism of you and your book b minister in the far West. I have his little book yet. long must it be before the people find out that you h identified yourself with the truth by loving it and li that you are not going to lie about anything nor wil leave any false impression.

In loving gratitude for your living witness to Truth Love,

Florence Whitesi

RAPID PROGRESS.

The question, "How can I progress most rapidly in understanding of Christian Science?" (Science and Hea p. 495) is one which many are asking, and its answer, given in our text-book, is wonderful in its clearness a comprehensiveness. The student of Mind Science would well to refer to it very frequently. A faithful and pe sistent effort to practise what it points out reveals the dept of its meaning.

There are many calls to-day for our more rapid progres in the understanding of Truth. Even if we have reached a measure of harmony in our own experience, there are many who need our aid and who are eager to avail themselves of what Christian Science has to offer in the way of healing. With these the foremost consideration usually is how this healing may be most quickly realized. Mortals are impatient of suffering, and in almost every instance are weary of experiments when they come to Christian Science for help. What is more, they have also well-nigh exhausted their rather limited supply of faith in the possibilities of good, and are therefore easily discouraged if

Digitized by Google

their ailments are not quickly overcome. The Master rightly estimated mortal sense when he said, even of his own disciples, "O ye of little faith." From the force of education mortals in general have faith only in material ways and means, their faith in the spiritual being smaller than "a grain of mustard seed," according to Christ Jesus.

Those who seek help in Christian Science soon find that they have something to do for themselves; that in addition to the study of the Bible and our text-book, it is necessary to put into practice their teachings, and this involves the breaking away from old habits of thinking, speaking, and acting. While it would hardly be fair to call the bondage of material belief, including sin and suffering, self-imposed, it is undeniable that mortals hug their delusions,—cling to the fetters which universal false belief has imposed upon them. The tendency to keep in memory the most distressing experiences and to recall with the utmost care every ailment from infancy to the present hour, is sometimes almost amusing. Those who do it are quite forgetful that at each recital they are welding anew the links of this supposititious chain of error, and greatly hindering their own progress. In Christian Science we learn that nothing is real in our experience except that which relates us to God, good. If suffering has seemed necessary to awaken us from the dream of materiality, this implies the destruction of a false sense; then why should any cling to that which is destructible?

The healing in Christian Science brings marvelous spiritual upliftings, wherein we partake of the bread which cometh down from heaven, and go in the strength of this "living bread" for many days, and these are the experiences which we should both treasure and tell,—not the dreams of sin and suffering which are proved unreal by the entrance of the truth to our consciousness. If we scientifically measure each day's progress, we shall learn that it depends upon how many burdens of error we have dropped by the way. Our heavenly Father supplies *all* good for us, but no evil. If, then, we cling to a sense of that which does not come from God,—think of it, speak of it,—need we wonder why complete healing is not quickly realized. As our revered Leader has said, "Progress is the law of God" (Science and Health, p. 233), and if we are not progressing the fault is not in the law, but in our failure to obey it. We certainly cannot afford to deny good and affirm evil for ourselves, when we should constantly be doing the opposite. The question quoted from our text-book, and its answer, cannot be studied too frequently.

ANNIE M. KNOTT.

A CORRECTION.

IN copying from the *Concord Monitor* the correspondence between Mrs. Eddy and Countess Fanny von Moltke, we copied also the statement that Countess von Moltke is the "wife of the present head of the famous German family which gave the fatherland one of its most distinguished warriors in Field Marshal von Moltke." We are now informed that this statement was incorrect and that Countess Fanny von Moltke is unmarried; also that her father was a cousin of the great Field Marshal. We regret this mistake.

LETTERS TO OUR LEADER.

Cambridge, Mass., Dec. 7, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader and Friend:—Having just completed a series of lectures, I wish to report to you what gives reason for encouragement, in that there is much growth in the churches towards recognition of the rule of law. In many the era of government by personal domination is over, and with the coming of obedience to law, has come peace and real efficiency. With great joy I learned of cases where after a separate existence a once dissatisfied minority had dissolved its organization and become again identified with the branch church first established in the community. If contentions prevent our neighbors from recognizing the good part, these harmonizations are effectual in proving to them that when in our right mind as to Christian Science we obey Love as law.

Hardly a day passes but my heart indites a letter of love and thankfulness to you because of your example; but I do not intrude upon your time—rather endeavor to ease the burden of your labor, if it may be, by following the leading of your demonstration and holy living. It is your example which leads us, and it is your proving of the truth which brings to judgment those who are faithless and insincere. In this last outburst of that which "loveth and maketh a lie" the ancient promise to Israel was fulfilled, "Thine enemies shall be found liars unto thee." The power of the liar lasts only so long as he can deceive, but less and less does that power prevail, for press and people are coming to know and love the beautiful truth, and to loathe falsity; and the genuine, deep, and tender love and appreciation which your life and character have won everywhere among thinking people indicates a growth of human consciousness up towards the standard you have set.

With tender affection and friendship,

Yours faithfully,

WILLIAM P. MCKENZIE.

Boston, Mass., Dec. 9, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Leader:—Permit us on behalf of the December, 1906, Normal Class of The Massachusetts Metaphysical College, now in session, to send you this brief message of love and gratitude. Coming from nearly every quarter of the earth, witnesses of the world-wide growth of our Cause, we unite in thanks to God for Christian Science and for you His Revelator. Our Lessons have unfolded to us still more of the wonderful spiritual teaching of our text-book, Science and Health, and have impressed us with the necessity of adhering strictly to its statements in our teaching and practice. As a result of your teaching we have been brought up out of great tribulation, out of disease and sin, and sorrow and suffering,—and words fail to express what our hearts would indite of gratitude and love when we remember all these things. We thank you for your tender, patient love and care during our first feeble footsteps in this new-old Christ-way, and for all your rebukes, messages, and admonitions. We love you for all you are to humanity, for your unfailing faithfulness in pointing the world to Christ, and for your exemplification of love "still remaining love," though "meeting no response" (Science and Health, p. 586). May we assure you of our continued loyalty and unshaken confidence in your wise leadership of our great Cause, and express the hope that we do not fall asleep in the hour of tribulation.

With sincerest love, honor, and gratitude,

SAMUEL GREENWOOD, British Columbia; GALLIE W. HUMAN, Texas;
CHARLES H. GIBBS, Sydney, Australia; LOUISE S. R. KING, Ireland;
DORA J. STANTON, California;

Committee.

New York, N. Y., Nov. 8, 1906.

Our Dear Leader:—Although I have never had the opportunity of seeing you when in Boston, I cannot refrain longer from expressing the love and gratitude I feel toward

Digitized by Google

you our Leader—Leader to all who are humbly learning of the Christ in Christian Science.

The words of Mr. Strang in the *Christian Science Sentinel* of April 28, so often come before me, "No one on earth to-day, aside from Mrs. Eddy, knows anything about Christian Science except as he has learned it from her and from her writings." I owe all to Christian Science and I cannot delay longer in thanking the one through whom it has come. The way in Science may seem rugged, but I am learning that it alone leads to God. I am a member of the uptown New York church, and I feel that I have regained my heritage, which is freedom; that after all nothing can come between me and Principle,—Truth and Love.

Thanking you if you can spare time to read these few words of deep gratitude, I am

Lovingly your follower in truth,
MRS. BLANCHE VIRGINIA WILSON.

Jonesville, Mich., Nov. 29, 1906.

Beloved Leader:—May I take a moment of your precious time to tell you my heart is full of loving gratitude to-day to divine Love, and to you for all you have done and are doing for me and for the whole world? We, in this little branch of the true Vine,—your dear church in Boston,—have held our Thanksgiving service, inspired by a deeper sense of gratitude than ever before for the blessings that are ours to-day through your beautiful life and example of loving patience and forgiveness. God bless you to-day, dear Leader, with His richest rewards. The New York *Independent* reached me this morning, and I have just read your sweet words in "Harvest," and may I be pardoned if a sense of pride and gratitude arises in my heart that your dear old Congregational church in Concord was also my first church home? Truly "thy people shall be my people;" the erect form of our dear pastor, Rev. Dr. Bouton, is ever a very vivid picture in my "memories hall." I am exceedingly happy to-day in the consciousness of the nearness of divine Love and in my unity with God, the all-good, as you have taught us in the dear "little book," Science and Health; also that I am a Christian Scientist.

One of your followers up the hill of Zion, as you are a follower of Christ,

Gratefully and lovingly,
VIOLETTA M. DOANE.

St. Stephen, N. B., Dec. 5, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—Divine Love enables me to-day to send you the balance which has for so many years remained unpaid for my tuition in The Massachusetts Metaphysical College. Owing to the always pressing need of funds for our work in my field of labor, that there should not be retrogression from posts won, I have given the very widest interpretation to your kind message relative to terms of payment, sent me by Miss Bartlett before I entered the class. The legal debt I can to-day cancel. The debt of love and gratitude due you, dear Leader, grows larger with each passing day. Dearest of all, may the assurance that the very humblest of your students is striving at this hour to realize more deeply the import of your life-long sacrifice for humanity, that she may thereby more understandingly aid in establishing in the world's consciousness the true conception of this life-work, necessary for its uplifting and redemption, add even a little to your heart's comfort.

May God's love shelter you, sustain you, uphold you, as only Love shields, sustains, and upholds.

Lovingly and gratefully your student,
LUCRETIA ANNIE VEAZEY.

TESTIMONIES OF HEALING.

My first serious acquaintance with *materia medica* be when I was still a boy, going to school in Sweden. I confined to a sick-bed for several weeks, with lung trou and later had another and more severe siege of the same ease. When able to be up I was warned to be careful; h ever, I grew stronger and for a period enjoyed a measur good health, so that I was able to follow the trade o painter, although during most of this time I took dru My next serious experience came through lead poisoni It was a severe case and I had the advice of four diffe doctors in Chicago. Before this time stomach trouble gradually developed and my ailments increased rapi becoming very severe and complicated.

In this condition, and with an ever-growing sense dissatisfaction with human life, I first heard of Ch tian Science in San Francisco, and became sufficie interested to buy a copy of the text-book, "Science Health with Key to the Scriptures," by Mrs. Eddy. surprised myself with the earnestness with which I deavored to grasp its contents. It appealed to me fr the first as religious teaching of the highest order. I had become so prejudiced against religion in gene that I at first failed to see that here teaching and heali went hand in hand. I continued to read the book casionally for over three years before my prejudice w sufficiently removed to see that association with the Chr tian Scientists would be a help to me; for up to this ti I had kept strictly by myself; however, nearly three yea more went by before I became willing to take my sta for Christian Science, which I finally felt impelled to about seven years ago. Under wise and loving counse the truth is growing clearer day by day. The few trea ments I have received since coming into Christian Scien have been followed with marked results. I am healthi and happier now than ever before, and have a feeling th I am on the ascending path. My appreciation of Christia Science, and gratitude for it, for its great Leader an faithful and loyal workers, is increasing daily.

The above describes not a half of my experience, eithe under *materia medica* or in Christian Science. Any com parison between them, either in respect to efficiency o economy, is in my estimation wholly in favor of Christia Science. In all cases where this comparison takes place it must relate to physical healing alone, and in Christia Science, physical healing, although a great blessing, is th least of all.—CHARLES A. HEDENSTROM, Vancouver, B. C

I have found the God I long sought for. I want t testify for God, and for His dear ones who have helped me on the way from sense to Soul, especially Mrs. Eddy, the one chosen to bring this healing truth to a needy world. It is about ten years since I first heard of Christian Science, and I have never ceased one moment to work, watch, and pray for that Mind to be in me which "was also in Christ Jesus." I have struggled on, alone with God, no one to help me as it seemed, but all against me. Now I see that really all was for me and nothing against me but my own false sense, and how real it seemed till it was stripped of its disguise. God has done all for me and mine. I did not at first seek this healing for myself, but for my brother, though I was healed of many ailments. One of these was almost death to me, and the doctors had told me that I could never be well again, but thank God, I did at last find myself in perfect health through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. The physical help is as nothing compared to the spiritual healing. I have a husband and five boys, each of whom has been healed in Christian Science of severe ailments. I have been tried, but the Father has established

Digitized by Google

His word in me. My husband is coming into Science very beautifully, and he and I study the Lesson-Sermon together. Although I do not know of any others who are interested in Science here, I know that the truth is at work, and the light cannot be hid. I am patiently waiting on God; His will is mine, and I am not anxious, but thankful. I owe all to God, good, and He is all to me.

I have a deep sense of love and gratitude to God and to Mrs. Eddy.—MRS. R. W. FOSTER, Tahlequah, Ind. Ter.

It seems almost impossible to tell what Christian Science has done for me, for it has done much more than words can express. From childhood I never felt really well, and while in New York City three years ago, I was taken very ill. From that time on I never felt able to walk. I then went to Massachusetts, and a physician there said I would always have such trouble. I went to Cleveland, and there grew so much worse that the doctors decided the only way to save my life was by an operation. After it was performed I was better for a short time, when I had home troubles and my health gave way entirely. I was taken to Akron, O., and every day I felt worse than before, until I far preferred death to life.

On the 29th day of November I met a friend and she asked me why I did not try Christian Science. I smiled to myself at what seemed foolishness, but I went home with her and talked all the afternoon. My mother was anxious that I should try Christian Science, and I went and stayed with the friend who treated me. In one day I was convinced it was the truth, and I clung to it with all my might. I was healed of severe pain in my neck in two days, and in three weeks of my chronic trouble. At first I was apparently worse, but one day, while lying on the bed learning the "scientific statement of being" (Science and Health, p. 468), I realized that I was well and happy; that I had left sickness and sorrow behind and looked toward the future; that I was at peace with the world, and content. I started to work in an office on the 1st of January, and have never been absent a day from my work. I am grateful to all for the patience shown me in bringing to me this *truth*, grateful to Mrs. Eddy for the years she has spent in working for humanity, and thankful to God for showing *me that* divine Love is ever willing to protect and care for us, though the whole world forsake us.

JESSIE E. WHITING, Akron, O.

From January, 1879, to June, 1880, I was confined to *my* bed with throat and lung trouble, which was pronounced incurable by two physicians; but having changed my location *I* was restored to partial health, although I continued to manifest an abnormal condition of the chest and had terrible headaches. Other troubles appeared and my life became a dreary expanse of suffering, either present or *dreaded*. I endured twenty years of this suffering, in which time aid was sought from seven different physicians, *all of* whom in the kindest way did everything in their power, but without benefit to me. During these years my suffering grew more intense, and at times I would become unconscious, when injections of morphine would be used. I was finally told that I could not live much longer.

Christian Science was then brought to my notice, with some positive proofs of its healing power, and I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. The first reading was without much understanding, but I persisted, and "let there be light" was surely verified to me, for "there was light." I beheld God as a "very present help," and was lifted out of my troubles, slowly but surely. Now, after five years of study in Christian Science, I am well; my lungs are strong and the sunken chest has rounded out; the headaches are only a memory; the uterine trouble is perfectly healed, and my voice is strong and clear. For nearly two years I have been a Second Reader in a branch church. In deep gratitude to divine Love, and to our dear Leader, I am devoting my life to the work of Christian Science, striving in "the full assurance of faith" to lessen sin and sorrow.

MRS. ELIZABETH CROSBY, Austin, Tex.

I wish to acknowledge the great benefits I have received during the last three years through the study and help received from Christian Science. From childhood I was a great sufferer from stomach trouble and female weakness, beginning at the time of our arrival in Manitoba from England. I tried in many ways to get relief, through medicine and other remedies, but received no help from any of these. I remained in this condition for years, getting better at times, then as bad as ever. At last I became so discouraged that I felt I could not keep up any longer, so decided to consult a noted doctor. The one I called upon said that an operation was necessary, and further advised a return to a milder climate. I submitted to the operation, and upon leaving the hospital I followed the doctor's advice and went to England, but suffered more than ever. I remained in England for two years, but did not fully recover from the operation or get any relief from the climate.

Leaving England, I came to Vancouver, British Columbia. My condition remained as bad as ever. About two years after arriving here, Christian Science was mentioned to me. I did not take any notice of it at first, but finally decided to call upon a practitioner, who kindly loaned me a copy of "Science and Health with Key to the Scriptures." I began to study, and it appealed to me from the very first, yet I had great fear to overcome on account of relatives and friends, who were opposed to Science at that time, and persuaded me to return the book to the practitioner. To please them I did so, but had a most helpful talk, as a result of which I took with me a *Journal* to read, resolving this time to seek, with earnest prayer, to be led to do that which was right. Truth was leading me. I again went and got that little book, and this time kept it to myself, reading it night after night, and turning to God alone for guidance. The answer came, and I shall never forget that day. I had suffered from ingrowing toenails for years, and at this time I found to my great surprise that they were healed and perfectly painless. Such peace came to me as no words could express; the whole room seemed illuminated with a holy presence. I knew then that God had thus revealed to me that Christian Science is the truth. My heart was full of gratitude and love to God for the blessing I had received. It seemed hard to me at the time that my dear mother, sister, and friends could not see as I did, but I am glad to say that they are with me now in Christian Science. On Feb. 6, 1902, I made a firm resolve that never again would I trust to material remedies, that God alone was my healer. I threw away all I possessed in the way of medicine and have never needed any since. I began to attend the services, and also received treatment from a practitioner, who most lovingly and patiently helped me through many struggles during the months that followed. My side was perfectly healed, and the fear of eating certain kinds of food completely overcome. My complete healing came slowly but surely, and to-day I am a living witness to the power of Truth, after having proved that drugs and change of climate are of no avail.

Although I feel grateful for the physical healing, I am still more grateful for the spiritual understanding gained from studying the Christian Science text-book, which is teaching me how to be better day by day, and through which the Bible has become so much clearer to me that more and more I love to read it. I must not forget to mention the gratitude and love I feel towards our dear

Digitized by Google

Leader, Mrs. Eddy, and it is my desire to try to live this gratitude day by day.

ALICE MAY SOUTHON, Vancouver, B. C.

Prior to my healing through Christian Science I had rheumatic trouble for twenty-six years and very distressing female trouble. I was practically an invalid for over ten years, and during that time was almost constantly under the care of a physician. Besides having medical treatment I tried baths, hot springs, etc. While having medical treatment I was attended by six different doctors, and in all spent between four and five thousand dollars. In the fall of 1900 I was examined by physicians in Joliet, Ill., and in South Bend, Ind., who said I had an abnormal growth, and declared I could not live another year unless it was removed by an operation. I then had to decide between the operation and Christian Science treatment, which I did in favor of the latter. In December of the same year I began the treatment, and after two months of Christian Science help I was completely healed of all these ailments. In May, 1901, one of the doctors who had previously examined me admitted my healing. For the past four years I have been in better health than ever before in my life; can now do things which never before seemed possible to me.

I am deeply grateful to Christian Science for the health and happiness which I now enjoy, and shall ever thank God for His wonderful revelation to this age through Mrs. Eddy, our beloved Leader.—MRS. MARY J. O'NEILL, Joliet, Ill.

It is with sincere gratitude that I send this testimony of my perfect healing. When Christian Science was first recommended to me, I was suffering from heart trouble and the worst form of skin disease. The latter complaint I had endured for five years and was obliged to be bandaged continually. *Materia medica* could do nothing for me, and the disease was spreading over my whole body. This was my serious condition when I asked for help from Christian Science. A practitioner gave me absent treatment; I improved at once, and after a few weeks all the trouble left me and I found myself in better health than I had known for many years. On account of one of the troubles I had been obliged to wear very large boots, but now the feet and legs are quite their normal size and I am able to wear ordinary-sized boots. I should like to add that I am seventy years of age. This experience has given me a realization of the presence of divine Love that I never dreamed of possessing before, and I thank God from the depth of my heart for having given this understanding of Truth to mankind through Mrs. Eddy. I am reading Science and Health and the *Sentinel* regularly. I hope to grow in knowledge and to help others.

MRS. CHARLOTTE LOVE, Middlesex, England.

In grateful acknowledgment of the blessings that have come into my life during the past five years, through the health-giving power of Christian Science, I feel impelled to write of some of the trials which preceded its acceptance. I was a great sufferer for over twenty years, with what several physicians pronounced rheumatic and stomach troubles, also female weakness. I always tried to bear the suffering, and with hopes of some time being made well, took the medicines prescribed for me, but suffered untold agony from the use of powerful liniments, which gave at most but temporary relief. After the doctors failed to help me, I tried massage and electricity for a long time. Thinking the climate of North Dakota, where we then lived, was not conducive to my recovery, the doctors advised me to seek help in a warmer place, and we consequently moved to the Pacific coast. For a short time the change seemed to help me and I was encouraged, but with the changing seasons the trouble became as bad as ever. I was then advised to go to California for the winter, which I did. I certainly tried with all my might to get well. The change seem to revive me for a little while, when with greater disco agement I went to see a specialist, who said I would not l more than six months. Feeling very despondent and w hopes of life fast slipping away, I returned home to Va couver, B. C., to prepare for the worst.

In this condition Christian Science found me, and I ca not forget my joy when learning from the practitioner whom I appealed, that all things are possible to *God*; and began at once to prove this through the healing influence Truth as demonstrated for me. My healing came slow but as compared with the suffering endured for so ma years, under the kindest care of the different physicia we had employed, the health and happiness experienc from Christian Science, even though it came slowly, was to me the greatest of blessings. From the first trea ment in Science the great fear of death was taken awa and the pain was greatly reduced.

While I feel grateful beyond measure for the perfe health which I have enjoyed for the past five years, th spiritual unfolding of God's promises, gained in makin a study of the Christian Science text-book, has become t me far more precious, and I am striving to prove m gratitude to Mrs. Eddy in a life made purer through he teachings of God's Word.

MRS. JEAN CAMERON, Vancouver, B. C.

My gratitude for Christian Science is beyond all words. I cannot begin to enumerate the blessings experienced, which have come to me through a study of our Leader's works and the help of a dear Scientist. From my childhood I was troubled with a disease which kept getting worse from year to year, although I was using almost every material remedy prescribed for that trouble; but all failed to relieve me. In this condition I was led to Christian Science. I was helped, and shown the way to God, and in a few weeks was healed. This was eleven years ago and I have been happy and well ever since.

I thank God for all; and also our beloved Leader, who was enabled to bring us this truth.

MRS. IDA LINDSTADT, Burlington, Ia.

Eleven years ago I suffered an injury in my side from overstraining. I had an operation, which left me with a discharge and in constant pain for five years. The only relief which physicians offered was a surgical appliance to support the injured parts, but little relief came from this. In this condition I was asked by my wife to try Christian Science, which I decided to do. At the first treatment the pain all left me, but it was two weeks before I was able to be out. My healing was slow, and after I was almost healed an accident caused the same trouble on the other side, but through the help of a dear Scientist it was soon mastered. Christian Science has also healed me of many other ailments. I was a heavy user of tobacco, but this habit was overcome in Science.

To God I owe endless praise. I am indeed grateful to the giver of all good, and grateful to our beloved Leader, Mrs. Eddy.—EDWARD LINDSTADT, Burlington, Ia.

I wish to express my love and gratitude for the many blessings I have received through Christian Science. My little boy, who had been going to the Christian Science Sunday School, was taken with severe throat trouble, other cases being in the neighborhood. He said he did not want a doctor, so I called a Christian Science practitioner, and after two treatments he was perfectly well. This was the first time I had tried Christian Science. Some time after, the other little boy had the same trouble, and was also cured by Christian Science. In August, 1905, my little girl, three years old, was supposed to be poisoned, and her

Digitized by Google

whole body was affected so that the appearance was dreadful, but through Christian Science she was healed and her skin is now fair and smooth. During all the time she was affected by this condition, she would play about, was happy, and very seldom complained. She often would say, "Christian Science will make me all better."

Again, last summer, my little boy had a supposedly infectious ailment, but as soon as I noticed it I telephoned to a practitioner, and it was overcome very quickly. There are many other things for which I am very grateful to Christian Science, and to dear Mrs. Eddy, who is showing us the way to God.

MRS. EMMA HUMPHREYS, Minneapolis, Minn.

It is with a heart overflowing with gratitude to God, and to our dear Leader, Mrs. Eddy, that I most gladly contribute the following testimonial of healing through Christian Science. About eighteen years ago, while out driving, the vehicle was overturned. My left limb was to all appearances badly injured, and I was carried home in a helpless condition, suffering intensely. The best surgeon in the town was immediately called, and after administering chloroform and working on me for nearly two hours, he said that it might be several months before I recovered entirely. I was confined to my bed for about six weeks, and when I did get up, had to use crutches for four months. The injured limb at times caused me very great pain, and in walking I limped considerably.

About a year after this, I came from Louisiana to Texas, and for the past three years I have been a resident of Dallas. During all these years I was still a sufferer, until about eighteen months ago, when I became interested in Christian Science and attended the services regularly. I was informed by a dear Scientist that there had been cases of healing at the Wednesday evening meetings, and while in attendance on such an occasion, my limb began to pain me so severely that at first I thought I would be compelled to leave the church. I declared the truth to the best of my understanding, but the suffering did not entirely cease until the services were about over, and on leaving the church such a sweet peace and heavenly calmness came over me as words are inadequate to express, and I realized from that very moment that my limb was healed. The next morning I walked to my place of business without the least inconvenience or pain.

I am thankful to God for this healing, and for the many other demonstrations and blessings that have come to me through the study of this beautiful, Christlike religion. It has helped me physically, morally, financially; and above all, I am most grateful for the spiritual uplifting, the happiness, contentment, and the sweet peace that "passeth all understanding." Christian Science enables me to seek and to find the good in my fellow-men, and to realize that all God's children have one Mind, and reflect only God, good.

MRS. L. E. SPANN, Dallas, Tex.

I am exceedingly glad to have all the world know that I praise God for the discovery through Christian Science of man's birthright—good health. From childhood I had suffered from heart trouble, which drew me into closer and closer bondage each year, until I became a miserable invalid in the hands of kind physicians who told me that no power on earth could make me well. Through the earnest solicitation of my mother, I consented to try Christian Science treatment, and began the treatment in May, 1898, with a good deal of curiosity, determined to grasp only the physical healing. Three weeks' treatment and two months' acquaintance with a faithful practitioner, followed by encouraging letters after my return home, and constant, eager study on my part, healed me, and opened my eyes to the fact that even with good health life is not worth living until we realize the glorious liberty which comes to God's children. For over seven years I have found Christian Science an all-round, sure remedy, not alone for physical ailments, but because it fits into every perplexing place in our daily experiences.

MISS HARRIET M. BRAY, Whitefield, N. H.

In the year 1888 I was suffering from a stomach and bowel trouble, for which my physician said there was no known cure, and opiates were administered whenever the pain became unbearable. In this extremity I applied to a Christian Science practitioner, a student of Mrs. Eddy, and in a short time I was well. A year later our babe, three weeks old, was placed under a physician's care for treatment of a condition from which we had lost our first-born. After several weeks of surgical treatment, as there was no improvement in her condition, we again sought aid from Christian Science. The result was complete healing in ten days. Since then no material remedies have been used in our family of four, although several serious cases of illness have occurred during these years, and many minor maladies. For these and all other needs Christian Science has been found sufficient, and my thought often goes out in love to the one who has made a better understanding of Life possible to me,—our beloved Leader, Mrs. Eddy. I feel that the only adequate expression of my gratitude is in daily striving to so live that I may bring no reproach on our glorious Cause, and in endeavoring to so purify my thought that Truth may shine through me to heal and save others.

MRS. CAROLINE P. CALOHAN, Eureka Springs, Ark.

About two years ago Christian Science was brought to our home by a dear relative, who gave us some literature that helped us to understand a little of the truth. I also had about two weeks' treatment, which completely healed me of stomach trouble, from which I had suffered for several years. Four months later I fell into a cellar, receiving some severe injuries. A physician was called, and he said I would not be able to use my arm for five or six weeks. A Christian Science practitioner was then called, and treatment given, after which all pain disappeared. The next morning I took off the sling, as my arm felt more comfortable without it. After two more treatments I was well, and went to work as usual the fourth day.

I feel very grateful to God, and to Mrs. Eddy for what Christian Science has done for me.

MARTHA BAMBERGER, Homer, Ill.

All that I have and all I am I owe to Christian Science. I had many diseases, and was healed of all of them, ten years ago, by the power of Truth. I have had many good demonstrations since then by applying the truth to error. One day I cut my arm severely, and had much fear for a few minutes, but I kept declaring the truth, and continued at my work. I remembered Jesus' words, "Ye shall know the truth, and the truth shall make you free," and in an hour I was free. Without Christian Science—the Christ-knowledge which Mrs. Eddy has made known to us—I would not have been able to rise above the sense of fear and pain. I am deeply grateful to God that my footsteps have been so lovingly guided into the way of Truth.

MRS. SALLIE DUNNING, Burden, Kan.

GALILEE.

CLARA BAXTER.

PEACEFUL as lapping of waves on the lee,
Christ-Truth now safely guides over the sea,
Quelling the turbulent senses of ill,
Calming the waters with his "Peace, be still."

Digitized by Google

FROM OUR EXCHANGES.

One danger attending the conception of a morally bankrupt world is that the churches are led to attach too little importance to what the world thinks about their doings. It prevents the churches paying heed to those just and wholesome criticisms of themselves which are often to be heard from secular lips. . . . For the case offers one feature which nothing less than criminal folly can afford to overlook. I allude to the steady growth of a body of instructed public opinion which is adverse, not to this or that side of the controversy, but to the controversy itself. As the strife proceeds religion is seen to be suffering humiliation, and the world—the morally bankrupt world—looks on with shame. That world, whose own deepest interests are understood to be the matter in dispute, is beginning to suspect the *bona fides* of a quarrel which, starting with pretensions so high, seems at times to be nothing else than a prolonged vendetta between Church and Dissent. . . . The churches have themselves only to thank if the world, saddened by the spectacle before it, begins to despair of its High Places, and to look to its Nazareths for the coming of better things.—*The Hibbert Journal.*

The American Church is not the Church of the common people. Our influence has been on the side of the privileged classes, and we have contributed to the discontent and the distrust, until we are ignored and counted out in the efforts of the common people to secure a fair chance in the struggle of life. So true is this that representatives of our ministry have dared to say in great crises, "I have no sympathy with organized labor." Even representative bodies of the Church have practically said, "These matters are not our business."

But this is the darker side. From every part of the Church and from almost every modern school of thought there is an increasing consciousness of the guilt of such a situation, and, still more, an inspiring consciousness of the responsibility of membership in the kingdom of Him who would contain all men in His family as brothers. To these we must look for the restoration of the divine order and the apostolic democracy.—*The Churchman.*

It means much for Christianity that the Church is placing stress upon religion in this present world. Too much time and effort has been consumed in the endeavor to portray a heavenly life after death, rather than a heavenly life here and now. . . . What we have in the New Jerusalem will depend largely upon the kind of men and women that we send from this world into the next. To deny that we have nothing to do with what is to be over there, is to affirm that we are puppets, existing simply. . . . We are laboring for the kingdom of God here, and at the same time we are laboring for the kingdom of God on high. Our citizens there will be, in mind and spirit, such as we fashion here. Then why dwell upon a far-distant immortal life? Here and now is our work.

REV. SAMUEL GILBERT AYERS.
The Universalist Leader.

In spite of all the creed making of the past, Christian theology has not yet reached a final form, and the great principles on which it rests, if they are to remain alive and active, must find for themselves ever new modes of expression in the lives and souls of men. Standards of orthodoxy are useful enough in studying the history of doctrine, but they ought not to be set up in judgment of a living faith. This is a thing which can express itself in an infinite variety of intellectual forms, and no man or company of men has any right to insist on others conforming to their opinions, save on the basis of a conviction like their own.—*The British Congregationalist.*

It was because the man of the psalms saw God in p that he could be so thankful for what was going to be. had his very dark times.—we shudder when we read a them now,—but he could always see light ahead. He lo down the ages and proclaimed victories. And so it is Things are not as they should be, but faith in God says they are going to be better. A day of thanksgiving proclamation of God, and along with it gratitude for past and hope for the future.—*The Advance.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science Health with Key to the Scriptures" by Mary Baker G. Ed with latest revisions and additions, and numbered li 700 pages.

For description, price, and other information, see last p of cover.

THE CONCORDANCE.—A complete Concordance to S ence and Health with Key to the Scriptures. This w has been compiled from the late revised edition of SCIEN AND HEALTH, and contains about eighty thousand referen (more than ten thousand words being indexed). It a contains an index to the Marginal Headings, and a list the Scriptural Quotations in SCIENCE AND HEALTH. 5 pages, 10 x 7, bound in cloth, marbled edges. Price, p paid, single copy, $5. Twelve or more to one addre $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to da of The Mother Church, The First Church of Christ, Sc entist, in Boston, Mass. This does not include the list members. Price, prepaid, $1 per copy; $5 per half doze $9 per dozen.

Address all orders for books named above to JOSEP ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blank will be supplied by The Christian Science Publishing So ciety to practitioners who wish their names and addresse inserted in the advertising columns of *Der Herold de Christian Science.* These applications should be properl endorsed and forwarded to the Society. The rate fo advertisement will be $2.00 for the first line, and $1.00 fo each additional line. It is desirable that those who offe their names in this way should be able to communicate wit patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR KIMBALL'S LECTURE. 31 pages.

Works on Christian Scienc

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elu dating and enforcing practical Christian Science, thus affor ing invaluable directions for all true Scientists. The followi are some of the topics treated: SEEDTIME AND HARVES DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MI SION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTE SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cent $2.50 half dozen; $4.50 per dozen. Leather covers (pocket $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographic sketch of the author. The way she was led to the discover of Christian Science; its growth and fundamental idea; 12 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.0 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in th history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 50 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Secretary of the Interior reports that 19,431,187 acres of public lands were disposed of during the year, of which 1,774,341 acres were sold for cash. The others went for miscellaneous entries, embracing homesteads, land warrants, scrip locations, State selections, swamp lands, railroad and wagon road selections, and Indian allotments. Two million three hundred and seventy-four thousand more acres were disposed of than during the previous year. There remain of the unappropriated public lands 709,000,000 acres, of which nearly one half are in Alaska.

The Secretary reports that there were 324 cases of depredations upon public timber, to the value of $307,000, an increase of $213,000 over the previous year. Settlement was made in 172 cases and $19,000 collected. Recommendations for civil suit were made in 63 cases and criminal prosecutions also in 63 cases. He declares that 2,091,000 acres of public land were enclosed unlawfully and that in 66 of these cases the enclosures have been removed and 338,000 acres restored. Proceedings in the other cases are pending.

In discussing the leases of oil lands in the Creek and Cherokee Nations, Secretary Hitchcock, referring to the sub-leases scandal says: "The parties to said transfers were called upon for an explanation, and oral hearings were had at which full opportunity was given for such explanation as the parties interested might desire to make. The magnitude of these transactions, involving many millions of dollars, left no doubt in my mind as to the party furnishing the capital, and that if said transfers or drilling contracts were allowed to stand, the oil industry in the Indian Territory would be practically under the control of the corporation which already dominates to a large extent the oil industry of the country. The parties therefore were required to comply strictly with the regulations. Not satisfied, however, the parties endeavored to secure a reversal or modification of the departmental regulations from the President; but having been fully advised of my action in the premises, the President declined to make any modification and directed that the rules be enforced."

The Secretary reports that there are now twenty-three irrigation projects of great magnitude under way in the West in the effort to reclaim the arid lands. One of these, the Hondo project in New Mexico, is practically completed and will soon be in operation. The funds available for this work from the sale of public lands amounts to more than $28,000,000, and allotments amounting to $39,000,000 have been made. On the subject of forest reserves the Secretary says that there have been twenty-two additional reservations, that the area of three has been reduced, seventeen have been enlarged, and two have been consolidated. The increase in area during the year was 21,306,001 acres. The total number of reserves is now 106 and the aggregate area is 106,091,423 acres.

The Colorado River is again flowing into the Salton Sink, and Imperial and Coachella Valleys once more are menaced by rising waters. The main line of the Southern Pacific must be moved to higher ground, unless the water can be brought under control. A thousand persons in Salton Basin, it is said, must lose their homes, a quarter of a million acres of farming lands must be abandoned, the Southern Pacific must build two hundred miles of new main line, and irrigation about Yuma must be abandoned. The Government Laguna Dam irrigation project may become an impossibility. More than $25,000,000 of present values are estimated to be at stake upon the success of a further effort to close the break. What is known as the Hind Dam was thrown across the new channel, and an earth dike was built up parallel to the river for ten miles, mainly in Mexico. On the Arizona side of the river is the Government dike. The entire river has found its way around the Hind dam into the channel from which it has just been barred. The dam itself is uninjured.

All the large exhibit palaces of the Jamestown Exposition are rapidly nearing completion and a large number of buildings and pavilions will be in readiness for the installation of exhibits by March 1, nearly two months before the date appointed for the formal opening of the Exposition. The Manufactures and Liberal Arts Building, one of the largest of the group, is under roof. This structure is brick veneer with white staff (marble effect) trimmings and is one of the most stately and imposing buildings on the grounds. Its sister building, Machinery and Transportation, is about ready to be roofed.

The Board of Trustees of the Carnegie Institution of Washington at a meeting in Washington last week appropriated $661,300 to aid in scientific researches of various kinds during 1907. This provides for continuing work in ten departments already organized and for the reorganization of a department of nutrition. About $100,000 was set aside for the award of minor grants previously implied, for new minor grants and for research associates.

The annual report of the Second Assistant Postmaster General shows that, despite the heavy growth in the volume of second-class matter, the percentage of expenditure for railroad transportation is steadily declining. In the fiscal year 1906, ended June 30 last, when the postal revenues were in excess of $167,000,000, 27.88 per cent of the revenues was expended on account of the transportation of the mails.

The American artists in Rome, at a recent meeting, discussed and signed a petition to Congress asking for the removal of the United States tariff on works of art. The tariff was classed as "illiberal and unworthy of a civilized country," and its removal was advocated in the interest of artists living in the United States as well as in the interests of those living abroad.

The Federal Grand Jury, which is investigating coal land frauds in Utah and the charges that railroad corporations have discriminated against certain shippers, made a partial report last week. Indictments were returned against several of the highest officials representing the Harrim corporations in Utah.

A window in memory of the of State, John Hay, was unvei the Temple Keneseth Israel, and Columbia Avenue, Philad said to be the first man not a thus honored.

Foreign.

The decision of the Cabinet t the amendments to the Educat in the House of Lords, came surprise to most of the men House and places the responsi ing the bill on the House of L bill will probably be introduced session of Parliament.

Emperor William dissolved t on the 13th and ordered new consequence of the Government 178 to 168 votes, on the bill auth the ministry contends is an adeq of troops to end the insurrectio Southwest Africa and hold against a recurrence of the rebel

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A PHYSICIAN'S TRIBUTE.

Chicago, Ill., Nov. 29, 1906.

Dear Mrs. Eddy:—The grateful and reverential thought of the hour, on this beautiful day of national thanksgiving, impels the recall from memory's pages of the experiences of years gone by. In contrast and in bold relief I see the manifold blessings of this year, all seemingly welded into a continuous chain of hallowed events,—the logical sequence of the golden light of Christian Science, which has illuminated the dark chambers of my consciousness,—and all because of the courage, fidelity, devotion, love, patience, and spiritual ideas which you have reflected for so many years.

Last March the shadow of pneumonia was quickly dispersed when submitted to the rays of divine Truth, and many other seeming difficulties have since been dissipated by the same scientific law of Christian Science. One of these specific delusions, prejudice of a bitter and intolerant type, clung to me more or less tenaciously after I began the study of Science and Health, and was not overcome until the appearance in the daily press on Oct. 28 of that vicious and malicious attack upon you and your work. That glaring, transparent Beelzebub aroused active thought from its dormant slumber, and at one stroke the intruding nightmare of prejudice was swept away, and the pure air of divine Love became the sublime essence of life.

That afternoon, upon invitation of a Trustee of First Church of Christ, Scientist, this city, I visited the home of a man who but a few days before had been condemned to die of pneumonia by his physician and nurse, after the usual unsuccessful last resort to the oxygen tank. The wondrous and joyful story of Christian Science healing, as related by that man (a foreigner) in almost unintelligible *English*, and the gratitude of both himself and his family for his resurrection from the shadow of death to the sunshine of hope and the prospect of health, was a most beautiful and impressive lesson. Here was another living *witness* to the omnipotence of God, to the declaration that Truth "healeth all thy diseases," and to me a very *necessary* one. That day I stood in the presence of Truth's wonderful work, which far transcended any and all man-made theories and reduced to veritable insignificance the years of faithful study and practice of medical science (so called) to which I had been devoted. It was the story retold of Goliath, whose gigantic frame, smitten by David, fell tottering to the earth.

Words are wholly inadequate to express the gratitude I feel to God; and to you, dear Leader, for that sparkling gem of divine wisdom, "Science and Health with Key to the Scriptures;" also for all the excellent literature and lectures which you have so generously and wisely provided, and to your devoted students, who by practice and precept have so patiently encouraged me in the onward march from matter to Mind—darkness to light. To one and all I return the thanks of a heart filled with love and gratitude. That I may reflect the sunshine of Love and Truth and exemplify their spiritual potency as you have so beautifully done, is the earnest and humble prayer of

Yours sincerely,

FRANKLYN J. MORGAN, M. D.

THE SEARCH FOR WEALTH.

SAMUEL GREENWOOD.

CHRISTIAN SCIENTISTS are not engaged in building up a material sense of existence, nor in governing their affairs according to material standards, but rather are they concerned in learning the spiritual meaning of all that pertains to their well-being. In this spiritualization of thought is naturally involved the outgrowing or abandoning of their former material views, and the transfer of their affections from the things of material sense to the things of Spirit. Much of what had formerly been considered as of prime importance, and worthy of human ambition and attainment, is giving place to a clearer apprehension of the spiritual realities of existence, and of what constitutes the true substance of happiness and enrichment. Neither earthly experience nor the teachings of Christ Jesus warrant the belief that the acquisition of worldly wealth is essential to prosperity, or that it ministers, in any true sense, to human need. Christian Scientists do not ignore or despise the utility of money as a medium of exchange, or as representing the *quid pro quo* of mental or manual labor, but they are awakening, however slowly, to the fact that the substance of all that mortals hope for is in spiritual and not material consciousness; therefore to become spiritually wealthy, to lay up "treasures in heaven," should be their chief care.

The "love of money" is defined in Scripture as the "root" from which springs all evil, a view which human experience corroborates and which should warn mankind against its mesmeric spell. The inordinate desire for gain becomes mere idolatry when one forgets that "the earth is the Lord's" and that good can be derived from God only. In the belief of mortals money is endowed with almost supreme power; but it is admitted that it can work evil as well as good, that it often works ruin and havoc upon one while enriching another; it cannot, therefore, proceed from the divine nature or government. In their passion for its possession many have been willing to barter the fairest things in their keeping,—their purity, justice, honesty, self-respect, brotherly love. If one lives for mere money-getting, the heartless hoarding of unearned millions through the deprivation of many will stand only for poverty, so far as those things are concerned which are worthiest in the sight of God, and whose accumulation brings their possessor nearer and nearer to the divine image.

The modern tendency towards large monopolies, the attempt to bring the world's supplies under the control of a few, with its manifest injustice and oppression, is the natural fruit of human selfishness, nourished by the belief in the sovereignty of wealth and grown abnormally large through opportunity and indulgence. The possessors of large fortunes may derive a transient sense of pleasure in the ability they confer to gratify material desires, or from the adulation of a fickle money-worshiping world, but when they are surfeited of all that money can provide, with what shall they appease the unstilled hunger of the heart? Money gives no abiding satisfaction to the millionaire who revels in it, to the thief who steals it, or to the toiler who sweats for it. If houses and lands, stocks and bonds, fine raiment and jewels are men's chief needs, then indeed is the millionaire rich and the toiler poor; but if goodness and love, kind-

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

ness, charity, and truth are the necessities of man's being, then the toiler and the millionaire might change place and neither be the richer nor the poorer. The belief that riches consist of material things has made criminals of men, while the knowledge that all that makes life worth living is gained only through Christlikeness and spirituality, makes men benefactors of their kind, whose gains of goodness enrich the world and impoverish none.

The only value attaching to wealth is the good it may enable its possessor to do, the enlarged freedom it may confer to give his time more unreservedly to God and the race. Its possession is not an evil if it has been honestly acquired, if it does not encourage selfish sentiments and motives, nor alienate trust in God; but whatever disturbs the right relationship between mankind and God is evil, either of itself or in the sense entertained of it. If the fear of want is held in abeyance only because of what one may have in the bank, or the prospects of retaining one's position, it may be a blessing to lose these if thereby we gain the consciousness of the Father's care. Divine Love is no nearer the man with a million to his credit, than to the man who has only what he earns from day to day. In their sense of want or of abundance mankind must learn that God, Spirit, is All in all to man, a truth that, when understood, heals the false sense of poverty, the feverish greed of gold, and all the disease and dementia of a material sense of being.

Mortals do not need money as much as they need love and purity and goodness,—conditions without which they cannot gain the consciousness of happiness or of immortality. The largest fortune on earth cannot impart to its possessor one grain of true wisdom, nor give him access to the knowledge of Truth. On the contrary, the tendency of material wealth, apart from Christian influence, is away from spirituality and towards sensualism and worldly-mindedness. When one stands face to face with the great problem of being, and realizes the helplessness and poverty of wealth in the presence of sorrow and pain and death, the hollowness of material pleasure, and the frailty and uncertainty of the human sense of existence, he must admit that what enriches and redeems human nature must be outside of materiality. Sooner or later the lesson must be learned that the substantial success of living is not the accumulation of gold and silver and lands, but of those spiritual qualities which constitute the ideal man in God's likeness. All merely material possessions at last drop from one's grasp,—his gathered millions and his broad acres pass to others, and he stands at the close of his earth career empty handed, save for what he has gained of those things which God prizes in man, and without which mortals are "wretched, and miserable, and poor, and blind, and naked."

Christian Science abundantly demonstrates the ability of infinite Spirit to care for all the needs of man, although the human sense of both need and supply may often seem material. Man as the son of God has access to "all that the Father hath," a spiritual abundance from which each individual is supplied without impoverishing the other. But let no one indulge in the fancy that because Christian Science enables him to overcome a sense of poverty, that it will "demonstrate" material possessions by the same rule. Christian Science demonstrates the reality and substance of Spirit, divine Mind, but does not accept or maintain a material sense of things. The first and last need of mankind is to know what God is, and this need the understanding of Christian Science alone supplies. The lack of necessities in one's present environment is a discordant state, resulting from a false material sense of being, and as this sense yields to the apprehension of spiritual truth, the immediate causes of poverty disappear, whether disease or lack of work. A sense of material wealth and material poverty merely represents the extremes of human belief, which fails to apprehend man's spiritual nature and existence. God rewards our faithfulness to the Christ-ideal with more goodness and love. He also gives an abundance of the th needed for our comfort and happiness, when we recog the divine source of all supply. It was the knowl of what God, Spirit, is that enabled Jesus to feed thousands, despite the inadequacy of the material sen supply; and it will be through gaining the same knowl that we shall have our needs cared for, and not thr belief in the mere gaining of money or other form matter.

The Christian Scientist is not required to lose his ea possessions any more than his sense of health, but he need the spiritual sense of both harmony and substan preserve these from the spoiler, material sense. God quires the sacrifice only of that which usurps His pla our affections and desires. As we gain the understan of the Science of being, Christian Science, we shall serve whatever is worthy in our present experience, and become enriched in those things which God hath laid up those who love Him, and which endure for time eternity.

CHRISTIAN SCIENCE AND SOCIAL REFORM

FRANK H. SPRAGUE.

It is sometimes assumed that Christian Scientists oblivious of, or indifferent to, certain deplorable condit which appear in the present state of society, because do not use the methods commonly employed to suppres eradicate these specific phases of evil. The facts of the c however, do not warrant such a conclusion. For, w the Christian Scientist's apprehension of Truth may ren it impracticable for him to try to co-operate with fellow-religionists and philanthropists in some of the l of endeavor which they regard as indispensable to the w being of humanity, this attitude is not prompted by a sp of indifference to such considerations. On the contr no class of people has more at heart the amelioration human sorrow and distress than have Christian Scient Although sympathizing with the worthy motives wh prompt all humanitarian effort, they are impelled, never less, to seek the solution of these difficulties along m fundamental lines. Working from the standpoint of P ciple, and following the guidance of revealed Truth, t are enabled to approach the problems of human existe with a more profound and intelligent understanding of situation and the ways and means by which the u mate defeat and destruction of every form of errone manifestation is to be accomplished. Not only must discordant factors in any particular case be correctly di nosed, but their source must be discerned before an a quate remedy can be applied. Christian Science pro beyond cavil that all human discord springs from a fa sense of existence. The so-called human mind is incapa of self-purification, and is prone to lapse into a state of mo inertia, become a stagnant pool. Its self-originated tempts to break away from enslaving conditions and r into an ideal atmosphere are sooner or later foiled by t earthward gravitation of mortal propensities. A limit material mentality proves inadequate as a basis of endu ing harmony in either individual or collective relation So long as this erroneous type of mind is acknowledg to be the source of human achievement, the past history the race must continue to repeat itself; and social regim inspired at their inception by lofty ideals and pure motiv are apt to degenerate and fall a prey to materialism an corruption.

In the tragic drama of human experience waves of civ ization succeed one another, even as physical forms an organisms appear and disappear to mortal sense. Like a materially conceived things, each new order of societ claiming a human origin, and patterned after a finite mode is destined to suffer decay and dissolution. The counter acting influence of reform movements may, for a time

Digitized by Google

succeed in checking, or even eliminating, the more flagrant symptoms of moral disorder; but no form of protest becomes effectual, in the broader sense, until the human mind relinquishes its self-assured prerogatives, and yields to the sovereignty of the divine Mind. The real offender and promoter of discordant issues cannot be permanently dislodged by measures of a merely reformatory character instituted at the behest of the finite and fallible human mind. So long as a false estimate of man enters into the calculation, it is of comparatively slight consequence whether the individual be regarded as the unit of society, or whether the body politic be treated as the conservator of individual interests. In either case, a materially conceived type of man cannot long retain the ideal status accorded him in the most perfectly wrought out social scheme. The spiritual standard of man must be enthroned in human consciousness before the individual can be adapted to any social scheme, or a social scheme devised which will promote the highest welfare of the individual.

Christian Science builds on an eternal foundation. It defines the true status of man, both individually and collectively considered, as the spiritual idea or reflection of the divine Mind, and not a materially conceived creature representing the fluctuating and uncertain unit of an arbitrarily constituted social system. On this foundation alone can harmonious relations be maintained among men, and an orderly state of society realized, unfettered by the hampering conditions of mortal perversity and short-sightedness.

While, therefore, fully persuaded that mankind can be saved only through the spiritualization of human consciousness, Christian Scientists recognize the desirability, in the present transitional stage of experience, of encouraging, in legitimate and judicious ways, as far as may be compatible with their main endeavor, reformatory movements and measures which make for an improved order of human ideals and conditions; since each step in the progress of mortal consciousness from lower to higher levels, whereby human customs and institutions are made to manifest more of Soul and less of sense, tends to prepare the way for the more definite and general recognition and demonstration of divine Science.

All human agencies designed to promote a truer sense of justice, self-sacrifice, and purity may thus be made to subserve the higher ends of Truth. In the chrysalis stage of human progress, dominated by imperfect intellectual, industrial, social, and religious standards, the rigid shell of conventional institutions may seem to present slight evidence of the transforming power of Truth; yet the maturing form within must at length burst asunder this artificial envelope and emerge, fashioned not by human artifice and sagacity, but by the "divinity that shapes our ends."

WHAT GOOD DOES IT DO?

REV. MARTIN SINDELL.

We sometimes meet people who desire all the benefits *which* Christian Science promises, but who unreasonably find fault with its teachings. If they would but stop and *ask themselves* the question, What good does this critical attitude of mine do? they would in every instance answer, *It does no good.* Finding fault with the textbook of Christian Science never helped any one to gain an iota of spiritual understanding; never made people well, happy, or prosperous. If all who are inclined to be critical will for the moment forget personality, and try to imbibe the beautiful, uplifting, and refreshing truths in Science and Health, they will find, as they begin to rise out of their erroneous ways of thinking and living, that they have lost all desire to find fault, either with its message, or with the messenger who was good and wise enough to bring such wonderful truth to the world.

Error has always found fault with the truth and with those who have revealed it, but has error ever gained anything thereby? Has it become "more to be desired"? Has it become beautiful, lovable, trustworthy, or helpful? Have the faultfinders who have perhaps unconsciously permitted themselves to become channels for error, become thereby more happy and peaceful? After listening to Jesus, the people of "his own country" were astonished, and said, "From whence hath this man these things? and what wisdom is this which is given unto him, that even such mighty works are wrought by his hands? Is not this the carpenter, the son of Mary . . . ? And they were offended at him." Their faultfinding attitude hid from them the truth which Jesus would have revealed to them in his teachings and his "mighty works." Those who refused to hear the message of John the Baptist said, "He hath a devil." The carnal mind, which according to Paul "is enmity against God," is a poor judge of Truth and its manifestations. The Pharisees said of Jesus, "Behold a man gluttonous and a winebibber, a friend of publicans and sinners." Yes, he was indeed their friend, but they knew it not. "He came unto his own, and his own received him not." The people who found fault with Jesus, accused Paul of being "a pestilent fellow."

Strange as it may seem, it is not those who profess no religious belief or inclinations who find the most fault with the heralds of Truth, and with their message. No, it ever has been that those who profess to love and even teach the truth, have been the most bitter in their denunciations of and their antagonism to its clearest statements, if these conflicted with their own opinions.

It is high time, now that the world acknowledges to so large an extent the genuine worth of Christian Science, that its opponents cease their unkind criticisms. If all those who desire help from Christian Science would honestly and earnestly try to "seek the pearl of great price," the truth contained in Science and Health, and be thankful that its author was pure enough to receive it and brave enough to proclaim it, they will find they are "not far from the kingdom" of harmony,—the "wholeness" which they desire, and which is promised to every sincere seeker of Truth.

ETERNAL LIFE.

The thought of God awakes my life,
And brings to me a joy sublime;
The realm of toil, the sense of strife
Are all forgot when Thou art mine.

When I am Thine then Thou art mine,
And all I am beholds Thy face,
Through all my soul Thy light doth shine,
And give me life and truth and grace.

The oneness of my life with Thee
Creates sweet rest and peace and joy,
And all there is of love in me
I give to Thee without alloy.

Thy depths of life, Thy breadth of love
Encompass me on every side;
In Thee I live, in Thee I move,
And in Thee am I glorified.

This sweet accord, O God, with Thee,
Jesus my Lord did live and show;
Eternal Life it is to me,
And all I ask to feel and know.

O fellowship with perfect Life,
As come and go the endless years!
This harmony without a strife
Excels the music of the spheres.

REV. D. M. BROWN.

SELECTED ARTICLES.

[From the *New York World.*]

Episcopalians along with other sects are asking themselves what is behind the extraordinary growth of Christian Science. Why have the adherents of the new faith increased eightfold within ten years, passing the Universalists in number and almost equaling the strength of Unitarianism? Their converts represent a loss from the orthodox denominations, for except for a negligible number of former non-churchgoers they have been recruited from Baptist, Methodist, Presbyterian, and Episcopal churches, even from Jewish synagogues.

The offhand and no doubt the main explanation of the vitality of the new faith is the appeal it makes through the spiritual healing of disease. The institution of a "class in healing" by the Emanuel Episcopal Church in Boston, bears interesting testimony to the present recognition of this principle by other communions.

But beyond this fundamental doctrine, Christian Science must be thought to be gaining at the expense of the older denominations by reason of the latitude of belief it permits. By going to the Bible direct for what the Bible has to teach, with no intermediary but the explanatory commentary of its Founder, it avoids all subjects for controversy. Having no sermons, it affords no inlet for "higher criticism." It rules out ritual and dogma as unessential and averts all danger of dissension over incense and altar candles. Contention regarding predestination or infant damnation and subtleties of dispute concerning transubstantiation do not arise, for there is nothing to provoke them.

Are not these important causes of the inroads Christian Science is making on the orthodox churches? Are they met by disciplining pastors for doctrinal transgressions?

[Anna H. Carter in the New York *Sun.*]

Christian Science, in common with other forms of religious faith, reforms and regenerates morally and spiritually. Great numbers of Christian Scientists continually testify to improved moral conduct and to elevated spiritual experience, resulting from their interest in Christian Science. If its work were confined to this field alone, it would receive no more criticism than is incurred by forms of faith working only for moral and religious ends; but because Christian Science makes such strong and radical claims to heal disease it is sharply attacked, and because it has made these claims good by actually healing the sick and diseased it has been bitterly opposed.

That Christian Science, however, does heal the sick is sufficiently proved by the growth of the movement, which now includes thousands of people. This growth has taken place within fifteen or twenty years, and has been brought about almost entirely by the successes of Christian Science in healing disease. The growth of Christian Science is a matter of wonder when we consider the radical nature of its teachings respecting disease and sin, and the very strong tendency in us to cling to what is familiar, particularly to what has been taught us as true and final.

To say that Christian Science does not heal disease is to say that thousands of intelligent, sensible, honest people either do not know what they are talking about or are deliberately telling what they know to be untrue. Such, perhaps, might be said were Christian Scientists few in numbers and confined to out-of-the-way corners of the country; but since they number tens of thousands and are scattered over the globe, to prove such assertions becomes a somewhat more formidable undertaking.

And why should this army of reputable men and women say they have been healed, many declaring they have been brought from death's door, if they have not been so healed? Furthermore, why should their word respecting their cure be disbelieved? In our efforts to hold on to what ized by public opinion we are too apt to overlook tions. Think of the countless numbers who di spite of the most careful use of material means. the countless others who suffer without prospec from these means. The condition of these hel under ordinary healing means, not only points to t tions of such means, but it explains in part also tl of the Christian Science movement. It is becaus being relieved daily by it that it continues to gro is because also of the great moral and spiritual bestows that the ranks of Christian Science are steadily enlarged by thoughtful, earnest people not need of physical healing. And besides this ever-i body, so vitally interested, there are many more silent in the presence of the results of Christian These are not criticising what they do not unders with open minds are willing to trust the worth ar of Christian Science to the test of time, knowing tl hood and sham have no permanent place, and that and the genuine, in spite of time or circumstance, vive and become our final authority. From such, Science has received in the past and will continue t in the future the consideration its character and demand.

[Frank W. Gale in *The Wasp*, San Francisco, Cal.]

In a recent issue of your paper there app criticism of Christian Science that seems uncall Why should the simple announcement in the pre Charles A. Baldwin had been healed of tubercul the bone through Christian Science be discredited an the basis of unkind remarks? Surely to be healed i thing to rejoice over rather than to criticise because not accomplished by the ordinary medical methods healing of the sick through Christian Science is s established in these days that the well informed are n prised nor incredulous when the cure of some promin dividual is referred to.

As Christian Science is indeed a science that r studied and demonstrated, it is not strange that man have received its benefits should give up their form cupations and devote their time to the study of Ch Science and its application in healing and helping who are in need. As the fishermen left their nets in to become disciples of Jesus and preach the gospel an the sick, so in this age those engaged in various pu are hearing and responding to the call of Truth, and ing their old vocations in order that they may engage i healing ministry. Jesus said to his disciples, "Ye shall the truth, and the truth shall make you free," and t the same understanding of spiritual truth makes man fi

---

[Albert E. Miller in *The Reading* (Pa.) *Eagle.*]

Sufficient time has elapsed since the publication of report of the paper on Christian Science read at the theran conference at Boyertown to relieve one of any sible charge of acting hastily in offering a reply to objections lodged against Christian Science in the pape question.

Let us glance for a moment at the leading staten in the report: "The speaker said that to handle the ma properly would require more reading than he had done had not even seen the books of its Founder." One har needs to point out to the fair-minded readers of your pa the necessity of rejecting as utterly unworthy of belief statements of any individual concerning any subject wh soever who starts out by announcing that he has not tak the trouble to go to the authorities on the subject which proposes to discuss. Would this gentleman, for instan like to have the situation reversed and to have his own fait which is presumably based on the teachings of Luther, tri

Digitized by Google

and found wanting without the objector first having looked into the teachings of Martin Luther? As a result of this very questionable and one-sided method of considering Christian Science, we find that both the premises and conclusions as published are utterly at variance with the truth. Now let me for a moment offset this gentleman's statements concerning Christian Science by writing down a few facts:—

The Founder of Christianity instructed his followers to "preach the kingdom of God, and to heal the sick," and he proceeded to show them how this should be done by innumerable examples. Said he, "The works that I do shall he do also," and for several centuries many of those who believed on him were not only saved from sin, but from sickness as well, through the operation of their faith. Throughout succeeding generations those who worshiped the Father in spirit and in truth were seldom without tangible evidence of the efficacy of their faith in God to heal their bodily ills, as well as to supply their spiritual needs. It is recorded that on at least one occasion Luther healed physical disease through faith in God. Religious reformers, as a rule, have repeatedly drawn attention to the much ignored admonition of our Master to regard our heavenly Father as one who heals our diseases as well as forgives our iniquities.

A volume could be written in refutation of the many misstatements which our friend has managed to introduce in his paper on Christian Science. Time and lack of space forbid the answering of his charges in detail. His objection to the offering of prayers for the recovery of the sick as a profession, comes with ill grace from one who follows the profession of offering prayers for the reformation of the sinner. Prayer, as taught in the Bible, should heal as well as save, and is so understood by Christian Scientists. Let this objector investigate Christian Science without prejudice. Let him approach it with a desire to know its truth. Its cloud of witnesses will welcome any sincere inquiry, and will speedily assure him that their ills, which were healed through Christian Science, were more than imagination, and that their sicknesses were physical as well as mental. Furthermore, he will learn that their faith in God is of the kind that knows no questioning or turning back. It abides with them in their hour of need, as well as in their day of strength, and they are ever ready to offer "a reason of the hope" that is within them.

[H. Cornell Wilson in the New York *Lumber Trade Journal*.]

Christian Science would be very superficial indeed if its results in business or in other departments of human experience depended upon the thinking of other people. Such, however, is not the case. I speak of this because of a paragraph published in a recent issue of your paper. This paragraph says, "If you take the Christian Science view of business, that is, if you believe that business is going to be good, then it will be excellent the coming fall."

Such a line of reasoning, if carried to its logical conclusion, would mean that disaster could be brought about if everybody, or even a majority of the people, believed in it. This notion followed out would develop two active opposing factions (of belief) on practically every question, the state which prevails pretty much among men to-day. But this does not suggest Christian Science or its fruits in the least.

Christian Science, as its name implies, is the Science of Christianity, by means of which one may arrive at the correct solution of all the problems of existence, whether they relate to business, morals, or to bodily health. The standard to be attained being perfection or Truth,—as in mathematics,—and the means to the end being Christian or spiritual as opposed to material, nothing short of a right or "good" answer can be the outcome if in our work we adhere strictly to the unfailing Principle which governs all cases.

The optimism so often ascribed to Christian Scientists is not predicated of the selfish interests of men. It is founded upon the irresistible action of divine Principle, Truth, which is always right and governs the universe, including man, harmoniously. A reason for the optimism felt by Christian Scientists is to be found in the fact that they have been taught a positive rule by which they can successfully work out their salvation in accordance with the Principle that works together for the good of all.

Let me thank you for your courtesy in using this letter to correct the erroneous impression of Christian Science conveyed in the original paragraph.

[We assure our correspondent no disrespect was intended. We are broad enough, we hope, to have the greatest respect for all forms of religion, Christian Science included. We can find "books in the running brooks, sermons in stones, and good in every thing."—EDITOR.]

[David B. Ogden in *The Moulton* (Ore.) *Eagle*.]

Christian Science maintains that violation of God's law alone should bring suffering, and the study and application of this teaching is enabling the Christian Scientist to distinguish between that which human theory and tradition call law and the unchanging law of a just and loving God, thus making him willingly obedient to this law and its demands. Each student of Christian Science is proving true, in some small measure at least, that "the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Christian Scientists are not such by reason of a theoretical adoption of an unprovable premise, but have confidence in their accepted faith because of the demonstrated good which has come into their lives through its application; and it is believed that the lives of unnumbered men, women, and children throughout this land made happy, are ample evidence that the position of the Christian Scientist in contending for the supremacy of good and the unreality of evil has not been taken in vain.

[A. W. Mainland in *To. n Topics*, Winnipeg, Man.]

While Christian Scientists accept the Scriptural account of the miraculous feeding of thousands, they do not believe that Jesus mesmerized the multitudes into believing that they had partaken of food that had only a fabulous existence, but that he actually multiplied the food through his higher understanding of the creative power of divine Mind. They do not, however, claim to perform such miracles to-day, but are proving to their own satisfaction that through the greater freedom from worry and sickness and the consequent greater mental activity they are able to supply themselves with the necessities and comforts of life more easily than before Christian Science came to them. Science and Health, pages 254 and 461, says, "To stop eating, drinking, or being clothed materially, before the spiritual facts of existence are gained step by step, is not legitimate." "I do not maintain that you or I can exist in the flesh without breath, food, and raiment; but I do believe that man is immortal, and that he lives in Spirit, not matter."

When the critics of Christian Science become candid enough to investigate it fairly and see that "thinking" logically and intelligently is widely different from imagination, they will drop their false criticisms of it and join the already large number of bright, intelligent thinkers of to-day in bidding it Godspeed for the great good it is doing in saving and uplifting the race.

I would just like to add that there are copies of the Christian Science text-book in the public library, so that those who care to may inform themselves on the subject.

[From the *New Haven* (Conn.) *Register*.]

Invitations are out for a lecture on Christian Science by Edward A. Kimball of Chicago, who is described as a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass. This simple statement would indicate that the local followers of this religious society in this city and surrounding neighborhood, with their friends, are to be addressed by one of the most distinguished members of the Church.

It is not, however, with that phase of the event we wish to deal briefly. More interesting is the act of the officers of the Mishkan Israel Temple on Orange Street in opening its doors to this religious society. The hospitality of the managing officials of the temple can be ascribed to one motive only, and that the willingness to recognize the right of all to their particular methods of worship and belief, and to the readiness as well to share their spacious quarters with earnest people whatever their errand, provided it seriously pretends to benefit humanity.

The officials of Mishkan temple have taught the people of this city and other cities a lesson in good breeding and religious toleration which ought not to be lost sight of. They are as ever faithful to the doctrines of their historic church and are splendidly not afraid that their beautiful temple will be desecrated by the presence of another religious society. The oftener these things are done the nearer shall we all come to the fatherhood of God and the brotherhood of man.

[From the *Waco* (Tex.) *Times-Herald*.]

Phillips Brooks said, "Prayer is not conquering God's reluctance, but taking hold of God's willingness." It is not our purpose to provoke controversy, but it does seem to us it is the grasping of the above truth that has given impetus to the Christian Science cult. We might go on to dissent from many of the deductions of these people, but, as stated, we are not seeking controversy. With those of us who believe in God it is too often the case that we have the idea, either expressed or implied, that it is God who must be moved, when, as a matter of fact, He only waits for us to appropriate His blessings. Do we need help? It is already provided. Do we want peace? It is ours any moment we will to do God's will. Verily, "prayer is not conquering God's reluctance, but taking hold of God's willingness."

[Albert Cope Stone in *The Warrnambool* (Australia) *Standard*.]

In reference to our critic's objection to the Christian Science interpretation of the Holy Ghost, Christian Science teaches that the Comforter promised by our Lord is the spiritual consciousness of the omnipresence of God as divine Love,—the unfolding of the spiritual unity of God and man,—and the revelation to man's consciousness that the "Spirit of truth" is come and is leading him "into all truth;" that, as a result of this spiritual illumination, he may accomplish, through divine power, the mighty works indicated by Jesus when he declared, "Greater works than these shall he do; because I go unto my Father."

[From *The Alumni Register* of the University of Pennsylvania.]

The most significant fact in the annual statement of Dr. Rudolf Tombo, Jr., of Columbia, of the attendance at American universities, published in *Science* of December 8, [1905], is that Pennsylvania's Medical School, alone of the medical schools of the great American universities, shows an "increase of note" this year. Our gain is thirty-three. We shall not attempt to explain why medical schools generally are attracting fewer students, but we cannot be but doubly self-congratulatory that in spite of such a condition we have substantially increased our attendance.

THE LECTURES.

LONDON, ENGLAND.

Christian Scientists from every part of London flocke the Queen's Hall last night [Nov. 1] to hear what amou to an authoritative statement of their faith from one its leading exponents. In view of the recently-rene controversy concerning Christian Science, and the inte which is taken in the personality of its Leader, Mrs. E an extended report of this declaration is published be Hundreds of interested outsiders attended the gather and the great building was thronged in every part. sections of society were represented, either in the auditorium or on the tastefully-decorated platform, but predominant element in the assembly was formed by fessional men, who in scores of cases were accompanied their wives and daughters.

The importance with which the Christian Scient present regarded the occasion was made abundantly evid by the hush of keen expectancy which fell upon the wait thousands when the chairman introduced the speaker of evening, the Rev. Arthur R. Vosburgh. Mr. Vosburgh his lecture said in part,—

Every great religious movement that has marked a spi ual epoch has always been dominated by some transcend character. There has always been some Moses or Sam or David, some Paul or Luther or Wesley to go bef and lead forth the people of God. And every moveme that has brought humanity nearer to God has in doing t elevated human thinking and living into realms where th have become more gentle and pure and good. So wh such a movement as Christian Science came into t world it was inevitable that there should be a divinel ordained one to reveal and lead the way; and because it inevitable that the knowledge which is divine power sh come in gentleness, beauty, purity, and light, it was in t native order of the divine fitness of things that this o should be a woman.

It is a matter of common knowledge that Mary Bak Eddy is the Discoverer of Christian Science, and th this discovery came about through her own healing When God has a message of Truth to give to the worl He always prepares the way for the message, and H fits, prepares, qualifies, and calls His messenger. It i evident that one who should first be sufficient unto the tas of gaining such an insight into the nature and genius o Christianity as to grasp its hitherto unknown Science, an then of formulating and stating this Science, must bring remarkable endowment, both intellectual and spiritual.

Humanly speaking, Mrs. Eddy has the incentive and in spiration of the ideals of an illustrious and God-fearing ancestry. Her home nurture and training ever emphasized intellectual, moral, and preeminently spiritual ideals as representing the real values of life, and there were given her generous opportunities for intellectual training and culture. Then came years when adversity and affliction wrought chastening and purification, and finally came the hour of supreme experience, when the power of God lifted her out of the death-shadow, and healing came in a spiritual realization of what in her own words is the "living, palpitating presence of Christ, Truth." Thus, out of this experience she emerged with a great spiritual elevation and illumination, and conjoined with this an intellectual clearness and breadth that could not rest until it had gained the explanation of her divine healing. In other words, this healing—bringing not only physical restoration, but a wonderful baptism of spiritual light and power—was a definite fact, and for this sublime fact, as for every fact, she felt there must be a scientific explanation. This explanation she sought and found.

For this quest she had received a preparation along an-

Digitized by Google

other line of experience. In her study of homeopathy she had noted often that prescriptions in which the drug had been so highly attenuated that it had practically disappeared, healed cases which the larger doses failed to reach. Even unmedicated water or pellets frequently effected the same result. Only one explanation for this appeared, and that was that it was faith in the prescription itself which wrought the cure. Out of all these experiences she had become convinced that healing of any kind is always of mental procurement, and through her own healing she reached the understanding that God, divine Mind, is the true curative Principle. Thus she arrived naturally at what she has given as constituting the central idea of her discovery—"the Scientific certainty that all causation was Mind, and every effect a mental phenomenon" (Retrospection and Introspection, p. 38).

The Tribune.

PHILADELPHIA, PA.

To an audience which filled every seat in the Academy of Music, Mrs. Sue Harper Mims of Atlanta, Ga., a noted lecturer upon Christian Science, told last night [Oct. 30] of the work of Mrs. Mary Baker Eddy, the Discoverer and Founder of Christian Science. In her lecture Mrs. Mims said,—

You have all doubtless read or heard of a strange, absurd story about Mrs. Eddy and of the ridiculous statement of an impersonation of Mrs. Eddy by Mrs. Leonard of Brooklyn. I know both of these dear women. Mrs. Eddy is the most unique woman in the world, and at what to human sense seems an advanced age she leads the most remarkably spiritual and intellectual movement of all the centuries. Her very being is a rebuke to the greed, the dishonesty, the sensualism of the human or carnal mind, and this serpent of materialism strikes back at the pure idealism that rebukes it. When I read those absurd charges there rose to my vision my own visits to and impressions of this dearly beloved woman. I saw again that exquisite cameo-classic face, chiseled by holy thoughts into a charm and majesty beyond words, the united strength and sweetness of her air and manner, the radiance of her spirit, with love illuminating her face and eyes. I also know personally dear Mrs. Leonard—incapable of a fraudulent or deceiving act. The whole story is absurd. And now what has this saintly woman, Mrs. Eddy, done for the world? Let us look at her work from the side of philanthropy.

If some one should show us the way to heal the world by spiritualizing and evangelizing humanity, would it not fulfil every requirement demanded by the world's great need? Even the great and crying evil of poverty is included, for Jesus' words show that, by a divine law of sequence, if we seek first the kingdom of righteousness, all these things that the Gentiles seek shall be added; and these results are being experienced by untold numbers of people on this earth today.—*The North American.*

PASADENA, CAL.

Mr. Henry Van Arsdales, in introducing Judge William G. Ewing, who lectured on Christian Science Oct. 29, said in part,—

The inquiry, What is Christian Science? will always be entirely satisfied with ascertaining what Christianity is. Now, whether we go to the dictionaries or to the hundred and one theological schools for our definition of Christianity, there still remains an authoritative source which cannot be disregarded; namely, that of the Founder of Christianity himself, Jesus the Christ. It is related in the fourth chapter of Luke's Gospel that in the very beginning of Jesus' ministry he appeared first in the synagogue in his home city, Nazareth in Galilee, on a Sabbath and stood up to read. There was given him the roll of the prophet Isaiah and he read this from it: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." Then it is stated that he closed the book and said, "This day is this scripture fulfilled in your ears."

Here is a definite statement of what Christianity is; revealed by the infinite himself to the prophet, and confirmed by Christ Jesus at the beginning of his mission for the saving of mankind. In this statement is a full and complete salvation from all the ills of mind, body, and heart, from sickness as well as sin. No one has ever had authority to separate the message, and the wonder is that it has remained for the Leader of Christian Science, Mrs. Eddy, to point out that this message and the accomplishment of it was not alone to the first century, but to this century and for all time. Not only this, but Mrs. Eddy and her followers have gone farther and proved that the healing of sickness must follow the understanding of Christianity. Jesus said, "I speak not of myself: but the Father that dwelleth in me, he doeth the works." "He that believeth on me . . . greater works than these shall he do, because I go unto my Father." This Father is God, omnipotent, ever-present divine Love, from whom man cannot separate himself, if he will only reach out for Him. It is divine Love that does the work in Christian Science; the Holy Spirit prompting to do the work involved in Jesus' definition of Christianity.—*Correspondence.*

RILEY, KAN.

Mr. Bicknell Young of Chicago delivered a lecture on Christian Science at Sargent's Hall last evening, Nov. 13, which was greatly enjoyed by all. The speaker was introduced by Rev. Mr. Brown, a Baptist minister of Clay Center, who had been healed by reading Science and Health after many physicians had pronounced his case incurable. The hall was quite well filled; nearly all our business men were present, but the threatening weather kept many from the country away. We have planned to have our next lecture on a Saturday afternoon, since all farmers go to town on that day.—*Correspondence.*

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From the *Boston Transcript*.]

VISITS MRS. EDDY.

Concord, N. H., Dec. 18.—Lord Dunmore visited Mrs. Mary Baker G. Eddy here yesterday, and after an interview with her of nearly an hour gave out the following statement:—

"I was immensely struck with Mrs. Eddy's personal appearance and with the activity with which she got out of her carriage unaided and stepped into the hall. When I was ushered into her presence I could not help remarking to her that she was looking much better and younger than when I saw her last, and during the whole of our interview, which lasted for upwards of three quarters of an hour, I was struck with the remarkable vigor of her mind and the extraordinary memory which she displayed for events which had taken place when I first had the privilege of seeing her about seven years ago. She showed wonderful interest in everything which pertains to the Christian Science movement in Europe and was most interested to hear how well the lectures were attended and received by the English people."

NOT A RELIGIOUS FAD.

SOME of those who criticise Christian Science do so under the impression that it is not Scriptural, and that its adherents do not study the Bible; but this is a great mistake, as there are no people who, as a class, give so much time and attention to earnest, systematic Bible study as do Christian Scientists. A sample of the criticisms to which we refer is the following extract from the remarks of one of the speakers at the Baptist State convention recently held at Saginaw, Mich. We copy from *The Detroit Journal* as follows:—

"Rev. J. E. Smith of Kalamazoo, in his sermon last night, said: 'The young man of to-day is eager to learn and is picking up information from every source. Because orthodox religion is not presented to him in a more attractive form, he turns to the teachings of Christian Science, etc., which are making great inroads on the Church. Their literature, skilfully written, often read in secret, catches the youthful imagination. To counteract these influences and protect the young man, he should be made to read the masterpieces of literature and not read about them; study the Bible, not about it; study Christ and not about him. To be a Christian is to know Christ and not just to know about him. The saving of young men from the religious fads is the Church's great problem.'"

The first of the six tenets of Christian Science, written by Mrs. Eddy and published in her book Science and Health (p. 497), is as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life," and that this is no idle statement of faith is proved by the prominence given to the Bible in the public services of the Church. At these services fully two thirds of the time is given to the reading of the Scriptures, the Lesson-Sermon alone being more half made up of Bible references, and this Lesson-Se is not only read at the Sunday services, but it is st every day during the week by the members of the Ch Moreover there are very few Christian Scientists wh not, in addition to the study of these Lessons, pursu systematic daily study of the Scriptures.

The study demanded by Mr. Smith is precisely the s voluntarily taken up by Christian Scientists, and the p of their standing as Christians is their ability to do works which our Master demanded of his followers. it is a "religious fad" to heal the sick through spir means, then Christian Science is a fad, but in that case term will also apply to the work of Christ Jesus, who only healed the sick in large numbers, but also comman his disciples to do likewise.

The literature of Christian Science appeals not alon the young, but to men and women of every age and e position in society. ARCHIBALD MCLELLA

HOLY DAYS AND HOLIDAYS.

IN St. Paul's Epistle to the Colossians, he presents a wonderful way the allness and fulness of the Christ-i and says, "Let no man therefore judge you in meat, in drink, or in respect of an holyday . . . which are shadow of things to come; but the body is of Chri Even at that early date in the history of Christianity th was a disposition on the part of some to retain many the forms and observances to which they had been acc tomed, whether Jews or Greeks, and thus to obscure simplicity and power of a purely spiritual religion. W wonderful clearness Paul refers to outward forms as ty and shadows, and in the Epistle quoted he asks, "If be dead with Christ from the rudiments of the world, w as though living in the world, are ye subject to ordinances

The great apostle was contending here for the freed of all Christians from whatever tended to hold them su ject to materiality or any of the requirements of t "fleshly mind." This misnamed mind has ever been deceiver, and, under the guise of observing "holy day has led mortals away from the service of Spirit, God,- an error which was rebuked by the prophet Isaiah, who sa that the true observance of an "holy day" was not in "fin ing thine own pleasure, nor speaking thine own words, but rather in undoing "the heavy burdens;" letting "th oppressed go free;" and in dealing "thy bread to th hungry." Thus doing, says the prophet, we shall hono God and "delight" ourselves in Him. He adds, "The shalt thou call, and the Lord shall answer . . . and th Lord shall guide thee continually."

It is too true that mortal sense has ever led men to mak of the holy day a holiday in which to indulge selfishnes and a false sense of pleasure, with the inevitable result o disappointment and vain regret, which teach no real lessons it is Truth alone that can do this. In Christian Science we are learning to give up an uncertain, an unreal sense of pleasure for a perennial peace which ofttimes blossoms into joy. Our anniversaries become indeed holy days when we no longer mourn over lost friends or lost opportunities, but when, instead, we pause to view "all the way" by which Love has led us on our journey from sense to Soul. If we have failed in learning some lesson in the past years, we may master the problem in the clearer light of to-day, for divine Love waits ever to help us to the final victory over all that is unlike God. To Christian Scientists the supreme gift of Love is the understanding of Christ, Truth, by which every victory over evil—sin, disease, and death—must be gained, and by this understanding and these victories each day becomes a holy day.

At this season we may recall with much profit the following words of our beloved Leader, taken from "A Christmas

Digitized by Google

Letter." She says, "O glorious Truth! O Mother Love! how has the sense of thy children grown to behold *Thee!* and how have many weary wings sprung upward! and how has our Model, Christ, been unveiled to us, and to this age!" (Miscellaneous Writings, p. 160). If we truly enter into the spirit of this prayer, it will make of Christmas day a holy day whose inspiration will abide with us through all the year; help us to feed the hungry with the bread that satisfies and lead them to the Father's house. Thus doing we shall indeed realize the promise of Whittier's beautiful words, "The days shall all be holy time."

ANNIE M. KNOTT.

THE MEANING OF CHRISTMAS.

FOR all Christian believers the Bethlehem story must ever retain its sweet and incomparable charm. The rehearsal of its familiar incidents prompts one instinctively to bless the eyes that saw its star, the ears that heard its song. The Messianic coming has ever been thought of and referred to in Christian literature as heaven's incomparable gift to humanity, and as such, a false and inadequate sense of this coming could but prove a supreme disadvantage and misfortune. Human experience abundantly establishes the fact that the ill attending a false and ignoble sense is always measured by the height and glory of that which it misrepresents and wrongs, and the sad significance of this law is seen in the relation which, in all the centuries, an imperfect and inadequate concept of the Christ-coming has had to Christian life and history.

All Christian people recognize the appearing of the Bethlehem star as the symbol of the manifestation of God for the redemption of mankind from sin, disease, and death. If, however, the coming of the Christ to humanity be associated in thought with this wondrous event alone, a necessarily universal experience becomes restricted thereby, and humanity is robbed of the most practical and significant sense of the Christmas revelation. Jesus taught that his life and works were the expression and outcome of his Father's presence and activity, and no less clearly and specifically did he teach that his life and works were to be repeated in every believer; that he was the Wayshower, his life a model which was to find duplication in the instance of each and all of his "brethren," and that the fact of "God manifest in the flesh" was thus to be made continuous and all inclusive, in fulfilment of the prophetic declaration that "all flesh shall see the salvation of God."

That this was more or less clearly perceived by many in the early Christian Church, as it is understood to-day in Christian Science, is abundantly evidenced, not only in the corroborative healing works which were done by the disciples, but also in their specific declarations. Speaking to those who have received the Christ, Paul says, "Christ in you, the hope of glory." To the Galatians he writes, "Christ liveth in me;" to the Colossians he speaks of Christ as "our life," while to the Philippians he identifies himself with Christ so far as to say, "For me to live is Christ." All of these significant statements are perfectly intelligible when we come to understand in Christian Science that the Christ must come to the consciousness of every believer; that the Prince of Peace is the true concept of God, whose appearing inaugurates in each individual the unfolding in consciousness of the divine ideas. Speaking of her own experience, our Leader writes, "The revelation of Truth in the understanding came to me gradually, and apparently through divine power. When a new spiritual idea is borne to earth, the prophetic Scripture of Isaiah is renewedly fulfilled: 'Unto us a child is born, . . . and his name shall be called Wonderful' " (Science and Health, p. 109).

If in all the years the Christian world had realized and demonstrated the healing and emancipating significance of the Christ coming in individual experience, as it is now made clear in Christian Science, the angels would, ere this, have flooded the earth with their songs, as though the day of its redemption had come. The essential truth of Christmas relates itself to all humanity, and the medieval poet saw this clearly when he sang,—

> Though Christ a thousand times in Bethlehem be born,
> If he's not born in thee, thy soul is all forlorn.
>
> Could but thy soul, O man, become a silent night,
> Christ would be born in thee, and set all things aright.

JOHN B. WILLIS.

THE COSMOPOLITAN MAGAZINE.

There will appear in the February number of the *Cosmopolitan Magazine* a very fine portrait of Mrs. Eddy, also an article on Christian Science by Mr. Charles Klein. Mr. Klein's testimony of his healing through Christian Science was published in *The Christian Science Journal* of October, 1905, and attracted a great deal of attention, not only from those who knew him as a Christian Scientist, but also from the public, which recognizes him as one of the most successful of American dramatists.

LETTERS TO OUR LEADER.

New York, N. Y., Dec. 10, 1906.

Our Beloved and Revered Leader:—We, the students of Mrs. Laura Lathrop, C.S.D., convened in annual meeting, unite in tender, loving greetings to you. We desire to express to you at this supreme moment, as earnestly as words may, our deep and grateful appreciation of your patient, wise, and loving guidance through the wilderness of human darkness, doubts, and fears, and over the Red Sea of error "into the land of Christian Science, where fetters fall, and the rights of man are fully known and acknowledged" (Science and Health, p. 226).

After uniting in triumphal song of praise and thanksgiving to God, the strong deliverer, we pause for a moment to recall one of the many valuable lessons learned of you in our "passage from sense to Soul,"—the lesson that all true and permanent progress is conditioned upon spiritual unity and love. Then, renewing to you, our beloved Leader, our assurances of love and loyalty, and rejoicing in the consciousness of your God-given courage, fidelity, strength, and understanding to withstand the fiery darts of error, we press on "toward the mark for the prize of the high calling of God in Christ Jesus," "till we all come in the unity of the faith, . . . unto the measure of the stature of the fulness of Christ."

Lovingly, gratefully, tenderly yours in truth and love,

H. CORNELL WILSON.
AGNES A. KILLIN.
HELEN RUNYON BALDWIN.
Committee,

Boston, Mass., Dec. 1, 1906.

Dearly Beloved Leader:—The students of Julia S. Bartlett, C.S.D., assembled in annual meeting of their Association, long to give expression to the tender love and proud loyalty for you that fills their hearts to overflowing. We who in past years have wandered confused and weary among the varying beliefs of modern life, now through your teachings have learned and proven that God is with us, is our health and our Life to-day, just as surely as when Jesus proved it, over nineteen hundred years ago. There is not one among us who has not felt the practical benefit, in improved health and surroundings, of your labor for mankind. Our old faiths had taught us the necessity for following Christ; it was left for you, dear one, to show us how to meet this necessity. We have heard from childhood the im-

Digitized by Google

perative demand, "Abide in me, and I in you," and it had seemed to us practically an impossibility in the present day; but in your life and teachings we see before us the loving proof that this great demand of Christ can be met, here and now, in the turmoil of the twentieth century.

To many, and perhaps to most of us, God had always seemed unknowable, like an ideally beautiful sentiment merely. You have proven to us that God is the one reality of our lives. Through your teachings our lives have grown broader in interest, deeper in feeling, higher in purpose, fuller and richer in our ability to understand and help our brother. We strive to speak our gratitude and to tell you how we love you, but we realize again how inadequate are words to express our feelings, and we are thrown back upon the proofs of love as given long ago on the shores of Tiberias, when Jesus questioned so earnestly, "Lovest thou me?" asking but one proof of love, "Feed my sheep."

With reverence and loving loyalty,

BERTHA H. WOODS,
CARRIE A. MCFARLAND,
JOHN O. BARTLETT,
Committee.

Kansas City, Mo., Nov. 27, 1906.

Mrs. Mary Baker G. Eddy,
Concord, N. H.

Beloved Leader:—The Inter-State Christian Science Association of Kansas City, Mo. (Adam H. Dickey, C.S.B., teacher), in annual meeting assembled, wish to express to you our unceasing and heartfelt gratitude for having given to us and to the world your book "Science and Health with Key to the Scriptures," which has taught us the true meaning and demonstrable knowledge of God and His universe, and unfolded the "deep things of God" contained in the Holy Scriptures. The persecution that has been aimed at you for the Cause of Christ has made us love you all the more, and awakened within our hearts a keener appreciation of the great and growing sacrifice you are making for mankind, and the inestimable privilege we enjoy in being classed among your followers.

It had been our intention to contribute towards making smooth your daily drive, but we can do what we know you will appreciate more than material things,—we can so order our daily lives by loving and living your precious precepts and following your unselfish example in the service of God and man, as to repay in a slight measure our great debt of gratitude to you, and thus assist in some degree in making your ways "ways of pleasantness" and your paths "paths of peace."

Lovingly and gratefully,

The Association,
ANNAH T. NORTON, *Secretary.*

New York, N. Y., Oct. 29, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—Although this may never reach you, in the avalanche of loving letters that must be daily pouring in upon you, the love which goes out with it cannot fail, or return void unto me. I did not come to Christian Science for physical healing, but when, seemingly through curiosity, I first visited a Christian Science church. I found a people who believed in the whole of Christ's teachings, and so far as I could ascertain, were endeavoring to live in obedience thereto. As I took up the study of "Science and Health with Key to the Scriptures," the logic of it appealed to me most irresistibly, and later, when the time came to prove theory by practice and statement by demonstration in the cure of human ills, both mental and physical, I found it not wanting. I have been able to demonstrate, not only for myself but for others, and in my endeavor to live according to the teachings of Christian Science I have become a better man, a better husband, a better citizen. With every waking moment I thank God for the leading which bro into a Christian Science church, and for the time was made possible that through you this truth s made known to the world.

That you have returned good for evil, blessing ing, and love for hate, must be evident to any obse dividual, and in this, your journey Christward, it is prayer that I may prove a worthy and obedient follo

Yours in loyalty and love,
FRANK WE

Oneonta, N. Y., Nov. 25,

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Dear Leader:—Assembled to-day to dedic chapel to the service of God and man, our hearts' gratitude and love go out to God, the giver of all goo are grateful for the revelation of himself, in His W Bible, and in the life and work of Christ Jesus; also proof that he is still revealing himself, as evidenced healing and regenerating influence of Christian S given to the world through you, His faithful messe this age. We are aware that as yet we catch bu glimpses of God as Spirit, of man as His image, or spiritual church, as you have discerned them; we are ever, earnestly striving to understand and demonstrat of this great truth.

Lovingly and gratefully your followers,
First Church of Christ, Scientist, Oneonta, N
MARY B. MOSHER, *Cl*

Utica, N. Y., Nov. 30, 19

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the students of Marie M. A C.S.D., assembled at the annual meeting of our Associ unite in expressing to you our heartfelt gratitude fo example of unselfed love which you are giving to world. Recent events have led us to appreciate as before the demonstration of the truth which constantly phasizes your teachings. Our love for you was neve great as now, and our desire to follow where you lea creases with our understanding of your spiritual ach ment.

HENRY GRANT HOGG, ROSEMARY BAUM,
JOSEPHINE SNYDER, ELLEN LAW PERCY,
For the Association

Knoxville, Tenn., Nov. 12, 1906

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—The members of this church desire to press to you their love and gratitude. We realize more fu than ever before that the "everlasting arms" are around yo and all those who follow in the pathway so wisely mark out by you in Science and Health. With humility a meekness we thank you for your courage, wisdom, a fidelity to God.

Faithfully yours,
Members of First Church of Christ, Scientist.
NELLIE H. MATTHEWS, *Clerk.*

Toledo, O., Nov. 25, 1906.

Beloved Leader:—I wish to express thanks and gratitud for the wisdom you have shown in the removal of the edition numbers from Science and Health. It is a step forward and upward; a help to you, to our Publishing Society, to the Reading Rooms, and consequently to the whole Field, since "what blesses one blesses all."

Gratefully yours in truth,
ROSELLA WILSON,
Librarian of Reading Room.

AMONG THE CHURCHES.

BROOKLYN, N. Y.

The members of First and Third Churches of Christ, Scientist, of Brooklyn, N. Y., held a union Thanksgiving service in the Beth Elohim Temple, Thursday, Nov. 29, 1906, at 10.30 A.M., over six hundred people being present. First Church building being inadequate to seat the congregation, the courtesy extended by our Hebrew brethren in so generously and freely opening their doors to us at this time was another proof of the promise of Science and Health, p. 494, "Divine Love always has met, and always will meet, every human need." At the close of the Lesson-Sermon twenty minutes were given for testimonies and expressions of gratitude for the physical benefits and spiritual illumination resulting from the teaching and life work of our Leader, making of practical use to-day the command of the Founder of the Christian religion, "To preach the kingdom of God, and to heal the sick." The union service in this temple bespeaks the consummation of the hope of Christian Science; namely, the realization of our Father-Mother God and the brotherhood of man, and more clearly unfolds the definition of the true children of Israel, "The representatives of Soul, not corporeal sense" (Science and Health, p. 583).

In great gratitude we give God the glory for this demonstration, for He brought us forth also "into a large place," He has enlarged our steps under us.

CAROLINE T. BOWKER,
LILLIE OLIN BURCKETT,
JOHN JOSTEN,
Committee.

DARLINGTON, ENGLAND.

A branch church of the parent Vine, The Mother Church of Christ, Scientist, Boston, has been organized in Darlington, England. After the editorial "Orderly Methods Needed" appeared in the Sentinel, Aug. 5, 1905, students of the Christian Science text-book in this district commenced to work more earnestly, knowing that "better churches will be established by healing the sick than by hiring a hall and holding public services if little or no healing is being done."

Each step in our organization has been taken with the thought of helping the individual and bringing out independent trust in God, and it is with gratitude that we can say that every need has been lovingly met. Our aim is to prove a loyal branch church by emulating the example of our beloved Leader, Mrs. Eddy, by overcoming all evil with good, and by realizing that we are not working to form a church militant, but a church triumphant.

MARY LOGAN, *Clerk.*

BROMLEY, KENT, ENGLAND.

Just four years ago services were started in a private house here with an average attendance of ten. On the first of October, 1905, we organized into a society and moved our services to the Gymnastic Hall, and since then the attendance has increased rapidly, until now we have an average congregation of sixty people and a membership of thirty. A Sunday School was opened in December, 1905, with six children, and there are now two classes with a total of fourteen children.

We have during the last month opened a Reading Room, and on the 10th inst. we had the privilege of giving a lecture—the Rev. Arthur R. Vosburgh being the lecturer—in the Lyric Theatre, the largest hall in Bromley. There were between six and seven hundred people present, showing the great interest that has been aroused locally.

L. BEESLEY, *Clerk.*

MONTICELLO, ARK.

Two or three friends here began to meet in a private home about eighteen months ago to read the Lesson, having become interested in Christian Science through the kindness and love of two dear Scientists from Chicago who were spending several months in our little town. The interest grew so rapidly that in a short time it was found necessary to rent a hall down town, and last July we organized as The Christian Science Society of Monticello, Arkansas.

We have an average attendance of fifty and the interest is increasing continually. We have a lovely hall, which is also used as a Reading Room. The demand for Science and Health is very marked. Our hearts are filled with love and gratitude for this wonderful truth that makes free, and our earnest prayer is that we may so grow in grace that our light will shine before men and glorify our Father which is in heaven.—*Correspondence.*

RILEY, KAN.

This locality is devoted entirely to agriculture, and the members of our church all live on farms, most of us from five to seven miles away; therefore we have no Reading Room but keep our literature at the hotel and depot. Besides this we have a mailing list of about fifty persons to whom we send copies of the *Journal* and *Sentinel* regularly every two weeks. We have our own little chapel, which was dedicated five years ago, and while we are few in numbers (fifteen in all) we are working for the advancement of our Cause and are pleased to see people growing more interested from year to year.

MRS. ELLA C. WALTERS, *Clerk.*

LOS ANGELES, CAL.

The meeting last night [Oct. 28] at Simpson Auditorium, by the congregation of Second Church of Christ, Scientist, for the purpose of devising ways and means for the raising of funds for the building of their new one-hundred-thousand-dollar church, soon to be erected by them at Adams and Hoover Street, was a success. Stereopticon views of the plans for the proposed structure were thrown on a screen and were highly approved of by those present.

A number of pledges of money were handed in at the close and the finance committee say that they expect to have no trouble in raising the full amount needed for the building.—*Los Angeles Examiner.*

NEW BRITAIN, CONN.

Articles of incorporation of First Church of Christ, Scientist, of New Britain, were filed in the office of the town clerk yesterday [Nov. 5]. One year ago the Christian Scientists formed as a society, and now this society has been merged into a regularly organized church. This new church enters upon its mission with a charter membership of some forty and with a regular attendance of nearly double that number.—*Hartford* (Conn.) *Courant.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

TESTIMONIES OF HEALING.

It is over seven years since I began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had been brought up by good Christian parents, in so far as the old belief of orthodoxy is concerned. They held very fixed views indeed of God and the devil; heaven and hell; with the accompanying thoughts of eternal punishment for all who were not good enough to enter heaven at death. They believed that for such there was no possible escape from eternal torment. I had many years of ever-increasing anxiety and torment (or hell enough here for me), during which time I read and enquired of clergy and doctors, as well as of many good church people, how I might find comfort and peace and know that I was fit to enter heaven. How did they know they were saved? To such questions they invariably replied, "The future is a great mystery; we cannot solve it here." To me this was chaos and darkness, and I was tossed about in many storms by great waves of error,—waves of sickness, doubt of everything, a fear of death and dread of the devil. For seventeen years this was the only answer, All is a mystery, which cannot be solved here.

Christian Science found me sick in mind and body. My first release was on learning that there is no personal devil, that devil or evil, according to the Scriptures, meant wrong thoughts and the mistakes of the fleshly mind. I then reasoned that it was all between God and myself. The fright about the devil being gone, I myself seemed let loose, so to speak, and God not so many impassable miles away, as before, but ever-present. I learned that He is always the same unchangeable Love, and naturally, while the human sense was being healed the body forgot to complain. For a long time it seemed as though it would be impossible for doubt or ailment of any kind to recur again, but for the encouragement of beginners I must say here that these often confronted me, and many times the thought would come, You cannot be quite sure that this is all true; how can you prove it? and the valley would seem dark indeed. Then more earnest searching and prayer were needed, and in those lonely moments our Father's tender, loving hand was guiding me to prove those very things by indisputable demonstrations; hence my strength and encouragement to proceed all along those years. How many perfect realizations of God's presence, in the healing of sickness and the reclaiming of sinners, have been granted, even to me, until not a shadow of doubt remains as to the truth of Christian Science. It only remains for me to live ever close to God. What cannot Christian Science do?

At the end of the year 1904 I had to meet what seemed a very great financial crisis. Years ago I would have joined in the panic and been ill from worry, as indeed I had been for less, before the time of trouble arrived. One tenant after another got into difficulties, thus reducing my income to far less than my necessary expenditure. Then no check for three months, and upon this my banker wrote, demanding payment of an over-draft which had been allowed on account of long drought. To my request for longer time in which to pay, he expressed regret that it could not be given. Besides this, taxes, etc., became due. Oh, how truly thankful and deeply grateful I felt, through it all, for the positive sustaining influence of divine Love. I worked steadily on in the line of the Lord's Prayer, as spiritually interpreted in Science and Health, together with lines 11 and 12 of page 254,—realizing that each day's work had to be done for God, and grace was needed to perform that work to His praise; that there was no time to waste in worrying over troubles a fortnight off. Then came the text, "Seek ye first the kingdom of God, . . . and all these things shall be added;" and so they were, for on the day that each payment was due, the money was there to meet it. No doing of mine—I could do no but the Science work at hand, and wait. At the en the month all debts were paid, and I had nothing to but divine Love. There was no lack! Twice during time the old sense of worry got so far as to say, "Wh you cannot meet the debt?" I just said, in the stre of Truth, "It is ten days yet till that answer is need and the error was silenced.

A deep sense of humility and loving gratitude my whole being,—to God our Father, who had reve himself as the ever-present help and supply in all and means, and that the channel for this revelatio a woman, Mrs. Eddy, whom He has so graciously n pure enough, brave enough, loyal and spiritual enoug impart this message of Truth and Love to me and to mankind. Each day I thank God for the beautiful lived by our dear Leader. I am at present in New So Wales, and there are no Scientists nearer than two h dred miles, except my daughter, who is with me a mem of The Mother Church. I give thanks for the *Sent* and *Journal,* which bring to all readers so much valua help.—MRS. MARY CAMERON, Melbourne, Australia.

[Translated from the German.]

I gladly give testimony that Christian Science has hea me of kidney trouble of many years' standing, which h affected me so that I was afraid of losing my reason. spite of the remedies used, and the different kinds of tre ment, my condition grew worse from year to year. 1895 I began to have very severe stomach and bowel troub The attacks became more frequent, so that I ate my me in anxiety and terror. The disease seemed to have reach its climax when in 1900 I became acquainted with Christi Science. After talking with a practitioner here, I decid to take treatment, and I have never been sorry for it. for felt relief from the first moment; the pain decreased, t digestion became normal, and my courage and love f work returned. After six weeks' treatment I was dismisse as healed, and although the stomach trouble appeared twi afterwards, for four years I have been entirely free fro it. At that time I had almost no understanding of Chris tian Science, but after my wonderful healing I felt a desir to know more of this glorious teaching. I attended th meetings, read eagerly the Christian Science literature, an soon felt richly rewarded, for it opened to me hitherto unknown treasures.

The understanding that evil is unreal, and the recognition of good as divinely real, soon helped me to overcome my lesser ills and difficulties, but last year I was violently attacked by an eruptive disease. I took Christian Science treatment immediately, and was healed in a short time. During this severe illness I could, to my own surprise, be up every day, in spite of a high fever and inability to sleep at night. My friends did not understand how I could get well so quickly without the aid of a physician, but to me this healing was a new proof of the ever-present power of God, to whom all things are possible. This firm conviction has also helped me in demonstrating the power of Truth in different cases for myself and others. Later I was attacked by a painful eye trouble, but was again treated and soon was well; yet not very long afterwards the trouble again appeared, when I searched for the error underlying it, and thus began to work for myself. My work was not in vain, for after a short time the pain disappeared and my eyes became normal. The true recognition of good had set me free. This gave me new courage in assisting others.

For all these blessings I am indeed grateful to God, and hope that many may come into this true Christ-teaching, which I believe is the only one to better mankind and to keep them well.

FRAU H. BAUMANN, Zurich, Switzerland.
